IN its latest issue the *Kokumin-no-Tomo* mentions a rumour that the English residents of Yokohama applied to their Minister to obtain the protection of guards of their own nationality. Our contemporary bids the English residents be at ease about their safety. "It might perhaps be expedient" says that journal "to demand the protection of red bearded guards, if it were intended by that means to create a good excuse for asserting that the Japanese are as turbulent as they were thirty years ago. But there is as yet no real need of the protection of red bearded men. Even supposing that an emergency should arise, there are thousands of law-abiding police constables, and if Englishmen do not think themselves secured by the protection of these police, there are a hundred thousand well-disciplined soldiers to protect them. Englishmen, therefore, need be in no anxiety about their safety." We can assure the *Kokumin-no-Tomo* that the British residents are not at all concerned about themselves. A farcical picture of the settlement's perturbation has been drawn by a youthful journalist who takes his facts from his thesaurus; but in truth there is no alarm, nor has there been, so far as we know, any proposal to obtain the services of British troops. The Local Authorities have thought it advisable to detach constables for the protection of the promoters of the anti-revision agitation, and these gentlemen are consequently subjected to the great inconvenience of being guarded wherever they go. They do not, we should imagine, think of questioning the necessity of such a precaution, for they know that fanatics are to be found in every country, and that if even a solitary attempt were made to injure a foreigner in Yokohama the result would be most serious for Japan's reputation. They understand, therefore, that their protection is a matter of at least as much solicitude to the Government as to themselves, and that the presence of British troops could add nothing to their security. On the other hand, it is not to be disguised that the writing of the *Kokumin-no-Tomo* will not help to assuage the bitter feelings which now prevail. The language of this generally sober and cleverly written periodical has an unmistakably angry ring that cannot but assist to stir echoes of resentment. Knowing how discreditable to Japan is the existence of that little band of physical-force politicians called *soshi*, we should like, even in this context, to see all journals and periodicals of the *Kokumin-no-Tomo's* standing assist in discrediting these gentry and in removing every excuse for the exercise of their uncivilized muscles. We could almost wish, indeed, that a few of the *soshi* should pay a visit to Yokohama. They would leave the settlement, if they left it at all, in a condition eminently calculated to cool the ardour of their genus. A sound thrashing, or the shooting of half a dozen of these hot-blooded simpletons, would probably assist materially to eradicate the nuisance of the *Miji* era. The notion of asking for military protection against a handful of youths who, in the great majority of cases, are known to be mere hirelings without real pluck or principle, is not at all likely to be entertained by Englishmen. It is a pity that such stories should be circulated, and the same remark applies to an absurd tale recently ventilated by a Japanese journal, to the effect that the President of the celebrated meeting had mistaken his police-guards for *soshi*, and run away from them at the top of his speed. The tale had its origin among laughter-loving foreigners in Yokohama, and the point of it is that a more unlikely man than Mr. J. A. Fraser to run away from a *soshi* could not easily be found. That most unfortunate Tsukiji incident of last

spring, the wild folly written by a verdant journalist in Yokohama, and these recent canards may betray the *soshi* into the error of supposing that the British residents fear them. If they act upon that mistake their eyes will soon be opened. The British residents, whose whole interest lies in seeing Japan prosperous and respected, share the contempt felt by every respectable Japanese for these unhappy waifs who, by recourse to the methods of savages, would fain avenge their failure to attain civilized success.

In another note, our contemporary recommends that Englishmen and other foreigners who are in favour of treaty revision should give expression to their views. If they remain silent, while those who differ from them are making open demonstration of their opposition to the present scheme of revision, their countrymen at home may be led to conclude that the whole body of foreign residents are opposed to Japan's claims. The Tokyo periodical, therefore, asks such of the foreign residents as may be favourably disposed towards the Japanese proposals, to make their opinions known to the public. But there is a difficulty here which the *Kokumin-no-Tomo* does not appear to apprehend, namely, that in order to express an intelligent opinion about a scheme, people must first know what the scheme is. A little band of busy agitators have succeeded in betraying a large section of the Yokohama residents into the ridiculous position of holding a public meeting and passing wholesale resolutions on the strength of information mysteriously obtained from a source "which left no doubt of its accuracy," but which was, unfortunately, quite untrustworthy, for the information proves to have been at once incorrect and partial. That blunder is not likely to be repeated. The public does not know what Japan's proposals are or what Great Britain's counter-proposals may be. Without such knowledge it is evidently out of the question that the measure recommended by the *Kokumin-no-Tomo* can be taken. The British Missionaries, however, have addressed to their Representative a memorial couched in general terms, urging the advisability of Treaty Revision, and it has, moreover, been made abundantly clear that although many of the Yokohama residents were betrayed into voting for a resolution which advocated the postponement of Revision *sine die*, no such uncompromising attitude is really taken by them. Even the proposer and framer of the resolution has since addressed to the press a declaration over his own signature that "so far from being opposed to Treaty Revision, there is not an intelligent man in the community who does not admit that Japan is entitled to demand a relaxation of the terms of the present Treaties." The judgment and heart of the foreign community are sound enough in this matter, though through the unfortunate blundering of a few injudicious agitators a very different impression has been conveyed to the Japanese. The simple fact is that both sides are fighting for the best terms procurable, and both are equally convinced of the necessity of coming to terms of some sort. If the *Kokumin-no-Tomo* looked a little deeper, it would perceive that no event which has occurred since the opening of the country has contributed so materially to secure the achievement of Treaty Revision, nor could any other conceivable event have contributed so materially, as the Yokohama Meeting of September 11th, 1890.

CHINA AND TREATY REVISION.

It is singular to find how persistently and repeatedly certain errors appear in the writings of journalists who discuss Treaty Revision. The latest example is furnished by the *Mainichi Shinbun*. We there read that China is the great stumbling block in the path of Treaty Revision, since it will be impossible to restrict her people to settlements when the latter shall have been swept away, and the country completely opened in respect of all other foreigners. Why should it be impossible to restrict the Chinese to settlements? On the contrary, the task is essentially easy. To so restrict Ger-

mans, Frenchmen, or some European nationals while allowing other Western folks to live, travel, and trade where they please, would be virtually impossible. But to differentiate Europeans and Americans from Chinese is perfectly simple. A Chinaman might possibly disguise himself with success so as to pass for a Western, but a few such cases would be a matter of no consequence whatever. The object is not to keep aliens out of the interior, but to provide that they shall be amenable to territorial laws and justiciable by territorial courts while in the interior, instead of remaining under a system which would necessitate their being conducted to some remote spot on the sea-coast to receive judgment from a foreign tribunal in criminal cases or misdemeanours, and would oblige Japanese having cause of civil complaint against them to carry their pleas and witnesses to distant courts at serious cost of time and money. If ten, twenty, or even a thousand Chinese found their way into the interior disguised as Occidentals, there would be an additional guarantee for their good behaviour, since the first offence they committed or the first dispute they engaged in must inevitably lead to their discovery. Meanwhile, the great bulk of the Chinese residents would perforce remain in the settlements, their physical characteristics furnishing a more efficient barrier for their restraint than any system of police supervision.

Japan would not think of submitting her own subjects to Chinese laws and Chinese tribunals so long as the former remain unaltered and the latter unreformed. She is, therefore, perfectly justified in excluding China from arrangements depending primarily on the unrestricted recognition of one another's judicial autonomy by the covenanting parties. Apart from this consideration, however, the world would probably hold her excused if she made an exception in China's case, for undoubtedly the danger against which the United States and Australia have legislated so strongly stares Japan in the face much more vividly. The *Chinese Times*, in one of those thoughtful and well-written articles which distinguish that excellent journal, speaks thus of the state of affairs in China:—

The population has overtaken the means of subsistence, with the result that a large proportion of the people are half-starved their whole life long, and so far from the nation in its collective capacity attempting either prevention or cure of this ghastly evil, it is doubtful whether there is so much as the recognition that the matter comes within the range of practical politics at all; or that any duty lies on the Government beyond the hand-to-mouth one of giving rice to those who are on the point of starving, thereby enabling them to continue the process of unrestricted multiplication of beings to inherit this perpetual legacy of starvation. There seems no doubt that matters in China have long ago reached this. The laws and customs, and especially the religious beliefs ingrained in the hearts of the people, so imperiously call for offspring that nature, early and late, is urged out of measure to supply the demand. The prudential checks that we hear of in the West have perhaps no place in the thoughts of either rich or poor in this country; only the eternal stimulus is operative. The broad result is a natural increase, estimated on fairly good data, of over 3 millions annually. How are these additional mouths to be filled when the previously existing ones had not enough?

Japan, were her territories thrown open freely to Chinese immigration, would furnish an immediate means of answering the question put by our Tientsin contemporary. Multitudes of the lowest classes of Chinese would inevitably flock to her shores, and if the inundation did not ultimately overwhelm her, it would certainly produce results of the gravest inconvenience. A State is bound by the first law of its being to provide against such dangerous contingencies. China understands this just as well as Japan, and if amicably approached, would doubtless be content to give practical acknowledgment to her perception of the truth. But there is no occasion to seek such acknowledgment at present. The extraterritorial question furnishes a safe barrier. Until China is in a position to do what Japan offers to do for Occidental nations, and to claim what Japan claims at their hands, she cannot rebel against being excluded from the general agreement. It is not here that the

which China must be persuaded to become a party before they can be satisfactorily put into force.

Referring to tariff, we observe that new perplexities are presenting themselves to some minds. A writer in the *Choya Shinbun* quotes an eminent Japanese as asserting that the chief difficulties in the way of Treaty Revision do not come from without but from within. There is much truth, we believe, in this assertion, but we notice at the same time that the person making it proceeds at once to exemplify his statement by raising an objection which proves how very superficial is his own acquaintance with the problem. He avers that his country's negotiators seem to devote their attention exclusively to the extraterritorial question, and take no care for that other very important point, the recovery of the Empire's tariff autonomy. Strange that such misconceptions should be ventilated at this eleventh hour. The problem of tariff autonomy was solved long ago. From the moment that Japan signs her new treaty she will recover her tariff autonomy. She will not, indeed, be immediately free to regulate her customs dues as she pleases, but none the less she will be in possession of tariff autonomy just as much as Great Britain is when she concludes an agreement to admit French wines at fixed customs' rates for a fixed term of years. The mere fact of concluding a tariff convention with foreign States for a limited term is conclusive evidence that a country possesses tariff autonomy, and that its autonomy is recognised. If people would only take a little trouble to study these questions before venturing to pronounce opinions on them in public, what an amount of misconception and complication would be avoided!

A MEMORIAL FROM THE BRITISH CLERGY.

THE following memorial, signed by all the British missionaries in Japan with one exception, has been presented to Her Majesty's Minister in Tokyo:—

To His Excellency HUGH FRASER, Esq., H.B.M.'s Envoy Extraordinary and Minister Plenipotentiary to Japan.

MAY IT PLEASE YOUR EXCELLENCY.—We, the undersigned British Subjects resident in Tokyo and engaged in Christian mission work, under a sense of the many evils resulting from the postponement of the revision of the Treaties between H.I.M. Japanese Government and the Foreign Powers, desire to approach Your Excellency in the following memorial.

We desire to express to Your Excellency our sense of the great and successful efforts which have been made in recent years by the Government of Japan, especially in the compilation of her code of criminal and civil law, and in the organization of her legal tribunals, to bring her methods of legal procedure into a position similar to that enjoyed by the most enlightened nations of the West.

We venture, therefore, to express the hope that such a revision of the Treaties may speedily be brought about as will, while sufficiently safeguarding the rights and interests of H.B.M.'s subjects, satisfy the legitimate demands of H.I.M. Japanese Government in the matter of Extraterritoriality.

We remain Your Excellency's obedient servants,
Tokyo, October 3rd, 1890.

CONFUCIUS AND THE JAPANESE NATION.

IN a recent number of the *Ten-soku*, Mr. Kato, President of the Imperial University, strongly protests against the ingratitude of his countrymen towards a philosopher to whom they are indebted in a large measure for the degree of progress they have thus far attained. Formerly the Japanese all revered the very name of Confucius; they adored him almost as much as the Occidentals adore Christ. Now, however, so far from adoring him, they condemn incessantly as old-fashioned and stupid whatever is associated with his name. Mr. Kato admits that the teaching of Confucius is far from being complete; its tendency is to give too much authority to the old and to those in power. But such a theory of morality was at one time as beneficial, nay necessary, as it is at present pernicious and unattractive. To feel no respect for the sage who prepared the national mind for the reception of better seeds from the West, is as

though a man should feel no piety toward his parents who nursed him and taught him in his childhood. The present indifferent attitude of the nation towards Confucius is therefore to be condemned as unnatural. Mr. Kato farther considers that such a state of things bespeaks a deplorable absence of historical spirit among the present generation of Japanese. He invites all who are of the same mind with him on this subject to join him in reviving in the breast of every intelligent Japanese a due spirit of respect for the immortal Chinese philosopher. As to the method of manifesting such respect, he thinks it advisable to erect either a monument or a statue, or to celebrate a festival. In conclusion he begs the Chinese scholars of the old type not to imagine that he advocates a revival of the moral system of Confucius, his object being merely to show proper respect to the great Chinese sage and to impress on the minds of the Japanese nation the importance of maintaining historical continuity.

AN ORIENTAL EXHIBITION IN VIENNA.

LOVERS of Oriental art were afforded an exceptionally good opportunity of gratifying their taste in Vienna last March, when, in connection with the Museum of Commerce, the large collection of pictures and other objects of art made by Count Karl Lanckorowski, the Curator of the Museum, during his travels in India, China, and Japan, were for the first time exhibited to the public. As some of our readers will remember, Count Lanckorowski was accompanied as far as India by Ludwig Haus Fischer, the celebrated painter. The exhibits at Vienna furnished by Count Lanckorowski include the principal paintings executed by Fischer during his five months' stay in India. We are indebted to two Vienna papers, the *Fremden-blatt* and the *Neues Wiener Abend-blatt*, for a tolerably full account of the exhibition. An epitome of this account runs thus:—Count Lanckorowski has exercised great judgment in his choice of objects exhibited in the museum. He must have had exceptional opportunities for collecting, or he never could have brought together so many rare works of art. Some of the objects it would be difficult to match in any of the museums of Europe. An ornamented copy of the Buddhist scriptures, the antiquity of which is not known, which may have been made any time between the third century B.C. and the fifth century of our era, well repays inspection. The pictures with which it is adorned bear unmistakable evidence of the influence of Greek and Roman art on Indian painting. This feature of Indian art is engaging the attention of students just now. The exhibits as a whole are of a character to impress one with the idea that Indian painting is entitled to rank high when compared with that of other nations. Some old miniature pictures from Delhi are very well executed; and a collection of water-colour copies of the frescoes of a Buddhist temple (the rock-temple in Jutta) are particularly good. This is the first copy of these frescoes that has reached Europe. The scenes represented are mostly from the life of Buddha. The manner of their execution reminds one of the frescoes of Pompei, and hence furnishes most interesting material for comparison to the student of Oriental art. "Among the paintings collected by the Count in China and Japan are some of great merit,"* says our Vienna contemporary. When they speak of "Pictures from India" the papers we are quoting are careful to point out that they refer principally to the oil paintings and water-colours (about 70 in number) executed by Mr. Ludwig Haus Fischer. The scenes chosen by Mr. Fischer for representation extend from Ceylon (which furnishes scenes for 17 pictures) to the Khyber Pass on the Afghan boundary. Mr. Fischer was fortunate enough to obtain a clear view of the Himalayas from Darjeeling, a very rare occurrence. He has perhaps never been surpassed as a painter of eastern landscape scenery. In some of his coloring he produces fairy-like effects. He also shows wonder-

* No names of subjects or painters are given—hence we are unable to verify this assertion.

ful power when engaged in representing very intricate and delicate arabesque work. His representation of the richness and variety of tropical vegetation, and of the imposing forms of towering mountains, too, are those of a master hand. As instances we may mention the picture of the Ceylon mountains as seen from Kandy, and of Adam's Peak, rising out of orchards and ascending higher and higher till it ends in the strange stone column that crowns its summit, on which a shower bath of sunbeams are made to pour down from dark clouds. His "Lotus flowers in a pond in Colombo" and the "Forest scene in Ceylon" show that he has a minute acquaintance with botany. Some of his pictures are designed to illustrate geological details, and are traced with great accuracy and effect. His "View of Benares," with the smoothly flowing Ganges covered with boats and its banks lined with bathing-tents and natives in various picturesque costumes is a great success. Fischer is like an adept in the use of the duldest and most brilliant of colours. In his picture of the Temple of Elephanta, by means of a few shades of dusky brown he represents the crumbling weather-beaten condition of the stone of which the temple is built. On the other hand, in the "Golden temple of Amrizar and the Fort of Gwalior" he uses the brightest Indian colours with great effect. These pictures are of themselves sufficient to insure the success of the Vienna Museum of Commerce. But it is enriched with other interesting objects of art. For instance, in one of the two doorways of the Indian room hangs a Tibetan flag of prayer. It is made of thin white muslin, on which are inscribed in blue certain prayers. When this flag is moved by the wind the prayers are, according to the Tibetan belief, wafted on high. Thus the motion produced by the wind corresponds to the revolution of the wheel of the praying machine. In the same room are numerous specimens of Indian art and industry, also documents on the history of religion and customs, the footmark of some saint preserved in metal, and the picture of a full sized Afghan woman. The Vienna papers describe some objects brought from Japan by Count Lanckorowski, but to residents here there is nothing of special interest in the comments they make on this subject. The Museum of Commerce is a private enterprise, dependent on the support given to it by the public for its continuance. But after such a successful debut the future usefulness of the new institution is, we should say, more than certain.

THE "SOSHI."

THE *Kokumin-no-Tomo* deplores the development of the *soshi*. It roundly condemns the leaders of the *Rikken Jiyu-to* who have employed *soshi* as weapons of defence and offence, and regrets that politicians thus behaving have not looked to Peel and Bright for models of constitutional statesmen, instead of imitating the actions of the heroes of olden times. According to our contemporary, there are two kinds of *soshi*; those who, though misguided and narrow minded, are nevertheless actuated by a certain kind of disinterested patriotism and public spirit; and those who, degraded and mercenary, represent the very dregs of humanity. As to the *soshi* of the latter class, the *Kokumin* does not think it worth while to give any advice, but it recommends those of the former class to reflect on the position in which they now find themselves. Whatever may be their connection with a certain group of political adventurers, society in general is disgusted with the very word *soshi*; every good citizen shudders at the mention of the name, and the press describes them simply as a lawless mob. It is true—our contemporary goes on to observe—that the *soshi* of the better class affect the title of *seigi no soshi* (*soshi* of justice) to distinguish themselves from the unprincipled section of their fraternity. But the public does not admit such a distinction, and whatever disreputable action a *soshi* may commit is sure to be laid to the charge of the whole body. The Tokyo periodical admits

that the *soshi* are not alone to blame; their existence is owing, on the one hand, to the lingering customs of feudal times, when knightly fraternities were found in every community; and, on the other hand, to the encouragement given them by their leaders and elders. But these leaders are now beginning to discover the unpleasant and embarrassing fact that they have become the slaves of youths whom they originally intended to employ as their tools, and our contemporary thinks it high time for the *soshi* to divert the course of their life into other and more productive channels. It recommends them to return to their original occupations, or if they do not possess any sober occupation, to seek out a new field, each for himself. The group of *soshi* who have turned actors are far more honourable members of society than those who make it their business to escort political leaders through the streets, and to undertake every lawless task entrusted to them. "Get an honest livelihood, for thus and thus alone you can become useful members of society," is the wholesome counsel of the *Kokumin-no-Tomo*.

ABSENCE OF MIND.

THE *Indian Planter's Gazette*, reproduced by the *North China Daily Herald*, gives the following remarkable instance of absence of mind:—We have all frequently heard of, and most of us have been amused at, the ridiculous spectacle of a man driven to desperation in search of his eye-glasses, when in fact they were actually at the time only a couple of inches out of their natural position on the face. Equally ludicrous is it to see a carpenter searching the benches of his workshop for his two-foot rule when he has actually got it between his teeth! But of all the remarkable instances of absence of mind of this kind that I have ever heard of is that of a man going to a Police station to report the loss of a horse on which he was actually mounted at the time! Don't laugh, it's downright fact. This is how it occurred. An Australian horsedealer had landed a cargo of horses at Prinsep's Ghat, Calcutta, consigned to Messrs. Cook & Co. The consignment consisted of 125 fresh Waters all told. Part of the batch were sent to the Dhurumtollah stables and the remainder to Garden Reach. Some thirty or forty of the horses broke away from the syces after landing and were galloping all over the *maidan*. As the animals were frightened of the natives, the owner had one of the remounts of the batch saddled, with which he followed the fugitives. He succeeded in the course of the afternoon in capturing all the runaways, as he thought, but one. The missing horse was searched for all over Calcutta and the suburbs, but no trace of the animal could be found. Inquiry had been made at all the public pounds and every Police station in and around the city, but without success. As a last resource the importer rode up to the head office, and reported the loss to the Superintendent. "Come," said the officer, taking up pencil and paper, "let us understand each other. You say a batch of 125 horses were landed. How many were sent to the Dhurumtollah stables?" "Eighty," was the prompt reply. "How many are now in the stables at Garden Reach?" was the detective's next question. "Forty-four" was the answer. "You are still one short of the total number, you say?" "Yes, sir." "Then what is that horse you are now mounted on? From the appearance of its coat it looks uncommonly like an animal just landed." The man sat for some time speechless, before he was able to reply. It was the horse he had been looking for all over the town and suburbs!

THE CHIEF SECRETARIES OF THE HOUSES.

THE reported nomination by His Majesty the Emperor to the House of Peers of Messrs. Kaneko and Sone, respectively Chief Secretaries of the House of Peers and the House of Representatives, is commented on by the *Mainichi Shinbun*. The *Mainichi* is glad to hear that in Mr. Sone's case the report of his nomination is incorrect, for it is difficult to see how that gentleman could, while a member of the Upper

House, efficiently discharge his duties in the Lower House. Mr. Kaneko's nomination, however, still remains. Some say he was nominated because of his learning; but in that respect there are many gentlemen whose claims are as good as those of Mr. Kaneko. Others say that his merit obtained for him the honour; but there are a million others as meritorious as he. On the whole, the *Mainichi* doubts his ability to perform the dual functions. Suppose he was to commit some fault which should bring his conduct under the cognizance of the House. He would then be at one and the same time accused and accuser. But we (*Japan Mail*) may point out that this last objection is baseless. As well say that a member of the House of Commons who offends against the rules of the House, or otherwise misconducts himself, cannot be punished by the House because he would thus become one of the judges as well as the judged.

REUTER'S TELEGRAMS.

ANOTHER mare's nest has been discovered, and another opportunity eagerly utilized to throw dust into the eyes of the public. Several years ago, the press service and political telegrams of Messrs. Reuter & Company were supplied to the Yokohama newspapers, the Chamber of Commerce, the Club and certain leading mercantile firms, under an arrangement by which all the recipients contributed an assessed amount to the cost of the service. It was ultimately found that this arrangement did not work satisfactorily, and, the service being discontinued, Yokohama remained for a time in utter darkness so far as telegraphic news was concerned. It seemed to us that such a state of affairs was a serious reflection on the journalistic enterprise of the Settlement. We therefore determined to renew the service on our own sole account, paying the whole cost of transmitting the telegrams from Shanghai to Yokohama as well as other expenses. Such an outlay was altogether out of proportion to the circumstances of newspapers in Yokohama. We would gladly have shared it with one or both of our local contemporaries but for two reasons, of which it is sufficient to state the first, namely, that such a service cannot be satisfactorily shared by newspapers published at an interval of from 14 to 15 hours. The *Japan Mail* is published in the morning; the *Japan Gazette* and *Japan Herald* appear in the evening. This consideration was conclusive. We continued for a long time—two years, if we remember rightly—to pay a large sum monthly for the service of telegrams. Our evening contemporaries copied them regularly from our columns, with our consent in the case of the *Japan Gazette*; without it in the case of the *Japan Herald*. Subsequently, by an arrangement to which we were not parties, and of which we had no knowledge whatever until after it had been effected by Messrs. Reuter and Company's Agent, the *Official Gazette* became a recipient of the telegrams. We avoid detailed reference to this incident. The upshot of it was an agreement between Messrs. Reuter and Company's Agent and the *Japan Mail*, by which we promised to pay the same monthly sum as that charged to the *Official Gazette*, less a small special charge made to the latter by the Agent for expanding and transmitting telegrams. This reduced our outlay by about thirty per cent., while, on the other hand, Messrs. Reuter and Company received some fifty per cent. more than the sum for which they had previously performed the service on our account alone. The agreement further provided that the telegrams must not be given to any other newspaper without our consent, it being understood that the object of this provision was to secure for us a proportionate reduction in the event of another journal becoming a subscriber. Under no circumstances, however, were our evening local contemporaries to be admitted to co-operation, as the time of their publication would deprive the telegrams of all value for us. This agreement was between Messrs. Reuter and Company's Agent and the *Japan Mail*. The *Official Gazette* had nothing whatever to do with it. So far as we are concerned, we

have never communicated, either directly or indirectly, with the *Official Gazette* on the subject of telegrams, nor do we know anything about its arrangements except what Messrs. Reuter and Company's Agent was good enough to tell us. Such being the facts of the case, the *Japan Gazette*, in its issue of the 6th instant, publishes the following:—

REUTER "CORNERED" BY THE JAPANESE GOVERNMENT.

We have long been aware that it was a matter of absolute impossibility for any journal save the *Japan Mail* and the *Official Gazette* to obtain Reuter's telegrams. However, with the object of proving to our readers that our second-hand publication of Reuter's telegrams is not a mark of lack of enterprise on our part, we addressed the following letter to Reuter's agent at this port and received the response given below. Readers will please note the parties to the agreement, and we doubt not they will draw their own conclusion—one strengthening something more than a long held suspicion.

THE AGENT OF REUTER'S TELEGRAM CO.,
Yokohama.

Dear Sir,—A general desire having been expressed by the numerous subscribers to this journal that Reuter's telegrams should be regularly published; and it being my earnest wish to meet, to the utmost of my power, the desires of the patrons of the *Japan Gazette*, I shall feel much obliged if you will kindly inform me the latest terms at which you can supply all Reuter's telegrams.

I beg to point out that at present the telegrams are copied from the *Official Gazette*, and that any subscription from this office will be a clear gain to your company.

Yours faithfully, J. R. ANGLIN, Proprietor.

Yokohama, 3rd October, 1890.

J. R. ANGLIN, Esq.,

Proprietor of the *Japan Gazette*.

Dear Sir,—In reply to your favour of the 3rd inst. I regret very much that by the arrangement now in force between the *Japan Mail*, *Official Gazette* and this company, I am unable to supply the Company's Press Service and Political Telegrams to any other newspaper. Perhaps later on something may be done; if so I shall at once communicate with you.

I am, Dear Sir, Yours faithfully, JNO. W. HALL, Agent.

Yokohama, 6th October, 1890.

Observe the heading of our contemporary's article:—"Reuter 'cornered' by the Japanese Government." For years we alone of the newspapers published in Yokohama have had the enterprise to pay for a service of telegrams. The *Official Gazette* was made a party to the service in a manner against which we strongly protested at the time. We had no choice, however, but to consent. In doing so we took care to protect ourselves against future contingencies of a similar nature. It was an ordinary business precaution, with which the Japanese Government had no more to do than it had with the writing of the *Japan Gazette's* silly article. The dishonest subterfuge resorted to by our contemporary to excuse the want of enterprise which has reduced it to the ignoble rôle of copying all its telegraphic news from other journals; its characteristic attempt to misrepresent the conduct of the Japanese Government, and the wretched trickery by which it seeks to injure us in connection with a service the benefits of which it enjoyed gratis for several years with our consent, are worthy of it.

THE FIRST JAPANESE PETITION TO PARLIAMENT.

To four public-spirited men of Chiba Prefecture appears to belong the honour of having prepared the first petition for presentation to the Japanese Diet. The subjects of the petition are that people proposing to start journals should no longer be required to furnish security; that heads of families and heirs should be included in the exemptions from conscription; that postal savings banks should be abolished; and that registrar's duties should be discharged by Headmen of wards and villages in addition to their other duties. The names of these pioneer petitioners, who will doubtless become historical, are Fujii Kyogen, Takahashi Kanji, Sekiya Kojiro, and Itakura Rihel, and they have entrusted their petition to the representative of the first electoral district of Chiba.

ADMIRAL LANG.

THE *North China Daily News* has been the means of throwing further light on an interesting point connected with Admiral Lang's retirement from the Chinese service. It will be remembered that the proximate cause of that distinguished officer's resignation was the hauling down of his flag by the Chinese, and the offer of an inferior flag in response to his telegraphic complaint to Viceroy Li. It will also be remembered that this flag incident occurred in Hongkong during the absence of Admiral Ting. Had Admiral Ting been present, his flag would, of course,

have been flown as commanding the squadron, but in his absence Admiral Lang, the next senior, naturally hoisted his pennant. Criticising the incident, some foreign writers expressed doubts as to Admiral Lang's right to assume the title of Admiral for executive purposes, and suggested that it was merely an honorary distinction conferred on him in connection with his duties as instructor. By way of reply to these critics the *North China Daily News* publishes the following document, a despatch sent to Captain Lang, R.N., on the 13th of June, 1886, by Mr. N. R. O'Connor, then British Chargé d'Affaires in Peking:—

The Prince and Ministers of the Tsung-li Yamen to Mr. O'Connor.

12th June, 1886.

The Prince and Ministers of the Tsung-li Yamen have the honour to inform H.B.M.'s Chargé d'Affaires that on the 7th of June, 1886, they received a despatch from the Admiralty Office to the effect that the Prince and high Ministers of that Department had submitted a Memorial to the Throne upon the 2nd of June containing a report upon the naval and military reviews of the forces of the Northern Division and applying for the bestowal of decorations upon foreigners. Upon the same day His Highness and their Excellencies were honoured with the receipt of a Decree from Her Majesty the Empress in the following words:—
"The foreign officers who have acted as naval and military instructors, and have been most successful in their work, should in like manner receive due reward."
"Decorations of different grades will be distributed amongst them, and, as an additional mark of favour, the rank of Admiral is hereby granted to William Lang, who has especially exerted himself in instructing and exercising the fleet. A button of the third class is further bestowed upon von Hanneken in recognition of the admirable manner in which the forts built under his superintendence have been constructed."

It becomes the duty of the Prince and Ministers to communicate a copy of this Decree, transcribed with all reverence, to H.B.M. Chargé d'Affaires, with a request that he will in turn communicate it to Admiral Lang that he may respectfully conform thereto.

[Translated by W. C. Hillier.]

On the strength of this despatch our Shanghai contemporary severely criticises Viceroy Li, and even goes so far as to apply the epithet "mutinous" to the Chinese captain who hauled down Admiral Lang's flag. Here are the concluding paragraphs of a strong article:—

We gather from this that the Viceroy Li carries his independence so far, that when it suits him to do a discourtesy to a foreign employé, he does not care the least for an Imperial decree. The Empress—for this occurred before the Emperor's assumption of the government—makes Captain Lang an Admiral, and Li virtually says, "Your Imperial decree is nothing to me. I don't want Captain Lang any more, and I refuse to consider him an Admiral any longer." It has been said often that the Peiyang squadron is not a national fleet, but is Li's property, and that the appointments to it are simply at his pleasure. It appears now that this is absolutely true, and that the Throne is merely allowed to amuse itself with the idea that it has a navy; otherwise the Viceroy would surely not dare to ignore the Imperial decree as he has done. Captain Lang must naturally feel some regret at seeing a work to which he has devoted so much care and some of the best years of his life go to ruin; but otherwise we do not imagine that he loses much by being edged out of the Chinese service. It is known who pulled the strings that moved the Viceroy—for the Bismarck of China is himself a good deal of a puppet now—and Admiral Ting will probably be the next to discover how the strings work. We recur to the matter, then, partly to set Captain Lang right before foreigners—really a work of supererogation—and partly to draw attention to the warning which the affair should convey to all foreigners in Chinese employ, from the highest down. They will learn from it that they may hold their positions by Imperial decree, they may do their work faithfully, they may seem to themselves and to other foreigners indispensable to the proper working of the system of which they are a prominent part; but they are always liable to be undermined by Chinese, often their own subordinates, who think that things can now go on without them and that their places and emoluments are worth going through any amount of moral dirt to secure; and they will find that Imperial decrees are no security; they are not wanted any more and they can go.

Now is all this justified? We greatly doubt it. The whole question hinges upon a simple point—was Admiral Lang's rank of Admiral substantive or merely honorary? If the former, then unquestionably it was his right to assume executive command of any Chinese squadron with which he might happen to find himself present as senior naval officer. But if the latter, then it is equally beyond question that he possessed no such right. The despatch from the Prince and Ministers of

the Tsung-li-yamen by no means solves the problem. It certainly "grants the rank of Admiral" to Captain Lang, but such a grant does not necessarily constitute him an executive officer of the Chinese Fleet. An officer of Control in the British Army attains the relative rank of "Colonel" or even "General" after reaching certain grades in his Department, but under no circumstances would such an officer be qualified to take command of a regiment or brigade in the field or on parade: a subaltern of a month's standing would precede him for the purposes of such service. The cases are not quite analogous, it is true, for Captain Lang belongs to the executive branch, and whatever rank he holds may be supposed to confer corresponding executive competence. But does any one seriously imagine that when the Ministers of the Tsung-li-yamen penned the above despatch, they intended to delegate executive functions in the Chinese Navy to an alien who had not taken any oath of allegiance to the Emperor of China, and who, even in the discharge of such functions, must always remain absolutely exempt from the disciplinary rules of the Chinese service? We find it hard to entertain any such hypothesis. No Western Government would dream of conferring substantive rank in its military service on an alien not subject to its laws or jurisdiction, and not bound by any pledge of loyalty to the sovereign of the country. Why should China be supposed to have done anything of the kind? She certainly conferred the title of "Admiral" on Captain Lang, but that she intended to invest him with competence to take command of her ships by virtue of that title, we cannot believe. The one thing that puzzles us in the matter is Captain Lang's action. He is too good an officer to make a mistake under the circumstances described, and we can only suppose that the whole story has not been told.

A CHINESE STORY.

EXPERIENCE has taught us, in the case of Japanese affairs, to place so little faith in the stories ventilated from time to time by ill-informed foreigners who substitute fantastic inferences for facts whenever the latter are wanting, that we regard tales from China also with considerable scepticism. Nevertheless the following account—which we take from the columns of the *North China Daily News*—incredible as it sounds, appears to be based on good authority:—

An instructive illustration of some of the observations already made with regard to the relation between contiguous villages, in time of trouble, has been furnished, by a friend of the writer, who is a native of one of the villages concerned, and who was one of the middlemen through whom the difficulty was adjusted. The two villages in question are situated about a mile apart in Shantung, and are wholly surrounded by the floods. The larger village had thrown up a dyke at some distance from the terrace on which the houses comprising the village stand. The other village had no dyke. The area enclosed by the dyke of the larger village was but a few hundred (Chinese) acres, but it was important to the village to stave off the flooding of this land as long as possible. Some young fellows belonging to the smaller village resolved to make an attack on the dyke of the larger one, apparently on the ground that as the smaller village had no dyke, the larger one had no right to have one either. A considerable force went to cut the dyke, and was met by a very small force of the other village. A quarrel ensued, in which the people of the larger village sent forth reinforcements from the other parts of their dyke, where there were several hundred men at work. These at once flung over, and a battle began, in which the small village was quickly worsted, and two of their men were captured, but not until some of the people of the larger village had been wounded severely. One man had two fingers almost chopped off, another had a nick cut in his heel an inch deep with a hoe, severing the *tendon Achilles*. The two captured men were tied with ropes, hung up and beaten severely with clubs, till they were half dead, and unable to move. Uncontrollable excitement now ruled, and each village prepared for war on a large scale. About three hundred men rallied on one side, and half as many on the other. Some men of the small village rushed off to secure "middlemen" from a third village, and one such was found who proved to be a tower of strength. He is a professional gambler, well acquainted at the same time, and able to put through a law-suit without expense—a qualification of as much value in China, as the "hood of a city" in the Middle Ages. This man appeared upon the scene, and his words were few but weighty. He sided with the small village, with which he is connected by marriage, and adopted the view that "water must take its course." Dykes are contrary to nature, and not to be tolerated. The small village should not have cut your dyke as they did, but you should not have made the dyke at all. He therefore proposed that neither village should touch the dyke, that the larger village should be given a respite of two days in which to throw up a dyke close to the village (of no value toward saving the crops), and that when it was completed, the middlemen should come and themselves cut the dyke and let the water in upon the land of the

larger village. Were they prepared to "compromise" on this basis? After a short deliberation, they accepted the terms, and men are at work on the dyke. To-morrow the "peace-talkers" will cut the old dyke, and ruin the land of the large village.

But how could the words of any one man, supported though they were by six other men, bring about the acceptance of a result so unjust, and so ruinous to the larger village. Because the man who did the principal talking is a head bully, and able to conduct a law-suit. He had promised to see the smaller village through with this matter. If it had not been settled in this way at that time, a general battle would have broken out, as hundreds of men were already standing with weapons, ready to begin the fight. If the fight had once begun, very many lives would have been lost. This would have resulted in a lawsuit of portentous proportions, which would have been taken to the district city, thence in time to the capital of the province, and perhaps eventually to Peking, costing thousands (or tens of thousands) of stems of cash, and possibly many more lives. By these terms, hard as they were, the face of the larger village was saved. They are allowed a dyke, and the old one is cut by "peace-makers," not by the enemy. And what about those wounded? Oh they were injured in a general row, and "nobody is to blame." The two wounded captives were found to be alive, though in a sad condition. They also are to get nothing for their trouble, unless they should manage to die within five days, when the "peace-talkers" reserve the right to re-open the whole question! The small village has gained absolutely nothing by all this tumult, except to get many wounds and to breed an ill-will which will last for a generation, and in future years will break out anew in other rows and law-suits. The large village has also its harvest of wounds, and its ranking animosities of defeat and ruin. These two villages are connected by hundreds of marriages, and have been generally regarded as substantially one village. Now all this is altered by the impetuosity of a few hot-headed youths who insisted that no one should be better off than themselves. Whoever will peruse with care that chapter of the Sacred Edict which exhorts to peace and against law suits, will be able, in the light of such occurrences as these (which, under appropriate conditions are to be found anywhere) to obtain much light on the relation of the people of China to one another.

COMMERCIAL RELATIONS BETWEEN JAPAN AND TURKEY.

THE *Yiji Shimo* says the present is a fitting time for Japanese merchants to make an attempt to open trade relations with the Ottoman Empire. Turkey, with a population of over thirty millions, had in 1889 an export trade amounting in value to over sixty million yen, and imported goods valued at eighty-six millions. Trade with such a country might well be productive of profit to the Japanese, and the mission to Turkey of the *Kongo* and *Hiei Kan* should be availed of to send commercial representatives from this country. The *Yiji* does not doubt that if application is made to the authorities the necessary permission will be given, and representatives of Japanese firms will be accorded passage in those vessels. Our contemporary regrets to observe that no one has as yet chosen to avail himself of the opportunity now offered.

PECULIAR CLAIMS.

To English ears it sounds an attractive argument that foreigners cannot possibly consent to submit to the jurisdiction of a country where freedom of speech, pen, and public meeting is not fully guaranteed. But every thoughtful person must see that there is involved in such an argument the wholly untenable assumption that a foreigner who visits a country for commercial purposes, or indeed for any purpose except to represent his Sovereign, is entitled to claim privileges which are not enjoyed by the people of the country. If the contention is admissible that because Japan does not yet allow her subjects to write and say exactly what they please, within the limits of decency, therefore the exercise of judicial autonomy must be forbidden to her, by what possible process of reasoning can it be pretended that the same rule does not apply to Germany, to Russia, and even to Great Britain, within certain parts of whose dominions liberty of the subject in respect of public speech and public meeting is at present seriously curtailed? It is surely extravagant to suppose that we have any sort of right to carry our own institutions everywhere and force them upon the countries we choose to visit for our personal profit or pleasure. Surely, also, it is not reasonable to expect that at this comparatively early stage of her journalistic career Japan ought to have reached a point which England took nearly a century to attain, and which several great Western nations have not yet attained. We have an undeniable right to protest against laws and tribunals which do not provide efficient protection for person and property. But we have not

a shadow of right to insist that every privilege which we enjoy at home must be guaranteed to us abroad also. If the Government of Japan does not think that absolute freedom of speech can be granted consistently with the preservation of public peace and good order among thirty-eight millions of Japanese, to insist that it must be granted for the sake of a few hundred foreigners carrying on commerce and industry in Japan, is a very wonderful contention.

The practical question is whether for all the legitimate purposes of foreigners living in Japan the freedom of speech already enjoyable is not quite sufficient. We think that it is. Newspapers are at perfect liberty to expose abuses of every kind and to demand their redress, provided that the exposure and demand be not couched in language calculated to disturb public tranquillity. Respectable and self-respecting journals do not employ inflammatory or seditious language, and such journals may be carried on without any restraint in Japan. Newspapers of the type of the *London Times*, the *Standard*, the *St. James's Budget*, the *Spectator*, the *Daily Telegraph*, the *Daily News*, the *Manchester Guardian*, the *Irish Times* and many another, might be published in Japan from year's end to year's end without coming into collision of any kind with the law. What more do we want? What more have we any title to ask for? If this question were soberly and dispassionately considered, the extravagance of the commotion made about it would be at once appreciated. But the fact is that every penalty inflicted on a newspaper by the strong arm of the law throws certain agitators into a fever of unreasoning excitement. They cannot conceive the notion that the law may possibly be right and the newspaper wrong. Their one dominant idea is:—

I must have liberty
Withal, as large a charter as the wind,
To blow on whom I please.

They do not observe the lesson constantly inculcated by their own conduct, that intemperance is the worst of all tyrannies, nor are they capable of appreciating Burke's immortal dictum:—"What is liberty without wisdom and without virtue? It is the greatest of all possible evils; for it is folly, vice, and madness, without tuition or restraint." It has been often remarked, and in truth the observation is beyond cavil, that while a portion of the foreign local press of this settlement perpetually inveighs against the Japanese press laws, the example of gross licence set by itself is eminently qualified to make freedom of the press abhorred by all moderate Japanese.

GIFTS OF ART OBJECTS TO THE NATION IN ENGLAND.

THE extraordinary munificence which prompts men in England to present splendid collections and great sums of money to the nation for the furnishing or buildings of galleries of art, finds no parallel, we believe, in any country save America. Last year we had the case of an anonymous donor who gave a quarter of a million sterling for the building of a new picture gallery, and now we have Mr. H. Tate offering to the nation a collection of pictures probably worth not less money. Mr. Tate's letter to the Chancellor of the Exchequer offering the pictures, reads as follows:—

To the Right Honourable G. J. Goschen, M.P., Chancellor of the Exchequer, &c.

Sir,—The offer of my pictures to the National Gallery having been declined for want of space, many of the suggestions which have been made from time to time respecting the establishment of a national gallery exclusively confined to works by British artists lead me to the consideration of the special and particular lines on which such an institution should be founded, and the functions it should be established to perform, whether the work is to be effected by Government or by private action and enterprise, or by a judicious combination of both.

If the Lords of the Treasury, acting for the Government, sanction the establishment of such an institution on the lines indicated and laid down in the schedule attached, and the Lords of the Treasury agree to render reasonable pecuniary assistance by means of annual grants for the purpose of enabling the administration to assist provincial museums by loans

of paintings, water-colours, drawings, sculpture, &c., on a system similar to that adopted with so much usefulness and success with objects of industrial and decorative art by the circulation department of the South Kensington Museum, or if the Government will grant sufficient aid for the maintenance of the gallery and its administration alone, leaving to the future the sending of some portion of the collection on loan to provincial museums:—

Upon these conditions I am prepared to present to the nation a selection of pictures out of my collection, as specified in the annexed list, numbering 57, and further to allow the committee of selection to take any of the others which I possess, and which they may think it desirable to have included in my gift.

It is, however, to be understood that I will only consent to a few of these pictures to be taken out of my possession when a suitable and separate gallery shall have been erected, or an existing one prepared for their reception, the structure and situation of which shall have previously met with my approval, and the Lords of the Treasury having undertaken to complete the same at the latest by June 30, 1892.

I have the honour to be, Sir, your obedient servant,

HENRY TATE.

Park Hill, Streatham Common, S. W., June 17.

MORALITY.

No conceivable excuse could be urged by the *Japan Gazette* for the false slander which it uttered against this journal in its issue of September 30th. We thought it worth while to expose that slander, not because we were at all concerned to be thus maligned, but because a certain measure of good may be accomplished by laying bare the true character of the unscrupulous traducers who claim to represent public opinion in Yokohama. We understood that the process of exposure must hurt our contemporary, and were prepared to find it resort to a few of the general amenities which do duty for argument with it and its local congener. But we did not anticipate that it would seek to hide its dishonoured head under a falsehood so palpable as to be almost funny. To expose the new subterfuge it is only necessary to place the original statement and the subsequent one, side by side. Here they are:—

Japan Gazette, 10th Sept. Thereupon it was discovered that a bitter insult had been offered to Japan, and the Japanese were advised that they would do well to resent it. The advice was couched in so risqué a language that it was calculated to provoke their anger; it was translated into Japanese, and it has had its effect.

Japan Gazette, 6th Oct. We never said that its article of that date was the origin of the inimical feeling between Japanese and foreigners—that article was merely a continuation of a long series of years of similar diatribes written for the education of the Japanese Press.

We are familiar with the marvellous dexterity of

the *Japan Gazette's* conceptions. We know that its imagination can even embrace such phenomena as the "eagle-eye of obsequious officialdom" performing the operation of "smelling." But surely it cannot be suffering from such complete mental confusion as to imagine that the words "it was translated into Japanese" and "it has had its effect," can be construed as applying to "a long series of years of diatribes." It is a curious fact, never yet satisfactorily explained so far as we know, that public exhibitions of absolute indifference to the dictates of truth and honesty are condoned in the case of a newspaper, whereas any suspicion of such moral depravity on the part of a private individual would entail immediate social ostracism.

ANOTHER EXAMPLE.

It seems a pity that some useful occupation cannot be found for the ingenious persons in this Settlement who devote so much time and energy to attacking the *Japan Mail*. Their antics are really quite diverting, as soon as it is understood that the shame of such proceedings has ceased to be felt by the performers. To reach the *ultima Thule* in any line is an achievement, and truly we think that in respect of journalistic knavery this Settlement "beats the record." A very pretty estimate of public intelligence and public morality must be formed by men who day after day fabricate and utter airy falsehoods, confident that exposure is not probable, or that even if exposed their pretty trade will not be interrupted or their own honourable selves discredited. They add much eclat, do these chivalrous and conscientious champions, to the cause which they espouse, and their scrupulous truthfulness and impartiality in every-day matters confirm their title to sit in judgment between nation and nation. Examples of their fine methods abound in profusion. The latest is before us now. The *Japan Herald* avers that this journal published a "baseless slander" of the United States Minister "without a syllable of comment," and that we afterwards "apologised to the *Nichi Nichi Shinbun* for crediting it with the slander," but that "to the Minister whom the slanderous report was meant to injure, we did not tender 'a word of apology.'" The one grain of truth in this crafty fable is that our translator wrote *Nichi Nichi Shinbun* instead of *Hochi Shinbun*. All the rest is pure invention. On Saturday, September 27th, we inserted a translation of a paragraph from a vernacular journal. The United States Minister was not mentioned, though the paragraph seemed to point to him very plainly. After the translation we added the word:—"We give this rumour for what it is worth. The reticence of our Tokyo contemporary is well calculated to prevent denial or confirmation." So much for the *Japan Herald's* truthful assertion that we reproduced the report "without a syllable of comment." On the following Tuesday we published, by permission, a full and explicit denial of the rumour. So much for the *Japan Herald's* truthful suggestion that nothing was done by us to correct the false story. Three days afterwards we received a letter from the editor of the *Nichi Nichi Shinbun*, asking us to note that not his journal but the *Hochi Shinbun* had printed the original rumour. Now the story as told by the *Japan Herald*, while all these facts are fresh in the minds of the public, is that we published a "baseless slander" against the United States Minister "without a syllable of comment" and that we never took any step to correct it, whereas in truth we accompanied our translation with a distinct disclaimer of responsibility or credence, and were afterwards the first to publish an explicit contradiction of it. It is not without reluctance that we invite our readers' attention to these wearisome *exposés*. For ourselves, we know that fair men will judge us by what we actually write, not by the wonderful misrepresentations of our enemies. The only advantage, then, of exhibiting the guile of these scrupulous gentry is to gibbet their extremely ludicrous pretensions to represent respectable local opinion or to discuss questions of public interest and interstate policy. Is it really to be supposed that Yokohama's case has been en-

trusted to men who are incapable of even a scintilla of honesty, fairness or courtesy in their treatment of those that differ from them, and whose only weapons are calumny, invective and rudeness?

AN UNCONSCIOUS MERRY ANDREW.

We are brought somewhere into the close vicinity of the acme of absurdity when a journal like the *Japan Gazette* has the supreme insolence to charge the British missionaries of Tokyo with deliberate falsehood. Referring to the memorial recently presented by the British missionaries, our dainty contemporary says:—"We feel compelled to tell the memorialists that they know they have gilded the pill much too thickly, that they have visibly exaggerated." The missionaries spoke of "the successful efforts made by Japan" to bring her laws and law courts "into a position similar to that enjoyed by the most enlightened nations of the West." The *Japan Gazette*, that fine stickler for veracity and accuracy, interprets this as a declaration that "Japan has attained the status of the most enlightened nations of the West." Some flour and rouge, a peaked cap and a pair of wide pantaloons are alone wanting in the *Japan Gazette's* paraphernalia. Its mental equipment is admirably suited to the part for which nature evidently designed it, but printer's ink and a thesaurus do not form an appropriate stock in trade.

THE JAPANESE NAVAL MISSION TO TURKEY.

WRITING of the despatch to Turkey of the Japanese war vessels, *Kongo* and *Hiei Kan*, the *Nichi Nichi Shimbun* says if the question be properly looked at, many advantages to this country may be expected, as a set-off to the cost of the mission. One consideration is that an opportunity will be gained to show foreigners the progress Japan's navy has made in late years, and the stage of skill and discipline that her seamen have attained. Another advantage will consist in the important additions to the knowledge and experience of Japanese naval officials which such a cruise will afford; and, lastly, the act of thus sending home the survivors of the *Ertugroul* will be appreciated by Turkey as an indication of this country's kindly intentions towards her.

THE SENATE.

THE appears to be some probability that a few more days of life will be accorded to the Senate. The reason of this delay is said to be connected with the revised Criminal Code. The Cabinet has received the revised Code from the Senate, and in four or five days will have concluded its deliberations as to which of the Senate's suggestions should be adopted and which rejected. It is thought desirable that the Code should then pass once more through the hands of the Examining Committee of the Senate, and for that purpose the dissolution of the latter body is to be postponed for a week, or more probably a month. We were premature, therefore, in writing the Senate's obituary notice.

THE ROLL OF THE HOUSE OF PEERS.

THE House of Peers is now made up as follows:—

Imperial Houses	9
Dukes and Marquises	31
Members elected by Counts, Viscounts, and Barons	105
Imperial Nominees	56
Members chosen from among maximum tax payers	45
Total	236

Taking the number of members on the basis of the 7th article of the Law of the House of Peers, it may be said that the number can be increased to 272, so that 25 seats are still left for Imperial nominees.

A QUESTION OF JURISDICTION.

ACCORDING to Tokyo papers some doubt appears to have arisen as to the office having jurisdiction in connection with the wreck of the *Ertugroul*. The Yokohama diver, Masuda Mankichi, who started to begin operations for the recovery of bodies at the scene of the disaster,

first applied to the Wakayama Prefectural Office, but was referred to the Hyogo Prefectural Office, which in turn sent him back to Wakayama. After various essays, applications to the Naval and Military Departments having likewise failed, Masuda learned that the Home Office had invested the Marine Bureau with powers in the matter, and on applying to the Bureau was told finally that the Wakayama Prefectural Office would deal with his application.

CHOLERA RETURNS.

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	7,577	5,038
Hyogo	2,490	1,930
Osaka	977	601
Hiroshima	1,337	919
Yamaguchi	1,862	1,476
Kagawa	886	473
Fukuoka	5,041	1,927
Oita	1,016	603
Saga	636	377
Kumamoto	1,017	493

The total number of cases and deaths in the following Cities and Prefectures not included in the above, from the commencement of the epidemic to the 8th instant, are:—

City or Prefecture.	Cases.	Deaths.
Tokyo	3,524	2,433
Kanagawa	2,573	1,499
Nagasaki	3,189	1,344
Ibaraki	57	10
Gumma	136	95
Kagoshima	254	159
Nara	271	200
Kyoto	776	532
Wakayama	636	606
Fluine	637	128
Chiba	1,108	727

CONVOCAION OF THE DIET.

Tokyo journals state that the Imperial decree convoking the Houses of Parliament will not be issued till the budget of the 24th fiscal year has been finally settled. The budget has already been amended five times, and other amendments are said to be still in contemplation, the intention of the Cabinet being to lay before the House such estimates as shall be least provocative of opposition.

THE NINE TOKYO NEWSPAPERS.

THE *Choya Shimbun* has appealed against the sentence of minor imprisonment and fine pro-

nounced upon it and eight of its metropolitan colleagues, for publishing a memorial attacking the sixty-seventh article of the Constitution. It has employed Messrs. Oyagi Bichiro and Hirata Joye to conduct the appeal. The law holds a journal blameless in respect of the publication of any matter which can be proved to have been inserted for the public good. We trust that the *Choya* may succeed in establishing that fact.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 4th instant were as follows:—

Convertible Notes.	Reserves and Securities.
YEN.	YEN.
Notes issued	Gold coin and bullion, 24,092,247
75,795,093	Silver coin and bullion, 19,424,726
	Public Loan Bonds, 13,476,450
	Treasury Bills
	Government Bills
	Other securities
	Commercial Bills
75,795,093	75,795,093

Of the above total issue of notes, the sum of yen 6,328,224 is in the treasury of the Bank, and yen 69,467,769 in actual circulation, the latter showing an increase of yen 1,064,586 as compared with yen 68,403,183 at the end of the previous week.

THE JAPANESE CONSULATE AT MANILA.

THE *Choya Shimbun*, noting the recent appointment of Mr. U. Yatabe, Consul at Manila, to a post in the Patents Bureau of the Agricultural and Commercial Department, conjectures that this step is preliminary to the abolition of the Consulate. The chief products of the Philippine Islands are sugar, hemp, and tobacco, the exports amounting in value to over yen 5,000,000 and the imports to yen 3,400,000. The trade with Japan is considerable, but the heat is much felt by Japanese.

THE JAPANESE PLENIPOTENTIARIES.

THE *Mainichi Shimbun* denies the rumour that Counts Goto and Saigo have been appointed plenipotentiaries for the new treaties. Our contemporary cites the opinion of "a certain person" who points out that, as the negotiations must take place in Tokyo, Viscount Aoki will always be able to avail himself of the advice of his brother Ministers. Plenipotentiaries therefore are not needed. But the *Mainichi Shimbun* is wrong.

THE IMPERIAL NOMINEES TO THE HOUSE OF PEERS.

COMMENTING on the nominations to the Upper house, the *Fiji Shimpō* says the list of the Imperial nominees has not yet appeared in the *Official Gazette*. The names published in the Tokyo journals do not include all those honoured, consisting only of Tokyo residents. The true list comprises such additional names as those of Mr. Fujita Denzaburo and Mr. Hirose Saitsei of Osaka, and will be issued in a day or two in the *Official Gazette*.

AN OFFICIAL PHENOMENON.

JAPANESE officialdom, as described by the critics who love to assail it, is a very deformed and ugly affair, but we were not quite prepared to learn that its organs had been thrown so entirely out of gear that the functions of one are performed by another. Such appears to be the case, however. "The eagle-eye of obsequious officialdom," says an eloquent local contemporary, "smelt an opportunity for prosecution."

THE PARACHUTIST IN JAPAN.

As will be seen from our advertising columns Mr. Percival Spencer, whose daring parachute feats have been noticed frequently of late in China and other eastern papers, intends to drop from his balloon at the Public Gardens on Sunday next. If fine weather be experienced, Mr. Spencer should have a big crowd of spectators.

SIGNOR MAJERONI.

We are glad to be able to inform our readers that, with the valuable co-operation of our leading lady and gentlemen amateurs, Signor Majeroni will appear at an early date in the successful farcical comedy "Our Italian cousin," the first rehearsal of which took place on Wednesday night.

THE SENATE ("GENRO-IN").

THE Senate came to an end on the last day of September, 1890. It held its final session, says the *Fiji Shimpō*, on that day, concluding such business as was capable of conclusion, abandoning such as demanded any lengthy discussion, and forwarding the whole to the Cabinet. The announcement of its dissolution was then read formally, and the Senators separated, some to become members of the House of Peers, some to fill other offices to which they have been appointed, and some to retire upon the pensions allotted to them. The Senate had been in existence for fifteen years and five months when its death warrant was issued. Looking back to the time when it was created and to the hopes suggested by the fact, we become vividly conscious once more of the small interval that separates constitutional Japan from the days of her early apprenticeship to Western civilization. The Imperial Decree calling the Senate into existence ran as follows:—

(COPY OF IMPERIAL DECREE)

At the time of Our ascension of the Throne, when We became the Head of affairs, We summoned together the whole of Our servants, and on five several points took oath before Heaven:—We determined the welfare of the country, and sought after the means whereby to ensure the peace and tranquillity of the people. By the favour of the spirit of Our ancestors, and also by the exertions of Our servants, We have happily attained the slight degree of tranquillity of the present day. But, upon consideration, We find that Our assumption of power dates from no far distant period, and that, as regards the pacification of the interior of Our country, there are by no means few matters that have to be set on foot, or freshly regulated. Wherefore, We, now extending the spirit of Our oath, do here found the *Genro-in*, and thereby widen out the fountain head of the establishment of laws, and do create the *Dai-shin-in*, and thereby render firm the powers of careful judicial procedure:—We likewise call together the local officials, causing them to state the opinions of the people, plan the public welfare, and, by degrees setting on foot a well founded political fabric for Our country and homes, are desirous that each and every one of you should partake of its benefits.

Do you, then, abstain from becoming habituated to olden customs through adhesion to former ideas, and beware, likewise, of paying little heed to your advancing steps, or of being slow to act. Give, then, due attention to Our words, and use your best endeavours in regard thereto.

The publication of this Decree on April 14th, 1875, was hailed with much satisfaction by the nation. The vernacular press eulogised the wisdom and liberality of the Government, and wrote as though the morning of representative institutions had dawned for Japan. The *Choya Shimbun*, for example, then as now an exceptionally outspoken journal, published the following pæan:—

Rejoice our 30,000,000 of brethren and dance with joy! Give thanksgiving to the kindness of our Emperor for having granted to us, in Imperial Decree of the 14th of April, the means of raising ourselves to the level of enlightenment of European and American peoples.

Japan is situated on the easternmost edge of Asia and is a neighbour of China; therefore all her customs and laws were originally derived from China, and her people are accustomed to an absolute monarchy and to live under a despotic administration. We have been perpetually humbled and have never received freedom of conscience, and such being the case have always proved unequal in power to Europe and America. It seemed, indeed, as if like China, humiliation was

to be our lot. Recently, however, the errors of our administrative system became manifest, and we have introduced such reforms as seemed advisable; but the old forms of despotism still lingered, and Japan was like a convalescent slowly recovering from a tedious illness. There are among us those who alleged that an absolute rule was a good form of Government, and that in seeking to change it our people were unnecessarily anxious. But H. M. the Emperor in his benign wisdom, penetrated with the excellent governmental systems of other peoples, has consulted with his advisers, and by the decree which we now celebrate has conferred happiness and satisfaction upon the people of his Empire.

Henceforth our nation will grow in zealotness, in power and wealth. We shall not be deemed inferior to European peoples and the lineage of our Emperor will be rendered everlasting.

It seems strange to us, guided by our present knowledge, that so much practical importance should have been attached to an event of really small moment in the history of Japanese constitutional development. We cannot but think that, even in those comparatively dark days, experience ought to have furnished materials for a more appreciative view of the situation. The first assembly convoked after the Restoration, not without flourish of official trumpets or voices of popular applause, was exclusively composed of hereditary nobles and their esquires. A more distinctly aristocratic and conservative body of men never came together. Almost immediately they proved themselves entirely out of touch with the spirit of the time, and were incontinently sent home without having accomplished anything beyond the provocation of some ridicule. Neither in the calling nor in the dismissal of this assembly did the faintest whisper of the popular voice make itself audible. Then followed a proposal to hold periodical meetings of the local officials, a measure compared by foreign observers to the assemblies of burgesses of towns in England. It is singular to find, said these observers, that in Japan freedom of the press is followed by the conferring of political power on the people, whereas in England the burgesses of towns were assembled long before the birth of the first principles of liberty of speech, and even so late as the reign of GEORGE III. the laws enacted and the prosecutions directed against the press were of the fiercest kind. Anyone now comparing the Japanese *Chihokan Kaigi* (deliberative meeting of local officials) with the English assemblies of burgesses in mediæval times, would be deservedly ridiculed. The members of the Japanese body were officials holding office from the Government and in no sense representing the people, except in so far as their experience as local governors enabled them to give expression to the needs of the districts they presided over. Their periodical assembly in the capital to advise the Government was nevertheless an evidence of the latter's desire to widen the sphere of counsel, and establish closer touch with the body of the nation. More than this could scarcely have been said of the Senate either. It consisted originally of certain members of the Government who had previously

formed the Councils of the Left and Right (*Sa-in* and *Yu-in*), but by degrees additions were made to its numbers chiefly from the ranks of officials temporarily deprived of executive functions. In fact men soon came to recognise it as a convenient retreat for officials of standing whose retirement from active service was suggested by reasons of State. Called into being, as we have seen, on April 14th, 1885, the ceremony of opening it did not take place until the following July, when the EMPEROR in person delivered a speech to the members, declaring:—"We now establish you as a Legislative Body. Let each one of you act harmoniously with his colleagues and discharge fully the duties of his office, earnestly seeking to promote the welfare of all classes of the people." Naturally this gracious commission augmented the hopes fixed by the nation on the newly constituted body. But when the Senate brought its first session to an end on the 12th of August, and when men observed that of the numerous proclamations and notifications issued during the four months of its deliberations, not one had proceeded from it, they began to understand that its functions were limited to advice or revision, and that it was not to figure openly as a legislative body. Less than a month after the publication of the Decree calling it into existence, the Senate had petitioned that no law should be made without its consent, thus seeking to raise itself to parliamentary rank. What answer, if any, the Government made to this petition we do not know, but it is certain that in practice the Senate's consent was never considered a necessary preliminary to the issue of a law. The great majority of the important laws enacted during the fifteen years of its existence did, as a matter of fact, pass through its hands, and not a few projects of law originated from it, but inasmuch as it was not even consulted in some cases there could be no doubt that it possessed neither the recognised power of veto nor that of sanction. Its nondescript character never underwent any improvement. In the great re-organization of the Government at the commencement of 1886, when Count ITO became Minister President of State, the Senate was not even mentioned. It continued to receive accessions to its ranks in the shape of Prefects, Governors, Vice-Ministers, and other officials for whose services in an executive capacity the Government had no immediate need, and it continued also to restore to active life from time to time such of its members as the Authorities saw reason to employ. Thus, coming soon to be regarded as a species of shelf upon which "men with claims" could be placed and kept for future use, the *Genro-in* naturally ceased to impress the nation with any strong sense of respect. Nevertheless it worked on steadily, often introducing useful amendments into projects of law submitted for its

examination, and sometimes managing to postpone, temporarily or permanently, enactments which would have proved distasteful to the nation. The number of Senators was not fixed, nor did the Government think it necessary to set a publicly determined limit to it. At the time of dissolution the Senate contained 63 members, of whom 27 are understood to have been nominated to the House of Peers, and others may still have that honour. Many conjectures were formed as to the method which would be adopted by the Government in dissolving the Senate, but the question was finally disposed of last June by the issue of an Ordinance containing Pension Regulations, which would evidently apply to the Senators equally with all other officials. According to these Regulations, three classes of persons are eligible for pensions: first, officials retiring by permission after having attained the age of sixty and served at least fifteen years; secondly, officials retiring by permission, after a like minimum of service, owing to injuries incurred or sickness contracted in the discharge of their duties; and thirdly, officials whose office is abolished after they have served fifteen years at least. The amount of the pension varies from $\frac{1}{4}$ th to $\frac{1}{3}$ th of the salary received at the time of retirement, and there is a provision that though pensions cease to be payable should their recipients be re-appointed to office, this rule does not apply to the case of pensioners who become members of lawfully constituted assemblies. Such Senators, therefore, as are nominated to the House of Peers by the EMPEROR, will receive the annual allowance of 800 *yen* attaching to membership of the Diet, in addition to a pension varying from one-fourth to a little more than one-third of their salary as Senators. Thus the Senate disappears from the Japanese body politic after a more or less useful existence of nearly fifteen years and a half. Its history shows that it had several illustrious Presidents and many able members, but on the whole the nation will remember it chiefly on account of the contrast between the hopes inspired by its creation and the disappointment caused by its performance.

A BATCH OF OFFENDING NEWSPAPERS.

A JUDGMENT of unusually wide effect has been pronounced against Tokyo newspapers. Last month a political association called the *Kansei Nijuni-shu-Kai* (Society of Twenty-two provinces of Kansei) prepared two memorials, one addressed to the Cabinet, the other to the Minister President of State. The former was translated in these columns; the latter we hesitated to reproduce, deeming it an obvious breach of the laws of the land. Copies of both memorials seem to have been forwarded by the Kansei Association to a large number of vernacular newspapers, for, almost simultaneously with their re-

ceipt by the Cabinet, they appeared in print in various parts of the Empire. Now, according to the Press Regulations any newspaper publishing, without official permission, a memorial addressed to any branch of the Government exposes itself to punishment. This rule, whether it be in itself wise or unwise, is perfectly easy to obey, and violations of it have always been punished as indicating more or less indifference to the dictates of the law. In the case we are considering, however, the strong probability is that an offence committed by so large a number of newspapers would not have been visited by the imposition of any actual penalty, and that a reprimand would have been held to meet the requirements of the case. This view is borne out by the fact that no official notice whatever has been taken of the publication of the first memorial, which recommended the resignation of the Cabinet.* It was a prettily worded and somewhat romantic document, actuated avowedly by a desire to see the continuity of history preserved, and by solicitude for the fair fame of the members of the Cabinet. The SHOGUN had, of his own free will, surrendered his executive authority into the hands of the EMPEROR at the time of the Restoration, thereby preventing bloodshed and disorder, and earning the gratitude and applause of the nation. The *Daimyo* had, of their own free will, surrendered their fiefs to the EMPEROR at the time of the Centralization of the Government, thereby exciting the admiration and wonder of the world. Moreover, speaking generally, wisdom prescribes that when men have achieved fame, they should retire gracefully on their laurels. Therefore the Cabinet Ministers were urged to complete the record, and to consult their own reputation by tendering their resignations to the EMPEROR on the eve of the institution of parliamentary government. All this was within the bounds of fair criticism, and, as we have said, no official notice was taken of its publication. But the second memorial touched on very different ground. Our readers will doubtless remember the much discussed sixty-seventh article of the Constitution, which says:—"Those already fixed expenditures based by the Constitution on the powers appertaining to the EMPEROR, and such expenditures as may have arisen by the effect of law, or that appertain to the legal obligations of the Government, shall be neither rejected nor reduced by the Imperial Diet, without the concurrence of the Government." With regard to this the Kansei memorialists raised a curious point. After setting forth, with some insistence, the fact that the Government is just as much bound to abide by the Constitution as are the

* Owing to some misunderstanding this memorial has been described as the cause of the journals' punishment, but in truth it had nothing to do with the affair.

governed, the memorialists declared that by this sixty-seventh article the Government is virtually set above the EMPEROR, since its concurrence can enable Parliament to reject or reduce expenditures required for the exercise of the Imperial Prerogatives. The memorialists expressed confidence that the extraordinary power thus vested in the Government ran no risk of being abused by men such as the present Ministers of State, whose "loyalty and executive ability will go down as patterns to a hundred generations." But evil Ministers might at any moment be found at the helm of State, and then national misfortunes might be brought about by violations of the Imperial Prerogative. "The Constitution," they proceeded, "is sacred as the basis of national stability to all ages. It should be equally inviolable by high and by low. But such a provision as this sixty-seventh article makes everything depend on the men in power. The polity stands no longer on a foundation of laws, but on a foundation of persons. To receive from the SOVEREIGN, and to exercise, such independent power does not become subjects. Your Excellencies should restore this power, and make it clear that no such independent authority is vested in the Government by the Constitution. The official occupying the position of Minister President of State, stands between SOVEREIGN and subject. On him devolves the duty of adopting a far-seeing policy. But such an article as this sixty-seventh, which violates the Imperial Prerogative and endangers the welfare of the nation, should be corrected by restoring the independent power it confers. This duty devolves upon all the Ministers in office at the time of the promulgation of the Constitution; on Counts KURODA, ITO, OKUMA, INOUE, YAMADA, MATSUKATA, and OYAMA, and on Viscounts MORI and YENOMOTO. Your Excellencies now know the wrong, and should at once take steps to correct your previous error, so that the nation may be saved from long misfortune." Such was the memorial, remarkable as the first protest publicly uttered by any Japanese subject or subjects against the terms of the Constitution. In the preamble to the Constitution, His Majesty the EMPEROR makes the following declaration:—"When in the future it may become necessary to amend any of the provisions of the present Constitution, We or Our successors shall assume the initiative right and submit a project for the same to the Imperial Diet. The Imperial Diet shall pass its vote upon it, according to the conditions imposed by the present Constitution, and in no otherwise shall our descendants or our subjects be permitted to attempt any alteration thereof." It is evident, therefore, that the Kansei memorialists acted in distinct violation of the terms of the Imperial Decree forming the

Preamble to the Constitution, and that the newspapers publishing the memorial committed a grave offence. After considerable delay and debate their punishment has been decided; namely, a month's confinement without labour for the publishers and editors, together with a fine of 25 *yen*. Another apparent penalty has also been imposed, namely, the dispersion of the type used in the printing of the memorial. The language employed in stating this penalty is obscure, and an idea prevailed at first that the confiscation of the newspapers' type and plant was intended. But further enquiry shows that nothing is contemplated except such steps as will prevent further printing of the offending matter with the same type—namely, the "distribution" of the latter.

Such are the facts of an affair which has brought a criminal sentence on the staff of nine newspapers: the *Nichi Nichi Shimbun*, *Mainichi Shimbun*, *Nippon Asahi Shimbun*, *Tokyo Shimpō*, *Kokumin Shimbun*, *Ukyo Shimbun*, *Choya Shimbun*, and *Tokyo Koron*. The sentence seems severe, for though minor imprisonment involves nothing more than confinement without labour of any kind, it is still imprisonment. One cannot but think that a heavy fine would have met the requirements of the case. We trust that the day is not far distant when censorship of the press will be altogether dispensed with in Japan. The world does not reason about these matters: it only notices the broad fact that journalists are fined and imprisoned, and infers an arbitrary administration and an imperfectly developed state of public opinion.

RECKLESS SLANDER.

AS far as possible we make it a rule not to waste our readers' time or our own space by replying to the false charges preferred against us by our local contemporaries. Anybody gifted with an ordinary sense of justice must at once perceive the absurdity of these accusations, and to the opinions of people not thus gifted we are naturally indifferent. But there are cases where silence cannot be properly preserved, and such a case has just occurred. In its issue of the 30th ultimo the *Japan Gazette*, after briefly describing the meeting held by the foreign residents to protest against Treaty Revision, proceeds thus:—

Thereupon it was discovered that a bitter insult had been offered to Japan, and the Japanese were advised that they would do well to resent it. The advice was couched in words calculated to provoke their anger; it was translated into Japanese, and it has had its effect. A visitor to Yokohama to-day will see the police doubled throughout the Settlement; nightly meetings, got up by paid agitators sent down from the Capital to promote discord, which the native merchants and gentry of the place, be it said to their credit, abstain from attending; the minds of men and women perturbed by anonymous letters and inflammatory speeches, threatening assassination; the houses and business places of some of the residents guarded night and day by

special constables; men meeting in the streets, and, in lieu of the usual greetings, congratulating one another that they are still alive; anxious women afraid to accept invitations to social gatherings for fear of threatened dynamite explosions, and trembling in their homes all day until the returning footsteps of their husbands reassure them and dispel their apprehensions, only to be reawakened on the following morning. This is no over-drawn sketch; it is the actual state of affairs; and the literary trickster who is responsible for it all looks calmly on, and says the Japanese do well to be exasperated. But for the exasperation of his countrymen he has no concern, he deifies it as a parody of civilization. Let him be under no misapprehension; he will have his deserts. So long as Yokohama exists, his action will never be forgiven or forgotten.

With this wildly exaggerated and painfully humiliating picture of a foreign settlement thrown into a state of terror and social disorganization by the vague threats of two or three *soshi*, we have nothing to do. It is plainly the outcome of a distraught imagination. The points which deserve reference are these:—First, that advice calculated to provoke Japanese anger was given by this journal. Secondly, that the advice was translated into Japanese. Thirdly, that being so translated, it produced grave effects. And, fourthly, that the effects are "nightly meetings in Yokohama got up by paid agitators sent down from the capital to promote discord," the sending of "anonymous letters" and the delivery of "inflammatory speeches, threatening assassination;" the doubling of the police in the Settlement; the posting of guards at the houses and business-places of some of the residents, and in general a reign of terror throughout Yokohama. Now let us see what are the simple facts of the case. The meeting of foreign residents was held on the 11th of September, and the article said to have caused all this commotion appeared in the *Japan Daily Mail* of September 17th, that is to say, on the sixth day after the meeting. There can be no manner of doubt as to the particular article impugned, because it has elsewhere been specifically indicated by the *Japan Gazette*, and because in no other article of ours has any attempt been made to analyse the sentiments of the Japanese people in respect of the Yokohama meeting. It was an article more than one half of which was devoted to vindicating the actions of the British merchants against the attacks of the Japanese press, while the remainder contained an admission that the Japanese, from their point of view, had reason for indignation, an explanation of the causes that justified their indignation, and a warning that to yield to their angry feelings would be to injure the interests they had at heart. We do not, however, pause to discuss the actual language of the article or to show, what must have been patent to every one reading it, that it contained nothing justifying the character assigned to it by the *Japan Gazette*. Our purpose is sufficiently served by directing attention to the date of the article's publication—September 17th. Now in the five days separating the 17th from the day on which the meeting was held,

the Resolutions adopted at the meeting and the general nature of the demonstration had been discussed by nearly the whole vernacular press in terms of greater or less umbrage and indignation. It was, in truth, by way of reply to these utterances that our article was penned, as its opening sentences distinctly stated. Thus the charge that it caused the indignation of the Japanese is disposed of by the fact that it was itself evoked by journalistic expressions of that indignation. Proceeding to further details, there appeared in our issue of the 16th instant—i.e. the day before the publication of the impugned article, the following editorial note:—

The *Choya Shimbun* has the following:—"Great indignation has been caused among thoughtful persons in Tokyo by the meeting held by British subjects opposed to treaty revision. Messrs. Nagao Kageshige and Kobayashi Sentaro, holding that the action of the foreign merchants of Yokohama in opposing treaty revision is an outrage to Japan's national dignity, have sent to the Japanese traders of Yokohama a very strong letter urging them, if they desire to show their patriotism, to adopt the same plan as that pursued on the occasion of the silk dispute, namely, to form a combination among themselves and put a stop to all transactions with men who engage in attempts to injure Japan. If this plan be adopted, the writers think that the association of foreigners will soon be dissolved. Other persons in Tokyo have organized an association called the *Kinkisha*—brocade club, in allusion to the flag of Japan—three members of which, Messrs. Soji Tokusaburo, Inui Rokuro, and Kaneko Ryoichi, are to proceed to Yokohama and interview the leaders of the movement on the British side, at the same time organizing a large lecture meeting with the object of commercially ostracizing Englishmen."

The *Shogyo Shimpō* says:—"In consequence of the decision to put an end to treaty revision, of which movement English residents of Yokohama were the promoters, two gentlemen of Yokohama, Messrs. Sakai and Yenomoto, organized a movement to open communications with foreigners on the subject. Fortunately at the Kodo Club in the same place a meeting of committee-men was opened on the 13th instant, and these, being of the same way of thinking as Messrs. Sakai and Yenomoto, decided to choose representatives and approach the foreign committee. Steps are now being actively taken to arrange preliminaries."

From these extracts it will be seen that great indignation was described as existing in Tokyo before the appearance of our article; that a plan had already been formed to boycott the foreign merchants who had taken part in the anti-revision demonstration; that an association had already been organized to appeal to public opinion against the action of foreigners, and that the lecture meeting which we are accused of having caused, had already been planned. These simple and incontrovertible facts completely dispose of the false accusations preferred against us. But there is one more point to be noted. An article published in an English local paper can obviously exercise little influence on the Japanese unless it is translated into Japanese and reproduced by the vernacular press. Plainly conscious of this, the *Japan Gazette* is careful to say:—"It was translated into Japanese and has had its effect." Now the article was not translated or reproduced by any vernacular newspaper in Tokyo.

So, then, the case stands thus: an article published in reply to the angry utterances of the Japanese press is accused

Original from

of having provoked those utterances; an article published the day after a state of indignation had been declared by the Japanese newspapers as existing in Tokyo, is accused of having caused that indignation; an article published after arrangements for holding a lecture meeting had been publicly announced, is accused of having been the origin of that meeting; an article published four days after constables had been detached for the protection of the promoters of the Yokohama Meeting, is accused of having brought about the state of affairs which resulted in such an exceptional measure of protection; an article which was never translated or reproduced by the vernacular press is said to have been translated into Japanese and, by being thus brought to the notice of Japanese readers, to have produced effects of the gravest and most alarming character.

We need not pursue the subject. A lying slander of the most malicious description has been uttered by the *Japan Gazette*. To be the object of such slanders cannot cause us any concern. To be their utterer is to incur the scorn of all honest men. How far the judgment of persons resorting to these criminal inventions is to be trusted in respect of the important international questions which they habitually undertake to discuss, we leave their patrons to decide.

AN EASY EXPLANATION.

WE observe that persistent efforts are still made to establish the existence of a glaring discrepancy between Count OKUMA'S scheme of Treaty Revision and Viscount AOKI'S. A knowledge of the two schemes ought, one imagines, to precede any honest attempt to compare them. No such knowledge, however, is possessed by the critics. What the Yokohama public were told of Viscount AOKI'S programme by the most active promoters of the Meeting of the 11th ultimo was both fragmentary and erroneous, and that, of course, represents the sum of this community's information. We should obviously be precluded, however, from anything like an accurate comparative analysis of the present scheme of Treaty Revision even though we possessed sufficient acquaintance with its details, which we do not. To the promoters of the Yokohama Meeting and their journalistic supporters, we abandon the pastime of entering the lists of discussion equipped with ignorance.

The single item on which a charge of grave discrepancy is preferred against the schemes and an accusation of gross inconsistency against us—who are assumed to have discussed and advocated Viscount AOKI'S programme, though in truth we have never attempted any such task—the single item is that the guarantee as to employing foreigners in the capacity of Judges was included in Count OKUMA'S programme

and is excluded from Viscount AOKI'S. That much and that much only is known. Now we have not the slightest hesitation in admitting that we pronounced Count OKUMA'S terms to be, in our opinion, the best which Japan was then entitled to claim. We have not the slightest hesitation in admitting that we denounced in very strong language the opposition offered to those terms. We have not the slightest hesitation in admitting that we failed to detect any violation of the Constitution in the granting of such terms by Japan. We have not the slightest hesitation in admitting that we praised the Judges guarantee, not only as furnishing an institution which would stand between Japan and international disputes, but also as providing an excellent adjunct to the educational aids of the Japanese Bench. We have not the slightest hesitation in admitting that we ridiculed the idea of Japan's expecting foreign Governments to abandon their position of vantage unconditionally. All this we admit freely. We go further also. We say that we regard the Judges guarantee as the best solution ever suggested, and that we bitterly regret the short-sighted and unstatesmanlike policy which betrayed the negotiators of 1886 into so elaborating and disfiguring the original basis of Revision that it became wholly incapable of acceptance or practical execution. Then and then only the opportunity existed of carrying through the Judges guarantee in a satisfactory form. But the opportunity was lost irrevocably.

What then is the present position, and where are the tremendous inconsistencies of which we have been guilty? The Judges guarantee has passed hopelessly out of the field of practical politics. No Japanese Cabinet could venture to grant it, and no foreign Government, knowing Japan's condition, would think of demanding it. To insist upon its preservation would be the purest futility. What we or any other foreign journalist may think about the conflict between such a guarantee and the Constitution, is no longer of the smallest consequence. The Japanese nation has decided the question for itself, and unquestionably it has the sole right to decide it. The decision is, we believe, very unfortunate. The Judges guarantee would have satisfied foreigners more fully than any other guarantee can, and would have helped Japan both at home and abroad. But we are not children to cry out for the moon, and the moon is no farther from our grasp than is the Judges guarantee from being tolerated by the Japanese nation. If the pleasant relations between foreigners and Japanese are to continue, the Treaty-Revision problem must be disposed of, and to cling to an obviously impossible method of solution would be to play the part of mere obstructionists.

There is another point which must be noted, namely, the value of the last form

of the Judges guarantee from a foreign standpoint. Judges of foreign origin were to sit in the Supreme Court only. In order to reach that Court the question of an error of law by a lower tribunal would have had to be raised. An error of fact would not have constituted a valid ground of appeal. It is asserted that in practice this limit could generally have been evaded. But HER MAJESTY'S Government did not think so, and not thinking so, came to the conclusion that the Judges guarantee, as proposed last year, was illusory and unworthy of recognition by a Great Power. Yet even in that reduced form the Japanese nation revolted utterly against the guarantee. How are these facts to be dealt with—first, that the British Government declines to attach any value to the presence of a few foreign experts on the Bench of the Supreme Court; secondly, that Japan is finally resolved not to have aliens on her Bench at all? Can anything be more unjust than to accuse us of contradiction because we last year fought for a scheme which we this year recognise to have passed out of the field of practical politics?

There is yet another point; our often repeated statement that Japan cannot reasonably expect Foreign Governments to abandon their position of vantage unconditionally. It is very amusing to see how our traducers treat this attitude of ours. Whenever we have occasion incidentally to express such a view, they cry out with feigned astonishment, "Hulloa! Here is a new position taken by the *Japan Mail*. It has changed its tone." Whenever, on the contrary, they hope to convict us of inconsistency, then they freely quote our former declarations as to the uselessness of Japan's seeking to obtain what she wants gratis. These controversial vagaries are of no importance. The plain fact is that we have never advocated the unconditional surrender of Consular Jurisdiction, and that we do not now advocate it. The course of events has precluded the guarantee which, of all others, we should have liked to see adopted. The course of events has gradually narrowed the circle of possible guarantees until very few are left to choose from. But we have perfect confidence in the ability of the British Government to safeguard the interests of its subjects, and we do not for an instant believe that any reckless sacrifice of those interests is likely to be made by the Foreign Office. What is more, our information as to the present basis of Treaty Revision convinces us that the apprehensions entertained by some foreign residents are illfounded and chimerical.

HORSFORD'S ACID PHOSPHATE MAKES DELICIOUS LEMONADE.

A teaspoonful added to a glass of hot or cold water, and sweetened to the taste, will be found refreshing and invigorating.

INSURANCE SOCIETIES AND CHILD-MURDER IN ENGLAND.

THE Bishop of PETERBOROUGH has carried the second reading in the House of Lords of a Bill to amend the law relating to insurances on the lives of children. The objects of the bill are two: (1) to limit the sum for which a child's life may be insured (from £4-£8), (2) to secure that the money shall not come into the hands of the parents. It is a terrible disgrace to a civilised country that such a law should be necessary. That it is necessary, has been shown by the most incontestable evidence—derived from four or five trustworthy sources. The testimony collected by the Bishop of PETERBOROUGH and presented in the House of Lords went to show that there are English fathers and English mothers who cannot be trusted not to murder their children; who do not possess even the affection of brutes. Judges, doctors, and coroners are unanimous in asserting that child-murder is common in England; and that the chief object in perpetrating the crime is the addition of a few pounds to the weekly earnings of the parents. Mr. Justice DAY describes the societies which insure children's lives as seemingly "instituted for the perpetration of murder." Mr. Justice WILLS "is unable to say how strongly he feels about societies which tempt people to work the destruction of their own children." A medical man in Birmingham says that, to his painful knowledge, "it is absolutely true that hundreds of children are murdered in that town every year." Another declares himself satisfied that "any number of children are murdered for the sake of the insurance money." Coroner after coroner tells the same story. The child-murder which the new bill is designed to prevent is not such as usually forms the subject of a legal inquiry. It is murder by neglect, by wilful exposure to damp and cold, by supplying insufficient or unwholesome food, by allowing incipient diseases to do their cruel work unchecked, or by failure to protect a child from the danger of infection.

This trade in human life is infinitely more ignominious than the infanticide of China of which we have heard so much of late. In the case of the Chinese, the crime is committed with a semi-religious motive. They deem it a disgrace to be born a female, and think death preferable to the prolongation of an ignominious existence. Much as the Chinaman loves money, what we regard as his greatest crime—infanticide—is perpetrated with no sordid motive. But in Europe, side by side with all that is best and most refined, there exist even in this progressive age elements of barbarity for which we can find no parallel in non-Christian records. If the higher types of human nature are developing into gods, the lower ones are rapidly becoming

devils. The struggle for existence in the West is waxing fiercer and fiercer, and there is an ever-growing class of men and women prepared to sacrifice every moral feeling they possess on the shrine of what they deem to be the necessities of the time. The Bishop of PETERBOROUGH'S bill will doubtless prove a powerful check on the crime it is designed to prevent, and hence will meet with the approval of the nation; but the state of mind which renders child-murder for the sake of money a temptation will, we fear, remain unaffected by the new legislation. Baffled in one direction, it will but turn to another. Some new form of fiendishness will be devised. There is no denying that some of the social evils which have developed during the past ten years are too deeply rooted, and too much the outcome of circumstances beyond official control to be remedied by even the wisest legislation. To us the existence of a necessity for such a bill as that brought forward by the Bishop of PETERBOROUGH, suggests questions of the gravest import as to the future of the sadly over-populated places where the perpetrators of these dreadful crimes are condemned to reside. How many of the characteristics of modern crime may be traced to the intensity of the struggle for survival that exists in the West, is a question which forces itself on the attention of moralists and sociologists alike at the present time. That there is much in the social soil of our modern Western life to aid the growth of crime is admitted on all sides. But as yet no effectual remedy has been found. We trust that the Bishop of PETERBOROUGH'S attempt to suppress child-murder will open men's eyes to the fact that in the lower strata of humanity there exist evil powers and tendencies of sufficient strength to shake the whole fabric of society.

CURRENT LITERATURE.

A few of the great English journals, notably the *Spectator*, publish literary supplements once a month or once in six months, and in these supplements are to be found materials for forming a trustworthy judgment of the subjects that agitate the public mind at the moment and the style that finds favour in educated circles. In Japan this interesting innovation has not as yet made much progress. Still, it has been established, and notable among examples of it is the semi-annual supplement of the *Kokumin-no-Tomo*, a periodical which commands some of the best literary talent of the country. The summer supplement is now before us, and we proceed to summarise its lighter portion for the sake of readers interested in the study of modern Japanese literature.

Mr. YODA HYAKUSEN, one of the most popular *literati* of the older generation, contributes a historical sketch well worthy of perusal. About the middle of the fifteenth century, in the reign of the Emperor GO-HANAZONO, there lived a recluse in a suburb of Kyōto. Some five or

six and fifty years of age, he wore the dark dress of a priest, but his mien and a sword scar on the left temple, showed that the stole and the alb had not always been his companions. One autumn evening, a young man of refined appearance presented himself at the hermit's door, and was received by the latter as his nephew. The youth came to inform his uncle of the assassination of the Shogun YOSHINORI by AKAMATSU MAN-YU, and of the latter's suicide on being pursued by the Shogun's troops. This intelligence moved the hermit so deeply that his nephew pressed him for an explanation, and there ensued a long conversation, from which the following story is unravelled:—There lived at Chihaya, in the Province of Kawachi, a great grandson of the renowned loyalist general KUSUNOKI MASASHIGE. His name was MITSUMASA, a soldier of proved courage and eminent ability. On one occasion he displayed rare zeal and capacity in fighting for the cause of the Imperial House but the campaign proved unsuccessful on account of the treacherous conduct of his associate HATAKEYAMA MITSUMASA, who was only too glad to conclude peace with the enemy, the House of ASHIKAGA. From that time KUSUNOKI lived in strict retirement at Chihaya, the original seat of his family. There he divided his time between books and hunting. One day going out hunting, he was urging his horse over a mountain road, when he observed before him a traveller assailed by two highwaymen. He hastened to succour the wayfarer, and speedily put the thieves to flight. The traveller, while thanking his deliverer, regarded him with surprise and asked whether he was not the celebrated KUSUNOKI MITSUMASA. Answered in the affirmative, he proceeded to explain that he himself was one of the surviving followers of NITTA YOSHIMUNE, who had fallen fighting in the cause of the Nancho line of the Imperial House, and that he had come to Chihaya expressly to plan with KUSUNOKI the subjugation of the House of ASHIKAGA, usurpers of the Imperial power. KUSUNOKI welcomed the man—TORIYAMA KUNITOKI—hospitably, led him to his house, and found in him a clever and willing lieutenant. TORIYAMA was indefatigable in endeavouring to persuade KUSUNOKI to raise his standard against the House of ASHIKAGA, but KUSUNOKI invariably declined to move, alleging that he had entirely forsaken the world. The two had lived thus for some years in rustic tranquillity, when one morning they received news that a body of the Shogunate troops was advancing to arrest them. TORIYAMA and two other followers, SHINGUJI MASAMICHI, and TATENO MITSUHIRO, advised KUSUNOKI to muster his people and resist the Shogun's troops. But KUSUNOKI laughed at the idea, and sending his wife and son to the Province of Kii under the escort of SHINGUJI and TATENO, calmly awaited his fate with TORIYAMA. When the troops surrounded his house, he opened a parley and explained that he had done nothing to deserve the wrath of the Shogun. Perceiving, however, that his remonstrances had no effect, he took his bow and arrow and succeeded in driving his assailants out of the enclosure, on which he set fire to his house and managed to escape unnoticed amid the confusion and smoke. He was soon joined by TORIYAMA, and the two fled to the neighbouring province of Yamato, where they took refuge in a farmer's house. While there, TORI-

YAMA coming back one evening from an excursion in the vicinity, told his master that the Shogun YOSHINORI was expected to arrive at Nara next day, and persuaded him to avail himself of this rare opportunity to be avenged on the merciless tyrant. KUSUNOKI, now desperate and enraged, eagerly took the advice. Next day, at the appointed hour, he repaired to a wooded hill, over which lay the Shogun's road to Nara. On the approach of the cortège, he concealed himself behind the trunk of a huge tree by the roadside, fitted an arrow to his strong bow, and having drawn it to the full was on the point of letting the arrow fly, when suddenly the string of the bow was cut from behind and the arrow dropped at his feet. At the same time a man laid hands on him, but grasping his assailant, he dragged him to the ground, to find that he was no other than his supposed friend and retainer TORIYAMA, in reality a spy sent by AKAMATSU MANYU, one of the generals of the ASHIKAGA Shogun. KUSUNOKI was then taken prisoner by the forces of the Shogun and soon afterward beheaded at Kyoto. As for his wife and son, they too were sought for by the partisans of the enemy, but having taken refuge at Tatsukawa in Yamato, they were able to evade the vigilance of the Shogunate spies. Such was the hermit's story. At its conclusion, his nephew enquired about the fate of the two retainers of KUSUNOKI, SHINGUJI, and TATENO. The latter, replied the recluse, is long since dead, but the former is still living and now learns with infinite pleasure that the cruel fate of his ill-starred leader has been avenged by the death of his implacable foe. Terribly suggestive of the fierce, unrelenting fashions of feudal Japan in mediæval times, is this tale of TORIYAMA, the spy's, dogged persistence. For three years he lives in the house of the man whose destruction he is plotting, shares his confidence, wins his friendship, and at last incites him to an act that makes his life forfeit.

The next story carries us from history to fiction. It is from the pen of Mr. KODA ROHAN, one of the most promising novelists of the rising school. Many years ago, in a village not very far from the city of Yedo there lived, we are told, by the roadside at the entrance of a country village, a poor blacksmith. Formerly a distinguished disciple of the first swordsmith in Yedo, he had fallen hopelessly in love with the daughter of a respectable merchant in the neighbourhood of his master's house, had eloped with the girl, and abandoning his prospects of renown as a swordsmith, had retired to his native village. But as his parents angrily refused to admit him into their house, he ultimately drifted to the hamlet where we find him at the time of the story, there earning a scanty living by repairing agricultural implements. His wife O-RAN, is pretty, but voluble and ill-tempered. SHOZO himself is modest and good-natured. Poverty irritates the girl. To her husband's face she constantly laments the sacrifices she has made for the sake of a "block-head lord." One evening she is overtaken by her querulous mood, and SHOZO seeks to console her by declaring his belief that sooner or later a better star will shine upon their fate, for, despite the miserable work to which he is now reduced, he feels that as a swordsmith he has no equal in the country, and that fame and fortune are not yet beyond his reach.

Next morning, the blacksmith and his wife receive an unusual visitor in the person of the *Shōya* (headman of the village). He is the bearer of a surprising message. Orders have come from the factor (*Karō*) of the lord of the fief, summoning the blacksmith SHOZO to his residence in the castle town without delay. Both headman and blacksmith are bewildered by the command, but they hasten to comply. The following day they set out, SHOZO full of doubts and hopes. The castle town is only a few miles away. Before sunset, O-RAN, who has devoted the whole day to a reverie about the past, present, and future, describes at a distance her husband and the *Shōya* returning by a path through the wheat fields. As they approach, the old headman hastens his steps, but the blacksmith hangs back. O-RAN is all impatience and curiosity to know the result of the journey. The *Shōya* takes leave, praising SHOZO and congratulating O-RAN on her happiness in having such a man for her husband. Left alone with SHOZO, O-RAN is astonished at his pale face and dejected mien. Presently he lays before her a purse of gold containing fifty *ryo* (about two hundred *yen*). "When we arrived at the residence of the Factor," he explains, "we were shown into a splendid apartment and had the honour of an audience with the great man. I was astonished, and sincerely wished I could hide myself under the mat I was sitting upon, when the Factor asked me in a gentle voice if I was SHOZO, the first sword-maker of Japan. Not receiving any denial of the high honour he attached to my humble name, for I was dumb, he proceeded to inform me that he had been instructed to bid me make a sword for his lord, who regretted that an artist of my ability should live in poverty and obscurity. He then gave me this purse of gold, saying that I might want money while engaged on my work, and that on the completion of the sword, I might hope for further reward. Before I could compose myself to say something in reply, the *Shōya* accepted the order in my behalf. It is all like a dream." O-RAN is charmed by the glad tidings, but SHOZO grows more and more dejected. He knows well what is signified by the task he has undertaken, and doubts his capacity to justify the confidence reposed in him. After a long mental struggle, he concludes that he cannot honestly undertake the work, and that his only course is to return the money and abscond. This resolve he communicates to his wife, and asks her to leave him, as she must be disgusted with such a worthless husband. O-RAN reproves him for the suggestion of separation, and assures him that she would be happy to follow him to the end of the world. They retire to rest, and the next morning SHOZO is roused by loud knocking at the door. He calls for his wife, but she does not answer, and he then discovers that she has fled, carrying the money with her. SHOZO becomes almost frantic with rage and despair, whereupon the man who has been knocking—the *Shōya* himself—forces his entry into the room. At his sight, the smith rushes into his workshop and attempts to dash his head against the anvil, but the *Shōya* seizes and restrains him. Ultimately the Headman persuades the blacksmith to his reconsider his determination, and offers to advance him fifty *ryo* if he will consent to be guided. By degrees the smith's confidence returns, and he begins his task. Day after day he works,

making and unmaking many a sword, until, after unceasing labour during three whole years, he at last produces a blade to his heart's content. He carries it to the castle town and presents it to the *Daimyo* in the presence of the vassals of the house. The *Daimyo*, taking the sword, unsheathes it, and finds it so admirable that he looks at it for some time in mute admiration. He praises SHOZO and extols the excellence of the blade, but adds regretfully that no opportunity offers to test its cutting powers. Scarcely has the *Daimyo* spoken when SHOZO, who has hitherto been sitting on the ground in the courtyard, springs into the corridor, and baring his broad, stalwart breast, cries—"Here, test the blade here. One blow will show you whether or no my sword can cut a man in two." So the story ends. It is a romance, but like all romances it reflects the spirit of the times in which the plot is laid. We gather from it some idea of what the forging of a sword meant in Japan before feudalism fell. No wonder that men valued these blades above all earthly possessions, and handed them down reverently from generation to generation.

CONTRAVENTIONS OF THE INDIRECT TAXES LAW.

LAW No. 86.

We hereby give our sanction to the present regulations relating to the Punishment of Offences against the Indirect National Taxes Law and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated September 20th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.
Count YAMADA AKIYOSHI,
Minister of State for Justice.

CHAPTER I.—INVESTIGATION OF OFFENCES.

Article 1.—Any indirect tax official who suspects that an offence against the law has been committed may enter any house, godown, or other place for the purpose of collecting evidence.

When an offender is suspected to have concealed the goods in reference to which the law has been contravened in the house, godown, or other place of another person, indirect tax officials may enter such places for the purpose of collecting evidence.

When indirect tax officials desire to collect evidence as above they shall carry a ticket proving their official character.

Article 2.—When offenders, or goods forming the ground of an offence, are beyond the jurisdiction of an indirect tax office in the case of the last article, the duty of collecting evidence may be entrusted to an indirect tax office having jurisdiction.

Article 3.—Indirect tax officials may require the assistance of the police should it be considered necessary in the collection of evidence.

Article 4.—Indirect tax officials shall require an offender, or his relatives or servants, or should these not be present, a police officer or a municipality, town or villages official, or not less than two neighbours, to be in attendance when they collect evidence.

Article 5.—Indirect tax officials shall conduct the examination of interiors of houses or the attachment of goods between day-break and sunset. Cases involving the actual commission of an offence, or in which a store is opened or articles are arranged and sold only at special times, shall be excepted.

Articles 6.—Indirect tax officials may examine offenders or witnesses if such be necessary.

Article 7.—If indirect tax officials find the goods forming the ground of offence while engaged in the collection of evidence, they shall seize the same, put their seal on them, prepare a list of attachment, and deposit them in the hands of the officials of the municipality, town or village, or of the neighbours, or of the offender, who shall give a

receipt for the same; a receipt shall be obtained from the indirect tax office or branch indirect tax office if the goods be deposited in such office.

If the goods seized are deposited in the hands of the officials of a municipality, town, or village, or of the neighbors, or in the indirect tax office or branch indirect tax office, a copy of the list of attachment shall be delivered to the offender.

Article 8.—Indirect tax officials may prohibit the egress and ingress of any person from or to any place during the proceedings mentioned in the preceding articles.

Article 9.—When indirect tax officials finish the collection of evidence they shall draw up a statement of the same, and with the offender shall sign and seal it, after reading and making it known to the latter. If the offender will not or cannot sign or affix his seal, they shall note that fact.

The following matters shall be included in the statement of evidence:—

- (1.) Names, ages, status (*mibun*), occupation and residence of offenders.
- (2.) The method, date, and place of disclosure of the offence.
- (3.) Examination and statements if any are made.
- (4.) Articles seized, and their kind and number, as well as any statements of an offender with regard to such articles.

Chapter 2.—PUNISHMENT OF OFFENCES.

Article 10.—When indirect tax officials have finished their examination of offences they shall draw up applications requiring the infliction of punishment, and lay the same before the chief of an indirect tax office or branch office which has jurisdiction, with all the necessary documents and articles.

Article 11.—The chief of such indirect tax office or branch tax office shall inspect the document of examination and other documents, and shall, if he considers that the law was contravened, send to the offender a letter requiring him to pay any fine that may be assessed, or to bring any articles that may be forfeited, as well as costs under Article 16, accompanying such letter with a statement of his reason for considering that the law was contravened.

The chiefs of branch indirect tax offices shall inflict punishment under the last paragraph only when the value of the forfeited goods and the fines do not exceed *yen* 30, all other cases being dealt with by chiefs of indirect tax offices.

Article 12.—Offenders shall within 7 days obey the letter of intimation mentioned in the last article, if they decide to do so; if not, the chief of an indirect tax office or direct tax office shall proceed against them in any court of law which has jurisdiction.

Article 13.—If an offender obeys the order in the letter of intimation, no civil or criminal suit can be raised against him in regard to the same case.

Article 14.—Where the residence of an offender is not known, or where the offence is punishable with imprisonment or confinement, or where the offender is unable to pay the fines or taxes, then if an indirect tax official has obtained knowledge of the offence, it shall be laid before any court of law which has jurisdiction.

If an offender absconds, but does not carry off the goods forming the ground of offence, the indirect tax officials shall seize such goods, draw up a document of examination, and commence process for a suit.

Article 15.—Indirect tax officials shall bring offenders in the following cases before the court of law which has jurisdiction:—

- (1.) Where an offender is suspected of intention to abscond.
- (2.) Where it is anticipated that evidence may cease to be available.

Chapter 3.—MISCELLANEOUS RULES.

Article 16.—The cost of transmitting documents, or of the custody or preservation of goods seized which have to be sent back, shall be borne by the offender.

Article 17.—If goods which have been seized are likely to deteriorate, the chief of an indirect tax office may sell the same publicly, after obtaining the consent of the offender, and shall set aside the price of the same.

Should goods seized be ordered to be returned, in the case of the last paragraph the price shall be refunded.

Article 18.—Indirect tax officials in this law mean officials whose duty it is to examine and collect indirect national taxes.

Article 19.—Indirect tax officials are not permitted to purchase goods forfeited or seized, whether directly or indirectly.

Article 20.—This law shall come in force on and after the 1st day of the 1st month of the 24th year of Meiji. For the present, however, it shall not be applied in Hokkaido, Okinawa Ken, Ogasawara-jima or the seven islands of Idzu, which are under the Tokyo City Office.

THE LEVYING OF CITY AND PREFECTURAL TAXES.

LAW No. 88.

We hereby give our sanction to the present Law relating to the levying of City and Prefectural Taxes, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated September 30th, 1890.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Municipalities, towns and villages shall be responsible for the collection of city and prefectural taxes within their jurisdiction, and for payment of the same to cities or prefectures.

In the case of city and prefectural taxes which are not included in the land tax, four-hundredths (*yao*) of the sum levied shall be allowed to municipalities, towns, and villages as the cost of collection. The cities of Tokyo, Kyoto, and Osaka shall, however, be excepted.

Article 2.—Municipalities, towns and villages shall be responsible for the taxes collected, if any loss occurs by their fault or neglect.

Article 3.—Municipalities, towns, and villages may petition or sue governors of cities or prefectures for discharge of their responsibility, if loss of taxes occurs in consequence of unavoidable circumstances.

Article 4.—Governors of cities and prefectures may discharge such responsibility after receiving the sanction of a City or Prefectural Assembly.

Article 5.—Governors of cities or prefectures, or persons similarly entitled to act, shall issue orders of collection to municipalities, towns and villages in the case of city or prefectural taxes; the headmen of the latter shall announce the order of collection and intimate the same to each taxpayer.

Article 6.—Where the headman of a municipality is required to issue an order for collection, he may directly deliver such order to each taxpayer.

Article 7.—Orders of collection may be issued directly to taxpayers by governors of cities and prefectures, or by persons authorised to similarly act, in the case of those city or prefectural taxes which are not collected at a fixed time (*suji*).

Article 8.—Every taxpayer who has received an order of collection shall pay his tax to the officials of the municipality, town, or village authorised to receive it, and shall obtain a receipt bearing the seal of the headman of the municipality, town or village.

Municipalities, towns and villages shall pay the taxes collected to the financial officials of cities and prefectures, and obtain receipts for the same.

Each taxpayer mentioned in Article 7 shall pay his tax to the financial officials of his city or prefecture and obtain a receipt for the same.

Article 9.—If a tax payer should become bankrupt owing to some other debt, the city or prefectural tax shall be levied next to the national tax, according to the example set forth in Articles 14 and 15 of the Law relating to the levying of national taxes.

Article 10.—When the property of an individual who has neglected payment of a national tax, or a municipality, town, or village tax, is sold for that reason, the city and prefectural taxes shall be collected prior to the municipality, town or village taxes.

Article 11.—Release by prescription from the obligation to pay city and prefectural taxes shall be in accordance with national tax procedure.

Article 12.—The duties which under this law should be performed by towns and villages, shall devolve upon headmen (*kacho*) in localities where the Law relating to the Organization of Towns and Villages is not in force.

Article 13.—Bye-laws relating to this law shall be decided by governors of cities and prefectures on the decision of city and prefectural assemblies.

Article 14.—This law shall regulate the levying of local taxes until the Law relating to the Organization of Cities and Prefectures comes into force.

Article 15.—This law shall be in force in connection with and after the collection of the taxes of the 24th financial year of Meiji.

THE ABANDONMENT OF PROPERTY.

LAW No. 94.

We hereby give our sanction to the present Law relating to the Abandonment of Property, and order the same to be duly promulgated. We also direct that the same shall come into force on and after the 1st day of the 1st month of the 26th year of Meiji.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated October 3rd, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

Article 1.—Insolvent debtors of good character may give up all their property, through the law court of the place where they live, to their creditors on stating the circumstances of their misfortune or the fault of management, the cause of their insolvency previous to the time when their movables and immovables were seized.

The debtor shall state on his application the names and occupations of all his creditors, as well as the principal and interest of the debt he owes to each creditor.

Article 2.—Any proposal by a debtor to abandon his property must be accepted by the creditor according to the mode and conditions regulated by the provisions of the Commercial Code relating to composition.

Article 3.—The abandonment of property, when accepted by a creditor, must be sanctioned by the relative Court of Law.

Laws relating to bankruptcy may be applied to all other cases of abandonment of property.

CORRESPONDENCE.

THEORIES OF PAUL AND COROLLARIES OF CEPHAS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In regard to a short comment upon an article in the *Kokumin no Tomo* relative to "a crisis in the history of Christianity in Japan," allow me one word; and please deign to give my remarks as wide a circulation as those they criticize. I refer especially to one sentence:—"But when we bring this faith [Christianity] and submit it for the inspection of a people like the Japanese, they at once perceive how incomparably better adapted to human needs would be the original creed stripped alike of the theories of Paul and of the corollaries of Cephas."

Now, sir, if you mean, as your language clearly implies, that the *Predestination* of Presbyterianism, together with *Unitarianism*, *Universalism*, and *sprinkling*, *infant baptism*, *creeds*, etc., of all Pedobaptist churches, have come from theories of Paul and corollaries of Cephas, you ought to be able to give some evidence of this fact. These *isms* are the fruits of seeds which neither Paul's nor Cephas' hand sowed. I believe we ought to go back to the fountain of Christianity, bridging all the muddy streams of human dogma. Into the light of the intellect and heart with which we are endowed we should bring every precept of the divine Book. Certainly the Japanese see the caricature into which the multitude of sects have turned Christianity.—Christians themselves see it; but who is trying to help it? The fullness of time may not yet have come.

But, sir, to charge these things upon two of the truest and wisest of Christians, is making an accusation which needs explanation. It is like making a cowardly insinuation against one's best friend to thus speak of Paul and Cephas. Cannot the Japanese see this also? It is the only escape for the infidel's ignorance to speak in sweeping generalities. What are the theories of Paul and the corollaries of Cephas which should be stripped from the original creed? Answer. The writer of the sentence above quoted seems to have spoken with the knowledge that the theories and corollaries existed. It ought certainly to be considered a serious thing to make such charges against honest and capable men, and especially in the insinuating manner in which this charge is made. In the name of justice and morality, let us here, in the face of our dying fellow men, state the case definitely, and come to an issue. If infidelity loses, it has all to gain; if it gains, it has all to

lose. If not for ourselves, then for others, let us hear the truth of this matter.

I am yours respectfully,

E. SNODGRASS.

No. 41-B, Tsukiji, Tokyo, Sept. 30th, 1890.

[It surprises us that our correspondent's earnestness should have led him to attach such a hard and fast meaning to words which were used in a purely figurative sense. We spoke of Paul and Cephas entirely with reference to that celebrated phrase of St. Paul himself where he utters an emphatic warning against an apparent tendency of the early Christians to distinguish between the doctrine preached by different Apostles. The question of infidelity or fidelity did not enter our minds; still less did we think of laying at the door of Paul or Cephas any of the "isms" that have broken up Christian unity.—Ed. J.M.]

ANTICIPATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Perhaps "anticipation" may be said to be but another word for hope, but it is essentially a word implying work and preparation for some desired result; it is the looking for a joy already near at hand. When the crops planted and well-watered and weeded have risen above the soil and are swaying in their rapid growth to the gentle breeze, we anticipate a fine harvest. When our minds and memories, under careful cultivation and earnest application, begin to expand with the riches of knowledge stored within them, we feel equipped for the exercise of our talents and long to compete with the wise and useful men of our generation. And when, after more than thirty years of national development, of educating the youths of the nation abroad in all the skill and cunning of modern European and Continental law and varied literature; after establishing a national university and calling to its professorial chairs picked scholars from the most learned institutions of other lands and feeling them royally for their instruction; after changing olden customs and making new codes of laws according to the highest models of civilization, and putting them into practice successfully; after foreigners have purchased lands and built upon them and have dwelt in safety as unmolested in their rights as the citizens of the commonwealth; after even in the Press laws freedom has been allowed in all cases save where undue use of liberty would have roused the more slowly developing lower classes into a mistaken use of privilege, for the Sovereign who rules so wisely is not only preparing the people for the administration of a constitutional government, but as they advance toward it orderly and justly, grants them, not like an Autocrat, or a Czar or a Sultan, but like a Father, all that they know how to use; after the universal approbation and astonishment of all civilized countries have been aroused by the peaceful change from a Feudal to a Monarchical government, from isolation to the most widely extended commercial intercourse, from limited knowledge to a thorough educational system, from torture of criminals and barbaric prisons, to trial by evidence, equitable laws, and sanitary and moral prison reforms; after all these, within an average life-time, have become accomplished facts, why should the position of Japan among the powers be beneath that of Peru or Hawaii? Why do the merchants who represent English houses or other nationalities pretend that they fear that their rights so long enjoyed would be invaded when in fact they could be more justly and securely held? Because Japanese land belongs to Japan, and, as in all other countries must be taxed for the privilege of enjoying; why should a scare-crow be hoisted as a warning, suggesting that at the very moment when the Government is seeking for just and honourable recognition among the nations, it intends to use the coveted right in injuring those whose esteem and justice it has so long been striving to obtain? Scare-crows are straws and old rags and broken hats, so this selfish, greedy cry of "thieves" to arouse alarm and sway public opinion, is without substance, a thing of the imagination, a seeming terror without any reality. It is in bad taste. It is intended to call forth the pugnacious side of patriotism, to entrap the unwary and over-enthusiastic—but it is a scare-crow after all, and not worth barking at. And as such it will expose its emptiness to the world. "Steady now!" is the watch-word—calm and steady! To support foreign judges out of the nation's treasury, money so sorely needed for home use, is not justice; to admit foreign judges out of courtesy, if the countries they represent can afford to support them here, is in keeping with the politeness and etiquette of the Japanese nation, and it would be a pleasant sight to witness the cause of justice thus upheld by the legal fraternity. But the anticipations of the Japanese nation are the result of long and careful preparation, of steady growth and advance, of imitation or adoption of the best; of taking the selected seeds of social progress

from all governments and planting them in this rich soil, where patriotism will guard and watch their healthy growth. That Christian countries should forget the Golden Rule under such circumstances, is a bad example. That some selfish merchants and land holders should endeavour to keep the country in thralldom to their almighty dollar system is characteristic of the human heart, denounced by one who knew the hearts of men. Let the facts be sifted and things fairly and honestly spoken out and replied to, and it will be seen that only a scare-crow of huge dimensions has been put up to frighten away the friends and well-wishers of Japan. Americans employed in English merchant houses are the only citizens of that dear Republic who have joined the enemy's ranks. We have nothing to gain or lose by being friend or foe to Japan, therefore we only speak as we believe.

"Live and let live."
Yours, &c.,
October 3rd, 1890.

A.V.R.E.

"PACIFICUS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The objection to "Pacificus" suggestion that there should be assessors, and a sort of diplomatic supervision of the Courts, is, that in civil cases the Sovereign has no power over the judgments, to alter, revise, or upset them in any way. The remission of the sanction rests with the Sovereign only in criminal cases; in civil cases it is with the party to the suit only.

Your obedient servant,
Tokyo, October 4th, 1890.

S.

THE DEFINITION OF "SOSHI."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The other day I overheard a conversation between a foreigner (who speaks Japanese unusually well, and who understands something of Chinese ideographs), and a native (who speaks English unusually well; that he understands Roman letters, goes without saying). The subject of their conversation was a proper translation of 壯士 (*Soshi*), and notwithstanding their ability to converse in both languages, no satisfactory English equivalent could be agreed up.

In Williams English-Chinese dictionary we find for 壯 a variety of meanings, viz. "stout, healthy; manly; fertile, full and flourishing; abundant;" and for 士, of course, "scholar." But while the Chinese put the two ideographs together for expressing the phrase, "a valiant or strong man," I can hardly think that that is the meaning of the word *Soshi* as used by the Japanese. It would be of service to many of us, and would certainly eliminate much circumlocution, if a concise English equivalent for *Soshi* could be agreed upon.

Your obedient servant,
Yokohama, 4th October, 1890.

X.

(We have never been able to find any single English expression conveying the meaning of *Soshi*. In its present acceptance the term has come to signify "physical-force men," and despite its clumsiness we are disposed to think that the best translation.—Ed. J.M.)

DEGREES OF COMPARISON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have in times past compared the foreigners in the service of the Japanese Government to the leaves of autumn floating down the stream, so soon they pass away and are gone, their place knowing them no more, and the visible record of their work passing with them. These prophets have honour notwithstanding in other countries. The comparison changes from withered leaves to the young and sprightly British groom. This is what I call from the Paris correspondent of the *World*, *apropos* of some Anglicised stables established near Paris:—

The stable-fittings are, of course, all manufactured in England, and all or nearly all the horses have English names; but the general effect is that of a very pretty and expensive toy; an effect which is not removed by the presence of an army of English grooms, who are delighted to have a chat with a visitor from the old country, though not one of them would care to leave France, where they have a position of absolute power and prestige, similar to that of the high functionaries imported from Europe to Japan to establish Western institutions in that country.

Your obedient servant,
October 9th, 1890.

X.

THE JUDICIAL INSTITUTIONS OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I ask you to do me the favour of inserting in your estimable paper the present article which I have written in connection with what has been published in the newspapers touching the

meeting of the foreign residents of Yokohama, called by the principal English merchants in order to object to the revision of the Treaties.

I cannot suffer to pass in silence the grave errors concerning the judicial institutions of Japan, which crept into the speeches that prominent Englishmen pronounced on that occasion, by reason of the importance of the matter and of the influence that these errors might exert upon persons ignorant of the actual state of Japan.

It is not astonishing that a question such as that of the revision of the Treaties: one that interests to the highest degree Japan and all the European countries that are in friendly and commercial relations with her,—it is not astonishing I say, that such a question should engage the serious attention of the foreigners residing in Japan, especially of English subjects, who have here great commercial interests.

But it seems to me that such a question should not be decided cursorily, and that it is necessary that one should study it before expressing one's opinion about it. Has assurance been obtained whether the propositions of the Japanese Government on the subject of the revision of the Treaties, which may have been formulated according to new bases of arrangements more favourable to Japan than former drafts, do or do not really hold out guarantees to foreigners when they become amenable to Japan laws? Has certitude also been acquired as to whether the actual condition of Japan would or would not allow the foreign Powers to grant her that restoration of territorial jurisdiction that is common to all independent States?

The opposition of English residents to the revision of the Treaties, to the recovery of the legitimate right that Japan has lost by virtue of existing Treaties, touches immensely our judicial system. These gentlemen declare that they cannot submit themselves to Japanese jurisdiction, as they do not find in our laws sufficient guarantees for person and property; they seem to think that the liberty and the property of individuals are unprotected in Japan. They attach great importance to *habeas corpus*, and are unaware that in the Japanese law there is a provision that resembles it; they look upon the absence of the jury as a lack of guaranty as regards trials; they are distrustful as to whether the principle of the inviolability of the domicile is observed among the Japanese.

In the face of such accusations, which may bring discredit upon Japan in the eyes of Europe, the right to refute them is perfect.

May I be allowed, then, to say in the first place that we have in our Code of Preliminary Criminal Examination, as there is moreover in various European Codes, a provision touching provisional liberty that may be granted to an accused person in consideration of bail furnished, and under pledge of appearing upon summons served upon him.

Another provision, no less important from the standpoint of protection from prolonged arrest, directs that any accused person arrested upon warrant, shall be examined within 48 hours, and set at liberty if there is justification for so doing.

It is scarcely necessary to add that the Code of Preliminary Criminal Examination, as well as the Penal Code, which have been in operation for ten years past, are based upon the French law with improvements introduced by the compiler (M. Boissonade de Fontarabie, well known for his works upon law since his residence in Japan) and have been applied and interpreted by the Japanese Courts without the least difficulty.

In regard to decisions, in both civil and in criminal matters, rendered by the Japanese Courts, the prudence, the impartiality and the zeal of the magistrates, who have an independent position on account of their irremovability, have always been noticed, and although the jury system does not exist in Japan, it is recognized that decisions in criminal matters are in general rendered with moderation and equity, account being taken of extenuating circumstances in favour of the accused. With the collegiate system adopted by the new law upon the organization of the judiciary, greater guaranty will be found.

It has been recognized up till now, that suits instituted before the local courts by foreigners (I speak here specially of the European and American residents of Yokohama) against Japanese, either in civil or in criminal matters, have been investigated and tried with the utmost amount of attention and with the strictest impartiality.

Inviolability of domicile is a right that is assured to the Japanese people, besides being hallowed by the new Constitution, and there is, in the Penal Code, a penalty for the violation of domicile without legitimate reason therefor.

To believe, too, that there has been recourse within a short time to torture to extract a confession from an accused, is an error. For more than 12 years since the entire abolition of this remnant

of ancient feudal laws, there is no trace of such inhuman proceedings: all confession is based solely upon the weight of evidence.

From what precedes, the guarantees that the Japanese laws offer to those amenable to them, both as to their persons and to their property, cannot be gainsaid.

I am, Sir, your obedient servant, N. M.
Tokyo, October 6th, 1890.

[The above letter, from a distinguished Japanese jurist, came to us in French, and has been literally translated.—*Ed. J.M.*]

VACATION RAMBLES IN IBARAKI.

111.

The storms and floods of the latter half of August made travelling so unpleasant and so difficult that these vacation rambles had to be intermitted; but the more settled weather in the early part of September gave an opportunity to go off on short trips. One, in company only with Prof. T., of the High School, was to Ishioka, about 7½ *ri* from here, on the direct road to Tokyo. We, however, did not go by the straight road, but, in the hope of saving time, money and discomfort, went by rail as far as Shishido, from where it is 7½ *ri* to Ishioka.

In the name "Shishido," meaning "flesh-door," the first part is, perhaps, of Aino, at any rate, of very ancient Japanese origin: its appropriateness to this place I cannot tell. The town lies at a little distance from the station; and, although it is not large and flourishing, is by no means "a poverty-stricken place," as the "Hand Book" of Messrs. Satow and Hawes denominates it. On the way from the station to the town, the road cuts right through the *jinya* of Matsudaira Oino kami, who was a kinsman of the Mito family, and lord of Shishido, with a revenue of 10,000 *koku*. The one who was ruling at the time of the Mito Civil War met an unfortunate fate. He was sent as the representative of Prince Yoshiatsu of Mito, to attempt to arbitrate between the two factions; but, becoming necessarily embroiled in the conflict, and happening thus to engage in battle with troops of the Shōgunate, he became technically guilty of treason. Then, through the persuasion of a friend, who hoped to arrange easy terms for him, he entered the enemy's camp, and, being held a prisoner, was finally compelled to commit suicide by *harakiri*. He was, however, honoured with a burial in the cemetery of the Mito princes at Zuiru.

The road from Shishido to Iwama (about 1½ *ri*) was very good; but beyond that point it was very bad, so that we had to make detours through the woods. The inevitable rain-storm came up; we, however, being well protected in the vehicles, escaped wetting; but the poor coolies were soaked through. The rain, however, did not last long; and, when we entered Ishioka about half-past ten o'clock, the sun was shining brightly.

Ishioka is not "a small town" with "no great trade," but a fairly good sized and flourishing place of about 8,000 inhabitants. Among the large towns of Ibaraki *ken*, Mito, of course, takes first rank, Tsuchinra second, and Ishioka third. It is the centre of the brewing industry, *sake* and *shoyu*, in Ibaraki, and ranks as one of the most flourishing in the Empire. It contains about 30 large manufactories, one of which employs a steam rice-cleaner. The yearly product of *sake* is 7,000 *koku* valued at 120,000 *yen*; of *shoyu* (soy) it is 10,000 *koku*, valued at 90,000 *yen*. The products are exported chiefly to Mito and Tokyo, but also to other places. The causes of the rise of these industries in that place are two,—the good quality of the rice and beans of those parts, and the purity of the water.

Ishioka is also a market for rice, other grains, silk and tea. It is possible, that in the future the silk industry will become as flourishing as the brewing industry; for there is abundant capital, and the culture of silk-worms is becoming more and more extensive. The circulation of money is very easy. The town contains a justice's court, a police station, a bank; and it is the meeting place of four large roads,—from Shishido, from Takahama, from Mito and from Tsuchinra. It has an appearance of neatness and gentility; and is, perhaps, comparatively the liveliest and wealthiest place in Ibaraki *ken*.

It has also an interesting history. It was not known as Ishioka till 1869, but was previously called Fuchiu; and it was formerly the capital of Hitachi. It probably became the capital soon after Taikwa (645-650 A.D.), which was the first great period of governmental reformation; and it continued to hold that position till feudal times. From that time the governor of Hitachi usually lived there; although it seems that Taira Kunika lived in Ishida, of Makabe county, and his grand son, Taira Koremoto, in Mizumori. In 1427 the Baba family, a branch of Taira, having lost the Mito castle, which was then called Baba, retired to

Fuchiu, where they remained until Baba Kiyomoto, the last of the line, was overthrown by the army of the Satake family (1590).

From that time it ceased to be an important place; and after the change of several princes it became in 1700 the dominion of Matsudaira Hasima no Kami, younger brother of Mitsukuni, the second and famous Mito prince; and so remained till 1868. But its lord, who had a revenue of 20,000 *koku*, lived in Yedo, and had no castle, only a *jinya*, in Fuchiu. The castle of Fuchiu, although it is said to have been built by Taira Kunika, was probably built by a later descendant, whose date is unknown. It was situated on the verge of the hill on which Ishioka is located; but there are now no traces of it, except the moat and terraces. On the spot where stood the *jinya* of Matsudaira, now are located the Lower and the Higher Primary Schools of Ishioka.

Since "in 737, after an epidemic of smallpox (not previously known in Japan) had almost decimated the population, the reigning sovereign, Shōmu Tenno, decreed that in each province there should be erected a large monastery, to be called Kokubunji," such a temple was constructed in Fuchiu of Hitachi, perhaps, in 743 (?). It is said that it was a splendid building, with grounds measuring 100 *cho*, and with a seven-story pagoda: for, "afterwards, on the occasion of a bad harvest, he [Shōmu Tenno] commanded the construction of seven storied pagodas throughout the country, one to each province." The nunnery was in the western part of the town, which is even now called "Nunnery Plain" (*Niji ga hara*), and where even now old tiles may be found. The monastery was burned in the battle in which Baba Kiyomoto perished, and is said to have been rebuilt; but we cannot tell when it fell to the ground again. There are also two other Buddhist temples (Yakushido and Senjūin), built about the same time and of the same style.

Susha, a Shinto temple, is situated on the left side of the castle, and looks down on the rice-fields. It was formerly in the western part of the town, near the nunnery; but it was removed to its present location by Taira Norikuni, when he built the castle. This temple was built in the eighth or ninth century, perhaps at the time when some Emperor planned to have also a Shinto temple in the capital of each province. At first it was independent and very powerful, but afterwards it seems to have become a tributary of Kashima; for a certain priest of this temple received his rank from the chief priest of Kashima; and there still remains an old programme of a Kashima Boat Festival.

This temple contains many interesting relics and old documents, of which I shall take space to describe only a few. The first is a document which was given to the priest of this temple by the officer of Hojo in Kamakura. This document asks for prayers for the repulsion of the Chinese invasion of the Gen dynasty. The first invasion was repulsed in Konan (1278-1288), but this document is dated Showa (1298-1293). This seems to indicate that there must have been fears of a second invasion, which, however, is not recorded in history as having taken place. Another relic is Satake Yoshinobu's *gumbai*, "a fan used by military officers in giving a command." We find here also the *gumbai* of Iino Narikage, who was a vassal of the Shishido family, and visited the temple in Tensho (1573-1592). On the handle of this *gumbai* are rudely carved the following words, "With this fan I have gained several victories."

But the most famous relic is the *gumbai* of the renowned general, Ota Dōkwan, who laid the foundations of Yedo castle. He was a "wise, brave and learned man," but in his youth was very ignorant. I cannot refrain from turning aside to relate a very interesting story about him. When he went out hunting one day a severe shower suddenly threatened, and a few drops began to fall. Therefore he went hastily into a village, and, knocking at a farmer's door, asked to borrow rain-coats (*mino*). A beautiful girl came out, apparently showing no signs of timidity, and silently falling down on her knees, only stretched out toward him a branch of *Yamabuki* (the Kerria Japonica). He and his servants could not understand her meaning, which was concealed in a punning reference to the following poem:—

Naoaye yaye
Hana wa sakedomo
Yamabuki no mi no
Hitotsu dani
Naki zo kanashiki!—

which translated literally means, "It is sad that, although the yellow rose sends forth seven or eight fold blossoms, it has not a single seed." But by a happy turn of *mi no* to *mino* she tells him; "I am sorry that I have no rain coats!" He was so much astonished at the wit and learning of the peasant girl that he studied Japanese and Chinese literature very diligently, and finally became a

famous poet. It is said that after a few years he sent to that peasant girl the following reply:—

"Itoyazuba
Nurezaramaji wo
Tabibito no
Ato yori haruru
Noji no murazame:—

which may be translated: "If the traveller does not make haste, he may not get wet; for the shower of the rural districts clears off from behind him." If you study deeply all the allusions of this reply, you will recognize that it is very apt and witty.

When in a certain year of Eikyō (1429-1441) he was on his way to Mutsu, he passed through Fuchiu, and worshipped at this temple (Sō-sha). At that time he contributed his *gumbai*, and wrote a poem:—

Akebano no
Teyun wa oku kamo
Kamigaki ya
Sakakida shiroki
Natsu no yo no tsuki.

"The dew of dawn had already settled upon the foliage of the *sabaki* [*Cleyera Japonica*] of the holy fence, and the summer moon shines silvery."

This Shinto temple, though so ancient and once so famous, now ranks only as a village temple; but the present priest, named Ishizaki, is trying to have the rank raised. Recently many old documents have been discovered in the house of a farmer, belonging to an old family, in the village of Nodera, near Ishioka. These documents, it is said, throw great light on the history of Hitachi.

Thanks to the kindness of Messrs. Kaneko, Takeishi and Kurisu, we had seen and heard much of Ishioka, and should have been glad to investigate those new documents; but, as my passport had expired with the month of August, I must be home again that night. Therefore about 3 p.m. we left Ishioka, and in three hours were again in Shishido, with one hour to wait for the last train to Mito. On the road from Ishioka back to Shishido, we heard from one of our coolies an interesting *tengu* (sky-dog) story. It seems that just behind Iwama is an Atago-yama, one of the outlying hills of the Tsukuba range. On that hill formerly there were 12 shrines dedicated to *tengu*; but once upon a time another was added under the following circumstances. In a temple at the front of Mount Tsukuba was a young boy, whose old mother often visited him. On one occasion, as she expressed a wish to see Tsushima, he agreed to take her; and, carrying her on his back, he flew very swiftly to Tsushima and back again. When they had returned to the temple, the boy said that, as he was very tired, he must go to sleep awhile in the next room, but cautioned his mother not to look into the room. After a little his mother, moved by curiosity or anxiety, peeped in, and discovered a *tengu*, which at once flew away. At the next festival on Atago-yama, when the people of Iwama were preparing a tray of food for each of the 12 *tengu* shrines, they received orders from the priest to prepare 13 trays, as a new *tengu* (presumably this boy) had just come. The neighbourhood of Iwama is said to abound in *tengu* and tales of *tengu*.

When we reached Shishido, we called upon Mr. Tamochi Shishido, a lineal descendant from the family which founded the place. He had been reported to be in the possession of some very ancient relics of the family, and also, of course, to be the best posted man upon the history of the place. We found him a courteous and polished old gentleman, who would have been pleased to show us the relics, but for the fact that they were not all in his house at the time. We agreed, therefore, to visit him again, but the other day he very kindly came to Mito with many relics, and related to us a very interesting history.

The founder of his family was Shido Tomoye, the tenth son of the celebrated Yoshitomo by a concubine, named Hatta no Taubone. In 1159, when his father was overthrown by Taira, he was young, and took refuge in Kumano of Kii, under the protection of his maternal grandfather Hatta Munetsuna, Prince of Shimotsuke. It seems that he was then adopted by his grandfather, and hence took the name, Hatta Tomoye. When Yoritomo raised his banner against the tyrannical Heiji, Hatta Tomoye joined him, and served in battles in the west, under his brothers, Yoshitsune and Noriyori. Afterwards, when Yoritomo attacked Fujiwara Yatsulira, the Prince of Mutsu who protected Yoshitsune when the latter fell under the displeasure of Yoritomo, Tomoye became one of the generals of the Tokaido army and gained many victories. He received a dominion of nominally about 67,000 *koku*, of really about 150,000 *koku*, in Hitachi, and the same amount in Aki. He lived in Shishido, where he also died, and lies buried in the grounds of a temple, which he founded, but which is now in total ruin. He was a great favourite of Yoritomo, and received from him a very fine sword, which is

now in the possession of Mr. Shishido. This sword, about two *shaku* and eight *sun* in length, is called *Roku-suhama no katana*, because on one side of the blade appears that emblem of the family. The character *roku* is said to have been derived from the name of Rokusongō Tsunemoto, the first ancestor of Genji.

Tomoye's first son, named Tomoshige, became the ancestor of the Oda family, and lived in Hojo (at the foot of Mount Tsukuba), where for several centuries his descendants were very powerful. The fifth son, Tomohisa, was very brave and loyal, and in the contest of Shokyu(?) between the ex-Emperor Gotoh and the Hojo family, he sided with the former, and, being defeated, committed suicide. The fourth son, Iyemasa, became the heir of the main family; and his son, Iyeyoshi, was also brave. Once when hunting on horse back, he killed with a single arrow a wild boar which came rushing towards him. From this time he always used a banner on which were inscribed the figures of a wild boar and the sun. This relic is in the possession of Mr. Shogoro Maiye, a remote descendant of the Shishido family, and now a member of the Ibaraki Legislature. The horse which Iyeyoshi used to ride was a very fine and strong animal, which is said to have gone from Shishido to Kamakura and back in one day. But as that distance is more than 200 miles, we must be a little sceptical about the truth of the story! At any rate, the horse, named Gyokuren, fell dead by the roadside at Iwama on its way back from Kamakura; and its tomb may now be seen on that spot.

After the tenth generation a prince, named Iyemoto, removed to Aki, where he built a castle for permanent residence. Thus the family became divided into two branches—the Aki branch and the Hitachi branch. It is said that the descendants of the former branch still live in Aki; and a letter sent from Aki to Hitachi about 1700 to inquire into the genealogical connection between the descendants of the two branches, is still possessed by Mr. Shishido.

After two or three generations the Hitachi family began to decline; and finally in 1590, when the sixteenth prince, Yoshinaga, was in power, the castle of Shishido was destroyed by Satake Yoshinobu, who, however, was liberal enough to give Yoshinaga a domain of 6,700 *koku* at Ehigashima, in Makabe county, whither the Shishido family removed. The document which gives the assessed value of each village in that domain is now in the possession of Mr. Shishido.

When Yoshinaga's son, Yoshimasa, was the master, the Satake family were removed by Iyeyasu to Ugo, and wanted Yoshimasa to go with them. But he declined, and, becoming a *rōnin*, ended a gloomy life in the vicinity of Shishido. His son, Yoshio, died without an heir, so that the male line became extinct; but a daughter of Yoshinaga had married a *samurai*, named Sugimoto Yoshizumi, who was born in Echizen and afterwards became a vassal of the Izumo Prince, Matsudaira Dewa no Kami, a grandson of Iyeyasu. After the death of Yoshio, all the vassals of the Hotta [Shishido] family consulted together, recognized Yoshizumi as the legal heir of the family, and sent all the relics to him.

The descendants of Yoshizumi lived in Yedo, and served as common vassals of the Prince of Hirose, a branch of the Dewa family. After the Revolution the present master of the family, that is, Mr. Tamochi Shishido, the twenty-eighth generation from Tomoye, went down to the town of Hirose, in Izumo, where he lived four years, and then came back to "the old homestead," Shishido. Mr. Shishido says that he returned to the old home under promise from Mr. Maiye and other vassals of the family to support; but that, after he had received such support for three years, he declined any further aid. In Shishido and vicinity there are now about 200 families, who were subjects of this family. Mr. Shishido, though now far advanced in years, lives as a merchant in Shishido.

The first ancestor of the Maiye family was Hotta Iyehida, younger brother of Mochitomo, the ninth prince of the main family. The Maiye branch used to live in a castle of the same name in Makabe (?) county; but, after the fall of Shishido castle, they went to Ehigashima with Yoshinaga, and then removed to Dewa. In 1614 they came back, 18 vassals in all, to the place of the old castle, and became farmers, and afterwards *daikwan* (agents). From Iyehida to Shogoro are nineteen generations.

There are many other documents which Mr. Shishido and Mr. Maiye kindly exhibited to us, and, which, if carefully studied, might throw considerable light on local and national history; but lack of time prevented further investigations.

Mito, October 1st, 1890. CLEM.

THE CASE OF MR. A. R. COLQUHOUN.

Mr. A. R. Colquhoun is well-known by name at least to most people in the East, and to many of our readers he is probably known personally, for he acted as correspondent of *The Times* in China during the war between France and China. He is also known for his explorations in Southern China, and for his advocacy of the scheme for a railway from the coast of Burma through the Shan States to the China frontier. Originally an engineer in the Indian Public Works Department, in 1885, on the annexation of Upper Burma, he was, on account of the active interest which he had long taken in the region, invited to join the service being formed to administer the new province, and he received a very high post in that service. Last spring it came like a thunderclap on many to learn that this gentleman, one of the most distinguished men in the Indian Civil Service, had been dismissed, for this was what the course taken by the Authorities practically came to, although it was nominally a re-transfer from Burma to the Public Works Department. The surprise was still greater when it became known that this strong step was due to a private letter having fallen into official hands. Mr. Colquhoun immediately took leave of absence home, and laid the case before the Secretary of State by way of appeal. While he was awaiting the result, which came only recently, he was offered a high appointment by the South African Company in Mashonaland, and there he is at the present moment. The decision of the Indian Government on the appeal is adverse to Mr. Colquhoun, and although Lord Cross may revise or modify this, Mr. Colquhoun's official Indian career is closed. From the mass of correspondence on the subject which is under our hands, we propose giving our readers letters which will form a clear narrative of this curious episode. But one other word by way of introduction is necessary. Mr. Moylan, to whom the letter which led to all the trouble is addressed, is a barrister at Rangoon and correspondent of *The Times* there. For five years his letters and telegrams to that journal have been hostile to the local Government, sometimes indeed violently so. We pass no opinion on this, but merely record the fact. The local officials, being but men, have retorted whenever the opportunity appeared favourable, and there has been a kind of intestine war in which, so far, the correspondent has not come off worst. Now it was to this gentleman, the incarnation of all that is hateful to the official world, that the first letter was addressed, and this was the letter that fell into the hands of Sir Charles Crosthwaite, the Chief Commissioner. On the same day Mr. Colquhoun wrote two letters, one to Sir Charles, one to Mr. Moylan. How it came about does not greatly matter, but Sir Charles received both. Here is the first letter, the cause of all the woe, dated from Mogok, the capital of the Ruby Mines District, of which Mr. Colquhoun was chief administrative officer:—

"MY DEAR MOYLAN,—I, Yours of 18th to hand, returning letter from Mr. Walter and Macgregor. (*Times* manager and its correspondent in Calcutta.)

"2. I guessed that the reference to A. P. MacDonnell (Home Secretary in Calcutta) should have been as you explain. I am glad that he is likely to come, and that he is an intimate friend of yours.

"3. Daly's management of the Northern Shan States is a scandal. He works direct with the Chief Commissioner. Hildbrand, and the Commissioner, Northern Division (Col. Storer) are quite ignored. Fancy the political change of all the Northern States, with a population of some 2,000,000 people, and relations with Chinese frontier, entrusted to a young lieutenant. They require an experienced man, the best to be had—say Hildbrand or Parrott. When reference is made to this by you or Hannay (proprietor *Rangoon Gazette*) see that information cannot be traced to me.

"4. I write to McDonald (late of *The Times*) to-day, re appointment of Symes, also re Thinkell White's late acting appointment, which doubtless means he is to be soon again acting as a Commissioner. The insurrection in the Yaw district was a bad business, and from what one hears Ryte was badly treated.

"5. Regarding affairs in this part of the world, my telegrams will have kept you fairly well informed regarding the very serious movement which has been stopped by my action in garrisoning Momeit (capital) and in delivering a severe blow to the advance band (300) of Saw Yamine when within eight miles of the capital.

"I wired you for advice as to an article in 22nd issue of *Mandalay Herald*. I enclose you copies of correspondence between myself and C.C.

(Chief Commissioner, Sir Charles Crosthwaite) which will show you how I have been treated in this matter. The military authorities were annoyed because I insisted on holding and maintaining Momeit, and have tried to put down the 'ill-considered enterprise' of Nugent (a young officer who has just been killed) on the 14th to my score. He was expressly forbidden by me to undertake any operations. The successful blow delivered on the 19th to this band shows 'how little of 'enterprise' there was in attacking Mobong. Colonel Storer dropped me in the matter, and I received orders not to send troops or police in future to Momeit (State) without orders. This was unfortunate for him, as Twinnge (in Momeit State, near river) was attacked and burnt on the 22nd, and the C.C. wired me the information, and I had to telegraph to Colonel Storer for his orders instead of acting promptly. I was actually in Momeit (capital) from 29th December to evening of 3rd January, with nine military police (four of them ill) before the detachment called for by me came, and after that the A.A.Q.M.G. recalled it, but I kept them there. You can judge from this the encouragement received by me for acting promptly and successfully. D. has been since last June endeavouring to gain the submission of Khan Heang, Saw Yamine, and Mainlong Nga Naung, with the result that the whole borders are up. He seems to have been fooled to the top of his bent by the Sawbwas of Thilaw and Taungthaing, who were to get these men in. He is the "Sir Oracle" with C.C., Thinkell White, &c. T.W. is a great chum of his. Even with a great man trouble will come; how much more with a green, self-sufficient lad in charge! The whole N.E. frontier should be strengthened; we should meddle as little as possible with Chins, Kachins, and other hill tribes, and not allow ourselves to be led into expeditions into most difficult hill country.

"Yours very truly,

(Signed) "A. R. COLQUHOUN.

"P. S.—The proposed establishment of a post at Lashio, under Daly, with a few hundred raw military police (newly enlisted) is a veritable piece of madness. It would be 12 days beyond our outposts, and no communication kept up.

(Signed) "A. R. C.

"Glad to hear Eddis has joined you. I know his brother, a very good fellow at Calcutta."

This letter was posted, and the next the writer heard of it was a note from the Private Secretary to the Chief Commissioner, dated Mandalay, February 4th, 1890, which ran as follows:—

"I am to say that you enclosed in your letter under reply a letter to Mr. Moylan. As this letter was not in an envelope, Sir Charles Crosthwaite thought it was intended for his perusal, and began to read it before he perceived the nature of its contents. Sir Charles Crosthwaite has no desire to take advantage of an accident, although he considers the disloyalty and treachery evidenced by your letter deserve little consideration. It is, however, a question of public importance that officers should act honestly and loyally towards the Government they are serving, and that the Government should know the character of the new serving under it, and therefore the letter, with a statement of the manner in which it came into his hands, and a copy of this letter, has been submitted to his Excellency the Viceroy, by Sir Charles Crosthwaite."

Mr. Colquhoun, who appears to be a free and easy-going sort of person, took until March 13th to reply, and then this is what he wrote.

Mogok, 18th March, 1892.

In reply to your letter dated 4th February last, I would beg to submit this my protest against the contents of a private letter, addressed to a private friend, accidentally reaching a wrong person, being used against me.

The letter in question when despatched was enclosed in an envelope addressed by me to the addressee.—Yours faithfully,

(Signed) "A. R. COLQUHOUN.

At this point we may drop out the bulk of the correspondence. Mr. Colquhoun, when called upon by the Government of India, made an explanatory, and the result was that he was found guilty of insubordination, was degraded to a minor position in his old branch of the service, and was told that he had barely escaped dismissal. Thereupon, as we have said, came his return to England and the preparation of the following elaborate explanation, which has now proved equally futile. In justice to Mr. Colquhoun we give this in full:—

From A. R. COLQUHOUN, late Deputy Commissioner of the Ruby Mines, Burma.

To the SECRETARY to the Government of India, Home Department, Calcutta.

11, St. Bernard's Crescent,

Edinburgh, 26th November, 1890.

SIR,—With reference to the orders of the

Government of India removing me from my appointment of Deputy-Commissioner in the Burma Commission, and remanding me to the position in the Department of Public Works which I held before 1886, I have the honour to submit the following further facts and explanations, in the hope that the Government will be pleased to reconsider my case.

2. For the convenience of reference I annex copies of all the previous correspondence in my possession connected with the subject. I am placed at a great disadvantage by not having been supplied with copies of the letters addressed by the Chief Commissioner of Burma to the Government of India on my case.

3. I must premise by stating that I am intimately acquainted with Messrs. Walter, McDonald, and Macgregor, who are personal friends of mine. Mr. Hannay of Rangoon I have known for eighteen years. Before my appointment to the Burma Commission I was, while on leave granted by the Secretary of State, employed by *The Times* on a mission in China for two years. On being appointed Deputy-Commissioner in Burma, I promised Sir Charles Bernard that I would in future abstain from acting as a Press correspondent.

I beg that these facts may be kept clearly in view.

4. I desire again to call attention to the fact that I have been condemned for what I wrote in a private letter to a private friend, which letter accidentally fell into the hands of the Chief Commissioner of Burma. I venture respectfully to renew my protest against the contents of such a letter being used against me, and to submit that the fact of its being addressed to Mr. Moylan, who is a barrister in large practice, as well as *The Times* correspondent at Rangoon, in no way deprives it of its character of a private communication. The letter was essentially a private letter to an intimate acquaintance, from whom I was asking legal advice, and, as I shall presently show, was not intended to be used by him in his capacity of a journalist. If the language is somewhat hot and unguarded, I would urge that the peculiar circumstances under which it was written, when (as I explained in my letter to the Secretary to the Chief Commissioner of 29th April, 1889) I was smarting under an unjustifiable attack, were exceptional.

5. In his letter No. 569, of 25th March, 1889, the Secretary to the Chief Commissioner of Burma invited me "to submit any explanation you might like to offer of your conduct in infringing the standing orders contained in the Home Department Circular No. 30 1267-76, dated 16th August, 1884, and in violating the pledge given by you to the Secretary to the Government of India in the Home Department, dated the 23th December, 1887."

No reference was made to the notification dated 30th August, 1843, or the resolution No. 22 A, dated 3rd June, 1885, which have been quoted in the despatch of the Government of India reviewing my case. Of these I had no knowledge whatever. I had never seen even the orders of 16th August, 1884, until a copy reached me with the letter No. 569, dated 25th March, calling upon me for an explanation. My whole knowledge on the subject of officials corresponding with the Press had been confined to the knowledge that officials were bound not to communicate State secrets or to make public matters coming to their knowledge in their official position, which were intended to be confidential and not to be made public.

I submitted such explanation as I considered was required in letter No. 569, on 29th April, 1889, and to this letter I now beg leave to refer, as it is clear that I then wrote under a complete misapprehension of the nature and full extent of the faults attributed to me, which has led Government to act under a complete misapprehension of my case. I considered, and I submit that on the natural construction of Mr. Thirkell White's letter of 25th March, 1889, I was justified in considering that I was not required to do more than offer an explanation of an alleged breach of the Government Orders of 16th August, 1884, by me in communicating with Mr. Moylan, and accordingly I contented myself with stating how the letter came to be written by me, and I did not think it necessary to go into an explanation of the body of the letter itself.

Had I appreciated or anticipated the full extent of the unfavourable impression produced by my letter to Mr. Moylan, I should have submitted a reply of a much more detailed character than that of the 29th April, and should have gone through the letter in question sentence by sentence, in place of confining myself to a general reply to what I conceived to be a general charge. I certainly had no idea of the serious misconceptions entertained by Government respecting the meaning of the references contained in the letter to Mr. Moylan, and there was nothing in Mr. Thirkell White's letter to suggest the extent of the explanations expected from me. These misconceptions and the extreme view taken by Government were not

known to or realised by me until, after my arrival in England, I received and considered the letter dated 3rd August from the Secretary to the Government of India to the Chief Commissioner. It now appears that the Government of India have put an altogether incorrect construction upon the contents of my letter to Mr. Moylan, and without giving me any opportunity of explanation, have come to the conclusion that it proves I "was in constant communication upon official matters with *The Times* correspondent." In order to show that my letter to Mr. Moylan will not bear such construction, it is necessary that I should go through it paragraph by paragraph.

6. In the first paragraph of the letter to Mr. Moylan I refer to letters from Messrs. Walter and Macgregor returned to me by Mr. Moylan, and in the fourth paragraph I state that I had written to Mr. MacDonald "re appointment of Symes," etc. The Secretary to the Government of India, Home Department, in his letter of 3rd August, appends the remarks in the margin to these names. ("Mr. Walter, the proprietor, Mr. Macgregor, the Calcutta correspondent, and Mr. MacDonald, the sub-manager, of *The Times*, are, it is presumed, the gentlemen referred to.")

These assumptions are correct, but the inference drawn from them, that I was in communication with these gentlemen upon official matters, is gratuitous, and in fact erroneous. The letter from Mr. Walter was a private letter acknowledging the receipt of a Shan gong I had sent him. So far as I know, none of the members of *The Times* staff ever communicate with Mr. Walter on topics connected with that paper, and as far as his name is concerned any inference to my detriment is absolutely unjustified. The letter from Mr. Macgregor was also a purely private one, written to me from Bangkok, where he then was, and has been ever since. I believe moreover as a fact that during his absence from India he has not written or inspired anything in *The Times* or any other newspaper. I sent those two letters to Mr. Moylan as one friend sends to another letters in which the latter is interested. They contained no information on official matters. My letter to Mr. MacDonald was also a private one. It is true that it criticised certain appointments that had recently been made, but these were appointments which had been made public, and on which I venture to submit I had a right to my private opinion, and to express it privately to any friend. Mr. MacDonald is one of my most valued friends. I was writing to him privately, and referring as a matter of gossip to things which were, or might be known to all the world, and certainly were known to everyone in Burma. That this gossip was understood by him to be private, and not intended for any Press purposes is fully proved by the fact that they were never referred to *The Times*, directly or indirectly. It would have caused me extreme surprise and annoyance had there been any public reference of the kind. Mr. MacDonald treated my letter in the spirit in which it was written, viz., as a purely private communication between friends.

7. I now deal with the third paragraph, quoted on margin. This must be taken together with the fifth paragraph. ("Daly's management of the north Shan States is a scandal. He works direct with the Chief Commissioner. Hildebrand and the Commissioner, Northern Division (Colonel Strover), are quite ignored. Fancy the political charge of all the Northern States, with a population of some 2,000,000 people, and relations with Chinese frontier, entrusted to a young lieutenant. They require an experienced man, the best to be had—say Hildebrand or Parrott. When reference is made to this by you or Hannay see that information cannot be traced to me.")

Enclosures (1) and (2) dated 19th and 30th January.

In the *Mandalay Herald* of 22nd January a most unjustifiable and libellous attack had been made upon me with reference to the Momeit incident, charging me with being responsible for the death of Lieut. Nugent under highly disgraceful circumstances. (This incident is referred to in paragraph 5 of my letter of 25th April, and correspondence in connection therewith is annexed, to which I would invite attention.) Upon the article coming to my knowledge I felt the matter very keenly, and at once telegraphed to Mr. Moylan, in his capacity of barrister, for advice as to taking legal proceedings against the *Mandalay Herald*, and at the same time wrote to him on the subject. I also wrote to Mr. Hannay, telling him what I had done, and asking him in my behalf to see and consult Mr. Moylan on the subject. To put Mr. Moylan fully in possession of the facts, so that he might advise me effectually, it was necessary that I should send him the private correspondence on the subject, which had passed between the Chief Commissioner and myself. I submit there was no impropriety in sending him these

confidentially under those peculiar circumstances. It was for the same reason that I gave my private opinion as to the reason of the turbulent state of the adjoining districts, which gave rise to the situation upon which I had taken action to defend Momeit. I warned Mr. Moylan as I did, believing that he and Mr. Hannay would be of my opinion on the subject, and might thoughtlessly, in the course of conversation, support their opinion by referring to mine. It has not been suggested, nor is it a fact, that information based upon the private documents sent to Mr. Moylan, or upon the references in my letter, was published in *The Times* or elsewhere. They were sent to him as, for the moment, my legal adviser, and they were treated by him as strictly private and confidential.

8. Paragraph 5 of my letter to Mr. Moylan begins with the passage quoted on margin. ("Regarding affairs in this part of the world, my telegrams will have kept you fairly well informed regarding the very serious movement which has been stopped by my action in garisoning Momeit (capital) and in delivering a severe blow to the advance band (300) of Saw Yauine when near, within 8 miles of the capital.")

It is evident that these words have produced an unfavourable impression on the Government, and yet they do not in the least bear the construction put on them. It is true that I openly sent occasional telegrams to Mr. Moylan, but these telegrams were in every case mere details of events of public interest and notoriety which had happened in or near my district, such as defeats of dacoits, etc., which would have become known to him a day or two later had I not telegraphed. They in fact simply contain such news of events as is constantly communicated to the press by civil and military officers throughout Burma, and it has never been considered that such communications involve any breach of official rules or obligations. On the contrary, I believed and still believe that they are regarded as useful in preventing the spread of unfounded and alarmist rumours amongst the public, by securing the prompt publication of correct information. If all the telegrams which I sent to Mr. Moylan were inspected they would fully bear out this assertion of their nature. It would be seen that none of them were intended to or in fact did, throw discredit upon members of the Commission or the administration of the Chief Commissioner.

9. As to the concluding sentences of my letter to Mr. Moylan, while again expressing my regret that I should have been led to make use of somewhat intemperate language regarding the gentlemen therein mentioned, I have to submit that the expressions were used in a purely private letter written by one friend to another under the peculiar circumstances already explained, and never intended to be seen by a third party, and that there is nothing in them to prove that I was "in constant communication upon official matters with *The Times* correspondent," or that I was "in the habit," of supplying him with information intended to throw discredit on the local administration, or that anything I ever wrote to him was used for that purpose. I wrote to him with all the freedom of an aggrieved man placing his case fully before his counsel. I submit that there is no rule which prevents an official from entertaining or expressing in private his opinion of his brother officers, and expression of that sort cannot surely be brought within a regulation tending to enforce official secrecy.

10. Having now submitted a complete and detailed explanation of the references in the letter, I would invite particular attention to the passages on margin from the letter of the Secretary to the Government of India dated 3rd August. ("These passages prove beyond question that Mr. Colquhoun was in constant communication upon official matters with *The Times* correspondent; that in one instance, at all events, he had sent to Mr. Moylan certain confidential documents which he had received from you, and that the information which he was in the habit of supplying to Mr. Moylan was intended to throw discredit upon the conduct of members of the Burmese Commission, serving in other parts of the Province, and upon the administration of the Chief Commissioner.")

"If there could be any doubt as to Mr. Colquhoun's consciousness that he was acting in a manner disloyal to his official superiors, and inconsistent with the rules of the service, that doubt is removed by his injunction to Mr. Moylan that in the event of any reference to the subject of his communication being made in *The Times* or the *Rangoon Gazette*, of which Mr. Hannay is editor, care should be taken to prevent the information from being traced to him." These passages do me serious injustice. Whatever other unfavourable conclusions may be drawn from the single letter of 30th Jan., 1889, addressed to Mr. Moylan, I positively assert that I was not, as a matter of fact, in constant, or frequent, communication with *The Times*

correspondent, and it is not the case that I "was in the habit of supplying to Mr. Moylan information intended to throw discredit upon the conduct of members of the Burmese Commission," etc. I may point out that the very extract quoted from the letter in the second of the above paragraphs is in itself evidence, which may be described as conclusive, that the letter was not one of a number or series, but an exceptional one, and that it did not form part of a regular and systematic correspondence. Had the latter been the case, the injunction to secrecy would not have been necessary. This point I would impress on the attention of the Government, because it is manifest, from the passages quoted on margin, that Government believes I was constantly communicating to Mr. Moylan private information of the kind contained in the letter to him, and that I am in a large, or at least in some, degree responsible for the statements and representations hostile to the Local Government of Burma which Mr. Moylan has supplied to *The Times*. I beg in the clearest and most emphatic terms to disclaim any knowledge or privacy of such statements or representations until I saw them in print, and to state that I took no part, direct or indirect, in connection with their preparation or publication. Far from this being the case, it is known (and I believe to Mr. Moylan) that I disapproved of many of the telegrams which he communicated to *The Times*.

The injunction to secrecy is explained in paragraph 7 of this letter. I maintain that it is a very ordinary one in private correspondence, that it was natural under the circumstances, and that it has been misunderstood, as such references in private letters are liable to be misinterpreted by strangers to the parties and the correspondence.

11. I invite reference to Messrs. Walter, MacDonald, Macgregor, Moylan, and Hannay, on the above statement referring to them, and annex copies of correspondence which has passed between Mr. Hannay and myself.

12. I would beg to call attention to the extraordinary severity of the undeserved punishment which has been inflicted upon me—a punishment which falls only one degree short of the extreme official penalty of dismissal from the public service. The Governor-General in Council, while testifying to the fact that during my employment in the Burma Commission I have "on many occasions exhibited energy and courage," has not only branded me with the stigma of disloyalty and insubordination, which is wholly undeserved, but has also directed my removal from the Commission, and has remanded me to the position which I occupied in the Public Works Department four years ago—a step equivalent to the immediate loss of salary to the extent of about Rs. 800 per mensem, not to speak of the loss of future prospects. By my reversion I am practically deprived of about four years' seniority, and am placed below many officers of that department who were previously my juniors. Such a sentence is little, if at all, short of professional ruin. It practically puts an end to all prospect of advancement in the Government service, and, by affixing an undeserved stigma on my name, makes it difficult for me to open a new career for myself in any other direction. By my suspension, and the publicity which it has given to my alleged offence, I have already suffered very seriously.

Until this blow fell upon me I had hoped that my services through many years under the Government of India, some of a special character, for which I have received the approval of the Government of India and Secretary of State, together with the services I have endeavoured to render to British Commerce, and for which the leading mercantile communities at home and in the East have on various occasions invited special recognition at the hands of the Government, would eventually be rewarded by some mark of distinction. Instead of that I find myself suddenly branded with undeserved ignominy, and disgraced in the eyes of my brother officials and of the public.

13. I repeat in the most solemn manner that the Government has totally misapprehended my position in connection with Mr. Moylan. I was never in communication with him, or any one else (except on the one occasion referred to in paragraph 7 of my letter of 20th April, with the direct approval of the Chief Commissioner), of official matters, either knowing or believing or expecting that such communications would be the subjects of statements in the public press. I wrote to him, as I wrote to Mr. Walter, Mr. MacDonald, and Mr. Macgregor, as private friends and no more. The circumstance that these gentlemen happened in one capacity or another to be associated with *The Times* in no way altered the character of these letters. They were intended to be private, and no more. They were regarded and treated as private by those who received them, and never in any other manner. A private letter as I respectfully submit, does not cease to be private because the person to whom it

is addressed happens to be connected with the Press, any more than it would cease to be unofficial because the person to whom it was addressed was an official. I had nothing to do with Mr. Moylan's opinions and comments on affairs in Burma, and I did not approve of many of them. The Government has misjudged my case under a complete misapprehension of some references in the letter to Mr. Moylan—references which were quite clear to him, as they were to me, but which, like most references in other private letters, are liable to be misunderstood when read by those for whose eyes they were never intended.

14. I would therefore most respectfully request that the whole facts of the case may be again taken into consideration in the light of the further explanations now given, and that the Government will be pleased to withdraw the orders contained in Home Department letter No. 1,357 of 3rd August, 1889, and to direct my restitution to the position of Deputy-Commissioner which I held prior to that date. If, however, Government should still be of opinion that I should be punished for having written the letter to Mr. Moylan, then having regard to the circumstances under which it was written, and to the fact that it was not addressed to him as *Times* correspondent, but in his capacity of my legal adviser, and that it does not bear the interpretation which has been put upon it, I would submit that my unintentional breach of official rules would have been sufficiently punished by an official censure, and that the stigma of disloyalty and insubordination may be withdrawn, and that I may be re-gazetted to the rank of Deputy Commissioner, or else be permitted to retire from the Government service on such a special pension as Government may think fit under the special circumstances to grant. I have the honour to be, Sir, your most obedient Servant.

A. R. COLQUHOUN.

This correspondence is in a sense tragic enough. An element of comedy is lent to it by Mr. Moylan, who did not get his letter, and who thereupon addressed the following lively epistle to the Government of India:—

"SIR,—I have become aware that a private letter, addressed to me by Mr. A. R. Colquhoun, has been intercepted by Sir Charles Crosswaite, and that he has detained it, and kept it in his possession for some months. I do not give detailed evidence of these statements at present because I am informed that the Government of India have evidence of the facts before them. If, however, the Government of India require any evidence of the detention of the letter, I am prepared to furnish ample proof of the fact."

"I thereupon addressed the following letter to Sir Charles Crosswaite:—

"From E. K. Moylan, to H. T. White, Chief Secretary to the Chief Commissioner:—

"SIR,—It has come to my knowledge that the Chief Commissioner has intercepted and detained for some time a letter addressed to me by Mr. A. R. Colquhoun. That letter I have been informed on the best authority was posted by Mr. Colquhoun at Mogok in an envelope addressed to me."

"I have now to call upon the Chief Commissioner to immediately send me the letter in question, which he had no right whatever to detain."

"To avoid confusion and delay, and in case the Chief Commissioner should have intercepted and opened, or have in his possession other letters addressed to me, I beg to state that the letter I asked for is one dated Mogok, 30th January, 1889."

"An early reply will oblige me, as I desire, if the letter is not at once sent me, to take other steps."

"Yours, &c., (Signed) E. K. MOYLAN."

"I believe the Government of India are aware that Mr. Colquhoun has solemnly declared that he posted the letter in question at Mogok in a sealed envelope addressed to me. On the other hand I am informed that Sir Charles Crosswaite asserts that the letter fell into his hands owing to its having been placed by mistake in an envelope addressed to him, and sent to him through the post."

"I submit that whether Mr. Colquhoun's plain and straight forward statement is believed or Sir Charles Crosswaite's apocryphal story be accepted, it makes absolutely no difference as to my right to have the letter given up to me. The question of whether Sir Charles Crosswaite did or did not open a letter addressed to another person can merely affect the question of the nature and extent of the offence which he has committed. Even if Sir Charles Crosswaite's statement is true, it can afford no justification for now detaining my letter."

"On this question I would desire briefly to point out that every person who detains a posted letter is liable to two months' rigorous imprisonment with a fine. Sir Charles Crosswaite has, therefore, rendered himself liable to severe punishment."

"I have, therefore, to ask the Government of India to direct Sir Charles Crosswaite immediately to deliver up to me the letter written to me by Mr. A. R. Colquhoun."

"I should have before now prosecuted Sir Charles Crosswaite in a criminal court but that some legal difficulties might arise."

"I have further to ask the Government of India to grant me sanction to prosecute Sir Charles Crosswaite criminally for the gross and flagrant breach of the law he has committed."

"Yours, (Signed) E. K. MOYLAN."

By way of conclusion to the whole matter we may add that ultimately Mr. Moylan was informed that he could prosecute Sir Charles Crosswaite if he wished (which he has been prudent enough not to do), and that the letter was returned to the writer to South Africa. Mr. Colquhoun has a new and not less distinguished career opened to him there, and we have no doubt he will make the most of it, but obviously he has had a lesson in the caution necessary in conducting his private correspondence. We cannot ourselves pretend to feel any sympathy with him, and it will greatly astonish us to learn that his representations have had the effect of mitigating his punishment.

SAILING RACE.

The first stage of the sailing race for Mr. Whitfield's Farewell Cup and other prizes took place on Saturday last. A strong northerly breeze prevailed when the boats assembled near the starting line and dodged about in the choppy seas which came in. The course was round the North Mark, the Lightship, the Home Mark, the Green Lightship, a flag boat off Kanagawa, and home, finishing between the bailing barge and the French Hatoba. Capt. Efford, who was officer of the day, fired the starting gun at two p.m. precisely, and a few seconds later *Maid Marion* was across, followed promptly by *Sayonara* with *Trawler* thundering along in her wake, the others going over in the following order:—*La Belle*, *Princess Maud*, *Jessie*, *Petrel*, *Tortoise*, *Molly Bawn*, *Lady Louise*, *Scow*, *Box of Curios*, and *Nautilus* (which has been acquired by a new owner) last. The *Maid* fetched the North Mark in two tacks and was soon booming down under spinnaker for the Lightship. The sea and frequent rain squalls bothered the smaller craft badly, however. Shortly after the start *Jessie* bore up and came home with mast sprung; *Box of Curios* carried away some of her head gear and had to return; *Sayonara* got round the North Mark, but could not proceed further and *Petrel* was also compelled to bear up for home. Several of the smaller boats sent down their top sails for the stretch in from the Lightship, but *Princess Maud* kept hers aloft throughout. The stiff breeze favoured *Trawler*; and as moreover, with the exception of the trip to the North Mark and the shorter beat to the Green Lightship, there was no windward work, she was able to maintain a capital position all round. *Maid Marion* continued to draw ahead of everything and finished at 3h. 42m. 39s., having gone round the 17 races' course in 20m. 10s., *Trawler* coming in 20m. 41s. later. *Lady Louise* came in close astern of the big yard, carrying only lower canvas; *Princess Maud* next staggering under ordinary sail with the addition of gaff topsail and big balloon jib; *Molly Bawn* carried spinnaker half way home from the Kanagawa mark; and *Tortoise*, again sailed with remarkable judgment, did the stretch home with spinnaker on bowsprit end. It is of course vain to speculate on the result of a race, of which only half has been sailed, for the times for Saturday's race and those of a week hence must be added together before the handicap can be deducted. It will be seen, however, that, applying one half of *Trawler's* total handicap to Saturday's time she lost first place by 41 sec., and none of the other craft came near the leader on their allowance. The second race is almost certain to upset any conclusions that may be based on the first stage.

The following are the official times:—

	Light-ship.	Home.	Finish.	Handicap on 100 sec.
<i>Maid Marion</i>	2 49.40	3.02.29	3.42.39	0
<i>Sayonara</i>	—	—	—	32
<i>Trawler</i>	3.56.35	3.10.32	4.03.30	47
<i>La Belle</i>	3.10.52	3.27.03	4.40.51	58
<i>Princess Maud</i>	3.59.25	3.14.30	4.06.18	61
<i>Jessie</i>	—	—	—	56
<i>Petrel</i>	—	—	—	53
<i>Tortoise</i>	5.00.23	3.14.54	4.10.43	35
<i>Molly Bawn</i>	3.00.00	3.15.00	4.06.11	26
<i>Lady Louise</i>	2.59.32	3.13.41	4.01.54	14
<i>Scow</i>	—	3.32.20	4.33.11	87
<i>Box of Curios</i>	—	—	—	87
<i>Nautilus</i>	3.19.10	3.47.57	4.35.37	82

Oopack, British steamer, 1,729, H. Kemp, 9th October.—Kobe, General.—W. M. Strachan & Co.

Omi Maru, Japanese steamer, 1,525, John Wynn, 10th October.—Hakodate, General.—Nippon Yusen Kaisha.

Caroline (14), cruiser, Captain Sir Wm. Wiseman, 10th October.—Singapore.

Mercury (13), cruiser, Captain C. J. Balfour, 10th October.—Hongkong.

PASSENGERS.

ARRIVED.

Per Japanese steamer **Kobe Maru**, from Shanghai and ports:—Mrs. O. W. Willet and 2 children, Mr. and Mrs. Pionkoff and 4 children, Mr. and Mrs. Kuster, Miss Kuster, Master Kuster, Lient. and Mrs. Perkins, Messrs. Hitomi, Matsumaga, M. Schlessler, and D. Meyerdirk in cabin; Mrs. Yamada, Mrs. Matsumaga, Mr. Furugaki, Mr. Yanagishita, Miss Kasai, Mr. Ah Shi Do, Mrs. Yashiro, Mr. S. Kato, and Mr. Kon Chai in second class, and 62 passengers in steerage.

Per Japanese steamer **Wakanoura Maru**, from Hakodate:—Mr. A. H. Anson in cabin; 2 passengers in second class, and 21 passengers in steerage.

Per American steamer **City of Peking**, from Hongkong:—Mr. D. Nowrojee and servant, Mr. H. B. Roper, Mr. M. M. Kuhn and servant, Mrs. Portusa and infant, Mr. Percival Spencer, Mr. B. Ruttonjee, and Mr. H. H. Lightwood in cabin.

Per French steamer **Calédonien**, from Hongkong via ports:—Messrs. T. Hoshi, Tokijuro Kato, K. Nozawa, K. Ito, Izrienka, H. G. Herron, Laconture, Mallet, I. Plugger, Miss A. Werner, Mr. Capelle, and Baron de Gouzhung and boy in cabin.

Per Japanese steamer **Nagato Maru**, from Kobe:—Dr. Max Pesca and Mr. John Crosby in cabin; 41 passengers in steerage.

Per Japanese steamer **Yamashiro Maru**, from Hakodate:—Mrs. Smithers in cabin; 5 passengers in second class, and 42 passengers in steerage.

Per Japanese steamer **Omi Maru**, from Kobe:—Mrs. Williams, child, and amah, Messrs. Powers and Asakuma in cabin; 46 passengers in steerage.

DEPARTED.

Per British steamer **Ancona**, for Hongkong via ports:—Mrs. S. Cash, Mr. and Mrs. Hill, Mr. and Mrs. Pievost, Captain and Mrs. Christensen, Mr. and Mrs. Cohen, Major and Mrs. Wedgwood, Rev. and Mrs. Ashmore, Lieutenant Woodcock, R.A., Miss Oliva Blunt, Mrs. G. W. Miller, Miss Russell, Miss E. Russell, Miss A. R. Whitley, Mr. Wallace and 2 children, Mrs. J. A. Clunch and child, Mr. and Mrs. Upton, nurse, child, and infant, Miss Ozaki, Mrs. Wong, Mrs. Wong Yick Tong and amah, Miss Wymark, Messrs. A. M. Chalmers, F. Collins, H. F. Green, H. F. Arthur, R. Daniel, B. H. Pearson, J. Hutchings, Newman Cash, and Sergeant-Major Williamson in cabin.

Per Japanese steamer **Omi Maru**, for Kobe:—Miss Dr. Steinwood and Miss Bengel in cabin; 69 passengers in steerage.

Per Japanese steamer **Tokio Maru**, for Hakodate:—Mr. and Mrs. Sone and Mr. Maida in cabin; Messrs. Murasawa, Harada, and Ando in second class, and 30 passengers in steerage.

Per Japanese steamer **Kobe Maru**, for Shanghai and ports:—Rev. and Mrs. Taft and child, Rev. and Mrs. Headland, Dr. and Mrs. Jones, Mrs. Shandland, Dr. Ida Stevenson, Dr. R. R. Benn, Dr. C. P. Smith, Captain Carrow, Messrs. Strauss, W. Kerr, Hayashi, Ichifuji, Nagasato, Mahie, Takeda, Waterman, Tei, and Captain Steedman in cabin; Stanley's Opera Troupe (33), and Mr. Yoshimura in second class, and 52 passengers in steerage.

Per Japanese steamer **Sagami Maru**, for Hakodate:—Mr. and Mrs. Saito, Mr. Ishiguro, and Mr. Okada in second class, and 15 passengers in steerage.

Per American steamer **City of Peking**, for San Francisco:—Mr. I. Kuster, Mrs. Kuster, Miss Kuster, Master Kuster, Miss E. L. Rollman, Mr. J. F. Gouhan, and Mr. N. Schlessler in cabin.

Per Japanese steamer **Satsuma Maru**, for Kobe:—Mr. Yamauchi in cabin; and 27 passengers in steerage.

CARGOES.

Per British steamer **Ancona**, for Hongkong via ports:—Silk for France 105 bales.

Per American steamer **City of Peking**, for San Francisco:—

REPORTS.

The German steamer **Polyhymnia**, Captain Beltrius, reports:—Left Hongkong the 20th September; had during the first days stormy weather from N.E.; during the last days fresh wind with rain and heavy swell from S.E. by E. Arrived at Yokohama the 4th October.

The Japanese steamer **Wakanoura Maru**, Captain Hussey, reports:—Left Hakodate the 1st October at 8 a.m.; had strong winds from the S.E. and rain; passed Shiriya-saki at 2 p.m.; 10 p.m. a heavy gale from the eastward with heavy sea and heavy rain; hove the ship to; at 11:30 on the 2nd kept on ship her course; gale decreasing; passed Kinkasan at midnight with moderate wind from the N.W. and cloudy weather. Arrived at Oginohama the 3rd at 1:30 a.m. and left the 4th at 11:45 a.m.; had light winds from N.W. and fine weather; at midnight fresh wind from N.E. with rain; passed Inboeye at 3:20 a.m.; Noshiro at 10 a.m. had fresh wind from N. with rain, continuing to port. Arrived at Yokohama the 4th October at 2:20 p.m.

The American steamer **City of Peking**, Captain Cavarly, reports:—Left Hongkong the 28th September at 3:04 p.m.; had fresh to strong N.E. winds with moderate sea the entire passage. Arrived at Yokohama the 4th October at 7:23 p.m. Passed German bark off Kuro Island, evidently going through Van Diemen Strait.

The Japanese steamer **Kobe Maru**, Captain Haswell, reports:—Left Shanghai the 27th September at 10:15 a.m.; had weather bright and clear with moderate E. wind. Arrived at Nagasaki the 29th at 0:45 a.m. and left at 5:8 p.m.; had light N.E. winds with fine clear weather. Arrived at Shimonoeki the 30th at 4:40 a.m. and left at 6:54 a.m.; had dull and overcast weather throughout the passage, with rain from midnight. Arrived at Kobe the 1st October at 3:37 a.m. and left the 2nd at noon; had overcast weather with moderate to fresh easterly winds and heavy S.E. swell. Arrived at Yokohama the 3rd October at 3 a.m.

The Japanese steamer **Nagato Maru**, Captain Ekstrand, reports:—Left Kobe the 4th October at 1 p.m.; had fresh N.E. breeze and overcast sky; at 4 p.m. weather threatening, barometer falling; put into Yure-no-ike; strong N.E. breeze with heavy rain squalls; on the 5th at 8 a.m. weather moderate, barometer going up; left Yure-no-ike at 8:45 a.m.; met at 9 a.m. P. & O. steamer and Nippon Yusen Kaisha steamer **Omi Maru**; at 4 p.m. U.S.S. **Omaha** steering about S.W.; fresh southerly breeze and rain; at 6 p.m. wind hauled round to N.W. with hard rain squalls and heavy S.S.W. sea running; ship rolling heavily; midnight rain decreasing; rain continuing at 4 a.m.; wind hauled to east, blowing hard with heavy rain; at 8 a.m. rounded Rock Island; wind hauled round to N.E. with constant rain continuing till arrival at Yokohama the 6th October at 4 p.m.

The Japanese steamer **Yamashiro Maru**, Captain Young, reports:—Left Hakodate the 6th October at 6:20 p.m.; had fresh N.E. winds and heavy rain with following sea to Kinkasan, which was passed at 10 a.m. on the 7th; had cloudy and fine weather from thence to port. Arrived at Yokohama the 8th October at 10 a.m.

The Japanese steamer **Omi Maru**, Captain Wynn, reports:—Left Kobe the 7th October at noon; had fresh N.E. breeze and clear weather to Cape Hino; thence fresh to strong easterly winds with high head sea and overcast weather with rain to Rock Island; thence to port strong N.E. winds and overcast weather. Arrived at Yokohama the 8th October at 11:15 p.m.

LATEST COMMERCIAL.

IMPORTS.

The Import Market has continued very quiet during the week. In English Yarns there is nothing doing. Bombays are saleable in small lots at unaltered prices. Shirtings are entirely neglected, and Fancies are without demand. Sales for the week amount to 50 bales English Spinnings, 150 sales Bombays, and 1,500 pieces Italians.

COTTON PIECE GOODS.

METALS.

Some little business has been done, and prices for Bars have improved to the quotations given below. Other sorts dull, but with a lower exchange holders should have no difficulty in maintaining present values.

Flat Bars, 1 inch	\$2.50	to	2.70
Flat Bars, 1 inch	2.70	to	2.80
Round and square up to 2 inch	2.60	to	2.80
Nailrod, assorted	Nom.		—
Nailrod, small size	Nom.		—
Iron Plates, assorted	2.80	to	3.00
Sheet Iron	3.00	to	3.25
Galvanized iron sheets	5.80	to	6.00
Wire Nails, assorted	4.10	to	4.70
Pig Iron, per box	4.60	to	4.80
Pig Iron, No. 3	1.20	to	1.35

KEROSENE.

Market remains dull at quotations. Buyers are not hungry, and only nibble at some reduction in price which at present holders do not submit to. No fresh arrivals this week. Deliveries keep up fairly well, and it is probable that dealers will have to enter the market soon. There has been a sale of 15,000 cases Russian Oil at \$1.56.

QUOTATIONS.

Chester	\$1.72	to	1.75
Comet	1.70	to	1.72
Devoe	1.68	to	1.70
Russian	1.63	to	1.66

SUGAR.

A very limited business has been done in Sugar: only 842 piculs of White Refined, of which 76 piculs fetched \$8 per picul, 695 piculs \$7.10 per picul, and 71 piculs \$5.50 per picul. No enquiry for other brands.

White Refined	\$5.60	to	8.10
Manila	3.70	to	4.40
Taiwan	—		—
Pentam	2.80	to	3.25
Nanilla	2.90	to	3.00
Cake	—		—
Brown Takao	4.27	to	4.30

EXPORTS.

RAW SILK.

Our last report was issued on the 3rd inst. since which date settlements in this Market are 180 piculs, divided thus:—Hanks, 3; Filatures, 72; Re-reels, 89; Kakeda, 16. Japanese shipments have amounted to 111 bales, bringing the total business for the week up to 300 piculs.

As mentioned in our postscript to last circular, business was stopped by a sudden rise in Exchange rates; they soon began to decline again until we got them down to something under last quotations. The price of Silver has, however, again risen in London, and these daily violent fluctuations prevent all steady business.

The settlements noted above would seem to be nearly all for the United States trade, European

buyers holding off entirely. The business of the week has really been very small, a good portion of the settlements noted above having been contracted for some days earlier.

Telegraphic intelligence from abroad still remains of the most dispiriting character, and it is hard to tell when the trade will revive; there seems no chance of any immediate revival and holders here show no disposition to meet buyers.

Prices have been held firm by holders at the quotations given below; they profess themselves alarmed by the smart rise in Exchange, but at the same time are of opinion that it will decline again and that they will some day reap the benefit of their patient waiting.

There have been three shipping opportunities during the interval, the Canadian Mail, English Mail and American Mail. The first, named *Straits of Belle Isle*, on the 4th inst. had 162 bales for New York; the P. & O. steamer *Ancona*, also on the 4th instant, took 105 bales for Lyons and Marseilles; the *City of Peking* on the 8th instant took 313 bales for the United States. These shipments bring the present export up to 4,577 against 14,361 last year and 9,405 at same date in 1888.

Hanks.—Some of the purchases advised last week have been rejected, and new purchases have been made only to a very small extent, \$525 being paid for a few bales of ordinary *Hachioji* Hanks.

Filatures.—Business done has been small, and apparently confined to a few piculs, which it was necessary to ship in the last American Mail. Prices paid are as follows:—*Hakunaru* \$675; *Kameisha* \$670; *Hiranosha* \$660; in fine sizes *Mino* sorts have brought \$690, \$680 and \$655 according to grade.

Re-reels.—These have been dealt in to some extent, purchases being entirely for America; the best chops and marks have been entirely neglected, trade being confined to sorts for price, seconds and thirds being freely taken at \$625, \$620, \$615 and \$610. Holders are very strong and there is no current business.

Kakeda.—Very little doing in these. One parcel *Tiger Chop* was booked at \$610 and nothing has been done since.

Stock, 10th October	13,700	6,800	12,300
Available supplies to date	18,200	22,300	21,600

WASTE SILK.

The business continues on a fair scale, settlements reaching 1,053 piculs, divided thus:—*Cocoons*, 155; *Noshi*, 366; *Kibiso*, 532.

The buying has again been for European account, shippers for the States holding off; prices are strong and holders cheerful.

The *Ancona* on the 4th inst. carried 288 bales Sundry Wastes for Marseilles and Trieste, and the present export is 2,732 against 5,312 last year and 2,709 on the 10th October, 1888.

Pierced Cocoons.—There have been some further purchases of *Shinshu* at \$16 per bu, or say \$120 per picul for good quality, a few bales of *Oshu* have also been done at \$15½ per bu or \$116½ per picul. The *Cocoon* Market does not work very freely this year; holders require too much and the trade is by no means current.

Noshi.—A fair amount of business has been done in this department, best *Filature* touching \$155, *Oshu* \$145, *Bushu* \$138, *Josha* \$88. There has been nothing done in the lower grades.

Kibiso.—Buyers have operated freely in this class, best *Filatures* have touched \$120, best *Sendai* \$105, good *Shinshu* \$84 and ordinary *Hachioji* \$37½.

In *Mawata* and *Sundries* there has been no business.

Total piculs	13,700	Total piculs	11,500

TEA.

There has been less doing in Tea during the week, with no alteration in prices. The total purchases are 1,915 piculs, and ninety per cent. represent Common to Good Common. The season is going to end earlier than usual this season; and at Kobe there are only about 1,000 piculs in stock for sale. We have fully six months more to run before the next season opens. The majority of buyers are simply laying in lots in their godowns to prepare for any sudden demand from the consuming markets.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers), are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 15 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
161, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams:—“Wadham, London.” 19. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is “Health for all.” The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled “The Nile Tributaries in Abyssinia,” says:—“I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value.”

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. L. T. George, in his account of his extraordinary travels in China, published in 1876, says:—“I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse food cured in upon us, until at last a teaspoonful of ointment was worth a load of any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock.”

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the “JAPAN MAIL” of copious translations from Tokyo Journals, a Description by “Our Reporter,” and an “Editorial” written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, OCT. 25, 1890

SUMMARY OF NEWS.

PRINCE SANJO left the capital on the 19th inst. for the province of Sagami.

BARON IWAKURA TOMOTSUNE, Privy Court Councillor, expired on the 17th instant.

H.I.H. PRINCE KITASHIRAKAWA left the capital on the 18th instant for Takasaki.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU left Tokyo on the 18th instant for Numazu.

COUNT ITO proceeded to the Imperial Palace on the 21st instant to pay his respects to the Emperor.

HER IMPERIAL HIGHNESS PRINCESS KOMATSU left the capital on the 21st instant for Ibaraki Prefecture.

An earthquake was felt in the capital on the 17th instant at 8h. 35m. 6s. p.m., the duration of which was 36 seconds.

THE publication of the *Fuyu Shimbu*, the organ of Count Itagaki, commenced on the 20th instant at Kyobashi, Tokyo.

HIS IMPERIAL HIGHNESS PRINCE KUNI, who had been in the province of Ise for some time, returned to Kyoto on the 19th instant.

PRINCES SHIMADZU AND MORI, and Marquis ASANO were decorated with the Grand Order of the Rising Sun on the 21st instant.

THE marriage of Marquis Ikeda and Her Imperial Highness Princess Akiko (second daughter of Prince Kuni) will take place in a few days.

MR. HIRANUMA SENZO, a wealthy merchant of Yokohama, has applied to the Authorities for

permission to establish a private bank under the name of the Hiranuma Ginko, with a capital of yen 2,000,000, at Yokohama.

COMMANDER HASHIMOTO MASAOKI has been ordered by the Minister of State for the Navy to bring out the *Itsukushima Kan* from France.

THE Senate has been abolished, some of the members receiving honoraria varying from 800 to 1,500 yen, and some being appointed Lords in Waiting.

RAILWAY communication between Kamenose and Sanjo on the Osaka Railway Company will be opened about the beginning of November next.

THE laying of the line between Akihabara and Ueno of the Japan Railway Company, which is now going on, will be completed about the end of this month.

COLONEL TSUCHIYA KANARU was promoted to the rank of Major-General on the 16th instant and raised to fourth class, second grade from fifth class, first grade.

HIS IMPERIAL HIGHNESS PRINCE KITASHIRAKAWA returned to Tokyo on the 21st instant from Takasaki, where His Highness had been staying for a few days.

THE line of the Japan Railway Company between Ichinoseki and Morioka having been completed will, it is expected, be opened for traffic on the 1st proximo.

A MEETING of the Tokyo City Improvements Committee was held on the 21st instant at the Home Department, when matters in connection with the water-works were under discussion.

THE ceremony of presenting diplomas to graduates of the Tokyo Hogakuin (Law Institute) will take place on the 2nd proximo in presence of various high officials of the Educational Department.

HIS MAJESTY THE EMPEROR has granted the sum of yen 1,500 to the family of the late Baron Iwakura, while Their Majesties the Empress and Empress-Dowager have granted the sum of yen 500.

An extraordinary meeting of the Cabinet was held on the 18th instant at which Counts Yamagata, Yamada, Saigo, Oyama, Matsukata, and Goto, and Mr. Mutsu were present, the proceedings closing at 4 p.m.

THE laying of the line between Shiraishi and Okawa on the Japan Railway Company, which is now going on, will be completed shortly and the section will be opened for traffic about the beginning of November next.

VISCOUNT AOKI, Minister of State for Foreign Affairs, will give an entertainment at the Rokumeikan on the 3rd prox. to Ministers of State, the Foreign Representatives, and high officials of the various Departments.

ACCORDING to a report by the Ibaraki Prefectural Government the quantity of coal produced in the Prefecture during last year was 8,378,150 *kin* (one *kin* = 13½ *lb*) of which 7,435,300 *kin* valued at yen 22,205.90 were sold.

THE Law as to Diplomatic Officials and Consuls was promulgated on the 21st instant over the signatures of Count Yamagata and Viscount Aoki, by Imperial Ordinance No. 257. The law consists of eleven articles.

IT is stated that Mr. Hori Shingoro, who has been nominated by the Emperor a member of

the Upper House, having resigned his position as President of the Tokyo Court of First Instance, Mr. Oshima Sadatoshi, President of the Osaka Court of First Instance, will succeed him.

RAILWAY communication between Shiraishi and Okawa on the Japan Railway Company's line, which has been suspended for some time in consequence of damage caused by heavy rain, was re-opened on the 20th instant.

A REPORT issued by the Sanitary Bureau of the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 21st instant, was 41,240, resulting in 28,046 deaths.

MR. MINAMI SEIICHI, a member of the Oita Local Assembly, was sentenced in the Nakatsu Correctional Court on the 21st instant to minor imprisonment for a month, and to pay a fine of yen 10, on a charge of having given bribes to electors.

DURING three months ended June last the number of passengers who arrived in Kobe by steamer was 37,532, while 34,462 passengers departed. During the same period 15,073 passengers arrived at and 14,601 passengers left Hyogo by steamer.

AN outbreak of fire took place early in the afternoon of the 30th instant in a house at Kawatanamura, Toyoura-gun, Yamaguchi Prefecture, and thirty-two houses, three godowns and one shrine were entirely destroyed before the flames could be got under control. Early in the morning of the 16th instant about two hundred and fifty dwellings were burned to the ground by a conflagration at Tanabemura, Shimokita-gun, Aomori Prefecture.

RETURNS compiled by the Customs Bureau in the Finance Department show that during the month of September last exports amounted to yen 4,276,949.040 in value and imports to yen 7,385,697.200, the latter exceeding the former by yen 3,108,748.160. The following are the amounts of Customs duties collected at various ports during the month:—Yokohama, yen 211,724.305; Kobe, yen 139,834.007; Osaka, yen 7,702.211; Nagasaki, yen 12,048.128; Hakodate, yen 3,074.942; various other ports, yen 1,920.492.

THE interport cricket matches, Kobe v. Yokohama, came off this week on the ground of the latter club. On the first day Kobe made 68, and Yokohama 188, when the innings of the latter was declared closed, one not out and five men did not bat. In the return match next day, Kobe was in somewhat better form, the game becoming quite exciting at the close. Kobe went in first and made 171. At seven minutes to “time” Yokohama had 14 runs to get, with several wickets to fall. At three minutes to “time” two runs only were required to win, and the match resulted in favour of Yokohama by 3 runs and 3 wickets.

GENERAL depression is the principal feature of the Import trade, and only small quantities of Yarn have been taken, other lines being almost entirely neglected. Little business has been done in Metals, there is nothing to report in Kerosene, and Sugar is not in request. The Silk trade has revived somewhat, though transactions have not yet become extensive. Prices vary with exchange, and stocks are heavy. Waste Silk continues in fair demand, and prices are well maintained. The Tea trade is small, but full rates have been paid for the leaf taken. Exchange has been unsteady, and silver has dropped 1d. to-day.

EDITORIAL NOTES.

THE HOUSE OF PEERS.

THE *Kokumin-no-Tomo* of the 13th instant contains an interesting article on the House of Peers. After noting that, with the recent Imperial nomination of Members of the House of Peers, that branch of the Legislature has become fully equipped, our contemporary proceeds to remark that the public at large does not pay to the Upper House the amount of attention it deserves, the word Diet being generally used in the sense of the House of Representatives alone. Such a state of public feeling towards the Upper House is not, in the opinion of the Tokyo journal, altogether unreasonable, seeing that that House has little, if any, direct connection with the people. But it is a great mistake, the *Kokumin* urges, to disregard the Upper House, for it occupies a unique position in the present political stage of the country. It possesses an amount of power, constitutional as well as actual, which can never be passed over in any political calculation. The *Kokumin-no-Tomo* even goes so far as to state that there is no assurance that it may not one day obtain an ascendancy over the popular branch of the Diet. Our contemporary then cites various articles of the Constitution and of the Law of the Houses to substantiate its assertion that the Upper House possesses equal constitutional powers with the Lower, the only difference in the legislative capacity of the two being that the Budget is first laid before the House of Representatives. According to Article 39 of the Constitution, no bill that has been lost in either of the Houses can be brought forward again during the same session. Thus the House of Representatives would be absolutely incapable of accomplishing any of its reforms—the reduction of the land tax, the amendment of the Press Law, and so forth—without the co-operation of the Peers. Of course our contemporary does not think that the House of Peers will oppose every resolution of the House of Representatives. But the fact that the Peers possess vast powers in matters of legislation must be borne in mind by every statesman. The *Kokumin-no-Tomo* then passes on to consider the nature of the elements composing the Upper House. There are Princes of the Blood, men with high titles, gray-headed servants of the State, young men of bright intellect, and lastly wealthy farmers and their sons—a body of men apparently void of any cohesion between themselves. The most conspicuous feature in the composition of the House is—we are still quoting our contemporary—that its members are, in the majority of cases, very intimately connected with the present Government. To begin with, three Ministers of State, Counts Matsukata and Yamada, and Viscount Aoki, are found among its members. Another member occupying a conspicuous position is Count Ito, the most powerful supporter of the Government outside strictly official circles. "The influence," says our contemporary, "which Count Ito exercises over the nobility in general is deep and great, and, if anything, exceeds the influence exercised by Count Itagaki over the untitled classes. If Count Ito only raises his whip, the wildest horses among the *Kwazoku* will obey his will." There are, however, noblemen—observes the Tokyo periodical—who are by no means tame supporters of the Government. Such men are Marquis Asano, Count Yanagiwara, and Viscounts Miura, Tani, and Torio. These persons may, in some cases, even go farther in their opposition to the Cabinet than the Opposition in the House of Representatives. But their opposition is individual rather than systematic, personal rather than general. If they have enemies in the Government, they have also friends and allies. So they are, after all, in the opinion of the *Kokumin-no-Tomo*, opponents of a portion and not of the whole of the Government. Among other titled members of the House, there may be some not at all favourably disposed towards those in power, but considering how much they owe to the munificence of the present Government, it is extremely doubtful whether they will be courageous enough to turn round upon their old

patrons and benefactors. As to those members of the Upper House who have been nominated from among the Senators, our contemporary observes that some of them, in spite of their advanced age, are noted for a certain amount of activity and intelligence, and they might perhaps join, in certain cases, Viscounts Tani, Torio and Miura in opposition to the Government. But they are old and cannot be expected to hold their ground against a group of young members loyal to the Government. Such young members are Messrs. Ito Miyoji, Su Kohei, Kaneko Kentaro, Hirata Tosuke, Imamura Waro, and a few others. These men are the most brilliant officers in the service of the Government. "They are," says the Tokyo journal, "to the present Government what Generals Kato and Fukushima were to Hideyoshi. Who knows that the object of the Government in nominating these men to the House of Peers, is not to make them fight the battle of another *Shisu-ga-take*?" With regard to the members nominated from among men of business, they are either officers of companies under the special protection of the Government, or men who owe their fortune to the patronage of high dignitaries of State. They will, therefore, be friendly to the Government. The members representing the maximum taxpayers in each locality are in general comparatively ignorant and indifferent in political matters. Lastly those who represent erudition are mere scholars, and can exercise little influence over practical politics. Such being the nature of the different elements composing the House of Peers, our contemporary concludes that there is little probability of any serious opposition to the proposals of the Government in that House. The Tokyo journal suspects that it may be the Government's plan to counteract the opposition of the Representatives by means of the Peers. Thus while the members of the Lower House have been absorbed in petty political intrigues, the Government has constructed—says the *Kokumin-no-Tomo*—a formidable fortress in the shape of the Upper House. Such being the case, our contemporary thinks it vitally important for the members of the Lower House to obtain allies in the Upper House. At present no political party is represented in the Upper House, and consequently the *Kokumin* advises the principal parties in the country to exert themselves for the conversion of the Peers to their political creeds, so that the two Houses may work together harmoniously. While the members of the Lower House have made a serious mistake in paying no proper attention to the House of Peers, the members of the latter, especially hereditary nobles, entertain, in the opinion of the Tokyo journal, most erroneous notions about their position in the State. They think that, being the bulwarks of the Imperial House, it is their bounden duty not to identify themselves with any of the political parties. Individual independence is so marked that there is no cohesion among them as a body. Our contemporary cites the example of noblemen in England, and exhorts the Japanese Peers to do away with their old exclusive and conservative notions.

TRADE MARKS AND PATENTS.

IT is just as well that the question of protection to foreign trade-marks and patents in Japan should be fully understood. We therefore refer again to the subject, for the purpose of clearing up a doubt expressed by a local contemporary. The difficulty, as we explained in a previous issue, of concluding any arrangement for the protection of foreign trade-marks and patents in Japan, is that complete reciprocity could not be secured without special enabling legislation on the part of Western Powers. Japanese patents and trade-marks would be open to violation by foreigners residing in Japan, unless laws were enacted by foreign States to guard against such a contingency. To this our contemporary replies that the difficulty has no existence in fact. The reason assigned for this contradicting us is that "British subjects in Japan are just as much under the Common and Statute Law of England as they are if resident in London itself,"

and that, consequently, if a Japanese registered his trade-mark or patent in England, protection would thereby be secured to him against infringement of his rights by British subjects in Japan. It is amusing to find our argument thus traversed and confirmed in the same breath. Our contemporary itself admits that "it would be necessary that the patent should be issued or the trade-mark be registered in England," and yet fails to see that this is the very crux of the situation. If a Japanese desires to obtain protection for his trade-mark or patent within the British dominions, it might be proper to require that he should take special steps to secure English recognition for such patent or trade-mark. But the case assumes a wholly different complexion when a Japanese is asked to register his trade-mark or take out his patent in Europe in order to secure protection for it in Japan. Consider the converse of the proposition and its unreason will be at once apparent. Conceive the idea of requiring an Englishman residing in London to register his trade-mark or take out his patent in Tokyo in order to secure it against violation by Japanese subjects settled at Gravesend. No one should have any difficulty in apprehending this difference. Our local contemporary treats with airy nonchalance the extraordinary proposition that in order to guarantee a Japanese trade-mark or patent against violation within Japanese territory, its owner should be required to register it in England, France, Germany, Italy, Belgium, the United States and so forth. But the statesmen who have to deal with these questions examine them somewhat more accurately. The only practical way of meeting the situation is to provide that all Japanese trade-marks and patents duly registered in Japan according to Japanese law shall be respected by all foreigners residing or trading within Japanese territory; in other words, that the mere fact of recognition by Japanese law shall secure a patent or trade-mark against violation by everybody and anybody, without distinction of nationality, within Japanese territory. To effect this, each of the Treaty Powers would have to pass a special law, for although Great Britain, to take an example, may be able to restrain her own subjects in respect of a trade-mark or patent registered in London, she cannot at present compel her subjects living in Japan to respect Japanese patents and trade-marks registered in Tokyo only. Thus, in a word, the situation is reduced to this obvious absurdity, that in order to secure his trade-mark or patent against violation in his own country, a Japanese would have to register it in ten or twelve foreign countries. It will be seen, therefore, that in spite of sweeping declarations to the contrary, extraterritoriality is at the root of the difficulty, and that until Japanese laws become applicable to foreigners in Japan, the question of patents and trade-marks must remain *in statu quo*.

CURRENT TOPICS.

THE lately promulgated Regulations for Primary Schools and Regulations for Pensions of Teachers have given universal satisfaction to the public, with a few exceptions. It is a matter of sincere congratulation that the hitherto neglected teachers of primary schools have at last obtained from legislators the attention they deserve. We shall speak of these Regulations more at length in a future issue.

An event which we have more than once predicted as highly probable is, according to an apparently trustworthy report, about to take place. We refer to the estrangement of the extreme section of the Constitutional Liberals from the main body. Mr. Endo, head of the *Eishin-sha*, a political association composed of determined *soshu* in the Province of Kaga, and Mr. Tōyama, head of the *Genyō-sha*, an equally noted political association of *soshu* in Fukuoka—both gentlemen being members of the Constitutional Liberal party—are reported to have come to an agreement for the formation of a new party, in conjunction with a local association at Kumamoto under Messrs. Sassa and Furushō, and in conjunction also

with the Nationalists of Tosa, who are said to maintain a close connection with General Tani. It is not, however, known whether General Tani will countenance such an amalgamation or not. The name proposed for the new party is National Liberals. We are glad to hear of this project, because the secession of the unruly elements under Messrs. Edo and Tôvama from the ranks of the Constitutional Liberal party practically means the removal of the chief obstacle hitherto lying in the path of a coalition between that party and the *Kaishin-to*. As to the contemplated programme of the seceders, it is, one must confess, a curious spectacle to see the extreme section of the Radicals coalesce with a party which has hitherto been regarded as the no less extreme section of the Conservatives. But on closer observation, the spectacle loses something of its perplexing elements. In point of fact, one of the anomalies hitherto existing in Japanese politics has been the presence in the Radical camp of a group of politicians essentially conservative in their methods and sentiments. Men of ardent temperament, simple in mind, and possessing but scant education, these enthusiasts were enchanted by the glamour of such names as those of Counts Itagaki and Goto, and were led to cast in their lot thoughtlessly with the Liberals. It is, we think, a sign of the healthy development of Japanese politics that such persons have begun to think of returning to the camp of their natural allies. That they are not yet sensible of the nature of the transition they are about to effect, is apparent from the name which they propose to apply to their new party—National Liberals.

The contemplated secession of the above mentioned section of the Constitutional Liberal party, and the project of amalgamating the Conservative parties, seem to have revived the hope of uniting the *Rikken Jiyu-to* with the *Kaishin-to*. Such a contingency is now in the highest degree probable. If rumour can be trusted, Count Itagaki seems to be on exceptionally good terms with some of the leading members of the *Kaishin-to*. Some people even assert that the Count is indebted to the good offices of Mr. Shimada, editor of the *Mainichi Shimbun*, for the raising of funds to defray the expense of his new organ, the *Jiyu Shimbun*, which will make its first appearance on the 20th instant under his personal direction.

There is, it is said, much discussion in the Department of Justice as to the style of robes to be worn by judges and barristers. Count Yamada, Minister of Justice, is reported to be in favour of the adoption of an old national style somewhat similar to that at present worn by the instructors of the Art School. Mr. Mitsuoki, Vice-Minister of Justice, advocates frock-coats on ordinary occasions, and robes of state when judgment is given. Mr. Mitsuoki's opinion was reported to have more support than that of his chief, but now some papers state that Count Yamada has hopes of seeing his advice adopted by the Cabinet.

GOLD MINING IN SOUTH AFRICA.

THE extraordinary development of the gold mining industry in South Africa is well described in a lecture delivered to the Associated Chambers of Commerce in England by Mr. W. Y. Campbell, Vice-President of the Chamber of Mines at Witwatersrand, in the Transvaal. Mr. Campbell chiefly addressed himself to speaking of the gold mines at Johannesburg, on the Witwatersrand. The mines were opened in 1887, during which year their output was 34,000 oz. In 1888 the yield increased to 231,000 oz., and during the present year the production has been at the rate of 500,000 oz. The Witwatersrand district thus becomes practically the third in the world in respect of gold mines. The continent of America at present heads the list with 1½ million ounces; Victoria comes next with 600,000 ounces, and Russia next with 500,000 ounces. The Transvaal thus ranks already with Russia,

and Mr. Campbell declared his conviction that, in a few years, it would "challenge the world for first place as a gold-producing country." The great obstacle to its development at present is the fact that Johannesburg, where the mines lie, is situated in the wilds of Africa, 400 miles from a sea-port. Everything has to be carried to the coast by ox teams at extravagant rates. Every 100 lbs. weight of goods costs thirty shillings for transport, and in this way no less a sum than twenty-five million dollars was expended in 1889. A railway from the coast to Johannesburg would have saved eighteen million dollars on this item alone. It appears also that labour, whether white or black, is enormously dear, and that whereas in America improved methods of extraction enable the miner to get 75 per cent. of the gold in the ore, the means available at Johannesburg give only 45 per cent. If all this be correct, there is evidently a great future for South Africa. Mr. Campbell concluded his lecture with a political survey. He said that "despite the fact that it was divided into what were apparently many contending States inimical to each other, yet the tendency to those who could read beneath the surface was absolutely on the line of consolidation or a confederacy of States, with absolute freedom of self-government in all internal relationships and questions of domestic policy, but flying the Union Jack. The tie of Empire would be as strong and as loyal there as it was in Canada or Australia. A new nation as strong as either of these would grow up as South Africa, and in a far shorter space of time."

AFRICA—THE PARTITION.

THE most succinct and comprehensible analysis we have yet seen as to the partition of Africa resulting from the recently concluded treaties, is given in the pages of the *Economist*. Here is the pith of it:—

Roughly, it may be said that, including Egypt, Great Britain owns or her influence is supreme over an area of 1,650,000 square miles, while there is the entire basin of the Nile from Egypt southward to the British East African territory, which Gordon was sacrificed to save, and which has opened for the present to us, and where we should certainly object to see a foreign Power located. Here there are, including Darfur, nearly 1,000,000 square miles, of additional territory, which during the Egyptian occupation was estimated to contain 11,000,000 of people.

The following is a summary, which must only be regarded as a rough approximation, so long as our information is so incomplete and crude:—

BRITISH DOMINIONS AND SPHERE OF INFLUENCE.			
	Area.	Square Miles.	Population.
Cape and Basutoland	250,000	1,800,000	
Natal, with Zululand and Swaziland	40,000	650,000	
Bechuanaland, Kei	190,000	200,000	
British South Africa Co. and lands across the Zambesi up to the German and Congo States	400,000	3,000,000	
Total in South Africa	880,000	5,650,000	
Gold Coast and West African Settlements	35,000	1,000,000	
WHITEN SPHERE OF BRITISH INFLUENCE.			
Orange Free State	120,000	150,000	
Transvaal	110,000	400,000	
British E. Africa (a minimum)	300,000	(?)	
Socotra and Singali Coast	(?)	(?)	
Zanzibar Protectorate	1,000	200,000	
Royal Niger Co. and Sokoto	250,000	10,000,000	
Egypt to Wady Halfa (British occupation)	400,000	7,000,000	
Present total (say)	1,650,000	30,000,000	

The agreement with the French Government practically assigns to France a larger area than the entire area recorded in the above table. The Sahara from the West coast to a line drawn northward from Lake Tchad, contains roughly 1,700,000 square miles, but it is only on the South that fertile territory is reached in the watershed of the Upper Niger and lake already referred to. The French Congo, claimed under the curious De Brazza treaties, is also another larger slice of territory about which even the French themselves know very little. The French are also aiming at the subjection of Morocco. However, here is an estimate of the territory claimed by France with the supposed population thereon. She is now discussing the construction of a line of railway across the Sahara, although probably she is likely to gain more renown from such a work as an engineering feat than profit upon the capital required:—

FRENCH DOMINIONS AND SPHERE OF INFLUENCE.			
	Area.	Square Miles.	Population.
Algeria and Tunis	400,000	6,000,000	
Sahara with Timbuctoo to Lake Tchad	1,700,000 (say)	7,000,000	
Senegal, &c.	135,000	500,000	
French Congo	360,000	(?)	
Madagascar	230,000	3,500,000	
Total	3,725,000	17,000,000	

As compared with the area laid claim to by France, the German acquisitions are moderate enough. The

East African territory is the most valuable of these acquisitions; Namaqualand and Damaraaland being poor country, and the Cameroons very unhealthy.

GERMAN DOMINIONS AND SPHERE OF INFLUENCE.			
	Area.	Square Miles.	Population.
German East Africa Company	500,000	(?)	
Namaqualand and Damaraaland	200,000	250,000	
Cameroons	150,000	(?)	
Total	850,000	21	

Another vast area under Belgian influence is the Congo Free State, which Stanley once estimated at 800,000 square miles, and to contain 40,000,000 people, the Portuguese and Italian protectorates are smaller areas, and the former has not yet been exactly defined.

Is it possible to say anything as to the trade and financial prospects of these vast territories? The trade of South Africa is in our hands and is considerable. The trade of the lower Niger is also in our hands. But, apart from these, Algeria, Tunis, and Egypt are alone the countries of which the trade and finance are not really infinitesimal. There may be mining surprises in store. But the lands of tropical Africa are not usually suitable for a European population, and the present inhabitants are races which it must take a far longer time to civilise than those who look for big immediate results appear to think of. We do not, apart from surprises, look for any rapid development of either trade or financial success from these territories, British, French, or German; and the probabilities are that it will be uphill work with all of them to the northward of the Tropic of Capricorn for many years to come. Of course, such enormous areas are likely to produce a certain amount of trade. But the profits of such trade must be exceptionally good to render it worth the effort in the absence of roads and proper carriage. As to the fashion in which these lands have been acquired, that certainly is not at all a bright page in contemporary history. A traveller is equipped, with or without the assistance of the State, and departs for the interior of Africa. He distributes a few flags, of which the natives do not know the significance, and induces a chief here and there to place his mark to a treaty about which he and his people really know nothing. Such was the way in which a number of African territories were acquired. Can we wonder at the resistance offered by natives to any occupation resulting from such documents? In the end European guidance will doubtless be to the benefit and enlightenment of Central Africa; but Europe has proceeded in a clumsy fashion, and neither firearms, spirits nor clothing are much to the benefit of these savage races. Then the method of procedure, both by Germany and this country, of creating companies under charter to do the dirty work, companies which must be supported in case of need, yet which, nevertheless, enable Downing Street to plead ignorance when asked inconvenient questions, is one which we have dwelt upon on previous occasions. Probably immediate trouble is saved to the public official; but it is a system which in the long run will be costly, and may involve serious trouble hereafter. If it be to our advantage to annex these territories, then annex them openly; these go-between companies only defer responsibilities at added risk.

A MISSIONARY.

READING a letter addressed by "A Missionary" to one of our local contemporaries, we appreciate the fact that the stole does not make the saint. Here is a so-called "missionary," a supposed representative of truth and fairness, who by his own admission seldom sees a copy of the *Japan Mail*, yet who does not hesitate to speak of it in terms of malicious slander. This careful practitioner of the doctrines he preaches further declares himself entirely at variance with the British missionaries who signed the recent memorial to H.B.M.'s Minister, and even has courage to assert that "the mass of the missionaries wish to have it distinctly understood that they are in no wise identified with the English missionaries' action." It is amusing to observe how conspicuously men of such a stamp exemplify the old saw that we detect most readily in others the evil with which our own practice familiarises us. "A Missionary" takes an article published in these columns with express reference to the memorial of his British colleagues, pretends to think that its language is intended to apply to all missionaries, asks "who authorized the *Mail* to act as mouth-piece for the missionaries in Japan," and then proceeds to constitute himself mouth-piece for "the mass of the missionaries." Is he indeed their "mouth-piece?" Since when have "the mass" of the missionaries in Japan so completely changed their views that they are prepared to repudiate the Memorial signed by them in 1884? Since when have they become such violent anti-revisionists that they scorn all connection with their British colleagues' recent memorial, the sentiments of which were so impar-

tial that even the Yokohama agitators themselves might, according to the showing of their organ, have signed it without hesitation? Are the missionaries who attended the uncommonly full meeting of the Kobe and Osaka conference last Tuesday, and who voted for even more substantial concessions to Japan than those contemplated by the Memorialists of 1884—are these missionaries also to be excluded from "the mass" represented by our local contemporary's scurrilous correspondent? Lying before us as we write is a letter just received from one of the best known and most highly respected missionaries in Japan. He writes "my acquaintance with missionaries is very large, but I do not happen to know of any single one who is not in favour of granting to Japan substantially all that her statesmen care to ask." Are all the missionaries of this gentleman's "large acquaintance" to be excluded from "the mass" represented by our local contemporary's unscrupulous correspondent? For his own sake we should not devote a line to the task of contradicting a man of such calibre and temper, but it is always an interesting study to analyse the kind of persons who array themselves on the side of the implacables, and in this particular case the task is more than commonly easy, for nothing could possibly injure the cause he advocates more effectually than the letter of our local contemporary's virulent correspondent. We reproduce it, in order that our readers may judge for themselves whether such an exhibition of prejudice, falsehood, slander, and ill-temper can possibly be associated with a reasonable and reasoning attitude on the subject of Treaty Revision or of anything else:—

TO THE EDITOR OF THE "JAPAN GAZETTE."

Dear Sir.—Accidentally I came across a copy of the Japanese paper—printed in English, in which a leader is devoted to the Missionaries. That this sheet should approve the course taken by some of the English Missionaries is not at all surprising, but to make it appear as though these English Missionaries represented the general sense and sentiment of the mass of the Missionaries in Japan, is decidedly misrepresenting the facts in the case under consideration, viz.: The Treaty problem. In the above said leader it is said: "What the Missionaries see is that much ill feeling has resulted from the Yokohama meeting. * * * and that, unless something be done to efface this evil impression, a crop of lasting umbrage is likely to spring from those seeds of discord." Who authorized the *Mail* to act as mouth-piece for the Missionaries in Japan? I assure you, Mr. Editor, your correspondent is but one out of many who would most emphatically object to be classed among the few English Missionaries who are willing to sit under the shadow of the *Mail*. No, Sir, we wish to be free from all suspicion in this respect. Moreover, we are quite able to speak for ourselves when the proper time comes. In the above quotation it is said that the "Missionaries (what Missionaries?) see that much ill feeling has resulted from the Yokohama meeting." I think it would have been nearer to the truth to say: "The Missionaries see that much ill feeling has resulted from the petition of the English Missionaries, and that the mass of the Missionaries wish to have it distinctly understood that they are in no wise identified with the English Missionaries' action." Nor is it easy to understand why the English Missionaries took the course they did. Could they so soon forget what happened to Rev. Mr. Large? And afterwards to Rev. Mr. Summers?

Respectfully yours, &c.,

A MISSIONARY.

October 16th, 1890.

BAMBOO MATCHES.

We read in the *Shogyo Shimpō* that a certain Mr. Tanchi Suteroku has perfected a process for manufacturing matches from bamboo, and has obtained a patent. Matches made of this kind of wood are said to be particularly cheap, and much stronger than the ordinary article, but in what the process consists we have no information.

Speaking of matches, we translate the following from the *Tokyo Shimpō*:—"Matches of Japanese manufacture have, of late years, acquired a high reputation abroad, especially in China and India, where the demand for them increases constantly. The machine now employed in making them is, however, by no means satisfactory or equal to the work thrown upon it. We learn that Mr. Tanabe Shigeto, of

Yenoguchi in Tosagori, Kochi Prefecture, has invented a machine which is said to be a marked improvement upon the one hitherto in use. It can be driven by either steam or water power, and its capacity of production is put at two hundred million matches per diem. Four or five of such machines would suffice to supply all the factories in Japan. In point of cheapness and efficiency, therefore, the machine is something remarkable. The inventor has applied for a patent." A very wonderful machine truly, if these figures be even approximately correct.

MESSRS. DILLON AND O'BRIEN.

We confess to a feeling of sincere satisfaction at the news of the arrest of Messrs. John Dillon and William O'Brien. These gentlemen have ceased to deserve the smallest spark of sympathy. They deserve to occupy a felon's cell unless all the principles hitherto considered essential in the every-day dealings of honest men are to be disregarded. At a recent demonstration against the Roman Catholic Bishop of Limerick, Mr. Dillon said that in his opinion any Irish Bishop ought to have been ashamed to approve of the eviction of Irish tenants "no matter what the merits of the case might be." Such a monstrous doctrine is scarcely compatible with the hypothesis of its utterer's sanity. And now Mr. O'Brien is reported to have told a meeting of ignorant peasants that should tenants absolutely refuse to pay a penny of rent until every family that tilled the soil was placed beyond the reach of starvation, "then if the Government evicted the starving population, it would be swept out of existence by a torrent of English indignation, and the whole civilized world would send money and assistance." If such attempts to betray unfortunate peasants into acts of deliberate dishonesty are not criminal sedition, the time-honoured principles of right and wrong have been completely altered.

* * *

Mr. O'Brien, by the way, is opposed to politics being drawn into the sphere of religion. He was very angry with the Bishop of Limerick for interfering to protect a man against being boycotted, and he was of course very angry with the Pope for protesting against the plan of campaign. It is a pity that he is not here to give us one of his characteristic harangues against the missionaries who have memorialized about Treaty Revision.

MISTAKEN IDENTITY.

The *Nichi Nicht Shimbun*, generally so accurate in its comments, has an editorial note evidently emanating from the pen of a writer remarkably blind to the true facts of the situation which he undertakes to discuss. This is what our Tokyo contemporary says:—"There are three English newspapers in Yokohama. Of these the *Mail* is favourable to Japan; the *Herald* maintains a neutral attitude, and the *Gazette* makes it a rule at every possible opportunity to oppose our country. On the occasion of the holding of the anti-revision meeting, the British residents, appreciating the importance of journalistic organs, but not being able to get the three newspapers on their side, determined that the support of two of them at least must be secured. Unable, however, to induce the *Herald* to abandon its neutral attitude, they set about solving the dilemma by purchasing that paper. They offered twenty thousand dollars, but the proprietor asked thirty thousand, and an arrangement has not yet been effected. The probability is, however, that a bargain will be struck, in which event the anti-revisionists will have an organ, and will use it with the utmost vigour." This is truly delightful. Nothing could be more supremely comical than to call the *Japan Herald* a neutral paper. The *Japan Gazette*, indeed, is occasionally visited by spasms of conscience: it has its purring moods, though in truth they are generally compensated by subsequent accessions of clawing and biting. But the *Japan Herald* never once while the sway of its Protean proprietor remained effective—never once was

known to desist from growling and snarling. For a season, indeed, while the man of many aliases enjoyed the pleasures of a trip homeward under interesting circumstances, the *Herald's* pages reflected the kindly instincts of its popular and sound hearted manager. But the noun of multitude returned from his *offium cum pecunia*, and once more the shadow of his evil genius crept over the pages of his paper. Dust at first—an occasional pulverulent puff, not without taint of low places—was by and by followed by a steady pour of mud, up to master in respect of old-time consistency, but no longer saved by stray particles of grit from the semblance of mere slime. This is the neutrality which the projectors of a new journal are supposed to be about to convert into good solid partisanship. They will be diverted by the *Nichi Nicht's* account of their motives. The fact is, we believe, that they desire to establish a journal which shall not be disfigured by partisanship, and, above all, which shall be free from the virulent abuse and gross personalities that have made local journalism in this Settlement so notorious. The prime mover in this project was also, it is true, the prime mover in bringing about the agitation of last month; but he afterwards declared himself most emphatically not an anti-revisionist, being only opposed to revision without guarantees. That, indeed, is the position of all moderate men in the Settlement: they recognise that revision is either necessary or inevitable, but they want to have it effected on the safest and most favourable terms from their own point of view.

TAXES IN TOKYO AND THE NEW WATER-WORKS.

THERE has been some anxiety among the poorer classes in Tokyo lest new taxes should be imposed to meet the service of the loan of ten million yen projected by the City Improvements Committee for the construction of water-works and other purposes. To dispel all doubts as to this question, a number of Senators and other residents of the capital, some eighty in all, met on the 15th instant at the Koyokan, Shiba, and invited Mr. Kusumoto Masataka to explain the financial scheme of the Committee. According to the *Tokyo Koron* the gist of what Mr. Kusumoto said was as follows:—In August of the present year the City Improvements Committee came to the decision that Tokyo should be supplied with proper water-works, and that other improvements should be undertaken—a decision upon which the citizens are to be heartily congratulated. Some people appear to be anxious about the question of the ten million yen loan that is to be raised, but in a great city like Tokyo such a sum presents no difficulties whatever. Looking at the matter, however, purely from the side of profit and loss, it has to be noted, in the first place, that the inhabitants of the level parts of the capital number about one million, while those living on the higher grounds aggregate about three hundred thousand. The wells in use by these people amount to forty-four thousand, the great majority of which are contaminated. In addition, there are 7,078 wells supplied with aqueduct water. According to the scheme of the new water-works there are to be three great reservoirs, together with fifteen hundred conduits, the length of the pipes being over 120 ri (280 miles). There will also be 3,500 hydrants (*funsui-guchi*) for use in case of fire. Hitherto the inhabitants of the Honjo and Fukagawa districts have been paying sixty thousand yen annually for drinking water, and the citizens generally are taxed to the extent of five hundred and twenty thousand yen yearly on account of the aqueduct. These two accounts may be regarded as available for the service of the debt, and there will be an additional sum of two hundred and fifty thousand yen annually from the City Improvements Committee, as well as a sum of one hundred and fifty thousand yen from the Government during a period of seven years. Some fifty or sixty thousand yen will also accrue from the rent of public lands. Thus, in one way or another, there will be over a million yen to devote to the annual service of the loan, and no necessity whatever exists for new taxes. Mr. Kusumoto also explained that

the expenditure of ten million yen ought not to frighten the citizens of the capital when they have in hand a scheme of city improvements expected to cost altogether 140 million yen, which will be spread over a period of 280 years.

LOSS OF A BRITISH SAILING SHIP.

TELEGRAPHIC information (says the *Hyogo News* of the 17th) has been received at the Kencho stating that a British sailing ship—supposed to be the *Lizzie C. Troop*—was lost on the 22nd ult., on the island of Yerabeyima, one of the Loochoo group. The crew arrived at Kago-shima on Wednesday, but the information in the possession of the Kencho does not give the number saved; the *Asahi Shimbun*, however, as will be seen by our translations, places the number at 10. The telegram being in Japanese, the name is anything but clear, but seeing that the *Troop* left Nagasaki in ballast for Puget Sound on the 15th ult., and that there is no other vessel of that name at present in these waters, the probabilities are, we fear, that she is the British ship referred to. Added to this we already know that the 22nd was the date of the very violent typhoon which swept over that portion of the country, and the date of the *Troop's* departure and the date of her supposed wreck would place her somewhere in that quarter. Captain Fownes had his wife and family on board. The same journal has the following on the 18th instant:—The report of the total loss of the British ship *Lizzie C. Troop* off the Loochoo Islands, with the major portion of her crew, appears to be only too true. The survivors, seven foreigners and three Japanese, are due this morning from Kumamoto, Kagoshima, per Nippon Yusen Kaisha steamer *Mutsu Maru*, which left that place at ten o'clock on Thursday morning. Those drowned number thirteen, and include one Japanese. Nothing further is known, and, until the arrival of the survivors here, no list of those who perished will be available. The Captain's family included his wife and two children. Preparations have been made at the Sailors' Home for the reception of the survivors. The news of the disaster appears to have taken more than three weeks to travel up here, due, of course, to the ungetatableness of the locality where the wreck occurred. The vessel being an English ship, there will be the usual Court of Inquiry at H.B.M.'s Consulate into the circumstances attending her loss. * * * * The *Mutsu Maru* arrived this morning. Among the survivors are Mrs. Fownes, the Captain's wife, and the first mate. The vessel was driven on to the rocks during a typhoon, striking at 6 o'clock in the morning. The survivors stood by her and came ashore when the weather moderated. Those who jumped overboard were drowned. The Captain brought his wife and eldest son ashore, but lost the latter in the surf. He returned to find him, if possible, but was frightfully hurt among the rocks, and was washed back by the sea. He died on shore an hour later from the effect of his wounds.

PATENTS AND TRADE MARKS.

THE question of protection for foreign patents and trade-marks in Japan is running the usual gauntlet of misrepresentation and equivocation. Nothing could be simpler than the point at issue. Foreigners residing in Japan are held to be exempt from the control of Japanese laws. Consular Courts are not competent to enforce those laws as against their own nationals. Therefore a foreign subject or citizen living in one of the Settlements may infringe a Japanese patent or appropriate a Japanese trade-mark without running any risk of being cited before his Consul, who could not take any cognisance of the offence. It results, therefore, that in order to secure his right in a patent or trade-mark against infringement within the limits of his own country, a Japanese subject would have to register the patent or trade-mark in every one of the foreign States whose nationals carry on business in Japan. This difficulty has been thoroughly recognised in official quarters. It stands fatally in the way of any arrangement for reciprocal protection. Special enabling legislation on the part of each of the Treaty Powers

would be necessary in order that Consular Courts might be competent to restrain their nationals in Japan from infringing the rights of Japanese subjects in respect of Japanese patents or trade-marks.

Such being the case, observe how the question is treated by a local English journal. Here are two extracts from its pages, with italics of our own:—

Japan Herald, Oct. 15th.

British subjects in Japan are as much under British law, as they would be were they actually in England. It follows therefore, that if a Japanese were to take out a patent in London, or were to register a trade-mark, the Court here would punish any infringement of that patent or trade-mark, inasmuch as Englishmen here are subject to the laws of their own country. It is true that it would be necessary that the patent should be issued or the trade-mark be registered in England, but this, we apprehend, is a condition which prevails throughout the world, and we have no doubt but that many foreigners would be willing to register their trade-marks, &c., in Japan could they secure equal protection.

Japan Herald, Oct. 18th.

The *Japan Mail* asserts, as an unquestionable proposition, that a British Subject in Japan may with impunity infringe the right of a Japanese Subject acquired by virtue of the Japanese law of trade-mark, or of patents. The enterprising Britisher who would allow himself to be deluded into acting upon that advice would have no reason to congratulate himself upon following the teaching of the *Mail*.

Thus, on October the 15th the public is informed that in order to secure a Japanese patent or trade-mark against infringement by British subjects in Japan, "it would be necessary that the patent should be issued or the trade-mark be registered in England." On October the 18th the public is informed that if an "enterprising Britisher" in Japan attempted to "infringe the right of a Japanese subject acquired by virtue of the Japanese law of trade-marks or of patents," he "would have no reason to congratulate himself" upon doing so. A journal contradicting itself in this flagrant manner during the course of three days either is sensible that nothing could increase its discredit, or entertains the lowest possible idea of its readers' intelligence.

CHANGES OF LANGUAGE.

THE history of a people is reflected in its language. Nowhere has a more conspicuous example of this been furnished than in Japan. Since the country set out upon its extraordinary career of modern progress, commencing less than a quarter of a century ago, its language has undergone almost as much change as its institutions. An educated man of the time of the Restoration, could he be transported to the present era without linguistic preparation, would find his countrymen speaking something very like a strange tongue. Thousands of words not included in the everyday vocabulary of the year 1865 have now come into common use. They are derived, of course, from the Chinese, an inexhaustible source whence expert word-makers can draw materials for the manufacture of almost any conceivable term, abstract or concrete. A list of the additions and changes thus made and effected would be virtually a record of the nation's progress in science, literature, commerce and industry. It might be worth some scholar's while to prepare such a list. The *Yomiuri Shimbun* makes a beginning, though the examples it selects serve chiefly to show how largely the fashion for Chinese equivalents has come to prevail—how much the *on* is preferred to the *kun*. Here are our contemporary's words:—

1865.	1890.
Okami (the Government).....	Seifu.
Shimo jimo (the people).....	Jinmin.
Ofure (a proclamation).....	Chokurei.
Ohite (a law).....	Hokuritu.
Tahiki (message).....	Denshin.
Nengu (tax).....	Chiso.
Yuridai (meeting).....	Yukai.
Unjo (customs duty).....	Ze.
Kuji (a law-suit).....	Soshō.
Negat-nushi (the plaintiff).....	Geikoku.
Aite kata (defendant).....	Hikoku.
Omutsu (defective).....	Tantei.
Sushi gumi (a summons).....	Shōkanjo.
Chōji (suspension, as of newspaper).....	Teishi.
Oku-in (public hand).....	Kōshō.

MR. SPENCER'S PARACHUTE DESCENT.

MR. SPENCER made his second balloon ascent and parachute descent on Sunday last. The

day was particularly favourable, the sky being quite clear and the air very still and calm. A considerable crowd assembled in the enclosure, and the streets in the vicinity were packed with sightseers. At 4.50 p.m. Mr. Spencer gave the order to let go, but owing to insufficiency of buoyancy in the gas the balloon would not ascend, and more gas had to be admitted. Mr. Spencer meanwhile explaining the delay and promising that, should a second attempt fail, those who had paid for admission would witness free a successful ascent on a day to be afterwards fixed. At 5.6 p.m. he again started, and the balloon slowly ascended into the air, drifting very slightly to the north-west in obedience to a very mild air current. At a height of 1,000 feet the aeronaut left his seat and dropped suddenly a considerable distance, the parachute only becoming distended about half way down, and descending rapidly. So slightly had the balloon drifted that Mr. Spencer actually alighted in the Public Gardens, and soon reappeared among the spectators. He had deemed it advisable in order to ensure an ascent to dispense with the 10lb. weight usually attached to tilt the balloon on his quitting it and thus empty it of gas, being anxious to have some little risk in recovering the balloon (value £100) rather than disappoint his patrons. The balloon, however, emptied itself rapidly after he had left it, but having been set to the westward by a current of air in the higher region to which it ascended came down in Japanese town. In the course of a speech after his return to the ring Mr. Spencer said these low altitude descents showed that under all circumstances the atmosphere had sufficient supporting power to enable a descent to be made. In the experiments that he was making from day to day it was his aim to invent a flying machine. They saw him supported by a canopy of silk, and it was not beyond the realms of possibility that they should be able to support themselves and move in the air as the birds do. When that invention shall have been achieved it will be proved that these ascents are of great scientific value, and are not the mere foolhardy attempts of persons careless of their lives. Mr. Spencer's ascent occupied 1m. 10s., and his descent 35s.

THE DISTRESS IN CHIHLI.

WE have received from the Secretary of the Committee for the relief of distress caused by floods in Chihli, an appeal which we are requested to lay before our readers. As, however, it was published some days ago in our columns, re-production now is unnecessary. The magnitude of the calamity in Chihli is unquestionably appalling. An area of fully six thousand square miles of the district included in the drainage basin of the Peiho was completely submerged, and enormous numbers of people have been reduced to a state of utter destitution. A rough estimate made by competent observers assigns four millions as the number of persons who will be absolutely dependent on charity until next summer. Such a terrible prospect should command the sympathy of the whole of civilized humanity, and the foreign residents of Tientsin appear to have been thoroughly roused to action. We should not have waited for their appeal to reach us officially before inviting our readers to assist such a deserving cause, did we not feel that certain considerations will probably militate against the readiness of foreigners in Japan to subscribe. The floods by which the districts to the north of Tokyo were visited last August, produced bitter distress among the people, and resulted in a state of affairs fully justifying an appeal to foreign charity. Believing, however, that the provision made by the Central Government as well as by the local officials was adequate to meet the emergency, we refrained from opening a subscription list, as suggested at the time by correspondents. Kōchi Prefecture was subsequently visited by a similar calamity. We learn that great suffering exists there at present, and that the foreign public is likely to be invited to aid in relieving it. More than one appeal for assistance on behalf of Japanese reduced to the verge of starvation by the high price of rice and consequent inactivity of the labour market, are also

now before the public, and the Ladies' Charity Bazaar will soon constitute another call for funds. Under all these circumstances we doubt the success of an invitation to assist distant charities while those at home are so numerous and pressing. At the same time we shall be most happy to receive subscriptions and to forward them to Tientsin on behalf of the unhappy Chinese who may even at this moment be dying of cold or starvation.

THE LATE DR. STEIN'S FRIENDS IN JAPAN.

THE news of Dr. Stein's death was received by many Japanese friends with sincere sorrow and regret. They met on the 13th instant at the Koyo-kwan, Shiba, Tokyo, for the purpose of performing a religious ceremony in behalf of the departed soul of their admired friend and instructor. Count Ito, Viscount Kaido, and Messrs. Maruyama, Ariga, and Magaki were the originators of the meeting, and the invitations issued by them were responded to by over thirty gentlemen, occupying high positions in the Government, in journalism, and in party politics, all being personal friends of the deceased juriconsult. Conspicuous among those present were, besides the above mentioned originators, Count Yamagata, Viscounts Tani and Fujiwara, Messrs. Ito Miyoji, Kawashima Jun, Maeda Masana, Kitabatake Doryu, Seki Naohiko, Tsuzuki Keiroku, and others. The meeting was opened at 3 p.m. From a maple tree in the garden was hung a large portrait, 3 by 2½ feet, of Dr. Stein, which is said to have been painted by his eldest son at the request of Viscount Fujiwara. Beginning with Count Yamagata, all present in turn made an obeisance to the portrait. Then followed prayers and the offer of sacrifices according to the genuine Shinto ceremony, these rites being performed under the superintendence of Mr. Maruyama Sakura. He also addressed a *saion* to the spirit of the deceased. With regard to the employment of the ceremony prescribed by the Shinto cult, the originators are persuaded, it is said, that whatever may have been the religious belief of the late Dr. Stein, he would, were he alive, appreciate the warm and heartfelt sorrow of the Japanese for the removal from this world of a friend so loved and respected. While the ceremony was going on, an interesting incident occurred. A man in the garb of a sub-officer of gendarmerie presented himself at the gate, and asked permission to take part in the service. He said that, though he had not known the deceased personally, he was a most admiring student of the illustrious professor; and that, being deeply grieved at his death, he felt the strongest sympathy with the purpose of the meeting. The evidently sincere sorrow manifested by this official afforded unmistakable evidence of the sentiments with which Dr. Stein was regarded in Japan.

THE "RIKKEN JIYU-TO" AND THE "KAISHINTO." In view of the slow revival of the project of amalgamation between the Constitutional Liberal party and the *Kaishin-to*, it is interesting to hear the views entertained on the subject by the *Kokumin-no-Tomo*, a journal enthusiastically devoted to the consummation of the project of union. Writing in its recent issue about the Constitutional Liberal party, the Tokyo periodical deprecates the timidity and hesitation shown by the *Kaishin-to* in connection with the proposed amalgamation. Our contemporary observes that a vast revolution has taken place during the past ten years in the political opinions of the leaders of most of the progressive parties. Stated in a few words, the revolution of thought spoken of by the *Kokumin-no-Tomo* amounts to this, that while formerly Liberal politicians were purely destructive and radical in tendency, they have now become constructive and moderate. This change was first publicly announced by Count Itagaki in his manifesto about the organization of the *Aikoku-koto*, subsequently absorbed into the lately formed *Rikken Jiyu-to*. He plainly stated in that celebrated document that times had changed and that henceforth a moderate and construc-

tive course of policy must be followed for the perfection of the constitutional form of government to be shortly put into operation. No other statesman so plainly avowed his change of opinion, but the sentiments then expressed by Count Itagaki no doubt echoed,—so at least thinks our Tokyo contemporary—the general sense of leaders of the *Daido-ha*, the *Aikoku-koto*, the revived *Jiyu-to*, the *Kyushu Shimpoto*, and all the other parties professing progressive principles. This change signifies among other things that the leaders of these parties have been drifting more and more to the position always held by the *Kaishin-to*. Thus, notwithstanding its defeat of last year on the question of Treaty Revision, its partial defeat at the general elections of last July, and its procrastinating timidity in connection with the recent organization of the *Rikken Jiyu-to*—notwithstanding such apparently discrediting failures, the *Kaishin-to* may well congratulate itself on the signal triumph of the principles so consistently maintained by its members amid the taunts and insults of antagonistic parties. The appearance of a party like the *Rikken Jiyu-to* is the best proof of the triumph of the *Kaishin-to*'s constructive and moderate principles. But the leaders of the *Rikken Jiyu-to*, unlike those of the *Kaishin-to*, have adopted this policy in a straightforward, active, and cosmopolitan manner. Under these circumstances, our contemporary thinks that the members of the *Kaishin-to* should feel no regret about dissolving their party. If they join the *Rikken Jiyu-to*, they can easily occupy the central and most important position in that party. There may be, says the *Kokumin-no-Tomo*, elements in that party hostile to the admission of the *Kaishin-to*, but these need not be taken into serious consideration. The *Kokumin* cites the examples of the Whig party in England, which, notwithstanding that it contains, on the one hand, men like Labouchere and Graham, and, on the other, agitators like those under Parnell, enjoys the confidence of a large section of the nation because of the sober and respectable elements constituting the central and main portion of the party. Such being the case, the *Kokumin-no-Tomo* considers that these who advise the *Kaishin-to* to maintain a separate existence, are recommending a course of policy directly opposed to the best interests of that party. But we (*Japan Mail*) fail to appreciate this line of reasoning. To ordinary folks taught by tradition and instinct that converts should come into the fold of their teachers rather than that teachers should go over to their converts, it will appear more natural and reasonable that the *Rikken Jiyu-to* should be absorbed into the *Kaishin-to* than that the *Kaishin-to* should sacrifice its identity in order to be merged in the *Rikken Jiyu-to*. If, as the *Kokumin* points out, the policy steadily advocated by the *Kaishin-to*, in the face of much opposition and contumely, has at last finally triumphed, why should self-affacement be urged on the *Kaishin-to*? Rather let its intemperate and erring opponents lower their flag and range themselves under the banner of the politicians whose views they have now adopted.

THE NEW LOCAL NEWSPAPER.

As might have been expected, the curious error made by the *Nichi Nichi Shimbun* in describing the *Japan Herald* as a neutral organ, and ascribing to that fact the desire of the anti-revisionists to purchase it and make it an exponent of their own opinions, is contradicted by another vernacular journal, the *Tokyo Shimpoto*. Every reader of the local press knows that the *Japan Herald* has always represented the implacables of Yokohama, and that it has never hesitated to employ any weapon, however foul and vulgar, in fighting for the cause which it espouses. The *Tokyo Shimpoto*, therefore, points out with truth that nothing could be more erroneous than to credit the anti-revisionists with the desire of purchasing the *Herald* in order to change its attitude from neutrality to partisanship. Ever since the question of Treaty Revision entered the field of practical politics, the *Japan Herald* has stood at the very extreme of unscrupulous partisanship, and as is commonly the practice

of persons adopting such a rôle, has never ceased to rail against the partisan tendencies of others. To push it further in the same direction would be indeed a Herculean task. But the *Tokyo Shimpoto* is incorrect in the inference which it draws from this false phase of the story. It is deceived when it says that a scheme to purchase the *Herald* is not on the tapis. An advertisement now appearing places the matter beyond all doubt. Messrs. J. F. Lowder, James Walter, and W. Gordon announce themselves as promoters of a company in process of formation for the purpose of purchasing a paper, and it is an open secret that the paper is the *Japan Herald*. We have known for more than a fortnight that this was the case, but have refrained from commenting on the news, being influenced by considerations which it would still be injudicious to explain. Since, however, the vernacular press has begun to discuss the matter, we desire to point out to our Tokyo contemporaries that they will probably be making a flagrant mistake if they predict an anti-revisionist and partisan rôle for the *Japan Herald* under its new proprietorship. It is true that Mr. Lowder, as the chief promoter of the unfortunate Yokohama Meeting—unfortunate from the foreign standpoint, but incalculably beneficial to the Japanese negotiators—is persistently dubbed an anti-revisionist by vernacular newspapers. But, since the meeting, he has emphatically declared himself a revisionist, and has explained that his opposition is directed solely to the insufficiency, in his opinion, of the rumoured guarantees which are to accompany the abolition of Consular jurisdiction. Messrs. J. Walter and W. Gordon are doubtless of the same way of thinking, and under any circumstances these gentlemen represent the sound and honest side of the Fabian policy. Their opinions deserve the utmost respect, and we can be quite sure that any journal controlled by them or reflecting their views will be fair and courteous in its tone. To have such a paper in lieu of the violent and scurrilous sheet to which we have been hitherto accustomed will be indeed a blessing. Report says, further, that a gentleman of very high attainments both as a sinologue and as a man of letters has consented to edit the reformed journal. If this be so, the promoters and the community are alike to be congratulated, and we may all rejoice heartily to think that the reign of mud, malice, and misrepresentation is at length about to terminate.

THE MISSIONARIES AND TREATY REVISION.

WE learn that at an unusually full meeting of the Kobe and Osaka Missionary Conference, held in Osaka last Tuesday (14th instant), the subject of Treaty Revision was discussed. A statement was drawn up re-affirming the position taken in 1884—when, it will be remembered, nearly the whole missionary body in Japan signed a memorial urging liberal treatment of Japan's claims—but pressing more closely for substantial concessions to the Japanese Government. The sentiment of the meeting seems to have been decidedly in favour of the abandonment of extraterritorial privileges. A correspondent informs us that those present were practically unanimous in that view. There can be no question as to the value attaching to the opinion of missionaries on this subject. Their knowledge of the Japanese people and the Japanese language far exceeds that of any other class of foreigners both in accuracy and intimacy, and as their duties constantly take them into the interior and oblige them to live in remote towns and villages, it is evident that they are very keenly concerned as to the nature of the protection likely to be afforded to them by Japanese tribunals and Japanese police. On the other hand, it is not to be denied that in matters of this kind the missionary, who is before everything a student and disciple of principle, will always advocate what he considers right, without, perhaps, pausing to think whether it conduces to his interests or personal comfort. Justice before expediency is his motto. He finds it just that Japan should recover her judicial autonomy and be placed on the footing of other civilized countries. His experience of Japanese

ways and Japanese character leads him to conclude that foreigners have nothing to fear by submitting to Japanese jurisdiction. Therefore he pronounces in favour of relieving her from the international stigma which undoubtedly attaches to her present position. The merchant, however, cannot be blamed if he takes a less liberal view of the situation. He naturally sets his business interests above everything else. If he thinks that his business will be best secured by keeping things in *statu quo*; if, taught by the habits of his calling, he resolves to cling to all the privileges in his possession, or to drive the best possible bargain in negotiating for their surrender, we may preach to him a more magnanimous creed but we cannot pretend to deny that his attitude is natural and eminently practical. The position has now resolved itself simply into this—that a certain problem has to be solved; that the dictates of right and justice, as represented by the missionary body, clearly point to a liberal method of solution; and that the mercantile interest pleads for whatever form of solution will represent the best bargain from the foreign standpoint.

THE "NORTH CHINA HERALD" AND THE "JAPAN MAIL."

THE *North China Herald* has undertaken to criticise the action of this journal in respect of the recent controversy with Mr. J. F. Lowder. In so far as our Shanghai contemporary's criticism is a mere expression of opinion, we are not concerned to dispute it. But we must protest against being charged with "insinuating that Mr. Lowder, having been accorded a pension by the Japanese Government after many years of faithful and valuable service, had no right to take such a prominent part in a meeting called to oppose the Government's wishes." It is singular that, while quoting our very words, the *North China Herald* should thus misrepresent them. What we wrote was:—

Mr. Lowder for a long series of years occupied a position of honour and trust in the Japanese Government's Service, and is now a life pensioner of the same Government. During that protracted period his sympathies were openly and strongly given to the cause of Treaty Revision, and to the efforts made by Japan to obtain international recognition of her rights. Whether with such a record immediately behind him, the part now played by Mr. Lowder is consistent with the dictates of either decorum or friendliness we shall not attempt to decide.

There is a vast difference between denying a man's "right" to do a thing and questioning whether his action is "consistent with the dictates of either decorum or friendliness." The point was purely one of good taste. Mr. Lowder's "right" to organise the meeting admits of no dispute and has never been disputed by us. Men in his position, however, are usually guided by considerations more delicate than the mere dictates of lawful capability.

BURNS.

ONE of the marked changes in surgical methods which modern experience sanctions is the use of cold applications in case of scalds or burns. Not so long ago the current idea was that if one had courage to hold a burned spot before the fire for an appreciable time, this second application of heat would, by some mysterious process, undo the mischief caused by the first. But even though this extreme remedy were not resorted to, the greatest care used to be taken to avoid the contact of cold air or cold water. Now-a-days, however, the practice is to plunge the injured part into cold water, with the confident assurance that if it can be kept there long enough a complete cure will be effected. We ourselves recently witnessed the case of a child whose foot, scalded in the early morning, was immediately put into cold water and kept there until three o'clock in the afternoon, by which time all evil effects had disappeared. The following story related by the Vienna correspondent of the *Daily News* further illustrates the practice:—"About ten years ago all Vienna was enthusiastic over a young actress, Josephine Wessely, who, a tradesman's daughter, had made her way to the leading parts in Shakespeare's drama, and was one of the chief ornaments of the Imperial

Burg Theatre. Notwithstanding her success, she led a modest and retired life, devoting her savings to her family, so that her father was able to establish two large businesses, and was well enough off to invest some money in a house and large wine cellar. Then Josephine Wessely suddenly fell ill, and died at the age of twenty-seven. Her portrait is in the Burg Theatre gallery, and many visitors gaze upon it between the acts. Those who envied the old shoemaker his daughter's success thought he had paid dear enough for his stroke of luck when she died. Imagine the commotion when Vienna learned that he had died a frightful death. He was busy in his cellar the other night with a servant, and as he was moving a cask in which sulphur had been burnt to clean it the man held the candle too near. There was an explosion, and the clothes of both men were on fire in a moment. The cellar was filled with dense smoke. The man found his way to the entrance and called for help, but old Wessely in his maddening pain lost his way, and when at last neighbours came into the burning cellar they found him in agony in a dark corner, burned most terribly. Baron Mundy took him to the hospital in one of his ambulance cars. He was immediately placed in the cold-water bath, where his excruciating pains ceased. His children came to him during the night, and, with the help of the doctors, he wrote a will on a china tablet under the water, and then died. The persons who were present at this scene say that it was a most heartrending moment when the father expired, after having alluded to the untimely end of his darling daughter."

THE SENATE.

THE abolition of the Senate is at last an accomplished fact. The *Official Gazette* of yesterday published an extra containing the following Imperial Rescripts:—

"During the period of ten years which have elapsed since the Senate was organized we have derived assistance from that body in legislative affairs. In consequence of the opening of the Imperial Diet we now order the dissolution of the Senate, acknowledging the services rendered by it.

20th day, tenth month, 25th year of Meiji."
(Communicated through Count Yamagata, Minister President of State.)

"We hereby authorise the abolition of the Senate and order the same to be promulgated."

(Imperial Sign-manual.)
(Great Seal.)

Signatures of Minister President, &c.
ORDINANCE No. 255.

"We hereby authorize the conferring of special rewards on the President, Vice-President, and members of the Senate, and order the same to be promulgated."

(Imperial Sign-manual.)
&c.

ORDINANCE No. 256.

"In connection with the abolition of the Senate, it is hereby ordered that, as a special reward, sums not exceeding fifteen hundred yen shall be granted to the President, Vice-President, and members."

(Imperial Sign-manual.)
&c.

Signatures of Minister President of State and Minister of State for Finance.

JAPANESE LABOUR FOR THE STRAITS SETTLEMENTS.

WRITING about the urgent need of agricultural labour in the Straits Settlements, the *Singapore Free Press* says:—

India has been looked to as a field to secure our labour—which what success most of us have been made aware by the agitation in favour of greater freedom. China supplies an immense number, and yet not enough. The supply is falling off, too, for we have good reason to believe that the immigration returns will show a decrease of *over ten thousand* for the year. Then the Chinaman, industrious as he is, is an unsatisfactory member of the community. Putting aside his personal peculiarities, which are distinctly unpleasant, there is too much conservatism about him. China embodies all the ideas of the Chinaman, and he possesses, but little of the power of adapting himself to new circumstances. What his ancestors were so is he. Then he does not take kindly to a foreign rule and is inclined to be under a system that runs counter to that with which he is familiar, as intractable as he is superstitious and ignorant. Turning our eyes further a field in quest of possible labour supplies, there is that country of the future, Japan. It has never been suggested that the millions of the men that country might find emigration a paying enterprise, yet when one comes to look at the suggestion of attracting Japanese settlers in our Colony, there is not only a charm in prospect but also every chance of its successful realisation. Japan is one of the most highly

cultivated countries in the world. Every plot of ground is tilled, and narrow strips on the hill sides are cut out at a great expenditure of labour, in order to plant therein rice, tea, or the mulberry. If we could only get a tenth of our fertile cultivated as well as the greater part of Japan is, there would be no necessity to appeal to other countries for our food supply. In industry and agricultural skill the Japanese is quite the Chinaman. In disposition, hereditary politeness, language, and tractability there is a comparison to be drawn between the two. The difficulty lies in the problem whether emigration would ever be sanctioned by the Japanese Government, even under the extreme pressure of such general famines as that now causing such distress and suffering in that country. All the factors conducing to the successful establishment of emigration exist in Japan. On the one hand there is a crowded country only able to support its inhabitants with extreme difficulty; on the other hand broad tracts of fertile soil in a climate eminently favourable to cultivation, which would, amply repay the skilled labour which immigrants of the stamp of the ordinary Japanese peasant could bestow upon it. That the difficulties in the way are great and indisputable, but look where we will there is difficulty in getting labour, and the result of getting a few hundred thousand skilled agricultural labourers into the Colony who would at the same time be permanent settlers would abundantly compensate for any trouble in getting them here.

SPED ACROSS THE ATLANTIC.

WE take the following from a home exchange:—The Canadians (says the *Morning Post*) have actually under consideration a project which, they allege, will result in reducing the run from shore to shore of the Atlantic to eighty-four hours. The project is to construct a railway eastward from Quebec to the coast of Labrador, somewhere between Bellefleur Straits and Cape Weebick or Hamilton Inlet, and thence run a service of fast steamers to Milford Haven. The most easterly point of the Labrador coast is about 900 miles nearer to us than Quebec, and Milford Haven is nearer to America by fully 300 miles or thereabouts. The saving effected in mileage, compared with the run as at present performed from Liverpool to Quebec or Portland, would reach, it may be assumed, not less than 1,000 miles, and it is perfectly evident that a voyage of under 2,000 miles could be made well within four days—nearer three and a half, indeed, than four days. The journey by train from the most easterly portion of Labrador to Quebec would hardly take more than eighteen to twenty hours, so that travellers would be enabled to reach the old Canadian capital within four and a half days of stepping on board the boat at Milford Haven; or taking into account the railway journey from London to the Welsh port, it would be possible to reach Quebec within five days of leaving the metropolis, only three and a half of which would be spent on the water. At present the voyage occupies fully nine days, or, allowing for the journey from London to Liverpool, nine and a half to ten days. The choice of the Labrador route would reduce the duration of the voyage by nearly or quite one-half in point of time, to say nothing of the extra comfort travellers would experience from the shorter period spent on the open sea.

THE ORGAN OF THE RADICALS.

THE appearance of the new Radical organ, the *Fuyu Shimbun*, has been looked for with curiosity, not alone because of the interest attaching to a journal supposed to represent a great political party, but also because it was understood that the new publication would be under the direct supervision and control of Count Itagaki. The first number was issued on the 20th instant. The following is a translation of its declaration of policy:—"The *Fuyu Shimbun* is to be the protector of liberty. The manufacture of public opinion will be its function. Political liberalism is still in its childhood in our country. Sometimes it takes the wrong path or errs in its direction. The *Fuyu Shimbun* will act as guide to the wanderer. There are those who seek to lead astray and deceive our beloved children of liberty. The duty of the protector of liberty is to show them the true way, and prevent them from losing it. Of such as standing aloof from the strife of parties and maintaining an independent and impartial attitude, ally themselves with the cause of liberty, we will be the allies. Of such as are hostile to that cause, we will be the enemies. Political parties, too, are manufactures of public opinion, but the products they turn out are often unavoidably crude.

Public opinion is the view of the majority. A political platform may represent the view of the minority. The *Yi-yu Shimbun* embodies the opinions of the minority, but it will at last receive the adherence of the majority and become the organ of public opinion. The Diet is the wholesale warehouse of public opinion. There the value of the empire is fixed. The responsibility is great. If a crude public opinion be manufactured; if the quality of the article be not carefully chosen; if the market be subjected to violent fluctuations day by day, the vital interests of the State will be endangered. To obey public opinion is the virtue of Constitutional Government. To obey public opinion is also the duty of members of the same party, but to express one's own opinion is the right of a free man. Our hope is to forge an iron hammer wherewith to weld a public opinion that shall continue adamant for a hundred years."

There is certainly very little here to indicate the policy of the new journal. The literary style is peculiar. Such short aphoristic sentences are quite foreign to the spirit of the smooth, well rounded, and somewhat redundant phrases of the Japanese language as we knew it twenty years ago. We confess, too, that a feeling of bewilderment is the chief outcome of perusing this collection of sententious utterances. That the *Yi-yu Shimbun* was to be a party organ before everything, nobody doubted. Yet we find it promising to be the ally of those who "stand aloof from the strife of parties and maintain an independent and impartial attitude." Count Itagaki, its proprietor and director, certainly does not stand aloof from the strife of parties. He has been the most prominent figure in Japanese party warfare during the past twelve years, and he remains, in this respect, almost as conspicuous as ever to-day. We do not doubt that the writer of the new journal's manifesto is full of ideas. In fact he seems to be so full of them that like the knowledge packed into Mr. Toots' head at Dr. Blimber's, they won't come out. By and by, doubtless, he will condescend to take the public into his confidence. For the moment we can only welcome him heartily to the field of journalism, and congratulate him on the forcible and unusual fashion of his writing.

THE IMPERIAL HOUSE AND THE SHINTO CULT.
In the last number of the journal of the *Kokkagaku-kai* (Society for the Investigation of the Science of State) there is published a report of the address, delivered before that learned body by President Kato of the Imperial University, on the relations between the Imperial House and Shintoism. At present there being an agitation among the Shinto priests as to the advisability of severing their connections with the Government, Mr. Kato thinks it worth while to consider this question. But before proceeding to speak of the Shinto religion in particular, the lecturer briefly reviews the history of the relationship between religion and the State in European countries, and observes that, though in some Occidental countries certain forms of religious faith have more intimate connection with the state than others, the general opinion at present is that religion and the State ought to be quite independent of each other. In Japan there are at present three systems of religion; Buddhism, Christianity, and Shintoism. Between the two former Mr. Kato seems to profess no preference. But the position of the last in Japan is unique and especial. Mr. Kato observes that Shintoism did not profess formerly to be a religion, its activity in that sense being only of recent date. Indeed, he admits that in its nature it is not a religion, but a system of ceremonies to be observed in worshipping the ancestors of the Imperial House, as well as, in rare instances, the spirits of departed heroes. Thus it has a close relation with the Imperial House, and its preservation or abandonment as a cult directly concerns the dignity of the Sovereign. Mr. Kato, therefore, thinks it unwise to set up Shintoism as a religion and to strive to propagate it side by side with Christianity and

Buddhism. Such a course of policy may have very evil consequences, in order to avoid which he advises those occupying leading positions among the Shinto priests to lay aside all the religious pretensions now asserted by them, and to confine their attentions to the observance of the rites of worship of deified beings. There are, says the lecturer, certain forms of pseudo-Shintoism, such, for instance, as the *Tokami-ko* and the *Oyama-ko*. These in their nature are more of a religion than Shintoism itself, though they are vulgar and superstitious creeds. The Shintoists are advised by Mr. Kato to have nothing to do with these vulgar religions. He hopes that not only the Shintoists but every intelligent person will look at the question in the light in which he views it, so that all inconvenient results to the country and the Imperial House be in good time prevented.

TEMPLES.

We are indebted to the *Official Gazette* for a particularly interesting article upon the Shinto and Buddhist Temples in Nara-ken whose age exceeds four hundred years. The statement cannot fail to prove of service to those of our readers who take interest in the architectural monuments of the past. The data furnished are based on the result of an examination made by the Nara Prefectural Authorities, and may therefore be accepted as trustworthy. It will be seen that there are no less than 32 of these edifices which have stood the stress of time and weather over a thousand years. Considering the material of which the buildings are composed it will scarcely occasion surprise if the ages assigned should be received with a tinge of incredulity. Of the entire number two are said to be 1,297 years old. These are Horyuji, a Buddhist temple belonging to the Hossho sect and situated at Oaza Horyuji, Horyuji-mura, Heguri-gun; and Sesonji, the property of the Sodo Buddhists, situated at Oaza-Iiso, Oyodo-mura, Yoshino-gun. Horyuji was built by Shotoku Taishi of the Imperial House in the first year of the reign of Suiko Tenno. The same prince is credited with having built Sesonji. Next to these, in point of age merely, comes the temple known as Ankyo-in, at Oaza Asuka, Asuka-mura, Takaichi-gun, owned by the Shingon sect. Ankyo-in is pronounced to be 1,294 years old. Shotoku Taishi erected this also. Eleven years later the same prince built Tachibana-dera (now held by the Tendai sect) at Oaza Tachibana, Takaichi-mura, Takaichi-gun. Chofukuji at Oaza Tawaraguchi, Kita Ikome-mura, Heguri-gun, now in the hands of the Shingon Buddhists, was likewise founded by Shotoku Taishi. Chofukuji is 1,274 years old. Next in order stands Gakunaji, the property of the Shingon Buddhists, at Oaza Nukatabe, Hirahata-mura, Heguri-gun, built by Suiko Tenno in the 27th year of his reign; Monju-in at Oaza Abe, Abe-mura, Toichi-gun, erected by Kotoku Tenno in the first year of Taika (the adoption of a distinctive nomenclature for the different eras dates from this time); and Okadera, at Oaza Oka, Takaichi-mura, Takaichi-gun, which was built by the Emperor Tenchi 1,229 years ago. Both Monju-in and Okadera belong to the Shingon sect. Kontaiji, held by the Jodo sect, at Oaza Jurin, Nara-machi, Soyekami-gun, is 1,219 years old, having been built by the Emperor Temmu. Dosho Risshi conducted the opening ceremonies and was the first chief priest to officiate at Kontaiji. Chokoknji, in charge of the Shingon branch, at Oaza Hatusue, Hatusue-mura, Shikikami-gun, was constructed in the 2nd year of Hakuho, and is therefore 1,218 years old. Kotoku Tenno erected Chokokuji, and one Domyo was the first chief priest appointed to it. Kongosanji, also held by the Shingon Buddhists, situated at Oaza Yata, Yata-mura, Soyeshimo-gun, was built two years later. The 9th and 10th years of the Hakuho era saw the erection of Yakushiji (now the property of the Hossho sect) at Oaza Suna, Miyakoji-mura, Soyeshimo-gun—Rempo is the first recorded priest of Yakushiji—Hoshoji, held by the Shingon sect, situated at Oaza muro-oi, Muro-oi-mura, Uda-gun, built by the Emperor; and Tagimaji, occupied by

the Jodo and Shingon branches of Buddhism conjointly, at Oaza Tagima, Tagima-mura, Kuzushimo-gun. Tagimaji was likewise constructed by the Emperor. En-no-Shokaku and Nyoho Biku respectively were the earliest Abbots. It is worthy of note that the latter bore a title indicative of active connection with the Imperial forces. Kofukuji, in the possession of the Hossho sect, at Oaza Nobori-ji, Naramachi, Soyekami-gun, was built by Prince Tanaka in the third year of Wado of Gemmyo Tenno, and is 1,177 years old; whilst Jurin In, at Oaza Jurin, Naramachi, Soyekami-gun, which is held by the Shingon sect, was erected the following year, in the 1st year of Reiki. Jurin-in is believed to have been founded by Gensho Tenno. Matsuoji, at Oaza Yamada, Yata-mura, Soyeshimo-gun, built by Prince Toneri in the first year of Yoro; Minami Hokke-ji, at Oaza Tsubosaka, Takatori-mura, Takaichi-gun, erected the following year; and Yeizanji at Oaza Kojima, Uchi-mura, Uchi-gun, constructed by Fujiwara Takechi-maro, are respectively 1,173, 1,172, and 1,170 years old. These three are in the keeping of the Shingon sect. Shin Yakushiji, at Oaza Takahata, Naramachi, Soyekami-gun, held by the Kego sect, built by Shomu Tenno is 1,167 years old; and Hokeji, at Oaza Hokeji, Saho-mura, Soyekami-gun, also built by Shomu Tenno, dates from six years later. Reizanji at Oaza Naka, Tomio-mura, Soyeshimo-gun, built in the 8th year of Tempyo; Shimonobu, at Oaza Fukuzumi, Fukuzumi-mura, Yamabe-gun, established by Shomu Tenno in the 11th year of Tempyo; and Enseiji, at Oaza Niumiku-zan, Oyagyu-mura, Soyekami-gun, which dates from the 8th year of Tempyo Shoho of Koken Tenno, are believed to be respectively 1,154, 1,152, and 1,135 years old. All of these likewise belong to the Shingon sect. The Shinto edifices known as Tamukezan Jinja, and Kasuga Jinja (the first named a *Kensha* or prefectural temple, the latter a *Kanpei Taisha* or Government temple of the first class), are 1,142 and 1,121 years old. Tamukezan Jinja is said to have been erected by Shomu Tenno in honour of the God Hachimangu. Kasuga Jinja dates back to the 2nd years of Jingu Keiuu. These are the only Shinto Temples in the province over a thousand years old. Shodaiji, at Oaza Gojo, Tsuto-mura, Soyeshimo-gun, is 1,135 years old, having been constructed in the 8th year of Tempyo Shoho. The Chinese priest Kotoku was the first to open the services at this temple. Shodaiji is now in the possession of the Ritsu sect. Saidaiji, at Oaza Saidaiji, Fushimi-mura, Soyeshimo-gun, occupied by the Shingon-Ritsu Buddhists dates back 1,126 years; Anyoji, at Oaza Kitabukuro, Nara-machi, Soyekami-gun, built in the 4th year of Daido by the Emperor Heijo, and now held by the Jodo sect, 1,081 years; Koinji at Oaza Kokuzo, Gokaya-mura, Soyekami-gun, built by Saga Tenno, 1,070 years; Chogakuji, at Oaza Yagimoto, Yagimoto-mura, Shikikami-gun, opened by Kobo Daishi, Chief Priest, in the first year of Tencho of Junna Tenno, 1,067 years; Butsuryuji at Oaza Akahani, Uchimaki-mura, Uda-gun, built in the 3rd year of Kashu during the reign of Nimmei Tenno, 1,042 years; and Kumeji, at Oaza Kume, Shirokashi-mura, Takaichi-gun, erected by Prince Kume Oji somewhat over 1,000 years. All of these are now held by the powerful Shingon sect. The foregoing represent temples whose age exceeds one thousand years. Nyorinji, at Oaza Yoshino-zan, Yoshino-mura, Yoshino-gun, held by the Jodo sect, is believed to be more than 900 years old; Senju In, at Oaza Kangakuji, Takatori-mura, Takaichi-gun, built in the first year of Eikan by the then reigning Emperor, is 908 years old; and Shorekiji at Oaza Bodaizan, Gokaya-mura, Soyekami-gun, built by Ichijo Tenno in the 3rd year of Shoreki, is 899 years old. Both Senju In and Shorekiji are in the possession of the Shingon sect. The Shinto shrine, Takahama Jinja, a prefectural temple at Oaza Kamokami, Katsuragi-mura, Kuzukami-gun; Karakuni Jinja, a village temple (*sonsha*) at Oaza Karakuni, Naramachi, Soyekami-gun, the special shrine of Suiko Tenno; and Kissui Jinja, another village temple or

sonsha at Oaza Yoshino, Yoshino-mura, Yoshino-gun, vary from 550 to 900 years. Takahama Jinja is considerably the oldest. Karakuni Jinja is known to have been rebuilt in the 6th year of Kenkyu, 696 years back. Another Shinto edifice upwards of 400 years old is the Asukaza Jinja (a village temple—*sonsha*) at Oaza Asuka, Asuka-mura, Takaichi-gun. This was reconstructed in the 2nd year of Hotoku. Saiho In, at Oaza Gojo, Tsuto-mura, Soyeshimo-gun, "built in the 9th month of the 2nd year of Katei," and held by the Shingon sect, is 685 years old. Darumaji, at Oaza Oji, Oji-mura, Kuzushimo-gun, built by Ashikaga Yoshimori in the 2nd year of Eikyo, to replace the temple erected on the same site some centuries before by Shotoku Taishi, is 461 years old. Besides these there is only Kofukuji, at Oaza Horen, Saho-mura, Soyekani-gun, now in the control of the Jodo sect of Buddhists. These particulars, if accurate, certainly make a wonderful picture.

THE GOVERNMENT IN THE DIET.

THE *Fiji Shimpō* writing with reference to the duties of the Government as to bills submitted in the Diet, says it is not at all probable that the Ministers will themselves appear and give the necessary explanations. This task will in all likelihood devolve upon delegates appointed by the Government for that purpose. The question is, what officials will be elected thus to represent the Government. Various opinions, according to our contemporary, seem to be held, some people thinking that the delegation should consist of Vice-Ministers of State; others insisting on the necessity of the presence in the Diet of the directors of the respective bureaux; while others again contend that the fittest officials to represent the Cabinet will be the heads of the Bureau of Legislature. In any case those who may be selected to represent the Government in the Diet ought to exercise the utmost caution in their actions and language. In this view the difficulty of selecting officials fitted for the duties will be at once apparent. Such a delegation must be so thoroughly conversant with the subject of debate that they will be able satisfactorily to explain any questions that may be asked. They should at the same time be men of wide experience and sound intelligence, so that they may be able to convince the members of the correctness of the facts which they bring forward. It frequently happens that officials are not men of liberal views and quick understanding; and the spectacle of a timid and unready set of Government officials arrayed against the active and eloquent popular members will not be at all an edifying one. Perhaps the younger generation of officials would be more suited to such a duty than men who have grown old in the Government service; but there is always the danger of their being too hasty to conduct with prudence and care the business entrusted to them. For all these reasons our contemporary thinks the Government ought to exercise special caution in the selection of representatives. If the Ministers of State were in person to take upon themselves the duty of explaining bills, leaving the committee of Government officials to deal with matters of detail, all might go fairly well, but this can hardly be expected in the present condition of the Cabinet. The *Fiji* therefore concludes that only persons of mature experience, who have gained a certain amount of public confidence, should be put forward to represent the Government. Such men may fairly expect to command the respect of the Diet, and in this way the relations between the Government and the popular members may proceed successfully and without friction.

ALUMINIUM.

SIR F. ABEL, in the wonderful address recently delivered by him before the British Association, made the following reference to aluminium compounds which promise to revolutionise many branches of constructive industry:—"Various valuable copper and aluminium alloys are now produced by alloying copper itself with definite

proportions of the copper alloy, very rich in aluminium, which is the product of the electric furnace. The rapid production in large quantities of ferro-aluminium—which presents the aluminium in a form suitable for addition in definite proportions to fluid cast iron and steel—is another useful outcome of the practical development of the electric furnace by Messrs. Cowles. The electric process of producing aluminium alloys has, however, to compete commercially with their manufacture by adding to metals, or alloys, pure aluminium produced by processes based upon the method originally indicated Oersted in 1824, and developed into a practical process by H. St. Claire Deville in 1854—namely, by eliminating aluminium from the double chloride of sodium and aluminium in the presence of a fluoride, through the agency of sodium. An analogous process, indicated in the first instance by H. Rose—namely, the corresponding action of sodium upon the mineral cryolite, a double fluoride of aluminium and sodium—has also been recently developed at Newcastle, where the first of these methods was applied, upon a somewhat considerable scale, in 1860, by Sir Lowthian Bell, but did not then become a commercial success, mainly owing to the costliness of the requisite sodium. As the cost of this metal chiefly determines the price of the aluminium, technical chemists have devoted their best energies to the perfection and simplification of methods for its production, and the success which has culminated in the admirable Castner process constitutes one of the most interesting of recent illustrations of the progress made in technical chemistry, consequent upon the happy blending of chemical with mechanical science, through the labours of the chemical engineer. Those who, like myself, remember how, between 40 and 50 years ago, a few grains of sodium and potassium were treasured up by the chemist, and used with parsimonious care in an occasional lecture-experiment, cannot tire of feasting their eyes on the stores of sodium ingots to be seen at Oldbury as the results of a rapidly and dexterously executed series of chemical and mechanical operations. The reduction which has been effected in the cost of production of aluminium through this and other processes, and which has certainly not yet reached its limit, can scarcely fail to lead to applications of the valuable chemical and physical properties of this metal so widespread as to render it as indispensable in industries and the purposes of daily life as those well-known metals which may be termed domestic, even although, and, indeed, for the very reason that, its association with many of these, in small proportion only, may suffice to enhance their valuable properties or to impart to them novel characteristics."

THE ST. CLAIR TUNNEL.

We take from *Bradstreet's* the following account of the big tunnel just completed under the St. Clair river:—"Canadian engineering skill, enterprise, and capital have just succeeded in constructing a new link between the United States and Canada, a railway tunnel under the St. Clair river from Sarnia to Port Huron. The work marks a distinct advance in engineering science owing to novel and successful methods applied in the construction. The tunnel is 28,000 feet long from the beginning of one approach to the end of the approach on the opposite side, more than five miles. Of this distance only 6,000 feet, a little more than a mile, are wholly underground, and of this only 2,310 feet, less than half mile, are under the river. There are 2,390 feet of tunnel under Michigan soil and 2,160 feet under ground on the opposite side of the river. The following sentences outline fairly the marvelous character of the tunnel: "No brick or stone was used in its construction, and when fully ready for use it will be simply an iron tube made of plates; 6,000 feet long and 20 feet in diameter, perfectly round and water-tight; as dry as a street in summer time, lighted by electric light, ventilated by air engines, and kept at the right temperature with steam pipes." The tunnel was formally opened on August 25th; its cost will be in excess of

\$2,000,000, and although owned by an independent company "it is to all intents and purposes a portion of the railway system of the Grand Trunk Railroad Company, yet no other railroad company," says the *Toronto Empire*, "will be debarrated from its use." A bridge over the St. Clair at that point would have cost an enormous sum if it were not to prove an obstruction to the very heavy lake traffic passing through the St. Clair river daily during the season. The tunnel is certainly a triumph of engineering, and will probably have a marked effect on traffic between the north-west and the Atlantic seaboard. The delays incidental to shipping trains of cars on ferry-boats across the Detroit and St. Clair rivers are too well known to hold them up in contrast with the improvement incidental to the St. Clair tunnel as a means of rapid transit."

OFFICIAL VISIT TO TOBE JAIL.

ON Wednesday forenoon, on the invitation of the Kencho authorities, a visit was paid to the prison at Tobo by the members of the Consular body in Yokohama. The party drove to Noge in carriages provided by the Kencho, and closely examined the whole buildings of the prison to which all Yokohama criminals are consigned. Among the visitors were the Russian, Italian, and British Consuls; the Secretary of the Spanish Legation, the German and Austro-Hungarian Vice-Consul, the United States Vice-Consul General (Mr. G. H. Seidmore) and Deputy Consul-General (Mr. J. McLean); Mr. C. D. Moss, H.B.M. Court for Japan; Mr. Mitsuhashi, Councillor of the Kencho; Marquis Nembrini-Gonzaga, Kencho (Foreign Department); Mr. C. M. Martin, Yokohama Law Courts, and Mr. Takahashi, Chief of Police. The party, under the guidance of the veteran governor, inspected the offices, cells, and factory of the prison (in which there are at present some 1,300 inmates) and saw the different occupations in which they were engaged, the women being occupied, besides other tasks, in weaving and making up the brick-coloured cloth which forms the dress of the convicts. General approval was expressed of the high state of discipline and of the evident care taken to secure the comfort of the prisoners, as shown in the administration of the institution.

JAPAN IN "L'ECONOMISTE FRANCAIS."

WE have often had occasion to comment on the very imperfect and occasionally misleading information published by *L'Economiste français* about Japanese affairs in its brief bulletins of foreign intelligence. It is, therefore, with pleasure that we observe in its columns the appearance of correspondence which promises to be very able and interesting, from the pen of Mr. Urakami. This gentleman's first letter to the *Economiste* occupies 2½ columns. Dated at Tokyo, July 24th, it discusses a variety of topics most of which having now passed out of the field of immediate interest, need not be referred to in detail here. Mr. Urakami's style is clear and concise, and it goes without saying that his French, as published by the *Economiste*, is faultless. This reminds us to mention a letter recently received and translated by us on the subject of Treaty Revision. The writer, a Japanese jurist educated in France, had chosen French as his medium of expression, and his letter, which occupied about three pages of foolscap, was quite beyond criticism from a grammatical or orthographical point of view. We have never received from any of our Japanese correspondents, with one exception, a letter of the same length so well and correctly written.

RUSSIA IN KOREA.

REMOURS about Russian designs upon Korea still continue to agitate a section of the Tokyo press. As a specimen of the views taken by vernacular papers on this subject, we may refer to an article in the current number of the *Nippon-jin*. The canard now circulated in the capital is, as we recently stated, that Korea contemplates renouncing her Chinese relations, and putting herself under the protection of her

powerful neighbour on the north. The *Nippon-jin*, though not vouching for the truth of the report, says that it was not entirely unprepared for such an event. Despite the perpetual anxiety of Russia to extend her dominions on the Pacific, her only post in that quarter—Vladivostok—is closed by ice during the greater part of the cold season, and consequently the only course for her is, we are told, to obtain a naval station on the coast of the Korean peninsula and connect it with the proposed Siberian railway. If the present rumour has any foundation at all, it points, says our contemporary, to an endeavour on the part of Russia to obtain Korea's consent to the extension of the projected railway through the latter kingdom to one of its sea ports. When a rumour was circulated in 1888 as to the conclusion of a secret treaty between these two countries, it turned out that a trading station had been opened on the Russian borders of Korea, and similarly our contemporary thinks that the present report may prove not entirely baseless. The *Nippon-jin* considers that the contemplated Eastern tour of the Russian Crown Prince may have an important bearing on the policy and projects of the Northern Power in the East. Should the Siberian railway be constructed as originally designed, and should its eastern end be brought down to some convenient sea port, another San Francisco or Hongkong will be created on the Pacific. Such being the state of things, the *Nippon-jin* recommends its countrymen to keep a sharp watch over the doings of Russia in the East. We (*Japan Mail*) have so often expressed our ideas on this subject, that we content ourselves here with simply reproducing the gist of our Tokyo contemporary's article.

A DISTANT IMITATOR.

THE Japanese will be interested to learn that their progress has secured an imitator in a very distant part of the world. Madagascar, watching Japan from afar, feels called on to follow her example. The *Madagascar News*, an English journal recently started, has an article on the foreign trade of Japan. It quotes largely from our analysis of the Customs Returns for 1889, and having noted the rapid growth of Japan's trade asks why Madagascar should not emulate a similar record. A correspondent of the same journal, writing from Antananarivo, says:—"It has been interesting to read your different notes about the necessity of having roads in countries like Madagascar, which certainly ought to follow in the footsteps of other countries civilized in the last few decades, and I should think especially the progression of the Japanese ought to be remarked by the Malagasy, not only because that country has done and is doing the quickest progress in civilization ever seen; but also because there seem to be several features in the character of the Malagasy and Japanese which are very much alike, though this may be applied only to the Hova as real Malayan brethren of those people."

QUOT HOMINES.

THE *Fiji Shimpō* tells a story with a moral. A certain English gentleman of Yokohama, desiring to marry a Japanese, applied to the young lady's parents for permission, but these declined on the ground that she was the representative of the house and consequently could not change her name. Thereupon the Englishman determined to become a Japanese subject, and with that object employed legal assistance to settle the preliminaries. The parents of the lady were very willing to make this arrangement, by which the Englishman would have become what is called a "*muko-yoshi*," or adopted bridegroom. But when her Britannic Majesty's Consul was approached on the matter, he intimated that a British subject could not voluntarily remove himself from the jurisdiction of his own country under the extraterritorial system now holding in Japan. The Englishman was much pained by this decision, says the *Fiji Shimpō*, "from which it will be seen that while some Englishmen object even to come under Japanese

jurisdiction, others are disappointed at not being able to become Japanese subjects. *Quot homines tot sententia.*"

MEMORIAL FROM CENTRAL JAPAN MISSIONARY ASSOCIATION.

THE Central Missionary Association of Japan held its annual meeting in Osaka on the 4th instant, when the following memorandum was adopted and signed as below:—

We, the undersigned members of the Missionary Association of Central Japan, feel it incumbent on us to express our high appreciation of the progress made in recent years by the Empire of Japan, and in view of the solemn guarantees for civil and religious liberty given by the new Constitution and of the legal and judicial reforms in which the most enlightened nations of the West are being followed, we hereby reaffirm the position taken in the memorandum adopted by the Association in April, 1884, and desire to further emphasize our belief that every just and legitimate demand of the Japanese Government and people in accordance with the principles of International Law should be conceded in revising the Treaties between Japan and the Foreign Powers concerned.

The memorandum referred to in the above, is the following:—

MEMORANDUM ON TREATY REVISION ADOPTED AT A MEETING OF THE OSAKA AND KOBE MISSIONARY ASSOCIATION HELD IN TOKYO, APRIL 22ND, 1884.

The Osaka and Kobe Missionary Association having discussed the question of extraterritoriality in connexion with the proposed Revision of the Treaties, the undersigned desire to place on record a formal expression of their opinion that the time has arrived when substantial modifications should be made in those provisions of the existing Treaties which give exceptional privileges to the subjects and citizens of Treaty Powers and which are considered by the Japanese Government and people to be an infringement of their just and sovereign rights as an independent nation. The circumstances under which Japan was brought into Treaty relations with Western Powers were clearly exceptional, and in the interests of both Japanese and Foreigners alike exceptional arrangements were undoubtedly necessary. But the lapse of twenty-five years has placed us in such a widely different position as in our opinion to require that at least some of the exceptional provisions of the existing Treaties

should be modified, and that concessions should be made to any just and reasonable demand of the Japanese Government in this direction. The interests created under the existing Treaties certainly demand the most careful consideration of those to whom they are entrusted; but, in our opinion the difficulty of safe guarding those interests ought not to stand in the way of a speedy Revision of the Treaties, such as shall be both just in principle, and a generous acknowledgment on the part of foreign nations of the real progress Japan has made since the present Treaties were framed.

PROFESSOR TERSCHAK.

THE last concert in Yokohama of Professor Terschak and Madame Schuller has been fixed for the 27th inst. The programme will be of unique interest, for it will include a Fantasy on Japanese airs, composed by the Professor for flute and piano, which has already been played before the Emperor. For the first time also there will be played a Sonata, the work of the composer during his stay in Japan, a piece abounding in rare dramatic impressions, and regarded by the Professor as one of his best efforts. It is designed for the flute and piano, and also for the violin and piano. Among the other pieces will be a Rhapsody (Russian Rhapsody No. 2, the first having already been published) for flute and piano, also completed in Japan, and a Meditation for strings and harp (or piano), in the rendering of which several amateurs will lend their assistance. Madame Schuller will play Franz Liszt's transcription of "Tannhauser," a performance which is certain to be well worth bearing.

AH!

Is it possible for blatant folly to look more foolish than it does in the following paragraph:—

For our part, we do not see any valid reason why missionaries should not sip of the harmless pleasures and be surrounded by the comforts to be deduced from this life, so long as propriety is not outraged. We most decidedly stop at the pony and phaeton, however, and say that salaries merit reticement when such a luxury is possible to those whose lives, it is popularly supposed at the seat of revenue, are not cast in pleasant places.

"We must decidedly stop at the pony and phaeton." Dear! dear! must we, indeed. How very fortunate it is to have this distinct limit drawn between unpardonable luxury and frugal enjoyment. None but an "eagle eye" could have thus "smelled" the precise point at which the paths of missionary extravagance and economy diverge.

"KOMBU."

THE export of edible sea-weed (*Kombu*) is now among the most important items of Japan's foreign trade. The *Nippon* gives some interesting statistics about it. During the twenty-two years of the *Meiji* era—ending in 1889—the aggregate value of *Kombu* exported was 12,138,000 yen. The number of persons who make the collecting of the weed a profession is over 4,800, and the number of boats employed in 1887 was 11,504, the men handling them aggregating 25,477. The *Nippon* says nothing about the home consumption of the weed, but this, we presume, is included in the figures given so far as they relate to the number of persons and boats engaged in the trade.

SIGNOR MAJERONI.

THE following is a sketch of the career of the talented artist who appeared on Thursday evening at the Public Hall in "Our Italian Cousin:—His father was an officer of the Great Napoleon, and after Waterloo retired to Bergamo, where the son of whom we are speaking was born, the youngest of 17 children. He was trained for the engineering profession, which he forsook to join the army of Italian patriots in the war with Austria. After the treaty of Villa Franca, having fought with distinction in several engagements during that memorable campaign, he became one of a travelling theatrical company, thus entering a calling for which in his school days he had conceived a passion and shown considerable aptitude. In a marvellously short time he surmounted the

initial difficulties of his profession, and then passed into a company formed by the celebrated Madame Ristori, with whom he remained two years, only quitting her to become "star" of the Teatro del Fondo, Naples. Thus, while still a very young man, he was at the head of his profession. When all Italy rallied to the standard of Garibaldi in 1866, Signor Majeroni was one of the first to volunteer, and came through twenty-three battles unwounded, receiving the Military Cross of Honour for gallantry on the field. We next find him playing the leading parts with Madame Ristori (whose niece he married). At that time to be the leading man in the wonderful company organized by the great tragedienne, which was composed of the greatest actors in Italy, was a position which only the very highest talent could attain. He accompanied her in that famous tour of the world, which, commencing in April 1874, and ending in January, 1876, covered 43,700 miles, playing in all the principal cities of the Continent, throughout North and South America, in England, Scotland, and Ireland, all through Russia, (where the tour was under Signor Majeroni's management), and in the leading cities of Australia. On reaching the latter place he and his wife remained behind, and acting upon the advice given him by Colonel Mapleson in England, Signor Majeroni set himself to learn English. So persevering were his efforts that in four months he was able to play his first part in a language hitherto completely unknown to him. In April, 1876, Signor Majeroni made his first appearance in English at the Theatre Royal, Sydney, in "The Old Corporal." Such a house as then assembled had never been seen in the theatre before, and the enthusiasm with which the popular actor was received was justified in the words of the morning paper, who styled the representation "A performance characterised throughout by the most masterly dramatic power, and one not easily to be effaced from the memory of all who witnessed it." Madame Majeroni having also mastered the intricacies of our language, she and her husband went to America, where they toured in English, everywhere with conspicuous success. On their return to Australia some of the most brilliant seasons ever known were played by them in Melbourne, Sydney, and Adelaide. Signor Majeroni became lessee of the Bijou Theatre, Melbourne, and of the Opera House, Sydney, and under his skillful management some of the leading English artists were introduced to the Australian public. He and his wife during the past year have been visiting India and China, partly for health and partly for pleasure, and have just passed several months in Japan.

IS THIS REALLY WHAT THEY THINK OF US?

We find the following article in the columns of the *North China Daily News*—

If the unprejudiced visitor to Japan were asked whether he thought the country was ripe for the abolition of extraterritoriality, he would probably answer in the affirmative, and be surprised at the practical unanimity with which Yokohama has answered the question in the negative. If the visitor we contemplate had been a long time resident in China, he would certainly say, Yes, for the contrast between the two countries is so striking, that to the man who comes from the varnished barbarism of China, Japan seems to have already attained all that is really desirable in civilisation. Every decency and comfort of life and travel that is absent in China—we of course exclude the foreign settlements—is found wherever the traveller goes in Japan. The steamers that ply between Shanghai and Japan under the Japanese flag are as well appointed as any in the world. When the traveller lands he has no trouble with the custom-house, he finds good hotels, and if he expected any worry about passports, when he wants to go outside treaty limits, he is agreeably surprised to find that the worry is so slight as to be inappreciable. In nothing is the contrast greater between China and Japan than in the facilities of travel. In China, except where the traveller can take his own house-boat, travel with any comfort is impossible. Japan is being rapidly covered with railways, and it is really remarkable how excellently railways are managed, and that entirely by Japanese. The carriages are sufficiently comfortable, and the trains run with great punctuality. The speed is not great, an average of about sixteen miles an hour being maintained on the chief lines; but this includes stoppages, which are very numerous, the Japanese being very fond of travel, and the third-class carriages are nearly always

crowded. To the foreign traveller the first impression given by the railways is that it is a lot of schoolboys playing at running a railway, so young and small are the porters and the train hands and the station-masters, and the inevitable policeman with his sword, who guards the wicket of even the smallest station. The politeness and deference shown to foreigners at all the stations, large and small alike, are very conspicuous. The porter, who, as a rule, will politely refuse any fee, will get the foreigner's ticket for him at once, his luggage is checked first, he is admitted to the platform at once, while the Japanese travellers are kept in the waiting-room until the train is signalled. The foreigner in Japan who behaves with courtesy to the people of the country is everywhere treated by them with the greatest courtesy, as if, in fact, he were the honoured guest of the whole nation. This is, it will be perhaps objected, not the universal experience of foreigners in Japan; but our own belief and experience is that in Japan, more than anywhere else, to the polite every one is polite. The case is very different in China. What a horror, too, is a Chinese inn, even on a route so constantly frequented by foreigners as that between Tientsin and the Great Wall. In Japan the traveller may be certain of finding clean and comfortable quarters and a bath in the remotest village, with good soup, fish, and eggs and of course, rice. So fast, too, is the riding spreading for foreign food, that in all towns of moderate size he will also find bread and milk, if not beef. As to beer and aerated waters they are to be got now all over Japan, while ice has become such a favourite luxury, that it is sold in nearly every railway station. The roads are not good, but they are better than they used to be, and wherever the invaluable jinrikisha can go, it is ready, and the jinrikishaman has generally picked up a few words of English, and will readily act as a guide. Where the roads are better, there are waggons, to be hired, where worse, chairs and *kagos*. So much English is spoken, too, nowadays all over the empire, and all the chief towns have semi-foreign hotels where English is spoken more or less, that it is not really necessary to take a guide with one, the guide being an infliction that is not only expensive in itself but the cause of all other expenses being higher than to the guideless. The Chinese do not care to entertain foreigners or to learn anything of their language, and therefore the traveller in China who is not a sinologue must have an interpreter with him. The Japanese delight in entertaining foreigners and are anxious to pick up English, and they therefore do everything in their power to understand and be understood; and it is specially amusing at the great semi-foreign hotels that are built at all the principal towns served by the railways, to watch the Japanese servants trying to gain from every guest some addition to their stock of English. The cynic will tell you that all this politeness and courtesy to foreigners are assumed for a purpose. That the world has gone forth from Tokyo all over the empire that travelling foreigners are to be treated as well as possible in order that they may surely even if unintentionally influence public opinion in Europe and America in the desired direction; and he will point to Sir Edwin Arnold as a most successful result of this strategy. The cynic will add that there will be a great change when extraterritoriality is once abolished. The Japanese will then show openly what he now keeps hidden, his conviction that he is in every respect the equal at least of the foreigner. There will be no more special privileges to foreigners at hotels, on steamers, or at railway stations; and if the traveller, however innocently or unwittingly, transgresses in the slightest degree some police regulation of which he is entirely ignorant, he will be dragged before a Japanese police magistrate, and subjected to the fullest penalties that this "proud man dressed in a little bit of authority" may choose to inflict. The traveler does not see the seamy side, and there no doubt is one; but when we find almost the whole of Yokohama united in the conviction that guaranties are still required, we must bow to their superior knowledge: they are probably right when they tell us that Japan will not be nearly so delightful a country for travellers when they are subject in all things to Japanese jurisdiction.

Does this in very truth contain the idea which our Shanghai contemporary has formed of the objection entertained by foreigners to the unconditional surrender of Consular jurisdiction? Are the people of Yokohama really supposed to be so unreasonable as to imagine that the politeness and kindly treatment experienced everywhere throughout the Japanese empire by Western travellers or residents is purposely assumed, in deference to official instructions, in order that foreigners may be lulled into a mood of false confidence and thus induced to place themselves under the jurisdiction of people who are "spoiling" for an opportunity to make things hot for them? It would be hard to represent the foreign objectors in a more childish or silly light. Yet there is no denying the fact that the impression to which the *North China Daily News* now gives utterance has been sedulously fostered by a section of the foreign press of this Settlement. Repeatedly

we have been told that the Japanese are craftily making things smooth for us with the sinister hope of getting us quickly into their clutches. They must be a singularly provident, patient, and tenacious people to have pursued such a programme for twenty odd years, commencing it long before Treaty Revision entered the field of practical politics, and continuing it in the face of repeated failures and rebuffs. The fact is that the objectors need some new exponent of their position. They have been made ridiculous by indiscreet partisans in the past, as the estimate gravely given of their views by the leading Shanghai journal plainly shows.

NATIONAL LIBERALS.

The latest number of the *Keizai Zasshi* has an interesting article on the formation of the National Liberal party, of which we have given a brief notice in these columns. According to our contemporary's information, the new party is to be composed of a section of the old *Daido-ha* consisting of politicians of the Prefectures of Niigata, Aichi, Toyama, Kumamoto, Oita, and Miyaki, and of various Conservative associations, as, for instance, the *Eishin-sha* of Ishikawa, the Monday Association of Osaka, the *Genyosha* of Fukuoka, the *Kokken-to* of Kumamoto, the *Kakumai-kai* of Nagasaki, the *Hoshu-kai* of Oita, and the *Setsu-kai* of Hiroshima. The *Keizai Zasshi* regards the contemplated organization of this new party as a sign of the progress of political thought in Japan. In the early days of the liberal movement in this country, the ideas of political leaders were extremely simple, their principal object being to embarrass those in power by publicly advocating theoretical principles of liberty and popular rights. But gradually there have appeared two distinct sections in the liberal camp; one section advocating individual liberty and the other professing national ideas. The former section being the members of the *Rikken Jiyu-to* (Constitutional Liberals), the latter has now decided to form a new party in conjunction with the various conservative factions which more or less sympathize with its nationalistic principles. Thus the *Keizai Zasshi* thinks that the appearance of the new party is the natural result of the tendency of the times. The recent conference of Mr. Inagaki and his fellow thinkers at Toyama, the general meeting of the *Eishin-sha* at Ishikawa, and the meeting of Kyushu politicians at Saga, are said by our contemporary to have been for the purpose of effecting the amalgamation into one party of the various political associations above mentioned. For the present no formal announcement of the organization of the party will be made, the leaders of the new movement preferring to consolidate their association before publishing the fact of its existence. As to the effects of the new party on other political bodies, our contemporary observes that the malcontents of the Constitutional Liberal party will join it *en masse*. But upon the secession of these malcontents, a section of the *Kaishin-to* will most probably join the *Rikken Jiyu-to*, so that in the issue the effective strength of the last named party will, in the Tokyo journal's opinion, remain unchanged. The party most seriously affected by the new organization will be the *Taisei-kai* (Independents). The leaders of the *Taisei-kai* being Conservatives of the nationalist school, our contemporary thinks it likely that several of them will join the new party. With reference to the character of the National Liberals, the *Keizai Zasshi*'s opinion is not very favourable. Sentimental patriotism, extravagant loyalty, combined with headstrong radicalism, will, we are told, constitute the principal motive forces of the new party, or at least of a large section of it. "Men like Nishino and Kurushima"—fanatic assassins—"will in future invariably come from this party." The *Keizai Zasshi* further observes that certain members of the new party having imbibed some of the socialistic notions of the German school, the National Liberals may perhaps obtain the support of the lower orders, and though the term of such a party's effective existence is doubtful, it may for a time make itself notorious throughout the country. In conclusion, the Tokyo journal calls the at-

tention of the leaders of the new party to the extreme violence which has hitherto disfigured the conduct of their followers, and hopes that in future more care will be taken to control such extravagance. Thus much the *Keizai Zasshi*. Various questions of greater interest and importance present themselves for solution in connection with the new party. In what manner will it affect the position of the Government *vis-à-vis* political parties in general? What will be its real attitude towards the *Rikken Jiyu-to* and the *Kaishin-to*? What will be its true position in Japanese politics? Will it become an extreme-Radical or an ultra-Conservative party? These questions can only be answered after the actual organization of the party. At all events, it is pretty certain that the National Liberals will become a formidable power in the State.

ELEMENTARY SCHOOLS.

THE *Jiji Shimpō*, commenting on the new regulations as to Elementary Schools, says:—One noticeable point of difference between the old and the new regulations is that while the former rules consisted only of 16 articles, the new law extends to no less than 96 articles. Of course this difference is chiefly one of detail, the newer regulations taking in larger ground than the others. More important than this, however, is the distinction as to the manner of defraying the expenses of education. Formerly each parent had to pay the amount of his child's fees, but under the new rules these outlays are paid by the village, town, or city, the expense of education thus falling on the people generally, and not upon individuals. In other respects also the new regulations are very different from the old statute. To us it appears that one point should be specially brought to the notice of the authorities, and that is the necessity of refraining from frequent and arbitrary alterations of laws relating to education. Such laws from their very nature affect most closely the life of the people; and we are afraid there has in the past been too much alteration and amendment of the educational system of the country. Each Minister of State has thought it his duty to change the provisions introduced by his predecessor, and in this way the regulations affecting education have been exceedingly unsettled. If alterations are necessary they should be introduced gradually, and according to the requirements of particular localities.

STEAM HOPPER DREDGER FOR THE HARBOUR WORKS.

THE *Ayame*, a fine new combination hopper and dredger, built at Renfrew for the Yokohama Harbour Works, arrived in port on Monday evening after a rough passage (as will be seen from our shipping reports). She is a large boat, of 159 tons net register, and 50 horse-power nominal. Altogether she is capable of receiving about 450 tons of dredged matter. Her buckets bring up about 6 cwt. each at a time and pour this into her, and she is filled in the space of two hours. All need for a hopper is thus dispensed with. Further, the *Ayame* can dredge to a depth of 36 feet. The new dredger has been brought out to Japan by Captain Kuhe and a crew of 15. The dredger made about 7 knots an hour all the way.

"The patent hopper dredger *Ayame*, constructed by William Simons and Co., Renfrew, has," says the *London and China Express*, "left Greenock for Yokohama. This vessel is supplied to the Japanese Government, in connection with extensive harbour improvements at that port, and is of the same type as the *St. Patrick*, recently supplied to the British Government, and fitted with the builders' latest improvements. The engines are triple-expansion; and on the measured distance at Gareloch (when the vessel was fully loaded) a mean speed of nearly one and a half knots in excess of the contract was obtained—six runs being taken with and against tide. The dredging and other portions of the machinery were tried, and everything found to work in a most satisfactory manner."

THE SENATORS.

THE *Official Gazette* of on Wednesday announces the following rewards and new offices for Senators: Count Yanagisawa, President of the Senate, is placed on the Retired List and granted a sum of 1,500 *yen* in consideration of specially good service while in office. Mr. Kasumoto, Vice-

President, is also placed on the Retired List and granted 1,200 *yen* in the same terms. Mr. Yamaguchi and 37 other Senators are similarly retired with presents of a thousand *yen* each, and Mr. Kokushi Junsei and 52 others are placed on the retired list with presents of 800 *yen*. Viscount Iwashita and four others are appointed Lords in Waiting of the *Fuko-no-ma*, and Viscount Ito with 64 others are appointed Lords in waiting of the *Kinkai-no-ma*.

CHOLERA RETURNS.

THE latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	15th	41	36
	16th	47	32
	17th	38	39
	18th	39	37
	19th	23	34
Hyogo	15th	35	44
	16th	41	33
	17th	45	38
	18th	38	30
	19th	28	9
Oizayama	15th	37	15
	16th	30	22
	17th	33	28
	18th	38	21
	19th	35	30
Kagawa	15th	72	20
	16th	25	15
	17th	16	11
	18th	18	10
	19th	19	18
	15th	57	36
	16th	45	45
	17th	49	27
	18th	44	52
	19th	38	44
	21st	31	50
	22nd	19	29
	23rd	39	38

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	8,097	6,454
Hyogo	3,628	2,531
Okayama	1,409	977
Kagawa	1,724	1,045

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 18th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per <i>yen</i> 100) Silver <i>Yen</i> .	Pound Sterling (Per £1) Silver <i>Yen</i> .
15th	116.500	A.M. 5.7657
16th	116.500	A.M. 5.7657
17th	116.500	A.M. 5.8000
18th	117.500	A.M. 5.8715
19th	118.500	A.M. 5.8358
Averages	117.100	P.M. 5.8077

The above averages show for gold coin an increase in value of *yen* 2.533, and for the pound sterling an increase in value of *yen* 0.1210 as compared with the previous week.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 18th instant were as follows:—

CONVERTIBLE NOTES.		RESERVES AND SECURITIES.	
YEN.		YEN.	
Notes issued	76,224,447	Gold coin and bullion	22,069,247
		Silver coin and bullion	18,869,847
		Public Loan Bonds	13,476,450
		Treasury Bills	—
		Government Bills	—
		Other securities	4,739,182
		Commercial Bills	14,350,711
	76,224,447		76,224,447

Of the above total issue of notes, the sum of *yen* 6,713,873 is in the treasury of the Bank, and *yen* 69,510,574 in actual circulation, the latter showing a decrease of *yen* 362,531 as compared with *yen* 69,873,105 at the end of the previous week.

CONSECRATION OF THE NEW MASONIC TEMPLE.

On Monday the Masonic fraternity of Yokohama, and numerous guests from Tokyo and Kobe, assembled for the first time in the new Masonic Hall, No. 60, Main Street, to dedicate that building for the purposes of Masonry. There were altogether over eighty Masons present, who were comfortably seated in the spacious main hall of the building. The imposing cere-

monies of consecration were performed by the Grand Consistory of the Empire of Japan, and finished in about an hour, after which all present assembled in the banquetting hall downstairs and partook of a fraternal repast. The usual toasts were given, and a very enjoyable evening was spent.

JAPANESE HEADS.

THE interesting series of measurements taken by Dr. E. Baelz of Japanese crania, are supplemented by observations made by Mr. Inouye Yenryo while in the Imperial University, and now published in the columns of the *Tenoku*. Among 713 students then borne on the roll of the University, Mr. Inouye found fifty-nine whose crania measured 21½ inches in circumference; one hundred and eleven with crania of 21 inches; two hundred and fifteen with crania of 20½ inches; fifty-two with crania of 19½ inches; and twelve with crania of 19 inches. The heads of the remainder are not classified, but the average of the whole body of students is given as 20½ inches.

THE MEIJI BIJUTSU-KAI.

THE Meiji Bijutsu-kai, or Meiji Fine Arts Society, which for the information of English readers might be called the Society of Painters of the Foreign School, will hold its second exhibition during a period of twenty days from the 15th of next month, in one of the buildings in Ueno Park. The Society is now under the Presidency of Viscount Enomoto. Its membership has largely increased, and as preparations for the forthcoming exhibition have been in progress for some time, it is fair to expect that pictures representing the best efforts of the modern Japanese school will be shown. The exhibition is also to include examples of glyptic art.

YOKOHAMA ST. ANDREW'S SOCIETY.

THE second annual meeting of the members of the Yokohama St. Andrew's Society was held on Wednesday in the Chamber of Commerce Rooms—Mr. J. A. Fraser in the chair. Mr. Fraser was elected President, Mr. W. J. Cruickshank, Vice-President, Mr. C. L. Anderson, honorary treasurer, and Mr. F. H. Grant, honorary secretary, and Messrs. A. Patterson, J. Johnstone, J. A. Jeffrey, T. B. Macpherson, and W. Gordon, members of committee. The report and accounts, which showed a balance of \$128.90, were unanimously adopted, and it was resolved to send out circulars with the view of eliciting opinions as to the manner in which the celebration of St. Andrew's Day should take place. Fourteen new members were admitted.

S. HILDA'S HOSPITAL, TOKYO.

WE publish in this issue the list of subscriptions already received towards the S. Hilda's Hospital, Tokyo. It will be a pleasure to subscribers to know, especially to those who were present at the laying of the foundation stone, that the site is now occupied by a substantial and charmingly designed building, which is fast approaching completion. A house for mission women and nurses is also in course of erection on ground that intervenes between the Hospital and S. Hilda's House. The designs have been generously supplied by Mr. Conder, and the work is being efficiently carried out by Mr. Okuda, under Mr. Conder's supervision. About \$1,000 is still required for furniture and fittings.

A BRAVE MAN.

THE *Yomiuri Shimbun* quotes from the Osaka *Mainichi Shimbun* the following unique advertisement:—"Wanted a wife. If she is pretty, she need not be clever. If she is rich, she need not be pretty. If she is clever, she need not be perfect in form (provided always that she be not conceited). Her station in life is no object; neither is the remoteness of her place of abode, whether in country or town. She ought to be in the neighbourhood of twenty years of age, more or less. The would-be bridegroom is an artist of Osaka, occupying a medium position in society. Ladies desiring a union are requested to attend at the office of the Osaka *Mainichi Shimbun* by the 25th instant where full particulars will be given."

"NON VI SED SÆPE CADENDO."

THE value of persistency, as taught in the *Gradus* of school-boy memories, is thoroughly appreciated by the anti-revision writers of this Settlement. Taken separately, their arguments, in respect of pettiness and imponderability, bear a very close resemblance to the drop of water in the Parnassian proverb. Like the drop, however, they hope to effect something of their purpose not by force but by frequency. "Peg away" is the motto of these gentlemen. "Never mind about facts. Don't stickle at distortion. Be ready with misrepresentation." The *Japan Mail* is the stone which they seek to wear away. Against the *Japan Mail* they dash their little rills of invective and tiny ripples of argument, looking eagerly meanwhile to find fulfilment of the promise written in the pages of the *Gradus*. And when sometimes their faith in the truth of the academical tradition is rudely shaken, when no traces of the promised abrasion are discernible, and the stone is found standing as square and solid as ever, then they lift up their voices, cry out that there is never a stone at all, but only a thing of no consequence or consideration, and forthwith renew the *non-vi-sed-sæpe* process as vigorously and viciously as ever. Regarded in the light of a purely physical display this energy is admirable. Though directed against ourselves, its futility sometimes fills us with pity. Yet we fail to see how the cause which the anti-revisionists have at heart could be much advanced by the elimination of the *Japan Mail*. It is not a question of newspapers but of international policy. Even though our voluble and verdant contemporary, the *Japan Gazette*, could convict the *Japan Mail* of inconsistency, the basis of Treaty Revision would not be appreciably altered. We sympathise with the *Japan Gazette*. Its position is very embarrassing. Last year it strongly supported Count OKUMA's scheme of Treaty Revision. This year it discovers that the leaders of the anti-revision movement in Yokohama were opposed to that scheme all along. How to trim its sails to the newly found breeze without letting the manœuvre be publicly perceived, is a difficult feat. The *Gazette* seeks to effect it under cover of abusing the *Mail*. Could it only establish a charge of inconsistency against the *Mail*, then, on the strength of such a precedent, its own pironette would be treated with leniency. But the task is beyond its ability. Article after article has it published, each a replica of the preceding one, each made up of the same undeniable fact and the same unblushing falsehood. The fact is that the *Japan Mail* declared last year's scheme of Treaty Revision to be as favourable as anything Japan had a right to expect at the time; the falsehood, that the *Japan Mail* this year advocates Treaty Revision without guarantees. We thought

and said last year that Japan was making an excellent bargain. We thought and said last year that if public agitation forced her to withdraw her own proposals, her international credit would suffer seriously. We think that it has suffered. She must think so herself. But, contrary to our expectations, it has not suffered so much that Western States are unwilling to re-open negotiations with her. Above all, Great Britain is not unwilling. Great Britain probably appreciates that had she acceded to last year's scheme within six months of the time when it was submitted to her, the bargain would have been finally clinched and Japan must have stood her ground. Great Britain also understands that it now rests with her alone to find some exit from a situation which has become very painful, and which cannot be left unremedied without danger to international friendship. English Ministers of the Crown are eminently practical men. As negotiators they are not given to drive bad bargains for their country or to sacrifice her interests. But they are also statesmen. Fully alive to the necessity of considering the condition of the Powers with which they treat, and sensible of the imprudence of insisting upon compacts which overtax the strength or the good will of either side, they will not approach Japan at all unless they see their way to effecting a creditable, workable and mutually acceptable arrangement. We believe that such an arrangement will be effected and that it will add materially to British prestige and influence. As to a treaty unconditionally restoring Japan's judicial autonomy, that of course is out of the question. We are as much opposed to anything of the kind as the anti-revision leaders themselves. It is delightfully audacious to find our traducers labouring to persuade themselves and the public that we advocate such a compact, and persistently ignoring our re-iterated statements that we are either conditional revisionists or not revisionists at all. Apart from the obvious advisability, from a foreign point of view, of waiting until the Japanese judiciary has become practically conversant with the new codes before abolishing Consular Jurisdiction, there is the other consideration that, from a Japanese point of view, it would be extremely injudicious to bring foreigners under a system which they are strongly predisposed to rebel against from the outset and which they certainly have not, as yet, sufficient reason to trust. Conditions there must be if the matter is to be settled by negotiation. As to that, all are agreed. The only differences between our opponents and ourselves are that we no longer cling to certain special conditions now proved to be hopelessly unprocurable, and that we are perfectly willing to entrust the settlement of the matter to Her Majesty's Government and its Plenipotentiary. History has not taught us to doubt Great

Britain's will or ability to protect the lives and properties of her subjects in any part of the world. She is not going to depart from her traditions in Japan, we expect. Whatever bargain she makes will leave her sufficient command of the situation to avoid any final step incompatible with the evidence of experience or the dictates of prudence. A display of distrust towards our own Government, supplemented by demonstrations which only inflame Japanese national feeling, cannot improve the position in any way.

A MEMORIAL FROM JAPANESE CHRISTIANS.

IT was rumoured some time ago that the Japanese Christians were about to address a memorial to her Majesty QUEEN VICTORIA on the subject of Treaty Revision. The news of their intention reached us from an undoubted authority. Like the foreign Missionaries, the Japanese Christians had perceived that so long as the problem remained unsolved it must become more and more a source of serious friction between Western peoples and their own nationals, and this disquieting conviction suggested the expediency of petitioning the Sovereign of Great Britain to view Japan's claims with gracious liberality. The prayer meeting held at Yokohama shortly after the demonstration of September the 11th, was in fact designed not only to calm the excitement caused by the action of the foreign agitators, but also to afford an opportunity for arranging the preliminaries of the petition project. That much is certain, but how the project subsequently fared we were without information until two days ago, when the *Tokyo Shimpō* published a strange and somewhat incredible statement to the effect that the petition had been drawn up and was on the point of receiving signature when the fact suddenly transpired that the Methodists were opposed to it. This is hard to believe. The Methodist Mission in Japan is of great importance. The Episcopal Methodists support one of the largest and most efficient scholastic institutions in the empire, and the Canadian Methodists carry on the well known school at Torii-zaka. We do not know exactly what may be the attitude of the former towards Treaty Revision, but as to the latter, of which Drs. COCHRAN and EBY are leading members, there can be no manner of doubt. At all events, the proposed petition was intended to receive the signatures not of foreigners but only of Japanese Christians, and it may be presumed that in such a matter differences of sect could not possibly possess any influence with the latter. The *Tokyo Shimpō*, indeed, alleges that the missionaries also were to have signed, but that, we think, must be a misconception on the part of our contemporary. Our own conviction is that whatever may have happened—if

anything has really happened—to interfere with the consummation of the scheme, the defection of the Japanese Methodists is not the cause. We hope that no obstacle will be allowed to stand finally in the path of the preparation and forwarding of the petition. So far as the QUEEN of England is concerned, we are persuaded that no memorial is needed to inspire a sympathetic mood towards Japan's aspirations. The English nation is distinctly friendly, and would be perfectly pleased to give Japan what she wants, subject always to the approval of the Secretary of State for Foreign Affairs. From this point of view, therefore, a special appeal is not necessary. But the undoubted value of a memorial such as that proposed is that it would embody an expression of intelligent non-official Japanese opinion. When the Diet meets we shall surely hear what the representatives of the enfranchised section of the people think of the present treaties. Then will be dispelled the notion still entertained by some foreign critics, that the agitation about Treaty Revision is confined to a narrow circle of officials and interested foreigners. But in the meanwhile the views of the Christian portion of the population would be an interesting and useful addition to the discussion. The great majority of the leading Japanese Christians are men of excellent education. They possess also a comparatively exceptional knowledge of foreign institutions, and are therefore competent to express an opinion as to their country's fitness, from an Occidental point of view, to discharge the functions which she seeks to have entrusted to her. Finally, it may be assumed that a memorial compiled by Christians and avowedly representing Christian views, would be honest. Above all, the memorial would bring to British notice the progress that Christianity has made in this country, and would remove the last vestiges of an impression still lingering in the minds of some Japanese, that to embrace the Christian faith has the effect of denationalising the convert, and rendering him more solicitous about the propagation of his creed than the honour of his country.

MODERN PHYSIOLOGISTS.

SINCE DARWIN'S theory of the survival of the fittest obtained general credence, many philosophers have questioned whether it holds as truly for the human race under the conditions of our present civilization as for the other animate denizens of the world. DARWIN himself, as his friend and co-worker A. R. WALLACE tells us in the last *Fortnightly Review*, lamented that natural selection has no play in this nineteenth century, since the race for wealth is not won by the best or the most intelligent, nor does the largest increment to the population come from

the highest classes. The stream of human life is chiefly renewed from the lowest orders, and since the Occident has virtually adopted a democratic polity, it follows that the tendency of the age is towards the supremacy of those least competent, from a moral point of view, to exercise it beneficially. Democracy is only tolerable on the hypothesis that the masses improve intellectually and educationally in proportion as they become the repository of political power; in other words, that natural selection governs the development of humanity as it does that of animals or insects. For a time the public mind was not disturbed by this reflection. It was believed that the beneficial influences of modern civilization constituted an environment which would affect the human race, just as the conditions under which they live produce permanent modifications in the faculties of animals. Under this view, education, hygiene, social refinement, and so forth were expected to bring about improvements in individuals which would be transmitted to their progeny, the cumulative result being a continuous advance in physical, moral, and intellectual qualities. But, as WALLACE tells us in the interesting essay from which we quote, recent physiologists are tolerably unanimous in agreeing that qualities acquired by an individual after birth are not transmitted by heredity. WALLACE maintains, in common with GALTON and WEISMANN, that a race of cart-horses can never be converted into racers merely by the influence of food and training exercised through successive generations. The progeny of the cart-horse nourished and trained according to the most approved methods of developing speed, will remain a cart-horse to the end of the chapter. Only by selection can the type be altered; by separating the lighter and more active, and breeding from these through succeeding generations. Thus much granted, it follows that the type of humanity cannot be improved by civilizing influences brought to bear on the individual after birth, and that in some method of selection lies the only hope of improving the race. This conviction has led to the propounding of various schemes more or less startling in character. GALTON, of whom WALLACE says that "he has studied the whole subject of human faculty in the most thorough manner, and has perhaps thrown more light upon it than any other writer," advocates the introduction of a system of marks for family merit. Individuals standing high in respect of health, intellect, and morals would receive numerical credit for these excellencies according to a fixed scale, and would become eligible for a grant of public money enabling them to marry early. The objection to such a scheme, according to WALLACE, is that, though undoubtedly tending to produce a higher standard of perfection in the few, it would not raise the general average.

He regards the elimination of the lowest types as essential to a condition of genuine progress. H. M. STANLEY proposes a more radical measure. He would have marriages regulated by trained specialists, so that the privilege of parentage should be confined to the fittest. Evidently the answer to this is a simple *non possumus*. Human beings could never be brought to submit to such restraint in matters touching their strongest affections. Another project has been formulated by GRANT ALLEN. His idea is to abolish all legal restrictions as to marriage, and to make it a free contract lasting only so long as either party desires. The essence of this scheme is that "girls should be taught both by direct education and by the influence of public opinion, that the duty of all healthy and intellectual women is to be the mothers of as many and as perfect children as possible." For this purpose they would be "recommended to choose as temporary husbands the finest, healthiest, and most intellectual men, thus ensuring a variety of combinations of parental qualities which would lead to the production of offspring of the highest possible character and to the continual advancement of the race." It need scarcely be noted that this scheme involves the sacrifice of the most cherished instincts of civilization on the altar of racial progress. WALLACE himself, in his search for a solution of the great problem, has reached conclusions which qualify him for a leading place in socialistic ranks. He believes that so long as the conditions of the highest and lowest orders are separated by the immense gulf which divides them at present, it is hopeless to think of "dealing successfully with such tremendous social problems as those which involve the marriage tie and the family relation as a means of promoting the physical and moral advancement of the race." While one section of the female population squanders enormous sums to cloth itself daintily and the other is toiling from morn to night for a bare subsistence; while the upper classes spend thousands on a single social entertainment and the lower barely succeed in obtaining bread, such delicate problems as the relations of men and women in respect of individual and racial improvement can only be treated theoretically. WALLACE, therefore, advocates steps to bring about a state of affairs resembling that depicted by BELLAMY in "Looking Backwards." He would convert the whole nation, nay the whole of humanity, into one huge family, every member of which should have equal advantages, equal comforts, and equal enjoyments, the elders, *i.e.* the Government, "determining the general mode of living and working, with the fullest consideration for the convenience and real well-being of the younger members, and with a recognition of their essential independence." Given such a state of affairs, he thinks that several results, not superficially apparent, would follow. In the first

place the length of the period of systematic education would prevent early marriages. Moreover, it should be a part of the educational programme to teach women that "the most careful and deliberate choice of partners is the highest social duty, and that they should look with scorn and loathing on all men who in any way wilfully fail in their duty to society—as idlers and malingers, drunkards and liars, selfish and cruel, or vicious." Being also, under the supposed social conditions, absolutely independent in respect of the necessities and comforts of life, women would be much slower to marry than they are now. Probably few would marry before 25; many would delay until 30. The proportionate fertility of women married at 20 and 29 is as 8 to 5; to which difference must be added the increased interval between successive generations owing to late marriages, and a corresponding diminution in the number of generations alive at the same time. A marked check would thus be given to the increase of population. Another factor operating in the same direction would be the greater development of the intellectual faculties, which means a lessening of the procreative. Further and more elaborate results are explained by WALLACE as likely to ensue from the social conditions which he supposes, but unfortunately he says nothing as to the methods by which those conditions are to be brought about. "When we allow ourselves," he writes, "to be guided by reason, justice, and public spirit in our dealings with our fellow men, and determine to abolish poverty by recognising the equal rights of all the citizens of our common land to an equal share of the wealth which all combine to produce—when we have thus solved the lesser problem of a rational social organization adopted to secure the equal well-being of all, then we may safely leave the far greater and deeper problem of the improvement of the race to the cultivated minds and pure instincts of the women of the future."

What is the impression produced by reading these wonderful schemes? Surely one, and one only; that we are still at an incalculable distance from the time when it will be possible to inaugurate any of the programmes which physiologists now pronounce essential to the general improvement of the human race.

THE PRIVY COUNCIL.

IMPERIAL ORDINANCE No. 216.

We hereby give our sanction to the present amendment of the organization of the Privy Council and the Rules for conducting the business of that body, according to the advice of the members of the Council, and order the same to be promulgated.

[His Imperial Majesty's Sign-manual.]
[Great Seal.]

Dated October 7th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

The following amendments shall be made on

Articles 2 and 6 of the Organization of the Privy Council, Imperial Ordinance No. 22, promulgated in the 21st year of Meiji, and paragraph 2, Article 10 of the Rules for conducting the business of the Privy Council:—

ORGANIZATION OF THE PRIVY COUNCIL.

Article 2.—The Privy Council shall consist of 1 President, 1 Vice-President, 25 Councillors, 1 Chief Secretary and 5 Secretaries.

Article 6.—The Privy Council shall hold its meetings for the purpose of advising His Majesty the Emperor, and shall state its opinions with regard to the following matters:—

1. Matters which come under its jurisdiction according to the *Koshitsu Tempan* (Law of the Houses.)
2. Drafts and doubtful points relating to articles of the Constitution and to laws and ordinances dependent to the Constitution.
3. Proclamation of the law of seige provided for in Article 14, and Imperial Ordinances mentioned in Articles 8 and 70 of the Constitution, as well as all other Imperial Ordinances of a restrictive character.
4. International treaties and pledges.
5. Matters relating to the amendment of the Organization of the Privy Council and the Rules for conducting Business in the Privy Council.
6. Matters specially called for, besides those mentioned in the last paragraphs.

RULES FOR CONDUCTING BUSINESS IN THE PRIVY COUNCIL.

Paragraph 2, Article 10.—The President shall cause the Chief Secretary to make explanations and shall afterwards allow the members to discuss matters freely, but no member can speak without obtaining the permission of the President, who may engage in all debates, and shall point out the questions to be decided, and require members to vote with regard to the same.

ADMINISTRATIVE SUITS.

LAW No. 6.

We hereby give our sanction to the present Regulations relating to Administrative Suits against unlawful action on the part of Executive Departments, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 9th, 1890.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

COUNT OYAMA IWAO,
Minister of State for War.

COUNT GOTO SHOJIRO,
Minister of State for Communications.

VISCOUNT AOKI SIUZO,
Minister of State for Foreign Affairs.

VISCOUNT KABAYAMA SUKENORI,
Minister of State for Navy.

YOSHIKAWA AKIMASA,
Minister of State for Education.

MUTSU MUNEITSU,
Minister of State for Agriculture and Commerce.

Persons who think their rights are injured by unlawful action on the part of an executive office with regard to the following cases, except cases for which special regulations are provided in laws and Imperial Ordinances, may raise actions in the Administrative Court:—

1. Matters relating to the assessment of tax, except custom duties and fees.
2. Matters relating to the punishment of defaulting taxpayers.
3. Matters relating to prohibition or withdrawal of permission to engage in business.
4. Matters relating to water rights (*suiri*) and works (*doboku*).
5. Matters relating to the decision of rights as to the official or private ownership of land.

CORRESPONDENCE.

EURASIAN CHILDREN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly give me permission to acknowledge, through your columns, the receipt of \$28.57 from an old resident of Yokohama towards the Fund I am raising in the interest of Eurasian girls. He desires the acknowledgment to appear under the initial "T." We have already had the privilege of benefiting one family who were left almost destitute by the father's death. All the children, 4 in number, are now being properly cared for. Anyone interested in children of the Eurasian class, and desirous of benefiting them, is invited to aid us in this endeavour.

Yours truly,

FRANCIS STANILAND.

Yokohama, October 18th, 1890.

THE THEORIES OF PAUL AND COROLLARIES OF CEPHAS AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One more word about the above subject. Your appended note to my letter is not at all satisfactory. It is an evasion. You ought to explain in what sense "The Theories of Paul and corollaries of Cephas" is a figure. What do you call the figure? What would be the language without the figure?

Again, you say you "spoke of Paul and Cephas entirely with reference to that celebrated phrase of St. Paul himself where he utters an emphatic warning against an apparent tendency of the early Christians to distinguish between the doctrines preached by different apostles." This language is quite different from your former language. But if you spoke entirely with reference to Paul, why include Cephas? What corollaries among the brethren did Peter condemn? Besides do you know any of the doctrines preached by different apostles? Against what doctrine of different apostles did Paul utter "that celebrated phrase"? If among different apostles there were conflicting doctrines, I should think this would have a good deal to do with infidelity or fidelity.

Respectfully,

F. SNODGRASS.

41-B, Tanjiji, Tokyo, October 15th, 1890.

[If our correspondent turns to Paul's epistle to the Corinthians, he will find these words:—"Now I beseech you, brethren, by the name of our Lord Jesus Christ, that ye all speak the same thing, and that there be no divisions among you; but that ye be perfectly joined in the same mind and in the same judgment. For it hath been declared unto me of you, my brethren, by them which are of the house of Chloe, that there are contentions among you. Now this I say, that every one of you saith, I am of Paul; and I of Apollos; and I of Cephas." Our original metaphor was taken from this text. Mr. Snodgrass has not been careful to read us accurately. We have not said that we "spoke entirely of Paul." We have said that we spoke entirely of Paul's warning where he puts his own name together with those of Apollos and Cephas as the heads of sects which the early Christians were disposed to form. There is no question of "doctrines among different apostles." There is only question of different interpretations of the same doctrine by persons who claim to be of Paul, or of Apollos, or of Cephas.—Ed. J.M.]

THE FOOD SUPPLY OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I was very much interested in your article on "Rice and Bread," not only because of the interest I have taken in the deplorable condition of many of the poor, and the general distressed state of the country, but because the question of the food supply of any country is always interesting. I have therefore taken trouble to inquire as to the amount of wheat actually grown on an acre of land, and I find that you put the wheat crop much too low. The farmers say that land which will produce 2 *koku* per *tan* of rice will produce more than that amount of wheat and with much less labour. So that the lowest estimate which should be put on the wheat crop should not be less than 40 bushels per acre. Another mistake which has a good deal to do with your arithmetic is the weight of a bushel of wheat, which is 60 lbs. instead of 55.

There is no doubt but that the prices of both flour and bread in Japan are simply exorbitant, probably owing to the lack of facilities for producing either. But at the present price of wheat in Kobe, *yen* 5.40 per *koku*, and calculating 40 bushels to the acre, allowing one eighth of the price of the wheat for the grinding and the baking, according to American usage where labour is much higher than it is here, we find that one acre will feed 1,270 men one day at a total cost of *yen* 48.60 or an average of a little less than four *sen* as the price of one day's ration.

There is another source of food supply in this country that the people do not seem to appreciate, the great quantity of mountain land which might readily be used for pasturage, in view of the op-

portunity for the production of cattle. Beef ought not to be any more expensive here than it is in Texas, and in many places where cattle could not be used to advantage, goats might possibly be made useful for both milk and meat.

Yours, &c.,

FOOD SUPPLY.

Kobe, October 15th, 1890.

[The quantity of wheat likely to be produced per acre, on the average, in Japan is very difficult to determine. Exports consigned by us before writing the article referred to, agreed that 35 bushels would be a fair average. As to the weight of the bushel our correspondent seems to regard it as a fixed quantity, but in truth it varies greatly. In the Isle of Shypp (Kent) wheat has been known to weigh as much as 54 lbs. per bushel, but the average bushel of good English wheat is calculated to weigh 56 lbs. We put it at 52 lbs. so as not to err on the side of a too favourable estimate. Nevertheless "Food Supply's" figures are very interesting, and we are glad to learn that the case for bread may be stated even more favourably than we supposed.—Ed. J. M.]

CRICKET.

THE FLEET V. THE CLUB.

A second match between a team of the Yokohama C. and A.C. and one representing the Fleet took place on Saturday. The weather was fine, and as before the wicket was fairly good. The Fleet went in first putting forward Garde and Byrne, but the latter was sent back without scoring having given a chance in Sutter's second over. Byrne compiled a pretty record of 30 (including half a dozen three's), but of the rest of the team six were discharged without contributing to the score at all. Walford, Sutter, E. Edwards, and Watson, had the bowling in hand, and were very deadly in their attack. Sutter bowled four overs, of which three were maidens, and took one wicket at a cost of one run. Watson was hardly less successful, taking 3 wickets for 7 runs, while Edwards got 4 for 12 runs. Walford and Morris batted first for the Club but the latter was soon disposed of, and the former was bowled by Hunter after scoring 5, with the score at 19. Watson, who had succeeded Morris, soon settled down and, playing very carefully with Grant, raised the figure to 37, where the latter dropped out. Sutter took his place and the score mounted to 71, when Watson was unfortunate enough to give a chance off the third ball in Adair's second over. E. Edwards succeeded him, and soon by brilliant play, his score including a hit for six, rattled up 25, but collapsed before a ball from Pakenham—five for 108. Gillett and Philip made no long stand. They were followed by Edwards, but the promising partnership now developed was broken up by Sutter, who hit his wicket, and retired for 25—eight for 115. Crawford now joined Edwards, but succumbed to Pakenham almost immediately, leaving the innings in the hands of Edwards and Walkinshaw. The score thenceforward mounted steadily till the latest arrival, bowled by Hunter, went out at 28, the telegraph standing at 196, and Edwards having an unfinished "break" of 53 compiled by very wary and careful batting. The most successful bowler on the Fleet side was Pakenham, who out of 21 overs bowled 5 maidens, and took 4 wickets for 40 runs. The following are the scores:—

THE FLEET.	
Mr. R. B. Garde, c. Watson,	0
b. Sutter	0

"YOKOHAMA" V. "KOBE."

The interport match began on Monday at 10.30 a.m. under most favourable conditions of weather and with a brisk and lively wicket. Kobe went in first, sending Stephens and Lias to bat, Walford and E. Edwards taking the bowling for Yokohama. Lias soon retired, being caught out by Edwards after making a "pair" and Bremner, who succeeded him, was bowled by Edwards after compiling 13—two wickets for 18. W. Edwards now took the bowling at the Pavilion end. Stephens cut his first ball past point for four, and immediately followed up with another four of the same sort. This prosperous state of things was changed in the next over of Edwards', jun., his first ball coming in from leg and scattering Paken-

ham's sticks. Three for 26. The next couple of overs produced little. Wood slipped the younger Edwards for a single; and a couple of maidens were then bowled; Sutter took Edwards' (W.D.S.) place at the Pavilion end, the first extra, a bye, coming in his over. Edwards' next over proved disastrous for Stephens, whose wicket fell to the former, his score stading at 13—four for 31. Baggallay took his place, and for some time singles came; Wood, however, drove Sutter for three, but was bowled by Edwards in the next over. Five for 36. Gordon Brown was next man. Baggallay drove Sutter to leg for two, a couple of byes (one a three) followed; and Baggallay then retired clean bowled by Edwards jun. Six for 55. Hellyer now joined Brown, and Edwards' first succeeding ball produced four, Brown slipped the same bowler for 4 (to the boundary) and cut him for a single. The half century was reached at ten minutes to twelve. A chance was given on a ball from Edwards cut by Gordon past point, but by throwing in to the wrong end Gordon escaped, only to be given out in the same over, leg before wicket. Seven for 54. Boyle took his place, but after gaining a single came back bowled by Edwards—eight for 60. D. S. Brown then joined Hellyer, and the latter cut Sutter for three, while Brown drove him to the boundary for four. Walford now took the leather from Edwards and his first ball rattled off Brown's bails—nine for 68. Melhuish now joined Hellyer, but Walford's next ball took his sticks also, and the innings closed at 12.10 for 68.

The Home team now went in, Walkinshaw and Crawford taking the bat. Walkinshaw at once began hitting, eight runs coming in the first over off Stephens. Lias handled the ball at the Pavilion end. Singles came fast, and in five minutes ten appeared on the board. Walkinshaw slipped Stephens for four. By singles the score now mounted, and the first ball of the fifth over produced 20 on the telegraph. Walkinshaw hit Lias to the boundary twice, but the fourth ball of the seventh over was fatal to Crawford who was out l.b.w. with 8 to his credit—one for 30. Watson succeeded him. Walkinshaw drove Lias for another four to the boundary, and Watson got lost off Stephens in the next over, another four being made by Walkinshaw, who hit Lias to the boundary again. A few singles followed and the score was brought to the half century at 12.55 by Walkinshaw cutting Stephens for a couple. Lias, who had been hit about a good deal, now gave up the leather to D. S. Brown. Adjourned for tiffin, the score standing at 57.

Play was resumed a few minutes after two o'clock; and ten minutes later Watson succumbed, clean bowled by Brown (D.S.), having put together 12. Two for 73. E. Edwards joined Walkinshaw, who having now settled down to his work hit both bowlers about rather freely, and the scoring included a multitude of "two's" and a three here and there. Pakenham now took Gordon Brown's place at the bowling, and his first over resulted in Edwards' downfall, the second ball being returned into the bowler's hands. Three for 94. W. D. S. Edwards took his brother's place and drove D. S. Brown for three; and another single off the same bowler brought out the century on the telegraph. The captain got D. S. Brown to leg for four; and Walkinshaw at 63 hit a skyer off D. S. Brown, which was missed, as none of the field could get there in time. After a few more singles Walkinshaw drove D. S. Brown to the boundary, and sent one from Pakenham the same way in the succeeding over, Edwards taking a couple of pairs off D. S. Brown and then driving him to the pavilion steps, a rather expensive over. A change now took place in the bowling, Baggallay coming on in D. S. Brown's room, but giving place soon to Lias whose first over resulted in 13, Walkinshaw getting a couple of "four's" out of him. A few more runs, however, finished Walkinshaw's career, a ball from Lias being returned to the bowler. Walkinshaw's score stood at 117, including over a dozen boundary hits, and was a very brilliant performance. Four for 187. Sutter now went in, but the partnership was soon severed, for, skying a ball from Pakenham, it was held by Baggallay at long off, and Sutter retired without adding to the score. Five for 188. The Yokohama innings was now declared closed, and after a brief interval Kobe went in again.

Bremner and Wood opened the ball for the visitors, the bowling being in the hands of Walford and E. Edwards, the former of whom Bremner cut to the boundary for four; cutting off Edwards for a couple and later getting another four off Walford. Sutter now relieved Edwards in the bowling, and in Walford's next over he took Wood's bails—one for 27. Hellyer followed Wood, and Bremner took a series of "four's" off Sutter, the fourth and fifth in one over; but revenge for this came in Walford's second ball of the next

over, which played havoc with Wood's stumps, Melhuish followed in Wood's place, and Bremner continued to punish Sutter till at length the latter was relieved by Watson. Melhuish now began his score with a "four" off Watson. For a quarter of an hour runs came slowly, Grant relieving Walford at the bowling, his first over yielding a boundary hit to Bremner; Melhuish cut Watson for two, but skied the next ball, which was held by Philip. Three for 74. Pakenham succeeded him, but at five o'clock the stumps were drawn, the Kobe score then standing at 76.

The match was watched by a considerable number of spectators, and the band of the *Imperieuse* played during the afternoon.

The following are the scores:—

The second of the interport matches took place on Tuesday. The weather was again all that could be wished, and the ground in excellent condition.

The visitors went in first, and Bremner and Stephens handled the bat, Walford bowling from the Pavilion end. Off this bowler Stephens got a single in the first over and the first of the extras, a leg-bye, also came. Edwards handled the leather at the other end and his first over was a maiden. Stephens drove Walford to long-off, a boundary hit, and a bye gave five for this over. The next over produced three and the first ball of its successor Bremner hit to leg for four; Stephens drove Walford close to the boundary for three, and cut Edwards (E.) beautifully for three; and Bremner gave long-slip (Sutter) a rather difficult chance off Edwards, which did not come off. The seventh introduced Watson, who took the ball from Walford, and from whom Bremner got a four off his second ball. The third ball Bremner skied to leg, but the ball was not held by Crawford. Bremner hit Watson to leg for four; and cut him in the same over for a single, which was returned smartly enough to imperil the partnership. Sutter here relieved Edwards at the bowling, and Stephens hit him to leg for a single, the ball being again briskly fielded by Walford, who, however, failed at a high ball hit to leg by Bremner a moment later. Stephens now cut Watson prettily for four, and drove him again for a couple. Sutter's next over was unproductive of runs, and Watson bowled his first maiden, Sutter following with another. Stephens now drove Watson to the boundary and the half century went up at 11.25. Another four came off the same bowler, 8 runs from one over. Bremner followed up this good work by driving Sutter to the boundary and slipping him for another four in pretty style, but his next ball took the batsman's wicket and Bremner retired for 32, very pretty cricket, in which, however, he had given three chances. One for 65. Wood took his place, Walford resuming the bowling at this stage. Stephens drove the latter to the fence in the first succeeding over, and Wood hit Sutter to leg for a single in the next. Stephens sent a moderate skyer to long-off, but Morris missed it, failing to quite get up in time. W. Edwards now

took the leather at the Settlement end, Stephens getting a single off his first over, and another off Walford in the next. Wood drove Walford to long-off, but the leather was handled smartly this time, and the batsmen found themselves together at one end, Wood thus going out with only one run to his credit. Two for 74. Pakenham went in next, and the partnership began by Stephens driving Walford for a couple, again for four, hitting up the last ball of the over for four, and then slipping Edwards for a couple. Grant took Walford's place, and Pakenham drove him to on for a single, Stephens following with a two, neatly fielded by Morris at long-off. The younger Edwards resumed bowling at the Settlement end; his first ball took Stephens's bats, and he went back with 51. Three for 90. Lias now went in and, playing carefully for a couple of overs, slogged Grant to the fence in fine style, while Pakenham hit him to square leg for a couple, and cut him for the same number, the century now coming out on the telegraph at 12.20. Lias, feeling settled, now hit Edwards boldly to leg for four; Pakenham drove Grant to long-on for a couple; but in the next over Grant clean bowled Lias, who with his two fours and a single had to retire. Four for 109. Hellyer joined Pakenham, who took a couple of pairs off Edwards in the next over, Grant's next being a maiden—his first—and the last ball of Edwards' next produced a four for Pakenham. Morris took the ball at the Pavilion end and was promptly driven twice to the boundary and hit briskly to leg by Pakenham for three—twelve runs from the first over—Pakenham sending Edwards (E) to leg for four a few seconds later. W. Edwards again took the ball from Morris and in his first over bowled Hellyer, who came back with a single to his name. Five for 133. Baggallay joined Pakenham, and Pakenham passed the younger Edwards' second ball to the boundary; but the left hander in the next over lowered Baggallay's sticks, and he retired with a "duck." Six for 137. Pakenham now received Melhuish as partner, and after an over another change of bowling took place, Sutter bowling from the Settlement end. Pakenham hit him strongly to square leg for four; Melhuish got a single—his first—off him, but the fourth ball of Edwards' next over, grazing Pakenham's leg stump, sent him back and closed a very carefully played career for 42. Seven for 142. Boyle took his place, but the pair were soon parted Sutter's fourth ball downing Melhuish's bats—eight for 142. Gordon Brown joined Boyle, who slipped Edwards to the boundary, and soon after drove Sutter to mid-on for a couple. With the score at 150, the teams adjourned for tiffin.

Play was resumed at two o'clock. Sutter bowled a couple of overs and then retired in favour of Edwards (E.), and Boyle after eight more runs had been added was bowled by the younger Edwards—nine for 158. D. S. Brown took Boyle's place, and for a few minutes runs came singly, some wild throwing in off a hit by Gordon Brown resulting in an addition of 4 to the score, and a change of bowling occurring, D. S. Brown was immediately bowled by Walford in the first ball of his over. This closed Kobe's innings, the score standing at 171.

Yokohama sent forward Walkinshaw and Crawford to represent them, Stephens and Pakenham conducting the attack for the visitors. Crawford began well by slipping Pakenham for three. The next three overs were uneventful, but the third ball of Pakenham's succeeding over Crawford cut smartly to the boundary, and took a single off him to leg which was missed by the fieldsmen, though a high hit to leg by Walkinshaw off Pakenham was very neatly fielded from the same quarter; Crawford cut Stephens twice for two, and a couple of maiden overs were followed by Walkinshaw's downfall, as he was declared out caught at wicket on a ball of Pakenham's—one for 26. Watson joined Crawford, hit Pakenham to leg for four, and got three off Stephens, and followed this with two off the same bowler, Crawford hitting Pakenham to leg for four, and again for two. Crawford cut Pakenham very nicely for three, but the next ball in the same over brought down Watson's wicket—two for 44. E. Edwards took his place, but with 127 to make in an hour and a half the game looked gloomy for the home team. Runs came slowly till Edwards cut Stephens to the boundary, and Crawford similarly punished Pakenham, who was soon after relieved by D. S. Brown, whom Edwards sent to square leg for four, while Crawford cut Stephens for the same number and again for two. In Brown's second over Edwards was put out leg before wicket for 12. Three for 73. W. Edwards followed his brother. Crawford cut Stephens for three—perilously near the fence—Edwards followed suit off the same bowler, and a few moments later Crawford cut him again to the boundary. But the next ball from Stephens was caught by D. S. Brown in the slips and Crawford

retired with a capably played 54 to his credit—four for 91. Sutter now joined Edwards and at 4.10 the century went upon the board. The two batsmen after a time seemed fairly settled together, the score mounting up slowly with an occasional three and four, though the play was steady and cautious. Edwards hit Stephens to square leg for four. Lias then took the ball from D. S. Brown, and Edwards again had Stephens this time for three; retribution, however, coming in the form of the bowler's next attack which laid Sutter's wicket low—five for 127. Walford now took up the defence for the home team. The next four overs were productive only of singles, but Lias in the first ball of his third over took Walford's stumps—six for 132. Grant filled his place, and, after a short space of single run-getting, hit Stephens to leg for four and Edwards cut Lias to the fence for the same number. Seven minutes only remained now in which to get 14 runs. Edwards hit Lias to leg for two (score now 159). Pakenham relieved Stephens at the bowling and was cut by Grant for a single off the third ball of his first over; Edwards drove him to long-off for three, and amid great excitement cut Lias close to the fence, slipped him to leg for a single, and cut Pakenham for the same value. Edwards cut the same bowler for a single, and Grant put another ball to point off Pakenham. There now only wanted three minutes of five—two runs to win—and, as well may be imagined, suspense lay heavy on the partisans of both teams. D. S. Brown took over the ball from Lias at the Settlement end, but brought the home team nearer victory by bowling a wide which made the match a tie. Grant cut his next ball forcefully, but it was stopped in the slips and cleverly returned. The end came, however, with his succeeding ball, which Grant snicked to long slip and got a single off. The last ball of Brown's over Edwards drove to mid-off for two, and the innings closed with Yokohama winner of the day's match by 3 runs and three wickets to fall.

The match was exciting towards the close, but for some time before runs came very slowly. The Kobe team fielded much better than on the previous day, and as will be seen did much more with the willow. Stephens bowled all through the afternoon till within a few overs of the finish.

At the close hearty cheers were given for both teams.

The Imperial Marine Band attended during the afternoon and played a number of selections. The play was witnessed by a large crowd.

The teams dined together in the evening in the Club Hotel.

Following are the scores:—

SAILING RACE.

The concluding race of the two fixed to decide the ownership of Mr. Whitfield's "Fairwell Cup" and other prizes took place on Saturday over the same course as before, once round the Club Course and once round the 17 rater course.

Mr. Beart, who officiated as officer of the day, sent the boats off at 1.30, *La Belle* being first across the line. With the wind a little to the westward of S. spinnakers were used to the North Mark which was rounded first by *Molly Bawn*, followed by *Princess Maud*, *Tortoise*, *Maid Marion*, and *La*

Belle, *Trawler* last. Sheets were pinned in for the trip to the Lightship, and the leading boats came thence most of the distance to the Home Mark close-hauled. Here the wind dropped and suddenly sprang up from E., bringing in at a great rate the laggards from the Lightship. The run out to the Green Lightship was on a wind, and down to Kanagawa balloon jibs were carried by the leaders, *La Belle* and *Trawler* sporting their spinnakers. Thence the line was crossed in one reach, *Maid Marion* arriving a long distance ahead of *Molly*. The *Maid* was disqualified for having fouled the North Mark; and *Molly* lost first place to the *Princess* on handicap, *La Belle* made a capital race of it round the whole course with *Tortoise*. Following are the times:—

Mail	Home Mark.	Finish.	Total.	allows	Total.
<i>Maid Marion</i>	1:38.10	3:20.43	7:03.21	m.	7:03.21
<i>Princess Maud</i>	3:51.10	3:36.35	7:42.53	32	7:10.53

S. HILDA'S HOSPITAL AND DISPENSARY, AZABU, TOKYO.

On behalf of the Bishop of the Church of England in Japan, the undersigned begs to acknowledge with thanks the following subscriptions towards the erection of the S. Hilda's Hospital and Dispensary. The offerings presented to H.R.H. the Duchess of Connaught, to be laid on the foundation stone, are included in the list.

L. B. CHOLMONDELEY,
Chaplain to the Bishop.

Further subscriptions will be thankfully acknowledged.

DISPENSARY.

HORSFORD'S ACID PHOSPHATE
Imparts New Energy to the Brain, giving the feeling and sense of increased intellectual power.

"OUR ITALIAN COUSIN"

The high expectations fostered by Signor Majeroni's established reputation and by the fact that on his first appearance here he would be assisted by ladies and gentlemen, most of whom have already distinguished themselves on the amateur stage, were assuredly fulfilled by Thursday night's performance. The deterrent effect of a most unpleasant evening, the weather rainy, and the atmosphere raw and cold, while the roads were in a very muddy condition, no doubt caused not a few empty seats, but the house notwithstanding was well filled. The play "Our Italian Cousin" went smoothly to the end, and though the first act seemed to fall a trifle flat while the audience were essaying to grasp the plot and realise the interests involved, the other two acts enabled the leading actors to hold the full attention of, and win rounds of applause from the house. We have already shortly indicated the leading idea of the comedy, but may now with a view to distinguishing between the various players of last evening rapidly go over the plot again. Briefly then, the whole story hinges upon a letter which some young sparks by way of joke write to "Our Italian Cousin," *Charles Valeri*. The letter expresses the warmest affection for *Charles* and makes an appointment to meet him at midnight at a masked ball, describing the costume which for purposes of recognition is to be worn. *Charles*, who is a well-meaning good-natured, *mal-a-propos* fellow, with an exceedingly susceptible heart, is transported by the receipt of this precious epistle, and cannot refrain from showing it to *Fred Somers* who is engaged to marry *Charles'* cousin, *Laura Valeri*. *Fred* reads the note absentmindedly and puts it in his pocket. Meantime one of the concoctors of the letter, *Lee*, a veritable busybody, calls at the house of the *Armstrongs* (*Julia Armstrong* is the cousin of *Laura* and *Charles'*) and where *Laura* lives, and unconsciously arouses some suspicion as to *Fred* in the mind of *Laura*. While things are in this state *Fred* arrives, and is rather coolly received by his fiancée. Matters are smoothed over, however, and all would go well if *Fred* did not unhappily by accident draw from his pocket and drop on the floor the letter which had so delighted *Charles*. It bears no address, and *Laura*, on reading it, sees in its impassioned language the destruction of all her hopes. From her hands the note passes easily and naturally to the possession of *Armstrong* (who, though gifted with a temper of almost preternatural placidity has also had a misunderstanding with his wife *Julia*) and thence of course it finds its evil way to *Julia*. Another misunderstanding on a pretty serious scale now takes place in the *Armstrong* household, and at length *Mrs. Armstrong* and *Laura* decide, unknown to each other, to keep the appointment made in the letter, each prepared to mete out condign punishment to the gentleman whose disgraceful conduct has thus lacerated her feelings. *Charles*, on his side, goes to the ball to fulfil the original engagement which, as the first recipient of the letter, he believes himself to have entered into with some charming person or other. There, of course, after a good deal of amusing incident, *Charles* greatly to his surprise being addressed in quite familiar terms, but accorded somewhat cavalier treatment by the two ladies whom he finds at the appointed place—each lady naturally being interested in the movements of another gentleman—and after both *Armstrong* and *Somers* have challenged *Charles* to fight a duel, the mystery is cleared up, and *Charles* challenges all present—to supper.

The title rôle was taken by Signor Majeroni, and his conception of the hero of all these blunders proved a most artistic one. His imperturbable good nature, his innocent vanity, and a hundred other qualities and traits were most admirably combined by the Signor in what must have been to all present a truly delightful character. *Mrs. G. E. Rice* as *Laura Armstrong* appeared in a part which it seems to us must henceforward be regarded as one of the best efforts of her histrionic genius. From the moment in the second act, when the ladies come on the stage, to the very close she shared with Signor Majeroni the interest and sympathies of the house. Her scenes with her husband, in which almost beside herself with jealousy and anger, she seemed at one moment about to fling herself upon him and then moved frenziedly about the apartment; her perusal of the letter,—her little exclamations of jealous and suspicious passion—were perfect, each incident in itself, and she fairly surprised the house for a short space into utter silence when, in response to her husband's anxious attempts to make his peace with her, she took up a chair, carried it to the front, and stonily requested him to address his remarks to

that. Mr. Bayne was quite at home in the character of *Armstrong*, *Laura's* husband, who plumes himself a good deal on the calmness of his temper, his fiery gusts of rage and concentrated passion being most effective features in the action of the piece. In other respects, too, which it would be vain to particularise this favourite of local amateurs showed himself in perfect sympathy with the spirit of the comedy as well as with the "star's" conception of the leading character, besides acting throughout with studied care, and yet with the most finished absence of effort. Of Mr. and Mrs. A. C. Read it can only be said that in their joint character of a loving couple, whose movements were not of particularly great prominence in the progress of the play, they acted with all the grace and force which their previous appearances on the amateur stage in Yokohama had led us to expect of them. *Mrs. Read* was perhaps at her best in the outbreak of bitter despair consequent on her reading of the letter, but all through she was as charming and graceful as ever, while Mr. Read only confirmed the estimate long since formed here of his high abilities. Mr. Henson was very well to the front as young *Lee*, the busybody who sets every one by the ears in the first place, and Mr. Kenny (*F. E. Lewis*), Mr. C. W. Arnould (*L. J. Colston*), and Mr. G. W. Burton (*J. B. Price*), as the other young bloods of the play, moved about and spoke their lines with ease, when necessary with spirit, and acted all through with quite natural self-possession. This mention includes all the *dramatis personæ* if we except Messrs. Still and Robson (which latter cognomen disguised Mr. Robinson) who acted as *Thomas* (clerk), and *John* (a domestic) respectively.

It need hardly be said that at the end of both the second and third acts the leading actors were recalled, and very beautiful bouquets were presented to the ladies. The staging of the piece was capital. Selections were played at intervals by Messrs. Griffin and Keil in the form of piano duets, and these were most attentively listened to and heartily applauded.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, October 1st.

The Conference Committee on the Tariff reported on Friday, and the report has been adopted by both Houses of Congress. It now goes to the President for his signature. There are some who believe that Mr. Blaine will persuade him to veto it, but there is not much prospect of that. Mr. Harrison is not the man to throw down the gauntlet to his party even in a righteous cause. The bill, as it stands is an abominable bill. It raises the average rate of duties on imports from 45 to 60 per cent. It imposes duties on goods which for years have been admitted free with the assent of all parties. In order to compensate for the large increase of taxation, it reduces the tax on tobacco two cents a pound. This will take some six millions out of the Treasury and donate it to the manufacturers; tobacco will be no cheaper to the consumer. In 1883, the same thing was done, in order to retain the duties on hardware and textiles, for the benefit of the manufacturers; the proceeds of the excise on tobacco was reduced by \$20,000,000, but the price of the commodity to the smoker and chewer remained the same.

The sugar duty is in the hands of the President, who is empowered to admit sugar free, or to lay a tax on it as he pleases. He is to be guided by the legislation of South and Central States regarding imports from this country. If they admit our bread stuffs, provisions, and manufactures free, then we are to admit their sugar free; if they tax our goods, we are to tax their sugar. The result will be variegated. In the meantime, the Government is to pay every producer of homemade sugar a bounty of two cents a pound. Thus a sum of about eight millions will be taken out of the pocket of the general tax payer, and handed over to the Sugar Trust and Mr. Speckels. Speckels told Congress he "didn't want no bounty;" all he asked was to be let alone. But when the Treasury forces a million or two into his hand, he will take it like a little man. It will be interesting to watch how long a period will elapse before the producer of potatoes and wheat and corn and cotton and pork, demand that they be placed on the same footing as the sugar planter and rewarded by the public for conducting their industry.

The triumph of the manufacturers is precipitating the formation of trusts and combinations in every branch of industry. There is now but one factory in the country where axes are made; it is the American Axe and Tool Company with head-

quarters at Pittsburg, Pa. It has bought out all its competitors and raised prices \$2 a dozen, which it can safely do under the provision of the new tariff on foreign axes. Four months ago there were a dozen factories where saws were made. Now there are but two, and prices have advanced from 10 to 40 per cent. The lead manufacturers are combining on the strength of the provisions of the tariff shutting out foreign lead, and prices of shot, pipe, pig, and solder are rising. Tin has gone up from 50 cents to \$1 a box; not a pound is made in this country, and there probably never will be. The manufacture of window glass, has passed into the hands of two companies, which have advanced prices since the McKinley Bill was framed about 30 per cent. There is now but one company which makes zinc stove boards—all the others having sold out to it, and the price of these goods has advanced within a year 133 per cent. Gunpowder is now made by one concern only, and is twice the price it was last year. So on throughout the list. Congress has set the example of treating the consumer as a cow to be milked, and the manufacturers are not such fools as to neglect the hint.

It is understood that, having been delivered of this enormity, Congress will adjourn to day. It has failed to pass the steamship subsidy bill, which the country really wanted; but, by way of offset, it has not passed the force bill for the use of federal bayonets at the polls. It will be remembered first, by the worst tariff which has been adopted since 1822, and next by the worst job ever put through by an unprincipled lobby—the Bill requiring the Secretary of the Treasury to buy 4,500,000 ounces of silver each month for purposes of coinage. Now that the bill has passed and its mischievous effects are becoming noticeable, everybody is asking his neighbor how it came to pass. It is a curious story. When Cleveland became President, the East demanded that silver coinage should cease—the difference in bullion value between silver and gold coins being dangerously wide. This the West regarded as an attempt to increase the burden of debts, and to curtail the currency; and, being a debtor community, it was opposed to both. The Western view prevailed, and then the opinion of Congress swung to the other extreme. If no curtailment of silver coinage was possible, a feeling arose that it might be increased with advantage. The silver miners of Nevada, Colorado, California, Montana, and other silver producing States and territories, determined to make a bold stroke for their commodity. They obtained control of the leading newspapers west of the Mississippi, and manufactured a fictitious public opinion in their columns. The West was represented as clamoring for more silver currency. There was no such demand outside of the small circle of silver miners. But when every newspaper published in the far west States reiterated that there was, it was hard for Congress to ascertain the truth.

Then the silver miners formed a coalition with the great New York operators, who were easily shown that there was a glut of money in a law which obliged the Government to buy more silver than the mines produce. They always stand ready to make money, and they "chipped in" with the miners to get the bill through by the usual "moral pressure." It is stated that no member of either house was actually bought outright; but it is also stated that over a dozen Senators, and nearly two dozen Congressmen took an interest in the silver pools which were organized in New York. At the time the bill was introduced, silver was selling in that city at from 90 to 95 cents per ounce in gold. The Secretary was authorized to pay as high as 129 cents per ounce. It was no trick to buy up all the loose silver at the market price and turn it into the Treasury at a suitable advance. This was what the pools did. They are said to have laid in some 30,000,000 oz. of silver at from 90 to 98; last month they kindly let the Treasury have 4,500,000 oz. at 119 to 120. They also obliged some belated speculators who "got on" to the game at that tardy hour, and expected silver to run up to 129 without a break, with all the white metal they wanted; and thus after the Treasury was supplied, the price gradually reacted. To day it is selling at 112, at which or some similar price, the pools will probably take hold again, and run quotations up to 120 against the Secretary's next appearance in the market as a buyer. As a neat and quick scheme for turning an honest penny, this silver job can hardly be surpassed. The pools are said to have netted some six or seven millions already, and they will obviously go on milking the cow indefinitely.

Another curious case sheds light on the customs of the natives of this part of the world. A Jew named Goldberg seduced a girl of the name of Millie Panhorst. It appears that her family were aware of her relations with the young man. She

was in the habit of staying all night at his rooms. He said he would have married her but for his religion, which forbade him to espouse a Christian. One evening last week, he called upon her; angry words passed between him and her father, who insisted on his marrying her; he approached the girl, to argue with her; she drew a pistol and shot him dead. It does not appear that he was armed, or that he proposed to offer violence to any one. Nevertheless the coroner's jury found a verdict of justifiable homicide. The meaning of that is that any one who seduces a girl holds his life at her mercy. Not an unwholesome principle, perhaps.

DEDICATION OF AN ODD FELLOWS HALL.

The large hall of Keil's Buildings, the opening of which, and its subsequent consecration to the purposes of Freemasonry, were reported recently, was last evening formally dedicated to the purposes of Odd Fellowship with a view to the holding there of the meetings of the "Far East" Lodge, No. 1 of Japan. At a very early day in the history of Yokohama—for those early residents who were members of the fraternity soon felt the want of a body to consolidate them and to carry out in this corner of the world the high objects of Freemasonry—a Masonic Lodge was formed in the Settlement. To the Yokohama Lodge, No. 1092 on the roll of the Grand Lodge of England and Wales, belongs the honour of being the premier lodge in Japan, for it was the founders of the Yokohama Lodge that first approached Freemasons Hall from this country with the view of obtaining a charter. The establishment of the Yokohama Lodge was soon followed by the founding of the Orientsama Lodge (1263) and of the Star in the East Lodge (640)—the last mentioned being under the constitution of the Grand Lodge of Scotland—a Royal Arch Chapter and a Lodge of Mark Masons also coming into existence as circumstances or the maturity of time seemed to warrant. Within recent years, however, surprise has often been expressed that the order of Odd Fellows, which has now a large and influential following all over the globe, should not have struck its roots into the soil of Japan. Whatever reasons operated in the past to delay that process, it has now become an accomplished fact. Over a year has elapsed since the "Far East" Lodge was founded, and if the public may judge of the prosperity of that body by the number and character of its members, it is in a most flourishing condition. Under a dispensation dated May 28th last year from the Sovereign Grand Lodge, by which the Deputy Grand Sire (Mr. E. V. Thorn) was authorised to initiate and confer the degrees previous to the installation of the lodge, it was found necessary prior to opening the lodge to initiate ten new members, and these with three Odd Fellows resident in the Settlement, formed the founders of the lodge. From this small membership the roll has been increased to 32 members,—to whom must be added two candidates elected, while about a dozen others await the result of their applications for admission,—and the lodge has a credit balance of \$900. Mr. Keil's new hall, admirably adapted as it is to the purposes of Freemasonry, is no less suited to the uses of Odd Fellowship, and the step now taken in removing the meeting place of the lodge to such premises is one that cannot but work for the continued success of the body.

The ceremony of last evening was fixed to commence at 9.15, at which time a large company had assembled. The ladies were accommodated with seats arranged on the sides of the large hall, the other spaces being taken up by officers of the lodge. A considerable number of guests also occupied seats in the smaller hall.

All having taken their places, the meeting was called to order by Mr. E. A. Sargent, Noble Grand, and thereupon the Grand Herald (Mr. A. C. Stern) announced that the Grand Sire and other officers of the Sovereign Grand Lodge desired to be admitted in the name of Friendship, Love, and Truth, for the purpose of dedicating the hall to the uses of the Independent Order of Odd Fellows, and the diffusion of benevolence and charity. The Grand Officers then entered, being Messrs. E. V. Thorn, Grand Sire; A. T. Watson, Grand Warden; C. R. Greathouse, Grand Secretary; Paymaster McDonald, Grand Treasurer; and Rev. V. Marshall Law, Grand Chaplain. These having taken their seats, the Grand Sire, who assumed the chair in place of the Noble Grand, being supported by Messrs. Greathouse and McDonald, briefly intimated the purpose for which the assembly took place, and extended a welcome to the guests. All present then united in singing an opening ode, Mr. O. Keil presiding at the organ.

The ceremony was opened with prayer by the Grand Chaplain. All having resumed their seats, the Grand Marshal and Heralds entered the hall. These were undoubtedly the most imposing figures in a ceremony of no ordinary impressiveness, all being men of splendid physique, and dressed most richly in robes of Oriental design and of more than Oriental stateliness and dignity. When all these officers had duly saluted the Grand Sire they advanced to their stations. The Grand Marshal (Mr. J. J. Pearson) attired in royal purple, splendidly trimmed with green, and wearing, like the Heralds, turned up eastern shoes or *babooshes*, took up his position in the centre of the floor. The place of each Herald was marked by a tall pedestal in each of the four corners of the entire space; on one there rested a basket of flowers, on another a vessel containing wheat, on the third a vessel of water, and on the fourth a candlestick. Beside each of these pedestals a Herald took his place, the Herald of the North (Mr. R. M. Varnum) dressed in white, the Herald of the South (Mr. J. W. Hall) attired in pink, the Herald of the West (Mr. W. G. Cameron) wearing a scarlet costume, and the Herald of the East (Mr. T. W. Kennaway) dressed in blue.

The Grand Marshal now gave a short address illustrative of that part of the ceremony which was immediately to follow, in the course of which he described and explained the prominence accorded to the altar in this ceremony, and referred to its use in ancient rites. Having then received from the Heralds an assurance that they were ready to discharge their respective duties, the Grand Marshal instructed the Herald of the North to bring forward and place in front of the platform a representation of a white stone having lettered upon it the word "Purity." On this foundation he directed the Herald of the South to deposit a pink stone bearing the word "Friendship." The Herald of the East was then required to bring a blue stone distinguished by the word "Love," and a fourth stone, scarlet, and bearing the word "Truth," was brought by the Herald of the West. These four stones, laid one above another, were described by the Grand Marshal as illustrative of the four degrees of the subordinate lodge. Ascending now to the symbolism of the Encampment, he directed the Heralds of the North and South to bring forward a green stone with the word "Faith," and the Heralds of the East and West to similarly produce a gold coloured stone, the emblem of "Hope," and finally delegated all four Heralds to bring a royal purple stone representing "Charity." These several slabs formed a structure which, with the addition of Charity, the emblem of which was surrounded with a white altar railing and surmounted by a torch, constituted a complete altar.

The Noble Grand (Mr. E. A. Sargent) now stepped forward, and, handing to the Grand Sire the keys of the hall, requested him to dedicate it to the "business and purposes of Odd Fellowship."

The Grand Sire, accepting the keys, proceeded to address the members of the order, congratulating them on the possession of such a hall, so beautiful and so well fitted for the purpose to which they were about to dedicate it, and concluded by requesting them to join with the Grand Chaplain in prayer. After prayer the Grand Sire and Grand Warden read various passages of Scripture appropriate to the occasion, and the former then "by the authority and in the name of the Sovereign Grand Lodge of the Independent Order of Odd Fellows" formally dedicated the hall "to the businesses and purposes of Odd Fellowship, to the dissemination of Friendship, Love and Truth, and to the diffusion of Benevolence and Charity in their fullest extent to all its worthy members." This act was duly proclaimed by the Grand Heralds, at the command of the Grand Marshal.

The Herald of the North in the name of "Friendship" as pure, refreshing and life-giving as the water which at this moment he sprinkled from the vessel in his charge, dedicated the hall "to the practice of that noble virtue which unites men as brothers, teaches them to sustain that relation at all times, each in his turn helping and helped, blessing and blessed." A response to this having been made by the Grand Warden, and one verse of a hymn sung, the Herald of the South, lighting the torch on the altar, dedicated the hall to "Love" world wide and ever-enduring, and after responses by the Grand Warden and the singing of other verses, the Heralds of the East and West likewise dedicated the hall, the former to the inculcation and cultivation of Truth (in token of which he scattered wheat) and the latter, strewing flowers, to "Faith, Hope and Charity, which graces like these flowers fill the common air with fragrance, and beautify and adorn all on whom they fall. The practice of these highest virtues is in itself a fulfilment of that law which commands us to visit the sick, relieve the distressed, bury the dead, and educate the orphan."

The Grand Marshal now announced to the Grand Sire that proclamation had gone forth to the four quarters of the globe that all men might hear and know that Odd Fellowship had here a dwelling place. The Grand Chaplain then invoked the blessing of the Almighty on the work in which the assembly had engaged, and on the Order to the purposes of which the hall had been consecrated.

The Grand Sire then, addressing the members, expressed the hope that the solemn ceremonies of the occasion might not be lost upon the hearts of all present. In setting apart that hall for its noble purposes they had renewed their vows to practice conscientiously the lessons of the Order. Let them never forget the imperative commands of their laws, or that in addition to the good works of charity therein enjoined Odd Fellowship had high and important lessons to inculcate, lessons that if attentively listened to and practised by all, would elevate the character of men and hasten the coming of the promised day of universal peace and love. Addressing the members of the lodge present he delivered again into the hands of the Noble Grand the keys of the hall with the prayer that these walls would never echo with the sound of an angry or unkind word, and that all the influences flowing thence would be good and for good. Mr. O. Keil then played an organ solo.

The Grand Sire delivered an oration of which the following is the substance:—The question "Odd Fellowship—what is it?" has doubtless presented itself to many who know nothing of Odd Fellowship, except perchance from common report, or the vague suggestions of a morbid prejudice; hence it is often condemned as an idle organization, characterized, as its name would seem to import, rather by levity than by fidelity to the noble object at which it professes so earnestly and exclusively to aim. To correct so common an error, to remove such unjust prejudices, and to secure for Odd Fellowship the approving sentiment it so well deserves, are the objects of this brief paper. In the confidence of conscious merit, it courts a scrutiny into its principles and practices, with the assurance that an enlightened public opinion will render an impartial judgment on the standard of excellence which pervades the one, and the practical benefits that flow from the other. The name often confuses and perplexes intelligent and liberal minded people. Why, it is asked, assume a designation so singular, if the object be excellent, and such as all good men would commend? The candid inquiry should be, what is the object, what the fruit of the tree claimed to be prolific of good? If the suggestion should be made why Free Masonry is so called, practical masonry forming at this day no part of its work, the reply would doubtless be, that, although such is the fact, it is does not follow that the name is idle or inappropriate, since there may be a fitness in its application of an entirely independent character. The name Free Masonry may, and actually does import, associations significant of and inseparable from the origin of the Order. Having had its beginning centuries ago with the artisans of the masonic craft, for their mutual protection and recognition and the advancement of their noble art, the history of its early struggles to maintain its universality and a thousand other hallowed memories connected with its progress amid the fall of empires and the conflicts of nations, have justly inspired a veneration for its name, notwithstanding that its practical apposition may have ceased to exist. Its name is affectionately cherished by its votaries, because it has lived and moved, and had a prolonged and useful being through the vast past; still lives in the teeming and novel present and gives promise that it will survive through the distant and pregnant future. So with Odd Fellowship; it also had its origin with the sons of toil, and of the same craft, viz., the marble masons of London, at the close of the last century. A wise providence led men, whose daily bread depended upon their daily toil, by association to form a common fund, and thus secure in health the means of support when prostrated by disease. In its experimental outset, like Free Masonry, it encountered a corresponding ordeal; it had no prestige to smooth its uneven and obstructed pathway; reliant only upon its intrinsic worth, it also has survived obloquy and prejudice for more than half a century, and has lived to attain its present meridian height. Can it excite wonder that these memories, which cluster around the name of Odd Fellow, should secure for it a love and veneration that overcome and subdue the merely fastidious taste which would discord or shun it? No one can affirm that this name, though the cause of much prejudice, has not been, in a proportionate degree, an element of success. Concealed in humility it has achieved and become identified with an honourable distinction. Its good deeds have made it familiar to the public ear, and the popular mind. Where then, is the wisdom or the propriety of changing it? Such a change would not now be possible. It

cannot be made. The idea of Odd Fellowship at the beginning, instinctive of a wise providence, was, as has been already stated, mutual relief and protection. It was, it is true, a crudely digested system, if system it could be called. This idea, embodied into substantial form, and disciplined by experience and observation, continues to be a vital, although by no means the predominant element of its organization. It assumes, also, as a cardinal office, an earnest and unintermitting care for the moral health of its membership. Man has a moral as well as a physical nature, and the wants of each being reciprocal, they keep equal pace and move in parallel lines. In truth, there is no appetite of the human body more craving and inexorable, than is the insatiable hunger of the human heart for moral support. Infirmity of body, as well as of mind, is common to humanity; and there exists necessarily, as inseparable from this condition, a corresponding natural desire for sympathy. To supply this ever-recurring want, Odd Fellowship addresses itself, by a combination of efforts, in aid of the moral as well as of the physical man. These two aims, happily blended, comprehend its lever power against penury and vice, by which it labours to mitigate as well "the ills to which all flesh is heir," as to elevate, and ennoble our nature. Odd Fellowship is not a secret society. By far the larger portion of its ritual, or work, is in print, and is known to thousands and hundreds of thousands; all of its general legislation, comprising volumes of matter, is accessible to the public eye, and much of its ceremonial is constantly displayed to the public gaze. True, it possesses an unwritten and unspoken language, intelligible only to the membership. This language is, however, unimportant to the outside world, since it serves simply the purpose of mutual recognition between those to whom it is known. The members of the family have exclusive claims upon the supply which their joint labours and contributions have stored; hence it is fitting that safeguards should be thrown around these claims—how otherwise could a mutual relief society, in the secular sense of the word, be sustained? This is all the secrecy of Odd Fellowship. All objects, the successful attainment of which is hoped for by combination of masses of men, and the consolidation of many minds into a single will, demand a subordination which can only be maintained by a system of law and order. Odd Fellowship, in conformity to this experience, has an organization peculiar to itself. It has a paramount fundamental law, embodied in the form of a written Constitution, emanating from a supreme federal head, styled the Sovereign Grand Lodge. The Subordinate Lodge is the active working theatre of the Order, and membership in good standing in any one Lodge, evidenced by proper authority, is a passport to admission into any other Lodge, wherever situated, and to aid and assistance from it when the brother who desires the one, or needs the other, makes known his character. This system of government has proved so admirably adapted to the great object of the institution that perfect fellowship and subordination have prevailed ever since its formation; each Body adhering to its appropriate sphere, and moving in perfect harmony as a whole. Odd Fellowship is a moral, not a religious organization. The religious world is divided into many sects, each intent upon the promotion of its peculiar plans and interests, and in consequence wanting in that unity of action so essential in every secular institution to the securing of those great results which illustrate the triumph of benevolence and charity. This want is, in a good degree, met by the employment of an agency not amenable to such a disability, and in which men of many sects and creeds may cordially co-operate and labour, upon common ground, for the relief of human suffering. Such an institution is Odd Fellowship. It does not array itself against the Church, nor presume to arrogate its functions, or to supervise its teachings. Its Lodges are not the council rooms of enmity to religious, civil, moral, or social organizations. Far otherwise: all its oracles and instructions in relation to these grave subjects find their warrant and authority in the divine law, under the inspiration of which it preaches the Golden Rule as the sublimest illustration of the law of love. A Subordinate Lodge is the elementary organization of the Order, and, as has already been said, is the active field of its labours. It is there that the initiate receives his first impressions of Odd Fellowship. There the broad foundation upon which the whole superstructure rests is laid bare to him, and the brotherhood of man is taught as the inspiration of Deity and the first law of nature. The lessons and instructions there rehearsed within his hearing, will create in him new impressions, if he be not wholly callous and insensible to the voice of humanity and to the counsels of wisdom. The business of a Subordinate

Lodge is, however, chiefly administrative; its peculiar office is to provide the means to meet the claims of its sick and distressed members; to care for them properly during their illness; to bury the dead; to succour the widow, and to educate the orphan. In the faithful discharge of these duties it is ever watchful that no imposition is practiced by unworthy members, and that exact obedience is yielded to the laws. It is also sedulous in requiring and enforcing a high-toned morality and an upright walk in life. Every Lodge enacts its own by-laws, which regulate the mutual obligation between it and its membership, and possesses exclusive control over its own funds within their legitimate application. The by-laws of a Lodge may be regarded as a contract between the initiate and the Lodge; they define generally the reciprocal duties and obligations of each; they prescribe the amount of the contribution levied upon each member to the common fund, and the amount of his claim upon it when sick or disabled. These By-Laws also provide the amount to be paid in case of the death of a member in good standing as a funeral benefit. This benefit is by no means uniform; each Lodge for itself prescribes the amount payable, subject not unfrequently to the State general law, which fixes a minimum rate. This benefit ranges from thirty dollars to five hundred or more; some Lodges impose a special tax upon each member of twenty-five or fifty cents, or one dollar, as a funeral benefit; in which case, when the membership is large, as it usually is in cities, the benefit is correspondingly liberal. This fund is paid to the widow, if any, if not, to the nearest of kin of the deceased. The education of orphaned children is also enjoined, and is faithfully carried out. Although the by-laws form a contract between the Lodge and its members, the parties are also in their relations to all the laws of the Order; and, in the construction and enforcement of this contract, each must conform to all the duties and injunctions prescribed by the laws at large; each must seek redress for grievance before the appointed tribunals of the Order, according to the forms prescribed, and these must be exhausted before the courts will intervene, if at all, and should jurisdiction be entertained of such grievances by the courts, it is believed it would only be exercised to constrain the tribunals of the Order to a faithful administration of its laws. The general qualification for membership is prescribed in the following words: "No person shall be entitled to admission to the Order except free white males of good moral character, who have arrived at the age of twenty-one years, and who believe in a Supreme Being, the creator and preserver of the universe." To this general qualification there is one special and important addition, viz., health of body and mind. The propriety and absolute necessity of such a provision will be apparent to every considerate mind, as a preventive of the great inequality and injustice which would otherwise result in the distribution of benefits. Every applicant for membership must therefore candidly disclose his sanitary condition, for if concealment should be practiced, it will not only vitiate the contract between him and the Lodge, but, what is more serious and important to the initiate, it will subject him to arraignment, trial, and expulsion, and consequent disgrace. Fidelity on the part of the membership, not only to the laws and obligations of the Order, but to the laws of God, to the laws of the land, and to all the duties of citizenship, is strictly enjoined; good faith toward each other, and fair dealing with their fellowmen, are firmly yet fraternally enforced, and love for truth and honour, as cardinal virtues, is earnestly commended. Mr. Thorn, in conclusion, recited a poem appropriate to the occasion.

The audience then joined in singing the doxology, the Grand Chaplain pronounced the benediction, and the ceremony of dedication was thus brought to a close.

From the foregoing it will be seen that the ceremony was a deeply impressive one. The hall was not decorated in any respect, save that above the dais there was displayed a group of emblematic designs, surmounted by a triple linked chain of flowers. The strikingly beautiful proportions of the fine hall in which the ceremony took place, however, its really graceful accessories, and the splendid light diffused from the electric lamps, combined with the many hued dresses of the ladies and the richly decorated collars of the officers of the ceremony to render the scene a very striking one. The most prominent figures were, of course, the Marshal and Heralds whose fine costumes, the designs of which are from the pencil of Mr. Edward Barclay of Paris (who, being in Japan, most courteously lent his aid to the Committee) served to distinguish them from all others. Nor was the ceremony deprived of the aid that music could lend to such an occasion, for the various odes and incidental accompaniments were well given by Mr. Keil.

After the ceremony the hall was cleared and dancing was commenced to the strains of the Tokyo City Band, and kept up for several hours, a capital supper being provided by the Club Hotel.

The following was the dance programme:—

1.—VALSEMY QUEEN.
2.—VALSEDAWN-DAWN.
3.—QUADRILLELA MASCOITE.
4.—SCOTTISHSUMMIT DANCE.
5.—VALSEOSKAR.
6.—VALSETHE FIRST KISS.
7.—LANCERSFOGGIA.
8.—VALSENELLA BOCCA.
9.—POLKASOUND FROM THE NORTH.
10.—VALSELA MESSAGIERA.
11.—VALSEWHITE ROSE.
12.—GALOPTARIT.

LOSS OF THE "LIZZIE C. TROOP"

NARRATIVE OF A SURVIVOR.

As we briefly reported on Saturday, says the *Hyogo News* of the 20th inst., the survivors of the British ship *Lizzie C. Troop*, a wooden vessel of 1,391 tons, register, of St. John's, New Brunswick, and built 16 years ago, arrived here from Kumamoto per N.Y.K. steamer *Mutsu Maru*.

Among them is Mr. J. R. Troop, the chief mate, and to him we are indebted for the following particulars of the disaster. He said:—We left Nagasaki on September 15th with 600 tons of stone and dirt ballast on board for Puget Sound. We soon found wind, and at ten o'clock on the night of the 16th it increased to typhoon force; we were, in fact, in the typhoon which we have since heard wrecked the *Ertongroun* and other vessels. For 36 hours the wind shrieked and roared such as I have never heard before, and our lower topsail soon went. We kept all our spars intact, however, but the copper and sheathing began to wash off the ship outside. From that time on to Sunday, noon (21st), it blew a gale continuously, when it again increased, and by the afternoon we were in another typhoon. We had set all our strong, heavy sails, and for seven hours we had managed to keep her off the shore, but with the increased fury of the storm they were blown to pieces. The wind, which was blowing round all the time, blew first from the N.E. to E., then to S.E. and S.S.E. to S., from which quarter it never changed. On the morning of the 22nd ult. at about 9.20 we sighted the tops of hills; we could just see them sufficiently, that is to say, to distinguish there was something there besides sky. We struck almost at once, and after three bumps we were in pieces. The main and fore masts were of iron, and the former broke in the middle. When she had driven close in we saw it was all up with us, and everyone went aft. The Captain was with his wife and their baby, which was only two years and a half old. The second mate sung out, "You will have to swim for it, men." He and some of the crew then went down a rope over the stern and tried to swim for the shore, the first time she struck. He was never seen again. The cook and another man went down on the inshore side, got into the mizen rigging, and were lost. The others who tried to get ashore went, I think, to the off shore side, and went down between the vessel and the rocks and were ground to pieces. I got on the top of a little hatch to be clear of the crowd, but was washed from there, and my arm was caught between the planks of the deck as they opened and closed. I thought I was fixed, and the agony was awful, but the succeeding sea released me and I got clear. I reached some wreckage by the mizen rigging, and as it turned over I jumped for the water and reached the shore. We were in a little bay, with coal reefs on either side of us and a coal bottom. The ship was only about fifteen feet from us, so completely had she been blown on shore aided by the high tide; and I, with two or three other men, pulled the Captain's wife off some wreckage and got her ashore and also the Captain. Both had been jammed. The Captain's wife had had her dress caught in some of the wire rigging, as it appeared, and she had to tear it away. She was terribly hurt and bruised, and received a bad knock on the face. I had last seen the Captain on the top of a deck-house; he then seemed to have his foot jammed. The carpenter was jammed alongside him, his legs being fixed, but a heavy sea loosened both of them. The Japanese were as kind as possible, and we removed the Captain to a little house on the beach and stayed by him until he died half an hour later from his wounds. What became of the child I don't know. The Captain seemed to have all his ribs broken, he had lost an ear, and had an awful gash in his head. We dug a grave for him next morning, assisted by the Japanese, who made him a coffin, and having

held an inquest on him and obtained a certificate from the Japanese of his death, I buried him. I took these measures as he was injured. We then moved up to the village about two or three miles off, where the Japanese gave us hot food and drink and clothes. Those who were saved were in very bad straits. Our feet had been cut so by the coral that it was only ten days ago that I for one was able to walk. We saved nothing but the ship's articles. She broke into kindling-wood. We were on the island 17 days weather bound. We had to make a port 100 miles to the south in a small junk in order to get a steamer, but twice the wind failed us and we had to return. A policeman accompanied us up here, but a cabin-boy whom we had shipped in Nagasaki in place of the Manila-man who tried to poison us there, acted as our chief interpreter.

The following is the list of those who perished:—B. G. Fownes, Captain; Geo. Robinson, 2nd mate, aged 30, native of Wilmington, Delaware; Geo. Kuller, 55, Hamburg, A.B.; J. Patton, 20, England, A.B.; H. Taro, 22, Kagoshima, cook; M. Matsan, 22, Finland, A.B.; C. Smith, 25, Halifax, A.B.; C. Tidman, 21, Russian, A.B.; S. Hofallah, 28, Manila, A.B.; Pedro Beres, 28, Manila, A.B.; Laurence Power, 24, Liverpool, A.B.; and 2 Japanese.

The seamen have been placed at the Seamen's Home; the chief mate has found other quarters, while other accommodation has been provided for Mrs. Fownes. The chief mate is the most badly injured of the survivors. His teeth were driven through his lower lip, his nose broken, and the fingers of his right hand driven into the hand.

NAVAL COURT OF INQUIRY.

A Naval Court of Inquiry was held at H.B.M.'s Consulate yesterday morning (22nd) into the loss of the British ship *Lizzie C. Troop*, Captain B. G. Fownes, off Yerabu, one of the Loochoo group, on the morning of the 22nd, under circumstances which will be fresh in the minds of the public.

The Court was composed of Mr. Longford (H.B.M.'s Acting Consul), President; with Captains J. D. Haswell (British ship *Champion*), and D. Leary (British ship *Honolulu*), as Nautical Assessors.

John Rawlins Troop was the first witness called. He said:—I was first mate of the *Lizzie C. Troop*. I have a Master's Certificate, but I lost it with the ship. The latter was a wooden vessel, ship-rigged, of 1,361 tons. She was strong and sound, with masts, sails, rigging, and four boats all in good order; she was well found in all requisites. Benjamin George Fownes was her Captain; he had been a Master, I think, 17 years. I had been in the ship with him 14 months. The Second Mate had no certificate. We carried a crew of 20 hands all told. We left Nagasaki Sept. 15th with the above crew and the Captain's wife and child. The weather was fine with no threatening appearances. I can't say at what time we passed the outer lighthouse. On getting clear of the harbour we steered to the south, but I cannot give the exact course. We wanted to get clear of the islands. Captain Fownes intended to come out through Van Dieman's Straits and then keep the coast closely up to Yokohama. We were bound for Puget Sound in ballast of 600 tons of stone and dirt. At noon on the 16th our position was 30° 10' N., 140° 30' E. We had had fine weather up to then, with strong N.N.E. winds and clear weather. At 10 p.m. the wind gradually increased to a strong gale, and we put the ship under lower fore and main-topsails. At 11 p.m. we stowed the fore-topsail, which split as we took it in. At midnight set in a typhoon with barometer slowly falling all the time. Main-topsail blew to pieces soon after midnight, ship's position then being 29° 25' N., 130° 10' E. dead reckoning. Ship then lay under bare poles for 18 hours. From when the typhoon first took it revolved left-handed, viz., against the sun round the compass, in 20 hours, from N.N.E. back to N.E., and barometer fell to 28.05. On 19th we bent new lower fore and main-topsails in the afternoon. At 7 p.m. set gossamer of main-topsail. We were on port tack all these days, with the yards checked in a little. From 19th up to Sunday noon 21st the wind was still blowing strong gale from N.E. Judged ship's position by count 27° 30' N., 130° E., wind on 21st going back and forth from E.N.E. to N.E. On Sunday noon after dinner set lower fore and main-topsails, reefed spanker, maintopmast staysail, and fore-topmast staysail, checked in the yards, and ran the ship S. by W. for 28 miles about, judging that she made S.W. by S. course, true. This took us up to 8 p.m., then the wind was from the E. It then set in a typhoon again, blew away fore-topmast staysail, split main-topmast staysail, blew away

lower fore-topmast, and we took in the spanker. At 10 p.m. the main-topsail blew away, and the wind gradually went round from E.S.E. to S.E., S.S.E., S., remained there a little while and then went back to S.E., where it remained until 6.20 a.m. on the 22nd; barometer showing a little below 29.06. At 6.20 we sighted the land close under our lee, although we had previously supposed we must be quite 16 miles to the eastward of the land. On sighting the land we cut the foresail adrift, put the helm up and tried to wear. The ship, however, was too close; she fell off a little and then struck, and in five minutes was in pieces. We had struck on the island of Yerabu, one of the Loochoos. Captain Fownes had been on deck since Sunday noon. We had had everyone standing by since that time; no one went below. A look-out had been kept all the time, but we could not see a quarter of the length of the ship through rain and sea. Last true position we had was at noon of the 16th. We had lost nothing but our sails. The vessel was gone in a minute from the striking, and it was each man for himself. When we struck the Captain said, "We are all gone," and his wife, who had come up with the baby in her arms, said, "Well, am I to die alone?" and the Captain said, "No, I will come with you," and he joined her in the companion way and took the baby. She had been on deck before, but had to go below as she could not hold on against the wind. No orders were given when she struck; it was every man for himself, but the Second Mate sung out, I believe, "Jump and swim." He and some others went over the stern and were drowned. I was knocked down and got jammed in the deck, with the carpenter in the same position three feet from me. When I got loose I jumped on a pile of wreckage, thence into the surf, and so ashore. The ship was only about 15 feet from the shore, against a ledge of rocks against which she had come broadside on. The third time she struck she was beaten into pieces, and the masts came down in a heap. I next saw Mrs. Fownes on some wreckage and the Captain on a deckhouse. Mrs. Fownes's dress had previously been caught and she was tearing it away. I and another man hauled her off some wreckage on to a ledge of rock about 6 feet out of the water. I don't know who got the Captain ashore. The carpenter, who was a very old man, lived five days and then died. The Captain was insensible when brought ashore and never came to. The carpenter, I think, must have died from the shock, as he died between dinner and supper time in his sleep. I never saw the child or knew what became of it. Mrs. Fownes told me the Captain had taken it. I have been at sea 21 years, and in my opinion nothing could possibly have been done to save more life. Life-buoys were no good; I had one, but I threw it away. It was still blowing a typhoon when we struck, and in a case like that it was each man for himself. The people on shore must have seen us before we sighted the land, or struck, as there were quite a hundred of them on the beach when we got ashore. One of them carried me up to a house, another carried Mrs. Fownes. The stones were like knives, we could not walk on them. We slipped at this place until the Captain died, and then went to a village about three or four miles off, where the Governor lived. We were windbound on the island 17 days, during which time the best the people had was given to us. It continued blowing hard for 15 days, and on the 4th inst. another typhoon came and broke up or disabled every junk in harbour with the exception of the one we crossed in, and that took us two days to get ready for sea. We then crossed to Nahu, 100 miles away, and were 30 hours doing it. Counting the native crew, there were 18 of us on board the junk. We waited there for two days and then got a steamer up here *via* Kagoshima. All the time and everywhere we were treated to the best. Beyond a few slops the only thing we saved were the articles which we found ten days afterwards on the beach. All through the bad weather the crew behaved well and obeyed all orders, and I have no fault to find with them. They all did their best down to the very last. The Second Mate, the cook (Japanese), and seven foreign seamen were drowned, and the Captain and carpenter died on shore. We only found one body, and that was five or six days afterwards. We never found the baby.

This concluded witness's evidence.

The Court had no questions to ask.

Gilbert Gilbertsen, called, said he had been an A.B. on board the vessel for more than two years. He could not add anything to what the mate had said. It was correct in every particular. The wind was blowing so heavily that it was impossible to move along the decks. He saw Mrs. Fownes on the poop tearing off her dress. He said to two of the men, Charles Bigging and Henri Johannsen,

"Let's save the Missis." The other two did so, at considerable danger to themselves from the wreckage and the mountainous sea. He himself was thrown back on the shore.

Charles Bigging, called, said he was in the companion way with Mrs. Fownes and the baby. Just before they struck he said to her, "What do you think we are going to do?" and she replied, "Going to die." She then went down into the cabin, and the next thing he heard was a scream from her as the vessel struck. The second time the vessel struck it split amidships and the third time it split all along, and four men who were alongside witness fell right down into it and the wreck closed over them. When Johannsen and he were coming back the second time with the Missis they were nearly all drowned, as Johannsen, who had hold of Mrs. Fownes, was being swept to sea again and caught hold of witness by the ankle, crying out, "Charlie, mate, give us a hand." Witness replied, "All right, mate, hold on to me." Witness had a hook and managed to get them to shore. Johannsen would not let go of Mrs. Fownes at any price, but would have been drowned had he not got hold of witness's leg in time. Johannsen went afterwards to help the Captain, who was brought ashore in an unconscious condition. He was quite broken up; his legs were broken, as were his ribs, his left ear was torn off, he had a hole in his temple the size of half-a-crown. The carpenter must have been injured internally.

This concluded the evidence, and the Court adjourned.

On reassembling the President delivered the judgment of the Court, which contained a recital of the circumstances of the wreck and the following finding:—

That the vessel when leaving Nagasaki was staunch, sufficiently manned, and in every respect well found and fit for her proposed voyage.

That the Master navigated his vessel in a seamanlike and proper manner, and that throughout the series of heavy gales which were experienced from the evening of the 16th September until the final casualty everything that could be done by an able and experienced seaman was done by him.

That proper discipline was maintained on board the ship to the last; that the officers and crew conducted themselves properly, and that all used their utmost exertions in the working of the ship throughout the whole of this period.

That the casualty and loss of life which unhappily accompanied it were both unavoidable, and that no blame in respect to either can be attributed to any one on board.

The Court recommends that a new copy of the Master's Certificate held by the first mate, and lost at the wreck, be issued to him forthwith.

The Court desires to direct the attention of the Board of Trade to the assistance rendered and great kindness shown to the survivors of the shipwrecked crew by all the Japanese with whom they were brought into contact prior to their arrival in Hyogo, and especially by the natives of the island on which the wreck occurred, at a time when these natives were themselves suffering severely by losses from the storms.

The Court further desires to direct the attention of the Board of Trade to the highly courageous conduct of the two seamen Charles Bigging and Henri Johannsen in returning to the wreck and saving the life of the Master's wife at imminent risk to themselves; and still further to the conduct of Henri Johannsen in returning a second time to the assistance of the Captain and aiding in bringing him ashore when seriously injured and in a state of unconsciousness.

England has recognised the new Government of Brazil, and has saluted the flag of the Republic. Sir Richard Burton is dead.

London, October 22nd.

The shipping confederation has threatened to lay up all the vessels in the United Kingdom until the situation resulting from the strikes has improved.

[Burton, Sir Richard Francis, son of Lieutenant-Colonel Joseph Rutherford Burton, of Tunst, Salway, was born in 1831. He began life at Oxford, and was destined for the Church, but he yearned so much after military service that his father procured him a commission in the 1st Buffs, and sent him out to India in 1854 at the end of the Afghan War. He was nineteen years in the Bombay Army, eight years in active service, chiefly on the staff of Sir Charles Napier. While in India he became a distinguished linguist, and passed examinations in eight Oriental languages. He made an expedition to Mecca and Medina in 1853. He next explored Harat in Northern Afghanistan, and went to Somali Land, in East Africa. He commanded the expedition, taking with him the gallant Speke and Lieutenant Hume and Strogon. The explorers were attacked in the night by the natives. All fought their way bravely through the enemy. Captain Burton and Captain Speke were both desperately wounded. In the Crimea he was chief of the staff to General Beaumont, and he was the principal organiser of the irregular cavalry. Lord Palmerston was going to send Captain Burton to raise a large body of Kurdish horse, when peace was proclaimed. In 1860 he set out on his great journey to the interior of central Africa, and discovered Tanganyika. The expedition was absent three years. In 1863 Burton went to the United States, visited California and Salt Lake City, and travelled during that expedition 25,000 miles. In 1867, when the Indian Army changed hands, his military career terminated. The same year Earl Russell sent him to Fernando Po on the West Coast of Africa. The height of Bioko, 600 miles in extent, was his jurisdiction, and he spent three years in exploring. Then he was sent on a dangerous mission—a three months' mission to the King of Bahr-el-Atab, with presents, to induce King Gelle to abolish his "customs." Captain Burton was then transferred to Sao Paulo (Brazil), where he was active and useful for four years, both on the coast and in the interior. He then explored his own province, which is larger than France, the cold and diamond mines of Minas Geraes, crossed the great river San Francisco, 1,600 miles, visited the Argentine Republic, the Rivers La Plata and Paraguay, for the purpose of reporting to the Foreign Office the state of the Paraguayan War. He crossed the Pamper and the Andes to Chile and Peru, and visited all the Pacific Coast. Returning by the Straits of Magellan, Buenos Ayres, and Rio de Janeiro, he found himself appointed to Danangus. While holding that position he explored various parts of Siam. In 1871 the consulate of Danangus was reduced to a vice-consulate, and Captain Burton was ordered to resign. He set out for Ireland, and thoroughly studied, and explored it, returning the same year in had himself posted at Trieste. In 1870 Captain Burton visited Mecca, and wrote an account of his travels in that country. At the close of the year 1877 he started again for Mecca, purposing to traverse a new exploration on and partial exploration of the river which he discovered there. The second expedition left Suez, Dec. 10th, 1877, and returned there on April 16th, 1878, bringing home a large collection of geological specimens, &c., besides maps and plans. In 1879 Captain Burton and Commander V. L. Cameron undertook a journey of exploration in the country lying at the back of the Gold Coast Colony. Captain Burton has written some thirty volumes, which describe his travels. Among them are: "The Lake Regions of Central Africa," "A Narrative of an Expedition to the Cameroons, Abundant," 1881; "A Narrative of a Mission to the King of Dahomey," 1881; "Vikram and the Vampire, or Tales of Hindu Devilry," 1880; "Zanzibar, City, Island, and Coast," 2 vols., 1882; "Two Trips to Uganda Land and Cataracts of the Congo," 2 vols., 1885; "Uganda Land, or a Summer in Uganda," 2 vols., 1885; "Ethiopia and the Nile," 2 vols., 1885; "The Gold Mines of Abyssinia and the Ruined Middle Ages. A Fortnight's Tour in North Western Arabia," 1885; a translation of "Cameroons' Land," 1884; "Cameroons' Life and its Land," a commentary, 2 vols., 1884; "To the Gold Coast for Gold, a Personal Narrative," conjointly with Commander Verney Lovett Cameron, 1884. His latest work is a rendering of the Arabian Nights. Captain Burton has received the gold medals of the French and English Geographical Societies.—Men of the Time.]

REPORTS.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 1st October at 2.47 p.m.; had westerly winds and head sea to the 5th; northerly winds and fine weather to the 8th; variable winds and smooth sea to the 15th; thence to port moderate to strong westerly gales and head sea. Arrived Yokohama the 19th October at 3.13 p.m.

The steam hopper dredger *Ayame*, Captain Kuhn, reports:—On the 30th September in Lat. 15.30 N. and Long. 115.27 E., experienced heavy swell from the N.E. with falling barometer; wind from the N.N.W., increasing in violence from N.N.W. and westward; ship's position therefore according to Law of Storms on the left hand semicircle of the centre or vortex of a cyclone. At noon the 30th barometer 29.66 and falling; wind increasing; ran ship before the gale with the wind on the starboard quarter to escape the centre; at 8 p.m. wind veering a little more westward hauled her to an easterly course; at 4 a.m. the 1st October blowing a terrific gale ship behaving well considering her build; wind S.W.; hauled her up to N.E.; at 4 p.m. a sea broke over her stern and carried away small boat davits and bulwarks engine room ventilators, long-boat covers, and W.C.; started cabin skylight, and smashed some of the panes, filled cabin full of water which destroyed several charts and books; smashed patent taffrail log and strained the decks which caused much leakage in cabins and forecabin. Midnight between 1st and 2nd of October moderating; wind S.S.W.; steered N.E. for Formosa South point; barometer rising; lowest stand 29.36; 4 a.m. 2nd fine with a heavy swell from all quarters; 4 p.m. sighted the land of the Island of Luzon; heavy N.E. swell; 8 p.m. fell in with the N.E. monsoon blowing a moderate gale which continued until made the Japan coast; thence fresh N.E. and Northerly winds and fine weather to arrival at Yokohama at 7 p.m. the October 20th.

LATEST COMMERCIAL.

IMPORTS.

The Import Market continues depressed all round. There were indications of an inquiry for English Yarns, but at prices far below holders' ideas, which resulted in nothing. A few sales of Bombays have been made at slightly easier rates. Fancies are without demand. Sales for the week amount to 150 bales English Yarns and 275 bales Bombays.

EXPORTS.

RAW SILK.

Our last was dated the 17th inst., since then we have seen considerable business in this market; settlements by foreigners being 629 piculs, divided thus:—Hanks, 126; Filatures, 348; Re-reels, 125; Kakedas, 30. Japanese shipments per Oceanic were 88 bales, making the total export business of the week about 720 piculs.

It will be noted that the business increases each week; now, as before, the great proportion of the transactions have been done within the last two days, and it is probable that the Parthia leaving to-morrow will have considerable silk for the United States. Exchange has been fairly steady, on the basis of last week's rates until to-day, when news came from London that silver is down 3d.

Quotations here have given way to some extent, but not sufficient to induce very heavy business, for the news from consuming Markets continue to be very dull and depressed; at the same time holders here will lose money on their Silks at present values, and they hesitate very much as to realizing their loss. They are somewhat encouraged by the fall in Exchange, thinking that buyers will be able to pay a little more in Dollar prices for their Silk; we think, however, that they must ere long become more current in their ideas, although they will not be very anxious so long as they can dispose of over 700 piculs per week.

The Settlements have again been principally for the United States Trade, although the Market intelligence from New York seems to grow more

doleful day by day. Some business has been done for Europe, more especially in Hanks, of which the stock is very small and well held. There have been two shipping opportunities, the Verona, 17th inst., taking 20 bales for Lyons, and the Oceanic 18th inst., 323 Bales for New York. These departures bring the present export up to 5,084 piculs, against 16,779 last year and 11,607 in 1888. It will be noticed what a great contrast present figures give with those of the last two years.

The Parthia leaving to-morrow has on board 439 bales for the New York trade.

Hanks.—There has been considerable business in these, more than one quarter of the stock on hand being taken, presumably for Europe. The Sales comprise Shinshu at \$580, \$577½, and \$560. Shimonita, Tomiyoka, and Chichibu at \$580. Anaka \$570. Nothing done in Hachioji or in the medium grades.

Filatures.—These have been worked down a little in price during the last two or three days, but holders are more strong at the close, having made one or two good sales, including Tokosha, \$660; Koshu Yajima, \$675. Kaimaisha was done early in the week at \$670, and has since been booked at \$660; Toishu \$652½, and some other good No. 1 Silks were bought to advantage at \$645. Purchases for Europe have not been large; one parcel fine Ueen bringing \$680, with various chops of Bishu Silk at from \$640 to \$650. Stock in this class is heavy and contains some large parcels of well known chops of most excellent quality.

Re-reels.—There has been a fair amount of business in these, although Filatures have had the lion's share of attention. The latest prices paid are \$637½ for Tortoise and Five Girl chops. Bushu Kadama has been done at \$615, and Ichimurashu, first choice, at the same price; second choice bringing \$600. The principal demand seems to have been for medium grades, several parcels having been taken for the States principally in Bushu at \$600.

Kakeda.—The demand has fallen off in this class and only 3 parcels have passed the scales, Flower Girl \$620, Kintama \$610, Shika \$590. The stock in this department has not been large and sellers are fairly able to hold their own.

In other classes there has been no business.

WASTE SILK.

Trade in this branch has boomed along, settlements for the week being 619 piculs divided thus:—Pierced Cocoons, 108; Noshi, 912; Kibiso, 599.

Prices are well maintained, and with a declining Exchange show a tendency to harden. The business has again been for Europe—more especially for Swiss—account. The better qualities of Noshi and Kibiso receiving a large share of attention. The course of our Market so far shows a strong contrast to that of the Raw Silk Market and the

settlements to date are about on a par with those of last year.

The P. & O. steamer Verona on the 18th carried 242 bales of Noshi and Kibiso for Marseilles and Trieste; also 3 bales Mawata for Bombay. The present export figures are 4,564 piculs, against 6,779 last year and 4,855 at the same date in 1888.

Pierced Cocoons.—Another purchase of about two piculs has been made, good Shinshu quality bringing \$125 per picul, while medium and common were done at \$116 and \$108 respectively.

Noshi.—More than half the week's business has been in this class, European buyers operating freely. A nice parcel of Filatures was done at \$155; Oshu, at \$150; Mino, \$125; Shinshu, \$116½; while long lines of Foshu have been done at prices ranging from \$78 to \$87. Buyers seem fully determined to take advantage of the present time when quality is of the best.

Kibiso.—Fair amount of business also in this class, settlements reaching about 600 piculs; principal trade has been in Filatures, which have been freely bought from \$107 to \$117, according to quality. Besides these there have been purchases of Re-reels, at \$82½, Foshu, \$45; Hachioji, \$35. In Mawata and Sundries there has been no business.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest also suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couper, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT ON THE ERUPTION OF BANDAL-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial" written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 1, 1890.

BIRTH.

On the 11th October, at 5 in the afternoon, at No. 219-B Bluff, the wife of H. MOSS of a Son.

MARRIAGE.

On the evening of the 20th inst. at No. 67-A, Bluff, by Rev. J. L. Dearing, assisted by Rev. A. A. Bennett, Rev. S. W. HAMPERN, of Sendai, to Miss ALLIE A. ADAMS, of Boston, U.S.A.

DEATH.

At No. 73, Settlement, this morning, CHARLES H. MERRIMAN, aged 26 years.

SUMMARY OF NEWS.

COUNT TODA, Japanese Minister to Austria, has started from Europe for home.

It is stated that the Mito Railway and the Japan Railway Companies will be amalgamated shortly.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TAKAHITO proceeded to Yokosuka on the 27th ult.

VISCOUNT TANAKA, Chief of the Metropolitan Police, was present at a special meeting of the Cabinet held on the 27th ult.

It is stated that Shimonoseki, Hakata, Tsunokuchi, and Otaru will be opened for foreign trade when the treaties have been revised.

THE *Hiei Kan* and *Kongo Kan* left Hongkong on the 26th ult. en route for Turkey with the men saved from the wreck of the *Ertongroul*.

THE number of steamers which entered Kobe during August last was 461, 444 steamers sailing from the port. During the same month the numbers of steamers which entered and

sailed from Nagasaki were 182 and 178 respectively.

A SERIES of examinations for shorthand writers in the Imperial Diet has been opened. Ninety-three candidates appeared, but only eighteen were able to pass the trial.

HIS IMPERIAL HIGHNESS THE CROWN PRINCE attended the races at Negishi to-day, and added an item to the programme by presenting a prize to be run for.

THE graduation ceremony of the Tokyo Hogakuin (Law Institution) will take place on the 2nd inst. in presence of various high officials of the Educational Department.

THE receipts of the Kyushu Railway Company during the six months ended the 30th September last were yen 46,487,484. The number of passengers carried during the same period was 224,689.

AN extraordinary meeting of the Cabinet was held on the 27th ult. and was attended by Counts Yamagata and Matsukata, Viscount Aoki and Mr. Yoshikawa, the proceedings closing at 4.30 p.m.

THE Sanitary Bureau in the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 28th ult. was 42,541, resulting in 29,259 deaths.

AN ordinary meeting of the Cabinet was held on the 28th ult. at which Counts Yamagata, Yamada, Matsukata, Goto, and Oki, Viscount Aoki, and Messrs. Yoshikawa and Mutsu were present, the proceedings closing at 5 p.m.

AN outbreak of fire took place on the night of the 25th ult. in a house at Ichinoyemura, Minamikatsushika-gun, Tokyo, and two dwellings and one godown were entirely destroyed before the flames could be extinguished.

AN ordinary meeting of the Cabinet was held on the 25th ult. at which Counts Yamagata, Yamada, Saigo, Oyama, and Goto, Viscount Kabayama, and Messrs. Mutsu and Yoshikawa were present, the proceedings lasting till a late hour.

ACCORDING to a report by the Sanitary Bureau of the Home Department, the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 24th ult. was 41,771, resulting in 28,260 deaths.

IN consequence of the recent heavy rains various rivers in Ehime Prefecture have overflowed, causing much damage to crops. Eight bridges were carried away and one person drowned. Five landslips occurred, by which several houses were destroyed.

MR. HONMA, a member of the House of Representatives for the second district of Nara Prefecture, who has recently been under preliminary examination in the Nara Correctional Court on a charge of having given bribes to electors, has been acquitted.

SOME thirteen leading merchants of Tokyo have organized a company under the name of the Japan Iron Works Company with a capital of yen 200,000, which has been raised among the promoters, the office being situated at Nishikonyacho, Kyobashi.

MR. ASADA, Prefect of Kanagawa, will give an entertainment on the 3rd inst., the Emperor's

Birthday, at his official residence, Noge, to the members of the Consular body, officials of the Kanagawa Kencho, and officers of the British and American men-of-war which are now in the port.

THE receipts of the Hokkaido Coal Railway Company during the month of August last were yen 33,213.51, which total shows an increase of yen 1,115.86 as compared with the previous month.

ACCORDING to returns compiled by the Finance Department, the amount of Government paper currency and bank notes in circulation on the 1st ult. was yen 64,105,068.90, of which yen 38,178,197.40 represented Government paper and yen 25,926,871.50 bank notes. As compared with the previous month the above returns show a decrease of yen 920,769.50 in Government paper and yen 115,465 in bank notes.

AN outbreak of fire took place on the 14th ult. in a house at Tanabe-mura, Shimokita-gun, Aomori Prefecture, and a hundred and ninety-six houses, twenty-two godowns, a police station, a hospital, and eight telegraph posts were destroyed before the flames could be subdued. On the night of the 16th instant thirty-five dwellings were burned to the ground at Fukaura-mura, Nishitsuguru-gun, Aomori Prefecture.

THE ordinary half-yearly meeting of shareholders of the Ryomo Railway Company was held recently at Tokyo. The net profits during the first half of the present year were yen 38,327.396, of which yen 100 was set apart towards miscellaneous expenses, yen 383,274 as a reserve fund, and yen 37,500 was appropriated as a dividend to be declared at the rate of 5 per cent. per annum, while the remainder was carried forward to the next account.

HIS MAJESTY THE EMPEROR, accompanied by Marquis Tokudaiji, Grand Chamberlain, Viscount Nishiyotsutsuji, Chamberlain, Dr. Iwasa, an Imperial Physician, and several high officials of the Imperial Household Department, proceeded to Ibaraki Prefecture on the morning of the 26th ult. A sham fight and review was held on the plains some distance from Mito, the Imperial Headquarters, and His Majesty returned to Tokyo on the 29th. The Emperor was accompanied by the Empress.

THE ordinary half-yearly meeting of shareholders of the Sanyo Railway Company was held on the 20th ult. at the Kaiuro, Osaka, being attended by about two hundred and seventy shareholders. The receipts for six months ended September last were yen 119,947,346, of which yen 2,000 was set apart towards a reserve fund, yen 3,000 as miscellaneous expenses and rewards to officers, and yen 114,000 was appropriated as a dividend at the rate of 6 per cent. per annum, while the remainder was carried forward to the next account.

FEW signs of improvement are manifested in the Import market and prices are all more or less nominal. In Metals trade is dull, holders are firm, and the market is steady at late rates. The Kerosene market is quiet, but trade in Tokyo is reported better at slightly improved prices. Nothing is doing in the Sugar trade, and the Tea market is quiet. In the Silk market Settlements of raw produce have been principally for the American trade and stocks are large. Business in Waste Silk has been brisker and prices are well maintained. Exchange dropped smartly during the week but has recovered slightly.

URBANA-CHAMPAIGN

EDITORIAL NOTES.

THE "KEIO-GIJIKU" SCHOOL.

THE *Yiji Shimo* reports an address delivered by Mr. Fukuzawa before the pupils of the *Keio-Gijiku* School the other day. Mr. Fukuzawa said:—Our people have of late talked a good deal of self-government. Self-government is the art of governing oneself without the assistance or interference of others. The principle is not only of importance in ruling the nation: it is of vital value in the administration of our school. But the idea of self-government is impracticable in the case of any body of people in whom the intellect and intelligence are but imperfectly developed. In the present age, when the principle of self-government has obtained a hold on the minds of the public at large, it is above all things necessary that its elements should be well inculcated on those who are to take part in the intellectual life of the future. The system of family government cannot now be applied to a school such as ours; as a matter of fact our affairs have really for some time been administered by a committee of the students themselves; and in most respects they are conducted in the same way that those of any public body might be. Its property no longer belongs to any individual; it is rather held by the whole of the members collectively. All who are here present are students, or members who, having been students, have graduated, and thence acquired the right to take part in the affairs of the institution. It is in your power, meantime, to so conduct yourselves as to reflect credit or discredit on your *alma mater*, and for this reason it is my desire that you should all comport yourselves as gentlemen, and make yourselves worthy of our teaching. There are no doubt among you some who, by concealing their debauched and evil tendencies, are able to maintain a semblance of respectability, but these may rest assured that in course of time they will be found out, for the world is quick to detect a spurious note though submitted to it among a hundred honest bills. Still it must be remembered that if among a hundred notes sent forth by this school there are one or two counterfeit, the discovery will tend to awaken suspicion of all our products. It is, therefore, the interest of all to correct the errors and irregularities of their fellows in order to secure that there shall be no blot upon our record. To many my system may appear somewhat severe, but I think you will admit that in the circumstances—keeping in mind your responsibilities—my severity is called for. This, however, is not enough, the mere compliance with our rules will only result in your becoming deceitful and time-serving. It is my wish that you should not only conform to our regulations, but that you should learn to regard yourselves as shareholders in this institution, the welfare and success of which depend on your united efforts and individual behaviour. I hope, therefore, that you will always bear in mind that whatever you do will redound to the credit or discredit of this school, in the progress of which I believe you have all so deep an interest.

"VERDANT SIMPLE'S VIEWS OF JAPAN."

THIS is a satisfactory little book. Perhaps somewhat deficient in that sparkle and finish which Norris and others have taught us to expect in the novelette, it has all sorts of other good qualities. It is fresh, it is interesting, above all it is true. There is a charming sobriety in the author's judgments on Japan and her people. He fatigues us with no unjust grumbling, he nauseates us with no sticky feast of perpetual sugar and superlatives. His personages, both native and foreign, are real men and women, and the situations in which the hero finds himself are such as really might happen to a good-natured young globe-trotter like the hero of this tale. True, not many globe-trotters fall in love with missionary-esses; but then few missionary-esses are as young and pretty as Miss Georgie Makepeace, of the S.P.G. Church at Jotayama. All globe-trotters, we may be sure, fall

desperately in love with some O Shini San* before their first week in the country is over, and all, when they get safely back to Europe or America again, must laugh in their sleeve, as "Grenon" does, at the pompous imbecility of the ideas of the home folk *re* Japan and all that thereunto belongs. We will not do "Grenon" the injustice of selecting the plums of his book for insertion here. To pick holes is more legitimately our task, as critics. Now, we have one hole to pick in our author's Latin, and at least one more in his English. The Latinized form of "Things Japanese," dear young friend, is not "Matters Japonica," but "Matters Japonica," "matter," "materies," being feminine. English grammar is similarly offended by the use of such an expression as "if it hadn't have been." Where on earth could "Grenon" have picked up that phrase? Is it a provincialism that would come as a precious rarity to some Philological Society? It cannot be the fault of the printer's devil, as it occurs again and again. It remains a mystery, and we give it up, at the same time advising "Grenon" to give it up likewise. O Shini San and the S.P.G. clergyman's pretty sister, and Verdant Simple's experiences at the Grand Hotel and in Mr. Shortcrease's Consular Court at Kobe, and as a teacher of English in a remote country town, and the other fare which "Grenon" spreads before his readers, by no means exhaust the capabilities of Anglo-Japanese romance. If Rudyard Kipling has found Anglo-Indian life a treasure-house of character and incident, and has risen by his descriptions of it to a well merited fame, the life of foreigners in Japan offers quite as good a field to one with the will and the ability to dig into it. The odd situations arising from the mixture of nationalities at the open ports; the pitiable and grotesque social struggles of Tokyo; the residents who spend their lives explaining that they are not residents but only temporary exiles from the grandeurs of their aristocratic surroundings at home; the globe-trotters who, scorning the imputation of globe-trotterhood, insist that they are only travelling (a delicate distinction), or have just come to stay with friends; the Japanese one meets in a Society with their foreign clothes and ways; the foreigners who are so very Japanese; or may be, and with equal absurdity, so very anti-Japanese,—surely here are materials for a whole library of novelettes. They are materials which even a Thackeray would not have disdained to utilize, and they are materials which are lying fallow. We have no patience with the little crop of novels of native Japanese life, so-called, that have sprung up during the last few years—"A Muramasa Blade," for instance, and "A Captive of Love," and "Mito Yashiki." The whole *genre* is a false one, because no foreigner can ever truly put himself in the place of the Japanese, and gauge their motives, be in touch with their springs of action, sympathize with their endeavours, or understand their family life, wide as the poles asunder from ours. The novelist's legitimate field is his own people. His great good luck is when he finds his own people surrounded by new and interesting circumstances. That is the case in Japan.

THE YOKOHAMA LABORATORY.

A CORRESPONDENCE of a peculiar character has appeared in the local press of this Settlement. It had its origin in a long communication addressed by Mr. John Hartley to the *Japan Gazette*. Mr. Hartley has for many years laboured under the conviction that he is the victim of a legal injustice. No form of mental torment is more painful. It generally results in producing types like that so admirably portrayed by Dickens in the "Man from Shropshire." Mr. Hartley seems to have been affected in that way, and the public is therefore disposed to treat his utterances leniently. Probably very few people took the trouble to read the two columns of complaint addressed by him to the *Japan Gazette* of September 25th, and those that did read were doubtless more amused than impressed. Stated

* Surely the author means O Shige or some such name. We have never heard O Shini.

in a nut-shell, Mr. Hartley's contention is that the standard of purity established by the Japanese Government and enforced by the Japanese Laboratory for imported drugs is unduly high; that the analyses made by Japanese experts do not agree with those made in England, and that foreign importers are obliged to resort to bribery to get their drugs passed. With regard to the first two charges, it is to be noted that similar complaints having been already advanced more than once by British merchants, Mr. Hartley's contention is probably not without justice. But the accusation of bribery is a horse of another colour. Mr. Hartley's condition of mind appears to have become morbid. He is tormented by that old bugbear of foreigners, the phantasy that the Japanese Government sets spies to investigate the doings of men in whom no Government, however petty, could take the smallest particle of interest. Thus when he arrived here last year, he writes that he was "interviewed by a man, a Government spy he believed, who said he could analyse medicines for sixty dollars per month salary." An assertion so ridiculous is enough to discredit all Mr. Hartley's statements. But his charge of bribery was preferred so circumstantially that there could be no mistake about the identity of the British firm accused of having resorted to this disgraceful method. The officials of the Japanese Laboratory consequently wrote to the firm, and received in reply an explicit denial that bribes had been employed, accompanied by a counter-charge that "during a time when Mr. Hartley was treated with exceptional kindness and confidence by the firm, he gained surreptitious access to its papers and in fact stole his information." Mr. Hartley, however, re-iterates his charge, and the whole correspondence has now been published, presenting a decidedly discreditable appearance. What augments the singular character of the incident, is the grotesquely incorrect English employed by the officials of the Japanese Laboratory in their communications to the *Japan Gazette* and to the incriminated firm. We have here another instance of the recklessness too often displayed by Japanese students in compiling documents in a foreign language. Is it conceit or is it magnificent carelessness that betrays them into these laughable exhibitions? We venture to predict that one impression only will be left by this incident, namely, a memory of the curious English displayed in the letters from the Laboratory. It is little short of a disgrace that such letters should be sent by a Government department. The smallest exercise of trouble would have sufficed to have the letters recast in passable language.

THE PEACE PRESERVATION REGULATIONS AND THE REVISION AGITATORS.

THE *Nichi Nichi Shimbun* publishes a striking note about the Peace Preservation Regulations and the leaders of the Treaty-revision agitation in Yokohama. When the anti-revision agitation, we read, was at its height in Yokohama, apprehensions were entertained by the authorities that hot-headed Japanese patriots might be guilty of some lawless conduct towards the leaders on the foreign side. The question was then raised whether it might not be advisable to enforce once more the celebrated Peace Preservation Regulations originally issued on Christmas Day, 1886. Certain officials were in favour of such a step, but others contended that recourse to extreme measures ought to be avoided as long as possible, and that the better plan would be to trust to the efficiency of the police until there was good reason to think that circumstances called for something more radical. The latter opinion finally prevailed, and was justified by events, for things gradually quieted down and no Japanese was found sufficiently lawless and short-sighted to injure his country's reputation and mar her prospects by perpetrating acts of violence against foreigners. Now, however, a rumour having got abroad that Mr. Lowder and his party are negotiating the purchase of the *Japan Herald* newspaper with the intention of converting it into their organ

and instituting an active campaign, public opinion on the Japanese side has been again roused and the contingencies feared some time ago are again viewed with uneasiness, so that, after all, the Government may be obliged to have recourse once more to the aid of that most unpopular ordinance, the *Hoan Forei*. The *Nichi Nichi Shimbun* earnestly invites its excited nationals to keep these things in view.

The *Nichi Nichi* might also have added that the Japanese who are exercised about this new move in Yokohama, labour under a great misapprehension. If the *Japan Herald* comes into the hands of the gentlemen who recently opened negotiations for its purchase, its character will be radically changed from extreme partizanship and violence to fairness and moderation. Nothing more conducive to the re-establishment of pleasant relations could occur, and so far from imagining that another blow is to be given to their cause, the Japanese should welcome this movement and hope for its success. Misrepresentation and abuse are weapons with which the better class of Yokohama residents have no manner of sympathy. They desire sincerely to be on friendly terms with the Japanese, and are perfectly willing that whatever is right and liberal should be done within the limits of prudence—limits which by some, perhaps, are unduly stretched, but which, in the main, are natural and reasonable. It is undeniable that a bitter feeling has been engendered by the unceasing streams of intolerant invective, ill-natured exaggeration, and disingenuous misunderstanding which have poured through the columns of a portion of the local press for years. Utterly discreditable to the course which it professed to champion, a journal like the *Japan Herald* could only have the effect of disgusting all moderate men, and filling them with shame to think that such utterances might be construed by the Japanese as examples of English justice and English love of fair-play. Of course the cause of the opposition would gain vastly by being entrusted to the statement of just and scholarly advocates, sensible that no controversialist can descend to mud-throwing without bespattering everything identified with him. But, on the other hand, the whole discussion would be raised to a different level, the atmosphere would be cleared of malicious venom and vulgar recrimination, an immense advance would be made towards a mutual understanding, and the resulting gain to friendliness and dignity would be incalculable. We trust that the *Nichi Nichi Shimbun* will make use of its widely circulating columns to bring these facts before the Japanese public, and to instruct unruly spirits that the latest development of the Yokohama agitation is to be welcomed no less by the Japanese themselves than by all decent foreigners.

RELIGIONS IN JAPAN.

We have often said that one of the great ends achieved by the Christian Missionaries in Japan is the vitality which their propagandism imparts to religion in general. Whether the converts they win be many or few, it is certain that they galvanise the creeds of the country into active life and that the good they thus accomplish is very considerable. Confirmation of this view is afforded by the following note which we take from the *Yomiuri Shimbun*:—"The gradual accession of strength which Christianity receives in Japan has roused the Buddhists to resolute efforts of opposition. As a consequence we find that the number of publications devoted to the defence and spread of the Buddhist creed has greatly increased of late. The following list of journals and periodicals devoted to the cause of Buddhism will show this:—*Daido Shimpō* (Tokyo); *Kyōkai* (Tokyo); *Meikyo Shinshi* (Tokyo); *Jodo Kyōko* (Tokyo); *Kenchikai Zasshi* (Tokyo); *Zeshin-shu* (Tokyo); *Shinshi* (Tokyo); *Hōko* (Tokyo); *Fuzen Hōkoku* (Tokyo); *Shingi-kokin-kai-shi* (Tokyo); *Kokoro-no-Kagami* (Tokyo); *Bukkyō* (Tokyo); *Horima-no-tomo* (Tokyo); *Hōha* (Tokyo);

Mitsugenkyōho (Tokyo); *Daichigi* (Tokyo); *Shinseishi* (Tokyo); *Hō-no-ame* (Nagoya); *Michi-no-tomo* (Nagoya); *Seito-no-tomo* (Yokohama); *Kyōkaku Zasshi* (Tokushima); *Kyōyū Zasshi* (Kōfu); *Seinen-no-Gimu* (Hikone); *Bukkyō Shū-undo* (Kyōto); *Shin-no-hikari* (Kobe); *Seimuno Hyōjun* (Yamaguchi); *Bukkyōkai Zasshi* (Nagasaki); *Dogoku* (Koyasan); *Dento* (Kyōto); *Takusenkaï Zasshi* (Miye); *Shimeiyoku* (Ōmi); *Kō-no-michi* (Osaka); *Hō-no-shiori* (Kyōto); *Notan Shimpō* (Nagoya); *Hō-no-sono* (Kyōto); *Dainikyō-no-tomo* (Kyōto); *Gobokai Zasshi* (Kyōto); *Tokai-no-todai* (Ōmiye); *Rempokyo-gaku* (Miyagi); *Bukkyō Sei-nen-kai* (Kyōto); *Hanseikai Zasshi* (Kyōto); *Kyōyū Zasshi* (Yamanashi). The above list comprises only the journals and periodicals known to us. We are assured that a great many others are published."

THE "RYOUN KAKU" AT ASAKUSA.

This is the name given by its constructors to a lofty and not ungraceful tower which has been erected close to the temples at Asakusa, with the chief object of affording visitors to that interesting spot an opportunity of enjoying a view, which it would be hard to rival, of the city and its environs. The *Ryoun-kaku* is the project of a company, the president of which is Mr. S. Fukuhara. Its construction was commenced in January last and it is now fully completed, the elevators by which visitors are to be ascended to its upper floors having been placed in position on Saturday. The tower is over 320 feet in height, being 50 feet in internal diameter at the base, where its brick walls are nearly four feet in thickness. It is octagonal in shape and has twelve floors, the elevators ascending to the eighth. The structure rises as a plain tower, having double windows on each of its eight sides, to the tenth flat, where the double windows are exchanged for large single apertures; round the eleventh runs a gallery from which it is intended to display the electric light, and a small outer gallery on the twelfth flat enables sightseers to feast their eyes at perfect leisure on a scene of rare interest. The ascent is accomplished by means of a double elevator, each box having accommodation for ten people, and in the evening the building will be all lit up by electricity, no fewer than 60 lamps being to that end fitted up on the various floors. From the summit of the tower one looks down on the temples, and the busy antlike crowds that move about in the grounds; the zoological enclosure and its contented, well-fed tiger, its bears and monkeys; on the little lake, and the circular building of the panorama; a little farther off to the northward the Sumida can be traced from the Kanegafuchi mills till near its entrance to the Bay it is lost in the wilderness of houses. The bay itself is easily visible, and altogether the eye, unassisted even by a glass may be employed for hours in noting the numberless features of the view spread out before it. Visitors to the capital will find the tower a most interesting place.

THE LATE QUEEN DOWAGER OF KOREA.

OUR Korean correspondent, referring to the burial of the Dowager Queen of Korea, writes:—"This distinguished person was buried with all the pomp and splendour of royalty on Sunday morning, October 13th. For five months the body remained in the Royal Palace, and it is now resting ten miles east of the city. The preparations for the funeral were very elaborate. Thousands, almost hundreds of thousands, of dollars were spent in preparing the tomb and in the ceremonies. This was but natural, for, the last King dying without male issue, and this Queen being the oldest representative of royalty then living in the Palace, it fell to her lot to name a successor, and she gave the crown to the present King. The city, as had been expected, was full of people from the country. Some apprehension was feared by the authorities lest there should be an outbreak. Once during the review of the ceremonies prior to the burial there was a collision between several factions, those at the East Gate insisting that certain men from the river were not worthy of the honour of

being pall bearers. The conflict was short and sharp, with several deaths among the river men. When the news reached the King, orders were at once issued to arrest and execute any one found quarrelling or brawling on the street. Since then there has been no trouble. The Royal arm is not weak, foreign newspapers to the contrary notwithstanding. For reasons unknown to those not in authority a detachment of marines was ordered up from the U.S. steamer *Omaha*. They remained a few days and then returned."

THE SEVENTH PRINCE.

THE Peking correspondent of the *North China Daily News* writes:—"The Seventh Prince continues to have intervals of apparent recovery, and as sudden relapses. The mysterious character of his long illness, to the Chinese, has given rise to many surmises as to its origin. It is said that the Emperor in constructing a new residence for his father made no provision for the numerous demons and evil spirits which had their abode on the premises. As these evil spirits cannot find entrance to the palace to call the Imperial Ruler's attention to this little oversight of his, they disturb the peace of his father, not only causing him many painful days, but even seizing hold of his attendants and preventing them from assisting him. Many apparitions are seen, and, doubtless, if ever the Prince lives to vacate his present residence, it will forever after be condemned as haunted. It is well-known among foreigners, however, that the Prince is making an honest effort to break loose from the opium habit, and in his enfeebled condition he cannot resist the attacks of disease. The Emperor is most exemplary in the performance of his filial duties, going often to his father in great haste, if there are adverse symptoms, not stopping to have the streets cleared, roads repaired or any of the usual preparations. A crazy Chinaman undertook to force his way into the palace one day last week, and could only be restrained from doing so by the exercise of force. The several guards at that particular gate were not able to manage the madman, and it was not till a large squad of men seized hold of him that he was finally bound and taken to the Hsing Pu. Such incidents show the necessity of having the palace gates well guarded."

A NEW UNIVERSITY.

MR. INOUE ENRYO, one of the most celebrated Buddhist scholars in the capital, announces that he intends to enlarge the Philosophical Institute (*Tetsugaku-kwai*), of which he is Principal, into a University. In his memorandum on the subject, he states that during his recent tour in Europe and America he was struck by the circumstance that the educational institutions, from universities down to common schools, took for their basis of instruction the peculiar sciences and literature of each country. In Japan, on the other hand, he regrets that there is no university which gives the most prominent place in its curriculum to original Japanese science and literature. Japan possesses a literature, a history, and a religious science, peculiar to herself. Mr. Inoue thinks it of vital importance to establish a University where due importance will be given to these national subjects. He also proposes to supplement the instruction in his projected institution by materials drawn from Western sciences, literature, and philosophy. For the purpose of collecting contributions to carry out his scheme, he announces his intention of making a tour through the whole country, extending over a period of no less than twelve months. He will start on his journey toward the close of the present month.

It is really interesting to note the evidences of the national revival which commenced in Japan four years ago, and is at its zenith now. Pessimists always predicted that a reaction would set in sooner or later against Western civilization, and leading Japanese replied with equal assurance that such a reaction was not conceivable and that there could not be deliberate retrogression under any circumstances. Events have, in our opinion,

entirely justified the latter forecast. It is beyond doubt that the mood which overtook the nation in 1886 would have betrayed it into a strong revolt against imported civilization had anything of the kind been possible. When people begin to think that they have been deficient in loyalty towards a particular class of objects, they are very apt to go to the extreme of eschewing everything that weaned them from their allegiance. We should not have been at all surprised if the re-awakened affection of the Japanese for their own traditions and customs, had been accompanied by a corresponding revulsion against everything foreign. Neither should we have regarded this as a permanently dangerous tendency. The exact history of the introduction of Chinese civilization into Japan has yet to be written. We know, however, that the adoption was wholesale at the outset, extending from political institutions and philosophy to etiquette and costume. Nevertheless, by and by, the nation gradually reasserted its individuality, so that in the end, while the best features of Chinese civilization were preserved, they underwent such modification that they lost their essentially alien aspect. So, too, with art. Careful study shows that the elements of Japanese art are almost entirely imported, yet they have been so strongly impressed with the mark of essentially Japanese genius that the world regards them as a wholly new revelation. There is every reason to expect that as it fared with Chinese civilization and Chinese art nine centuries ago, so too it will fare with Western civilization to-day. The impression produced by the latter will be at least as permanent as, and stronger in proportion to its intrinsic superiority than, the impression produced by the former. In other words the history of the Japanese, and their disposition, so far as we are acquainted with it, justify us in thinking that they will remain the disciples of Western civilization until the West itself or their own genius offers something better for their acceptance. Believing this, we should not have felt any serious anxiety about the mood of the past three years even though it had assumed a distinctly reactionary element. But the point is that it has not assumed any such character. There has been no evidence of a disposition to turn away from the sciences and systems of the West. Nothing more can be said than that some of the externals of Western civilization—as female costume, dancing and so forth—have lost their temporary vogue, and that the people are determined to preserve their identity whatever they may borrow from foreign civilization. Perhaps the truest description of the nation's present temper is that it is a strong mood of self-assertion. Awaking to the fact that they were in danger of sacrificing their national individuality on the shrine of an alien civilization, the Japanese seem determined to show that they can assimilate that civilization without completely breaking away from their own traditions and customs. Mr. Inouye Enryō conceives the project of a university based on the study of the national religions, the national history, and the national systems, but he thoroughly comprehends that however welcome the scheme of such a university may be to the *Kokusui-hoson* party, it will have no chance of public support unless its curriculum includes foreign sciences and foreign systems also. Indeed, he knows that even the extremists among the *Kokusui-hoson-to* would scoff at the notion of including the former class of studies and excluding the latter. But we need not dwell on the subject. Speaking broadly, it would appear that foreign critics have appreciated the true significance of the nationalistic revival in Japan.

THE MISSIONARY.

A CORRESPONDENT of the *Mainichi Shimbun* raises, with much show of reason, the question whether the correspondent who, over the signature of "Missionary," recently addressed to the *Japan Gazette* a letter displaying in every sentence evidence of a spirit conspicuously unbecoming a missionary, was really written by a Christian propagandist or was only signed by

some one assuming that title for purposes of deception. We cannot be surprised at the *Mainichi Shimbun's* correspondent's perplexity. It is difficult to imagine that any missionary could have composed such a letter, and our own reflection on reading it was that the adherence of men of that type to the cause of those who imagine themselves opposed to us was decidedly a matter to be thankful for. But there are missionaries and missionaries, and it is incredible that the *Japan Gazette* would have lent itself to the deception suggested by the correspondent of the *Mainichi Shimbun*. The amusing feature of the incident is the swiftness with which retribution overtook the unhappy missionary. Scarcely had the ink dried on his declaration that the majority of the missionaries shared his intolerant and uncharitable opinions, when the Central Missionary Association of Japan adopted and published a memorandum embodying views even more favourable to Japan than those formulated by their British colleagues of Tokyo. May we infer the nature of the Yokohama agitators' cause from the character of the missionaries who side with them, as represented by the correspondent of the *Japan Gazette*? And if so, may we not infer the nature of the other side's cause from the character of the men who signed the Tokyo memorial and the Central Association's memorandum?

THE PRESIDENCIES OF THE HOUSE.

ACCORDING to the Japanese Constitution, the President and Vice-President of the House of Peers are nominated by the Emperor from among the members, but in the case of the President and Vice-President of the House of Representatives three candidates are elected by the House for each of these offices, and from among these three the Emperor nominates one. In both cases the duration of the office corresponds with the term of the House's life, viz., seven years for the House of Peers and four years for the House of Representatives. There is, however, a difference here in one respect, namely, that since the House of Representatives may be dissolved by the Emperor, whereas the House of Peers is not subject to such a fate but can only be prorogued, the term of office of the President and Vice-President of the Lower House is four years with the contingency of change in the event of dissolution in the meanwhile, whereas the President and Vice-President of the Upper House hold office for a certain period of seven years. The salaries of these officials are the same in both Houses, namely, four thousand yen per annum for the President and two thousand yen for the Vice-President. The duties of the President are to maintain order in the House, to regulate its debates, to represent it outside its precincts, and to assume the direction of its business during the intervals between sessions.

CAPTAIN INGLES, R.N.

ON Saturday morning at 8 o'clock Captain Ingles, R.N., Naval Adviser to the Japanese Admiralty, left Tokyo en route for England, whither he goes on four months' leave of absence. The popularity enjoyed by Captain Ingles in Japan and the influence he has acquired were attested by the large number of high officials who, despite the early hour and despite the fact that his absence from Tokyo will be but brief, assembled at the railway terminus to bid him farewell. Among those present were H.E. the Minister President of State, Count Yamagata, H.E. the Minister of State for Home Affairs, Count Saigō, H.E. the Minister of State for the Navy, Viscount Kabayama, Admirals Hahashi, Arichi, Y. Ito, and S. Ito, together with about forty Post Captains, Commanders, and Lieutenants. Admiral Y. Ito accompanied Captain Ingles to Yokohama, where carriages had been provided by the Port Admiralty to convey the party to the Hatoba. A more courteous and significant "send off" has seldom been given to any foreigner leaving Japan.

NEWSPAPER COMPANIES.

THE syndicate formed for the purpose of acquiring one of the local newspapers, having

failed to come to terms with the *Japan Herald*, directed its attention to the *Japan Gazette*, and has effected with the proprietor of that journal an arrangement said to be satisfactory to all parties. The movement, though based to a great extent on sentiment, may possibly prove a financial success, and will certainly be a boon to the Settlement, for the *Japan Gazette* under its new editorship is likely to prove a credit to the community. But the sequel of the story is very singular. It is announced that another syndicate has been formed to buy up the *Japan Herald* with the object of changing the editorship. If this simply means, as is probable, that people are tired of the mud-throwing so persistently indulged in hitherto by the two journals in question, the incident is eminently satisfactory. But it may also signify that the moderate views, which are sure to be advanced by the *Japan Gazette* under its new ownership, do not find favour in the sight of a section of the community—a hypothesis which we are unwilling to entertain. At all events the resolution and perseverance displayed in the inception and management of this newspaper scheme are very unlike the usually apathetic attitude of Yokohama towards public matters, and, if they only last, may have many beneficial effects.

POLITICAL AGITATION.

THE *Yiji Shimpō* has a note on the present political fervour and agitation which prevail throughout the country. A general combination against the Government on the part of politicians, who differ widely on other matters, has manifested itself, a movement which the *Yiji* thinks is all the more to be regretted inasmuch as the Government has acted most uprightly and generously towards the people. The agitation, however, seems to be the result of the actions of men who in many cases seek only their own glorification. The recent measures of the Administration by which district self government has been extended to the people at large and a Diet has been established where the popular views may obtain hearing, have only served to heighten the ambition of politicians in opposition. The anxiety to obtain office which these men show is the result no doubt of the old feudal distinction between the rulers and the ruled; and such selfish motives must be looked for so long as officials are widely removed from the private people by virtue of their ranks and the privileges attaching to their offices.

NATIONAL LIBERALS.

WE recently reproduced an article on the above subject from the *Keizai Zasshi*; but considering the importance of the question, it seems worth while to give the gist of another article from the last number of the *Kokumin-no-Tomo*. The National Liberal party, which is about to be organized, has arisen, says our contemporary, not in opposition to either the Government, the *Kaishin-to*, or the *Hoshu Chusei-ha*, but in direct opposition to the Constitutional Liberal party. A section of the would-be members of the new party had joined the Constitutional Liberal party, and had expected, by intrigues and the use of *soshi*, to obtain ascendancy in that party. But in this expectation they were entirely disappointed; the place which they desired to occupy was seized by men more moderate and practical. In other words they have been expelled from the Constitutional Liberal party, partly because they leaned to conservatism, and partly because they were too violent in their notions and methods. At all events, there is no manner of doubt—the *Kokumin-no-Tomo* goes on—that the new party, despite the hybrid character of the various sections composing it, is harmonious in the one fact that it represents the extreme of political opinions. As to the origin of the movement, our contemporary states that, according to some persons, the idea of forming the party originated at the conference recently held at Saga in Kyushu by a number of the politicians of that region, among whom conservative elements greatly preponderated. The Tokyo journal has not much sympathy with the new party,

but still it regards its formation as a very desirable thing from a certain point of view; for it believes that, unruly and violent as are most of its elements, they can do less mischief when organized into a visible and responsible political body than they could if they were entirely free to act separately and according to individual caprice. Our contemporary, however, thinks that it will be an extremely difficult business for them to maintain an efficient party organization. For they have combined not in consequence of the similarity of their political principles and objects, but because of their common antagonism to a certain party of politicians. In every other respect they are essentially an assemblage of men strangers to one another. They have simply met together for a moment as extremes sometimes met—in France, for example, when Monarchists and Republicans not infrequently combine together for a certain special purpose. The *Kokumin*, therefore, thinks it next to impossible for the new party to maintain an effective organization. As to the name of the party, the Tokyo periodical suspects that the words "National Liberal" may have been selected by conservatives to conceal their true character. Our contemporary is also entirely at a loss to understand what good purpose politicians pretending to entertain liberal principles hope to attain by uniting with Conservatives.

In an editorial note in the same issue, the *Kokumin* states that the formal organization of the new party will take place about the 20th of next month, and that such members of the Constitutional Liberal party as come from the Provinces of the Hokurikudo may perhaps join the new National Liberals.

CHANGES IN LOCAL GOVERNMENTS.

The *Yiji Shimpō*, noticing the recent changes in local governments, remarks that the new regulations present few points of difference as compared with those formerly in force. The chief changes noted by our contemporary are the abolition of one of the secretariats and the creation of two counsellorships in each prefectural government. The affairs of such departments have in recent years become exceedingly complicated and the duties of Governors have become correspondingly arduous and delicate. While two secretaries seem to involve the introduction of much unnecessary delay in the transaction of business, matters having thus to pass through the hands of a greater number of persons, there seems some necessity for the appointment of Counsellors who, it is to be expected, will be men of wide experience and sound judgment. Indeed there hardly seems in the circumstances to be any good ground for the continuance of even one secretary. The *Yiji* supposes that a series of changes in the chief prefectural offices is not far distant, and indulges in conjectures as to the nature of those changes. Some people, our contemporary thinks, will be disposed to advocate the claims of age and experience for prefectural governors, but the Tokyo journal strongly combats this suggestion and hopes that, in connection with future changes, able men will not be set aside on account of their youth.

JUDICIAL ROBES IN JAPAN.

The question, long discussed, of the costumes to be worn by Japanese Judges, Public Prosecutors, Clerks of Law-Courts, and Process-Servers was decided by Imperial Ordinance No. 260, issued on the 22nd ultimo. A picture of the prescribed robe is given in the *Official Gazette*. Its outline is that of a cross with the top removed, from which our readers will infer that in this particular instance a return is made to the fashions of old Japan. The sleeves are decidedly capacious, but if the plate in the *Official Gazette* is drawn to scale, it appears that they will not reach much below the elbow. Whether the notion of a wig was ever entertained we do not know, but if so it has been abandoned, for the head-dress is to be a cap, also fashioned more or less after the manner of ancient Japan. Both gown and cap are made of black silk, but they are relieved by coloured embroidery, the colours varying with the rank

of the wearer. We do not gather any very definite idea of the embroidery on the cap, but that on the robe encircles the neck and descends before and behind in the form of a V with rounded angles. The Judge's gown is embellished with purple flowers of the Paulownia Imperialist, the flowers numbering seven in the case of Judges of the Supreme Court, five in that of Judges of the Appeal Court, and three for Judges of Courts of First Instance. The same rule as to the kind and number of embroidered flowers is followed in the case of robes of Public Prosecutors and Clerks of Court, except that the colour of the embroidery is red in the former instance, and green in the latter, with the additional distinction that leaves only, and not flowers, are embroidered on the Clerks' gowns. Finally, Process-servers are directed to wear foreign costume, after the style of a policeman's uniform. A period of grace is granted until the close of the year, during which interval frock coats, or Japanese *haori* and *hakama* may be worn in Court. From the first of January next, however, the new uniforms must go into use. It will be remembered that a certain party among officials advocated the adoption of frock coats in foreign style for Judges when officiating, but their advice has not been followed, and we confess to a feeling of satisfaction that such is the case. The new robe will be Japanese in shape at all events, and we should think that it will be at once neat and becoming.

JINRIKISHA IN CHINA.

In a translation from the *Shih Pao* the *Chinese Times* says:—

"Since the introduction of *jirikishas*, streets are being swamped with them; they are like fishes in a narrow brook, causing great inconvenience to pedestrians. The impediments are greatly increased on account of the narrowness of the thoroughfares. A few days ago, a little below Chia K'ou, a little boy of about ten years old was knocked down and run over by a *jirikisha* fracturing the skull and causing much bleeding; he however recovered from insensibility, and the wound was not dangerous. Ever since the floods, the country people have come out to seek employment, finding none more suitable than to be *jirikisha* coolies; hence the raw hands increase the danger for the riders, because a man must be properly trained before he can become a *jirikisha* coolie.

Anyone who has ever driven through the streets of Tientsin in a *jirikisha*, or who has attempted to find passage through them in other ways, will appreciate the force of this note. Exceedingly narrow, the streets, or lanes as they should more truly be called, are paved, for the most part, with flat slabs of granite which, owing to the perpetual traffic and its nature, present a surface of slimy slipperiness dangerous at times, even to pedestrians. A sedan chair passing through one of these streets well nigh occupies the whole available space, and when a coolie comes along staggering under the weight of one of those enormous wheel-barrows peculiar to China, the streams of traffic going in opposite directions are likely to find themselves at a deadlock. The din and confusion are appalling, for a Tientsin Chinaman becomes voluble and abusive in direct proportion to the difficulties he has to contend against. Add to this that the Chinese coolie will not bear comparison for a moment with his Japanese prototype as a *jirikisha* driver. The difference is very singular. Seated in a *jirikisha* with a Japanese between the shafts, you feel that the man has complete control of the vehicle and are at once delighted by his dexterous and muscular management of it, as well as by the agility which enables him to keep the upper part of his body perfectly steady however violently he exercises the lower. But with a Chinese driver the case is quite different. He never appears to have the *jirikisha* completely in hand, and every step he takes gives his fare a nasty, springless jolt. The impression conveyed is that the *jirikisha* is running with him, not he with the *jirikisha*. Collisions and other accidents depend to a great extent, of course, on the degree of control which the coolie possesses over his *jirikisha*, and it is not at all surprising that mishaps occur much more frequently in China than in Japan.

PARLIAMENTARY TACTICS.

Most of the greater political parties represented

in the Diet have been for some time engaged in the so-called "investigation of political business," the object aimed at being to collect data for suggesting reforms in the various Departments of State. The *Kokumin-no-Tomo* declares that the method hitherto followed has been in every case erroneous and futile. The Committees of Investigation of each party have compiled their reports by means of facts and statistics supplied to them by the Authorities in response to their application. Seeing that officials are sure not to furnish to outsiders facts favourable to the latter's view, the Tokyo periodical ridicules the notion of compiling reports on such a basis. If any politician should be bold enough to attack the Government on the strength of documents containing such materials, he will only make himself ridiculous. Rather than follow a method so unsophisticated our contemporary advises political parties to seek facts and statistics from the Government after the opening of the Diet, in virtue of the powers given to members by the Constitution. Information elicited in the latter manner may also be imperfect, but no other method is equally practical and effective. The Tokyo journal further warns the various political parties as well as the Government not to expect much from the first session of the Diet. A good general always endeavours to concentrate his forces on the weakest point in the enemy's lines. Similarly, the parties in the opposition ought not in the first few sessions to distribute their energy over a wide area of political business. The more extended the area of discussion the more advantage will be possessed by the Government. Consequently the *Kokumin* recommends that the opposition should select a few vital questions, and devote their whole attention to the discussion of them. They will thus be able to bring their effective strength to bear on the Authorities. In order to follow such a course of policy, the parties ought each to fix upon a few suitable members to be their respective spokesmen in the Diet, since it is to be feared that the inexperience of most of the representatives, and their eagerness to speak, may seriously interfere with the success of the line of tactics just mapped out. The next thing that political parties are advised to do, is to open negotiations among themselves with reference to particular bills under discussion; advice supplemented by the corollary that they should be forbearing towards one another and endeavour to moderate the animosity now existing between them. The *Kokumin* writes, in fact, as though the overthrow of the Government were the main purpose to be achieved by the various political parties, and probably that view of the situation is not far mistaken.

DR. AND MRS. HEPBURN.

The golden wedding of two of Japan's oldest and most esteemed foreign residents constituted, as was well pointed out in the address presented to Dr. and Mrs. Hepburn on Monday evening, an occasion of a most unique character. The celebration of the fiftieth anniversary of one's wedding day is permitted to but few in any part of the world, and naturally to a very small number in the Far East. When to the rarity of the event, is added equally rare respect and warm personal esteem based on an experience of upwards of thirty years, the occasion assumes features which compel commemoration and almost necessarily engender enthusiasm. The action of the residents of this port therefore in presenting an address to Dr. and Mrs. Hepburn calls forth no surprise. The address was signed on behalf of the community by Messrs. Wilkin, E. B. Watson, Gay, Jas. Walter, Keil, Grosser, Dumelin, N. F. Smith, Rev. Mr. Loomis, and Rev. Dr. Meacham; and was presented in the evening, at which time the greater number of Yokohama residents at least availed of the opportunity of calling to offer their congratulations and respects. The address ran as follows:—We are here as the Representatives of this Community generally, wishing to honour this occasion as one unique, we believe, in the history of this Settlement, and especially in that this day witnesses the wedding of that golden

band which half a century of love and happiness in wedded life has been daily forging for you. Receive, we beg of you, at our hands, these small tokens of the respect, esteem, and affection which is felt for you by us all. There are thirty years and more to bear their witness to your walk and conversation amongst us, and it is on their testimony that we are bold to declare our high appreciation of your blameless lives, your untiring labours as Christian missionaries, your works and labours of love towards all men. There are, besides, thousands of Japanese, aye, tens of thousands who, Dr. Hepburn, must bear in their hearts a grateful recollection of your skill as a physician, and your kindness as a fellow man; while Japanese and foreigners alike owe to you the first Dictionary of the language of this land; a splendid work, the fruit of years of hard toil, as we know, and the benefits of which cannot be estimated. Of your other incessant labours in a like field, hidden by your modesty from many eyes—we might go on to speak; much more we might say, but, that we be not further burdensome to you, we will conclude, dear friends, with the hearty wish that gentle time may ripen the gold of to-day into the glistening diamonds of an added twenty-five years; and in a happy old age, the good fight finished, the course fulfilled with joy, you may pass to receive that amaranthine crown, which the hand of time can never touch, and where labour shall be rest, and where joy in the presence of the Master you serve shall be your full reward." In presenting it, Mr. Wilkin stated that he had been privileged to act as spokesman for the many friends who desired to mark the occasion by a small presentation, and that being entitled to claim to be among Dr. and Mrs. Hepburn's oldest friends he had not hesitated to accept the honour. Mr. Wilkin regretted that the satisfaction of placing before them that night what the community had to offer was out of the question, the secret of the approach of the happy event having been too well kept. He consequently had to content himself with the bare announcement that some of their friends had desired to secure something lasting, something that might be a memento of the occasion, that might remain as a souvenir, to be handed on as an heirloom. Others had thought to place in Dr. Hepburn's hands a small purse of money to be disposed of by him as he might think best. In conclusion, Mr. Wilkin referred to the very general wish to put on record the sentiments entertained, which wish had found expression in the address. Dr. Hepburn, who was visibly affected by the unmistakable evidences of affection and warm regard, acknowledged with characteristic brevity and in the simplest terms the marked honour paid him and his dear wife, and expressed his gratitude at having, as it appeared, in some degree made the lives of some of their fellow creatures brighter and happier. Disclaiming with customary modesty having done anything more than his simple duty, the venerable Doctor avowed the thankfulness he and Mrs. Hepburn felt to their Heavenly Father for the opportunities afforded them in the course of the many years they had spent in the East. The reception, which was attended by the majority whose engagements permitted them to be present, was in the evening subsequent to the presentation of the address, rendered additionally interesting by the reading of an original poem, composed expressly for the occasion by Mrs. Hepburn's sister, a resident of the capital. When we add that the piece was read by Mrs. Rice, we say that nothing was lacking in its rendition.

NEWSPAPER COMPANIES AND RUMOUR.

It is not to be wondered at, perhaps, that the proceedings of the newspaper syndicates in Yokohama, having caused considerable perplexity to the foreign residents themselves, should have puzzled the Japanese also. The first syndicate formed seems to have been resolutely bent upon one object and one object only, namely, the acquisition of a newspaper. Its members were determined to have a journal of their own. If they could not obtain one of the

papers already in existence, they talked of starting a new one; a contingency which would either have involved its projectors in considerable loss, or led to the disappearance of one of the rival journals. Yokohama, partly from charitable considerations, supports three papers, but would assuredly decline to be burdened with four. Happily, however, the experiment has been avoided; the *Japan Gazette* has come into the possession of the syndicate. They tried with some persistence and a great deal of good nature to purchase the *Japan Herald*, and even went so far, it is said, as to offer a sum far in excess of what that newspaper would bring in the open market. Indeed, they stretched the limits of kindness to the extent of making this offer without being permitted to take stock of the object of traffic or to ascertain its financial condition by the ordinary process of examining the ledgers. Still an arrangement could not be effected, and recourse was accordingly had to the *Japan Gazette*, the proprietor of which proved more amenable to reason and more appreciative of a good offer. It might have been inferred from this that the owner of the *Herald* did not wish to part with his property, but that such was not the case is now proved by public announcement to the effect that another syndicate has been formed for the purchase of the *Herald*, and that the required sum has been nearly subscribed. Such proceedings, being very difficult to reconcile with any ordinary business hypothesis, astonish outsiders and have set the tongue of conjecture wagging busily. The *Koko Shinbun*—the newly appointed organ of the Constitutional Liberals—probably "takes the cake" for inventive genius. It publishes a tale, with all the local colouring required to enlist credence, to the effect that the original scheme of purchasing the *Herald* was nothing more or less than a bit of sharp and shady practice. The real owners of that journal, it says, were Messrs. Pinn and Lowder, but, the *Herald* being the most insignificant of the journals published in Yokohama, the task of supporting it proved very difficult. Accordingly, the syndicate scheme was evolved, the secret object being to induce people to put up money by means of which the newspaper was to be ostensibly purchased by a syndicate as an anti-revision organ, whereas in reality it should be a case of one proprietor buying from the other, thus providing funds to support the impecunious journal without disturbing its ownership or altering its complexion. Messrs. Fraser, Shand, Kingston, and Litchfield and the rest, writes the *Koko Shinbun*, discovering this plot, were much incensed. Where on earth our Tokyo contemporaries heard such a cock-and-bull story we cannot conceive. Of course there is not a syllable of truth in it, but its character is such that it can scarcely be passed over in silence, and we presume that steps will be taken to make the *Koko Shinbun* publish an emphatic contradiction.

* * *

Apart from silly canards, however, there are some features of this movement which invite consideration. In the first place it is abundantly evident that a number of British residents of Yokohama have come to the conclusion that their views are not satisfactorily represented by the local foreign press. We have never ourselves pretended to be entirely in accord with these gentlemen's opinions. It is pretty certain that if the atmosphere of mud hitherto enveloping and obscuring all controversy in Yokohama could be cleared away, the difference between our ideas and those of our so-called opponents would be found to be infinitesimal. But for the present that difference appears to be considerable, and we can fully appreciate their desire to have a journal of their own which shall set forth their case moderately and courteously, without recourse to the suicidal weapons of slander and abuse. Our local contemporaries, however, have always claimed to be the mouthpieces of the conservative side, and their claim is now disavowed in the most practical and emphatic manner. The men whom they pretend to have represented are putting up a substantial sum for the purpose of buying them out, and en-

trusting to other hands the functions they have so ill discharged. The question is not one of dollars and cents. The members of the syndicates must be pretty well aware that as an investment their scheme is decidedly unpromising. They are willing to pay roundly, however, for journals of a different class, and the newspapers concerned must swallow the unsavoury pill, happily well gilded to expedite the process.

* * *

The second interesting feature of the case is that the reconstituted newspapers are to be the property of syndicates. A company-owned journal is, of course, a perfectly possible arrangement from a purely commercial point of view. Provided that the conduct of the journal and the moulding of its policy are left entirely in the hands of one or two members of the Association, the remainder confining themselves to drawing dividends or paying deficits and promoting the circulation of the paper, there need be no difficulty whatever in carrying out the scheme. But is that the programme contemplated by the recently formed syndicates? We scarcely think so. Considering the time and the circumstances of the case, it seems pretty plain that the object of the syndicates is to have organs of their own; vehicles for expressing their political opinions rather than mere pecuniary investments. If every subscriber looks forward to advocacy which shall express and support his particular views, it will be necessary to procure editors of remarkably receptive and versatile ability. However, the Yokohama folks are eminently practical. They will probably appreciate the difficulty of adapting a journal to numerous shades of opinion, and will end by placing their new acquisitions on a purely business footing, which is the only conceivable way of conducting a newspaper with a number of owners, all of whom possess and may claim to exercise equal functions of control and directorship.

* * *

The third feature of the movement is that it seems to establish the existence of a division in the camp of the men who have made themselves most conspicuous for activity and resoluteness of opinion in Yokohama. Originally there was talk of only one syndicate and one newspaper, but now there are two Richmonds in the field. It is hardly conceivable that both can be fighting in the same cause and under the same banner. Indeed, rumours are abroad which suggest that the remodelled journals are likely to commence their career in a mood of considerable mutual hostility. If anyone were in the happy position of a wholly unconcerned spectator, he might derive much amusement from the developments of this episode in Yokohama's history. There were points of an interesting and startling character in the proceedings of the celebrated meeting of September the 11th. Respectable residents were betrayed, on that occasion, into voting by acclaim resolutions which meant what they were not intended to mean and didn't mean what they ought to have meant. Had we no fear of being accused of profanity we should be tempted to call it the Miserere Meeting, for truly its record might be summed up in the frankest phrase of that penitent chant, "we have left undone the things that we ought to have done, and we have done that which we ought not to have done, and there is no health in us." But the meeting appears to have been only the opening scene of the performance. Perhaps the fault was that the proceedings were too well arranged. People were not allowed to speak who had many things to say. Perhaps, again, the distinction acquired by those who did speak fired others to seek similar publicity. At all events, whether repressed energy or fine emulation be the motive cause, the worthy citizens of this usually business-like and sober Settlement have been seized with a mania for acquiring platforms from which to address the public. They have put up some fifty thousand dollars to procure two newspapers, and possibly if the seizure spreads they may seek to gain possession of the columns of the third also. There is a tide in the affairs of journals as in those of individuals, though what lunar influence sets it flowing, we are at a loss to conceive. In

this instance it has cast up some golden drift on the barren shores of our local contemporaries. And as a loyal confidère we should wish them hearty joy did we not observe that this newspaper quest has had the unhappy effect of destroying the harmony that marked the Misere Meeting. The house is divided against itself, and we can only trust that the proverbial sequel of that condition does not await it. Of course it would have been contrary to the fitness of things that concord should have been preserved in connection, however remote, with two journals which, from the opening day of their eminent career, showed that the law of their existence was to tear each other to pieces under pretence of fighting for a common cause. Yet fate dealt unkindly with the Settlement when it decreed that the reign of discord should be inaugurated by an apparent birth of public spirit and unanimity. "Men are the sport of circumstances." Something always comes between them and their happiness. Perhaps it ought to have been foreseen that the continuity of Yokohama's evil genius would have been preserved, and that the two journals which had made the community assist at a spectacle of dirt-throwing and verbal horse-play for twenty years, were destined to extend their baleful influence even at the moment when their radical reform had been generally agreed upon.

A CHINESE CRITIC ON MISSIONARIES.

We take the following from the *Chinese Times*:—"A very remarkable paper has just come into our hands. It is an exceedingly brief essay on 'Missionary Methods' with a letter to Dr. Faber, by a Cantonese named Ho-cheung, who is described by Dr. Chalmers (the translator) as 'a slender young man of thirty, who gained the degree of *h'sin-tsai* at thirteen, and has spent his time subsequently in the pursuit of knowledge.' The paper was written with a view to the Missionary Conference at Shanghai, but the original miscarried and never reached its destination. That now published is a copy. It is a great pity that such an important contribution did not reach the Conference, as it contains the very essence of what the Missionaries are striving after, and offers most valuable suggestions. 'There is no better way of preaching than to attack the things that are obscure, by the way of the things that are clear to the hearers,' says this thoughtful writer, whose tract is divided into four sections. One of these is headed 'Recognising the Root,' and we quote it entire as a specimen of the Author's manner:—Everything has its root and its branches, and the business of propagating Christianity is no exception. The heart and the affections within are the root, which should be of paramount importance. The forms and institutions without are the branches, which may be made light of. The great bane of China is disobedience of the laws of God. Hence greed and corruption thrive together. Hence treachery and lying grow rank. Hence iniquity and ingratitude masquerade hand in hand. In preaching, by all means come down upon these things with the light of God—make them afraid by the words of retribution—send conviction home to them by holding up the facts. Visiting the graves and sacrificing to the wooden representatives of the dead, mean in China feelings of humanity and piety, opposed to iniquity and ingratitude. It is here that the people show, although their hearts are corrupt, the possibility as it were of being brought back unto obedience to God's law. For these things, although in their outward aspect alien to the Christian religion, yet in the spirit of them are an integral part of it. Do not Europeans cherish, and cleanse, and adorn the portraits and tombs of their fathers, by reason of their love and longing for them? They even reverently offer to them fragrant flowers; and only stop short of bowing down and worshipping them. It is only in their outward forms and institutions that they differ here from Chinese. If preachers do not recognise the root of the matter, and waste their breath in railing at the wooden fetiches and sepulchral sacrifices of the Chinese, their hearers, who do not care to

search into the reason of such discourse, naturally conclude that Jesus encourages people to be ingrate and iniquitous, and that His religion should on no account be followed. That humane men should be thus slandered is surely much to be deplored. Therefore I say, 'Would that preachers always recognised the root?'"

TERSCHAK'S CONCERT.

THE farewell concert in Yokohama of Professor Terschak and Madame Schuller took place on Monday in the Public Hall. There was a fairly large audience, indeed the house considerably exceeded expectations remembering the number of public entertainments that have taken place recently. The programme, too, was certainly not of a kind to draw mere idlers. The concert began with the Grand Sonata for flute and piano composed by the Professor in this country, the andante part of which was specially beautiful and evoked the most hearty plaudits. A Reverie of Schumann's, played by a string party consisting of Messrs. Kaufmann (1st violin), Ramseger (2nd violin), Rausch (tenor violin), Enthoven (1st cello) and Crane (2nd cello) came next, and, though all too short, took the fancy of the audience so much, being rendered under the Professor's leadership with infinite taste and expression, that a repeat had to be conceded. A Fantasia on the Japanese songs "Hana Kurabe" and "Sakura" (the latter of which was particularly beautiful) and an Intermezzo, both the composition in this country of the maestro, were then rendered by flute and piano. After the intermezzo, the bright and sparkling notes of which could with difficulty be banished from the ears of the audience, Madame Schuller rendered with her wonted brilliance of execution two pieces of Mendelssohn ("Frühlinglied" and "Spinnelied"), and a *valse de concert* named "Plaisir du Soir," by Terschak. For his "Rhapsodie Russ. No. 2" composed during his stay in this country—a number abounding in passages of the most delicate beauty, the distinguished flautist was recalled. The second part was introduced by a "Meditation" (by Terschak) for strings and harp, in which the party above mentioned re-appeared, with Madame Schuller at the piano in place of the absent string party. This fine number, rendered with rare power and precision, was followed by a piano solo (Liszt's transcription of the "Procession of the Guests to the Wartburg" March from Wagner's "Tannhäuser"), a work replete with grand and massive passages, and offering an ample field for the display of Madame Schuller's unique skill and power. The next number was a composition of the master's—"Concert Allegro (Op. 147)" chiefly marked by the lovely bird-like notes of the flute, and the concert was brought to a close with the Grand Imperial Turkish March (specially composed for the Sultan by the Professor), which, including as it does, the fine National Anthem, the Grand March, and a final hymn, proved as a four hands performance a grand and lofty piece. The concert was in all respects a rare treat to lovers of music.

COUNT ITO AND THE PRESIDENCY OF THE UPPER HOUSE.

It is scarcely necessary to say that Count Ito's consent to return to active political life as President of the House of Peers is heartily welcomed by the vernacular press. The *Nichi Nichi Shinbun* is conspicuously emphatic in its approval and congratulations. It pronounces Count Ito to be unquestionably the best qualified statesman of the day to discharge the duties of this important post, since he possesses the essentials of dignity and popularity (*sho*), ability and knowledge (*chishiki*) and wisdom and resolution combined with impartiality (*somei kadan*). Passing from this flattering eulogy of the new President, the *Nichi Nichi* observes that the assembly over which he is called to preside does not consist of effete and incapable nobles but of active men, some young and highly educated according to Western standards, some possessing ripe legislative experience acquired in the Senate and other responsible positions, some eloquent and of tried capacity as

statesmen. The man who directs the debates of such an assembly at a time when the Constitution is to receive its first practical interpretation, and when parliamentary precedents are to be established for the guidance of future Houses, must possess qualifications such as few can boast. Public opinion pointed unmistakably to Count Ito, and is correspondingly gratified by his consent to serve. At the same time, it is understood that the Count has stipulated not to be required to occupy the post for the full term of seven years contemplated by the Constitution. He accepted the office with much reluctance, and the Emperor has graciously consented to release him at the end of the first Diet's life, namely, after four years. Doubts have been expressed in some quarters on the subject of this question of time, since the terms of the Constitution are explicit, but it is plain that the purpose of the Constitution is to fix a superior limit of time for the President's appointment, not to compel him to serve throughout the whole of that period. The *Nichi Nichi Shinbun* further thinks that, failing Count Yanagiwara, no better selection could have been made for the Vice-Presidency than Count Higashikuze, for in addition to a record of distinguished service, that nobleman is remarkable for stately courtesy, calmness of judgment, and candour of disposition.

PERSONAL.

THE appointment of Count Higashikuze to the post of Vice-President of the House of Peers was unexpected, Count Yanagiwara having been generally spoken of in connection with that post. In fact it is reported that Count Yanagiwara had been offered the position; but as he declined it, the appointment fell to Count Higashikuze. He is one of the famous *Kuge* who provoked the anger of the Tokugawa Government and fled to Choshu. Since then his name has been inseparably connected with the restoration of power to the Imperial House, and is consequently very popular among the nobles.

Mr. Hoshi Tôru has returned from his recent travels in Europe and America. For a time it was a little doubtful whether he would join the Constitutional Liberal party. But he has at last declared himself for that party, and it is reported that he will contribute articles to its new organs, the *Jiyu Shinbun* and the *Koko Shinbun*.

Mr. Mori Tokinosuke, member of the Diet for a district in the suburbs of the capital, has been acquitted of the principal charge of embezzlement preferred against him, but he has been judged guilty of having unlawfully appropriated for his private use certain articles entrusted to his custody. As the consequence of this judgment of the preliminary court, Messrs. Hatoyama, Tsunoda, and others, who had been privately canvassing in the district to fill the expected vacancy, are reported to have redoubled their efforts to win the good opinion of the voters.

It has been regretted by everybody that an unfortunate episode, which we need not again refer to here, induced Mr. Fukuchi, formerly editor of the *Nichi Nichi Shinbun*, to stand aside from public affairs and lead a retired and private life. There are indications, however, that he is slowly emerging from his temporary obscurity. At the last meeting of the Elocutional Society, he delivered a lecture on the subject of the relation between politics and learning. It would be a loss to the country were a man of his political experience and literary capacity to remain permanently in the inactive obscurity to which he thought it expedient to consign himself after the celebrated investigation of 1889.

CHRISTIANITY AND THE CONSERVATIVE PARTY. THE *Keisai Zasshi* of the 25th ultimo has an interesting article on the dilemma in which the Christians find themselves in relation to the probable alliance between Buddhists and the new Conservative party now in process of organization. The conservative reaction—says our contemporary—which set in some years ago, is about to culminate in the formation of a formidable

able political party embodying the principles of the above movement. It being the rooted opinion of Japanese Conservatives that Christianity is fundamentally opposed to the principles of loyalty and filial piety,—the cardinal principles of the national polity,—the growing power of the Conservatives cannot but tell severely upon the position of the Christians. The danger in which the latter now find themselves is, continues the Tokyo journals, still more increased by the probable alliance between the Buddhists and the new party. Under these circumstances, what course of policy are the Christians to pursue? Will they ally themselves with some of the parties opposed to the *Hoshuto*. Or will they strictly maintain a neutral position in politics, and cope unaided with whatever opposition they may encounter from the new party? Our contemporary puts so much confidence in their practical sense, that it cannot but think that they will follow the latter line of action. The *Keisai Zasshi*, by way of substantiating its prediction as to the future attitude of Christians, refers to an incident that took place some time ago at the residence of a certain Count at Takanawa. The latter—it is scarcely necessary to say that Count Goto is meant—invited to dinner several distinguished Christians, including Messrs. Kimura Kumaji and Uyemura Masahisa. In the course of conversation the Count spoke of the importance of extending Government patronage to Christianity, whereupon his guests, it is said, unanimously deprecated the idea of mixing up religion and politics. At the same time our contemporary, while entertaining no doubt as the course of policy which the majority of leading Christians will pursue, is apprehensive lest among the bulk of the believers some may be scared by the opposition of the Conservatives and Buddhists into an alliance with a political party. The Tokyo journal, therefore, thinks it important that leading Christians should take measures to prevent any such fatal step on the part of their fellow-believers, for should they once combine with any party, they would have to identify themselves and their religion with the fate of that party.

It seems to us a very significant proof of the mood of the Japanese public towards Christianity that advice so excellent as the above should be tendered by a journal like the *Keisai Zasshi*. There is no mistaking the fact that the sympathy of the *Keisai Zasshi* is with the Christians, and that it desires to see them adopt a course conducive to the good of their cause.

"THE JAPAN ECHO."

We have received the prospectus of a new journal, the issue of which commences to-day. It is to be called the *Japan Echo*. The publisher is M. Salabelle, a journalist of experience, and the editor is believed to be Mr. J. Murdock, of the Higher Middle School. The paper is to be illustrated, chiefly by the pencil of M. Bigot, an artist of undoubted talent who is pledged, we understand, to abstain from caricatures, a species of delineation with which the public has learned to associate his name. The *Echo* will appear fortnightly. Here is what the prospectus promises:—

The main object of the publication will be to give a full, fair, and impartial view of every topic of interest handled by the foreign and vernacular press during the fortnight. As every question has two sides, and most have more, it will be the aim of the *Echo* to reproduce the gist of every thing of consequence published during the preceding fourteen days, irrespective of the stand-point assumed by the writers. While especial attention will be devoted to the English Papers of the Treaty Ports and the seven (?) leading dailies of Tokyo, space from time to time will also be found for items of interest cropping up in the smaller vernacular prints, and in the magazines. In short, the *Echo* will aim at being an accurate reflex of all shades of Japanese Public Opinion.

In addition to this it will also contain a large amount of original matter, consisting of Leading Articles, Editorial Notes, Written Sketches, Interviews, Sporting and Society Gossip.

An important feature of the paper will be the appearance of Signed Articles on subjects of contemporary interest by the leaders of thought in Japan.

It is of course our duty to wish success to this new venture, but we feel that the wish must sound rather empty. There is nothing that

we can discover to warrant the addition of another journal to the already over-filled list. If the pictorial side of the *Echo* is developed sufficiently to give it a special interest, the cost of publication must be increased out of all proportion to the field of enterprise. The price of subscription is announced at the very high rate of 75 *sen* per copy. Two hundred subscribers—a very liberal estimate—would therefore signify an income of only three thousand six hundred *yen*, and if this could be increased to six thousand by means of advertisements, the proprietors might congratulate themselves. How are the expenses of printing and paper, as well as the remuneration to editor, manager, artists, and engravers to be defrayed out of a possible income of five hundred *yen* monthly?

THE YOKOHAMA LOCAL PRESS.

The *Nichi Nichi Shimbun* contains a very precise account of the doings now going on in Yokohama with reference to the local press. It seems sufficiently interesting to translate verbatim, with the exception of the opening part, which consists chiefly of compliments to the *Japan Mail* and may therefore be omitted:—"The *Japan Herald* and *Gazette* make it a rule to attack everything Japanese whether it be good or bad, and are in direct opposition to the *Japan Mail*. Recently, when British merchants organised the anti-revision meeting, it came to be recognised that a journalistic organ to express the views of the agitators was necessary. Accordingly steps were taken to purchase the *Herald* and *Gazette*. Men of means among the English merchants, in concert with Mr. Lowder, bought the *Gazette* for fifty thousand *yen*, of which twenty thousand was paid by the shareholders and thirty thousand was held by Mr. Anglin, the previous proprietor. The programme is that Mr. W. Denning is to be engaged as editor with a salary of five hundred *yen* per mensem, and that Mr. Anglin will be Manager with a salary of three hundred. Mr. Anglin was originally a soldier in the English army, after which he became a compositor in the office of the *Japan Times*, and subsequently acquired possession of the *Japan Gazette*. Mr. Denning is well known in connection with lectures delivered by him. He is neither an unfair nor a prejudiced person, and being a man of scholarly attainments, a journal in his hands will not be dishonest or partial, nor will it indiscriminately attack everything Japanese. But as the newspaper is to be an anti-revision organ, we regret to think that it will of necessity be opposed to our country's fair demands. We fear also that Mr. Denning may forfeit the respect hitherto felt for him by the Japanese. There is another party opposed to the fashion of procedure adopted by the *Gazette* syndicate. This party, determined not to be beaten, has resolved to purchase the *Herald* for a sum of twenty-five thousand *yen*. Messrs. ———, ———, and Brooke are the chief promoters and managers of this syndicate, and Mr. Murdock, a teacher in the Upper Middle School, is expected to be editor. The paper will be a rival of the *Gazette*, but like the latter will be an organ of the anti-revisionists. Mr. Murdock is a very vehement controversialist, and a writer who uses exceedingly strong language. It is hard to say what length he may go to in discussion. If he adopted the side of justice and fairness, his writing would carry much weight, but should he lend his pen to partiality and advance unjust views, he will ultimately find society shut against him, and will prove his own evil genius. The event must soon be determined, and we invite our readers to watch the two newspapers carefully."

In the next issue of the same journal the following letter appeared over the signature of Mr. Murdock:—"Sir,—In the miscellaneous articles of your issue of yesterday, under the heading 'Changes in the English local press of Yokohama,' there appears a statement to the effect that Mr. Murdock of the Upper Middle School is to become editor of the *Japan Herald*. This statement is without foundation, and as it greatly concerns the reputation (*meigi ni kaka-*

ru koto itate omoku soro) of the Upper Middle School and of myself, I beg that you will publish this letter and contradict the statement, so far as it relates to me, in your issue of to-morrow. I am, &c., J. Murdock." It is perhaps fortunate for Mr. Murdock that this opportunity has been afforded him to correct a rumour very generally believed by the foreign residents. For several days it has been matter of common talk that Mr. Murdock was likely to be the new editor of the *Japan Herald*, and his denial in the columns of the *Nichi Nichi Shimbun* will be a surprise to many. We fail, however, to apprehend in what respect such a rumour can reflect upon either Mr. Murdock or the School where he teaches at present. If we are not mistaken Mr. Murdock was connected with Journalism before coming to Japan, and his return to that occupation would be perfectly natural. Further, if this rumour seems to call for emphatic contradiction in the interests of the Upper Middle School, the same regard for his position ought surely to have restrained Mr. Murdock from writing and publishing such a work as "The adventures of Don Juan's Grandson in Japan," which is the title, if we remember rightly, of a volume of doggerel verse, some parts of which so far exceed the limits of propriety as to be a disgrace at once to its author and its publisher.

Speaking of these things, we may mention that according to current rumour the scheme of purchasing and reconstituting the *Japan Herald* has been abandoned. The circumstances under which the project came into existence were of such a nature that we found much difficulty in crediting its consummation, and are not at all surprised to learn that more prudent and business-like counsels have prevailed. The *Japan Gazette*, in the hands of the company which has acquired it, may prove a pecuniary success and will certainly be a journal creditable to the Settlement. But another local newspaper in the possession of a rival company would have been quite in excess of the situation. Probably, if the truth were known, it would be discovered that neither business nor politics had so large an influence in this matter of the *Japan Herald* as charity. It would be difficult to find a community where the dictates of kindness and friendly fellowship count for so much as they do with the people of Yokohama. The *Japan Herald*, after all, has fought, for many years, according to its lights, a battle with which several of the foreign residents believe themselves to be associated. Of its fashion of fighting, the less said the better. People good-naturedly forget the fashion, and, remembering only the fact, are not content that the *Herald* should be entirely passed over by the rain of golden plums which the excitement of the hour has shaken from our little local firmament. The proverbial impartiality of that celestial moisture, which falls alike on the evil and on the good, would be violated by such a one-sided contingency. Charity, however, has a limit, prudence, and Yokohama is primarily a place of business.

There is another point which deserves to be noted. It is the *Nichi Nichi Shimbun's* conclusion that the *Japan Gazette* under its new management will be an anti-revision organ. We are bound to admit that very good grounds exist for confusion in respect of this matter. To Japanese observers it may well seem that anti-revision and anti-revision only must be the policy of the paper. But there stands in the way of this inference the fact that the principal promoter of the newspaper scheme has distinctly declared himself to be not an anti-revisionist but a pro-revisionist, and has gone so far as to assert that every sensible person must admit Japan's claims to a modification of the terms of the present Treaties. The only issue likely to be raised by the re-constituted *Japan Gazette* will relate to the terms of revision, concerning which there is plenty of room for differences of opinion. We entertain not the smallest doubt that the contemplated change in the control and editorship of the paper will be of the greatest

possible benefit to all parties, the Japanese included. Instead of a species of hoarding for the unbridled exhibition of every kind of slander, venom, and vulgarity, we shall have a moderate, just, and courteous journal, often critical perhaps and sometimes opposed to the projects of the Japanese Government and people, but always fair, honest, and polite. It will be like breathing fresh air after living in an atmosphere of mud and dust, and the effect upon the relations between Japanese and foreigners cannot fail to be most beneficial. We do not think that there is the least danger of Mr. Denig's forfeiting Japanese respect: he is much more likely to establish a new title to Japanese gratitude.

THE NEWSPAPER PROSECUTIONS.

ANOTHER curious feature of the newspaper prosecutions undertaken by the Authorities in consequence of the publication of the Memorial from the Kansei politicians to the Minister President of State, is that the *Osaka Nichi Nichi* has been acquitted. The printer and publisher of that journal were summoned before the Osaka Correctional Court on the 27th ultimo and charged with re-producing the Memorial from the columns of the *Choya Shimbu*. The judge was Mr. Yoshida, the Public Prosecutor Mr. Takano, and the advocate for the accused, Mr. Ogura. It appears that the newspaper was arraigned under Article 32 of the Press Regulations, which interdicts the publication of articles calculated to disturb the institutions of the Government. The Court held that as the matter on which the prosecution based its charge was merely reproduced from another newspaper, it did not come within the scope of the article, which referred only to original articles. We need scarcely say that this judgment, diametrically opposed as it is to the verdicts of the Tokyo and other Courts, has given rise to much comment by the vernacular press. The *Nichi Nichi Shimbu* is conspicuously critical. It avers that, so far from imagining the obnoxious memorial to be at all likely to disturb the Constitution, the Tokyo journals regarded it as fitting matter for ridicule. When, therefore, wholesale prosecutions were instituted, it was feared that the Government had committed a grave mistake, not only because such a step was calculated to alienate public opinion at a time when wise statesmanship would have sought to conciliate it, but also because a weapon was placed in the hands of foreigners who decry Japanese institutions and seek to demonstrate the country's unfitness to be entrusted with judicial autonomy. But at least it was hoped that the various tribunals required to try the offending journals would show unanimity, whereas there have been not only great differences in the nature of the punishments inflicted, but also direct conflicts of findings. So far as varieties of penalty are concerned, the Court of Cassation will no doubt put the matter right, but when we find the Osaka tribunal pronouncing a newspaper not guilty which has committed exactly the same offence that brought upon the head of a Tokyo editor a sentence of a month's imprisonment, it is evident that something is radically wrong somewhere. Of course the independence shown by the Osaka Judge is a matter of congratulation, but the display of that quality comes at an unfortunate time. The *Nichi Nichi Shimbu* further says that an application for bail pending an appeal to the Upper Courts was refused to its editor and publisher after a delay of twelve days, and that, consequently, the appeal was withdrawn and the editor and publisher went to prison, persuaded that they had better take their punishment at once than linger on week after week in jail while the appeal was going forward. It cannot be said that the Authorities have come out of this business with colours flying.

THE METHODISTS AND TREATY REVISION.

The following letter appears in the *Tokyo Shimpo*:—"Sir,—There are four sects of Methodists in Japan, the Protestant Methodists, the Canadian Methodists, the Nambu Methodists, and the Nippon Methodists. I do not know whether, in speaking of Methodist opposition to a

proposed Treaty-Revision Memorial from Japanese Christians, you alluded to one of these divisions or to the whole body of Methodists, but I can answer for the Nippon Methodists that they knew of no such intention on the part of any other Christian Association, whether native or foreign, and could not consequently have either opposed the memorial or signed it. That Christian societies as such should interfere in political matters seems a doubtful proceeding. If the step you refer to was contemplated, we should approve of it provided that its projectors did not act in their capacity of Christians but only as public-spirited men among the Japanese Christians. When Sir Harry Parkes was Minister in Japan, one of our missionaries, the Rev. C. S. Eby, in his capacity of a British subject, took a leading part in inducing the foreign missionaries to urge upon the home Governments the necessity of Treaty Revision. Another member of our Church, when on a visit to Canada, lectured publicly in favour of speedy Revision. May I beg you to publish these facts, and at the same time to correct the statements which appeared in your columns, so far as they concerned the Nippon Methodists. I am, &c. (signed) Ozawa Magotaro, Nippon Methodist Church."

CHOLERA RETURNS.

The latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	23rd	19	23
	24th	15	25
	25th	23	25
	26th	9	12
	27th	10	8
Hyogo	23rd	7	10
	24th	5	9
	25th	16	26
	26th	12	11
	27th	24	26
Okayama	23rd	13	13
	24th	11	6
	25th	18	10
	26th	10	9
	27th	10	14
Kagawa	23rd	17	18
	24th	13	22
	25th	15	3
	26th	23	22
	27th	10	12
	28th	3	7
	29th	14	16

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	8,183	6,666
Hyogo	5,736	2,612
Okayama	1,454	1,029
Kagawa	1,819	1,123

GOLD AND SILVER RATIOS.

The *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 25th ultimo, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100)	Pound Sterling (Per £1)
20th	118.000	A.M. 5.8181 P.M. 5.8181
21st	117.700	A.M. 5.8715 P.M. 5.8715
22nd	119.000	A.M. 5.8358 P.M. 5.8358
23rd	119.000	A.M. 5.8895 P.M. 5.8895
24th	118.000	A.M. 5.8330 P.M. 5.8330
25th	119.000	A.M. 6.0377 P.M. 6.0377
Averages	118.453	5.8841

The above averages show for gold coin an increase in value of yen 1.383 per cent., and for the pound sterling an increase in value of yen 0.0767 as compared with the previous week.

CANDIDATES FOR THE PRESIDENCY OF THE LOWER HOUSE.

The time of the meeting of the Diet drawing near, various rumours are circulated about candidates for the posts of President and Vice-President of the House of Representatives. The *Kokumin-no-Tomo* states that, according to a report, the names of gentlemen proposed by the various parties for each of these two posts are, respectively, ex-Senator Teuda and Mr. Yoshino Seikei by the *Taisei-kwai* (Independents);

* The terms used in the Japanese original are not very clear.

Messrs. Nakajima Nobuyuki and Oye Taku or Kōno Hironaka by the Constitutional Liberals; Messrs. Kusumoto, formerly Vice-President of the Senate, and Shimada Saburo of the *Mainichi Shimbu*, by a section of the *Kaishin-to* and by Conservatives well disposed to the Government. The House, it will be remembered, has to elect three members for each post and submit them to the Emperor, and as upon this point parties are scarcely like to act in union, it is impossible to predict the result.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 25th ultimo were as follows:—

CONVERTIBLE NOTES.	RESERVES AND SECURITIES.
YEN.	YEN.
Notes issued	Gold coin and bullion
76,360,579	24,005,247
	Silver coin and bullion
	18,839,312
	Public Loan Bonds
	15,479,450
	Treasury Bills
	—
	Government Bills

Of the above total issue of notes, the sum of yen 5,834,325 is in the treasury of the Bank, and yen 70,526,254 in actual circulation, the latter showing an increase of yen 1,015,680 as compared with yen 69,510,574 at the end of the previous week.

ALLEGED THEFT OF \$200.

On Sunday John McCotton, second engineer of the *Hokkai Maru*, who had just been paid off from that vessel, went to a saloon in China-town with over \$200 in his pocket. After leaving the saloon he stopped to speak to a coloured man for a short time, during which a *jinrikisha* coolie whom he had engaged saw his pocket book drop from his pocket and saw the man to whom McCotton was speaking pick it up and put it in his own pocket. The *jinrikisha* man followed him, but lost sight of him somewhere near the Chinese Consulate. The matter was reported to the Police Station, and McCotton was advised to go to the American Consulate and take out a warrant for the alleged thief's arrest.

AN EVIL MINDED SCRIBBLER.

A PRUDENT noodle has addressed to one of the local journals a letter charging Japanese scribblers with using obscene terms to name their silks. The particular word which caught this salacious simpleton's eye means nothing more or less than "golden jewel," but since his own unclean vocabulary contains only one word of that sound, he jumped to the insane conclusion that only one such word exists. Why these silly persons should be allowed to publish in the local press impressions as immodest as they are ignorant, we are at a loss to conceive.

BOAT RACE.

THE Yokohama Amateur Rowing Club Club fours race came off on Monday afternoon. Three boats started. Black kept the lead till near the finish, when Blue got in front and came in a foot ahead. The following were the crews:—

BLACK.	RED.	BLUE.
Smith (bow).	Payne (bow).	Gibbs (bow).
Eyton (2).	Young (2).	Marshall (2).
Martin (3).	Abenheim (3).	Barton (3).
Shepherd (stroke).	Mottu (stroke).	Campbell (stroke).
Henson (cox.)	Hooper (cox.)	Robinson (cox.)

THE HOUSE OF PEERS.

It is announced in the *Official Gazette* on Saturday morning that Count Ito has been nominated by His Majesty the Emperor President of the House of Peers, in accordance with Article XI. of the Imperial Ordinance concerning the House of Peers, while Count Higashikuni, Privy Councillor, has been nominated Vice-President of the Upper House.

ST. ANDREW'S SOCIETY.

We learn that it has been decided by the St. Andrew's Society to celebrate the forthcoming anniversary of St. Andrew by a ball, to be held in the Public Hall on Friday evening the 28th instant.

THE PRESIDENT OF THE HOUSE OF LORDS.

UNCERTAINTY existed until recently as to the probable occupant of the important position of President of the House of Peers. Public opinion had been for some time fixed upon three men, Count ITO, Count YANAGIWARA, and Count OKUMA, the general opinion being decidedly in favour of the first named statesman's appointment. But Count ITO himself did not appear to be at all willing to accept the post. He had foreseen, it was supposed, that the position of President of either House would, under ordinary circumstances, virtually remove its occupant from the field of active politics, and since the nation looks to him to resume the direction of the Cabinet at no distant date, he might naturally hesitate to assume duties incompatible with that prospect. The vernacular newspapers, however, in recent issues, spoke as though no doubt could any longer be entertained on the subject. The *Nichi Nichi Shimbun*, always conspicuous for the accuracy of its information in respect of such matters, explained that the Cabinet having unanimously fixed upon Count ITO as best fitted for the post, and this opinion having been conveyed to the Count, he sought audience of the EMPEROR and explained his views at some length. Subsequently the Minister President communicated the sentiment of the Cabinet to Count ITO through Mr. ITO MIYOJI, but the Count showed no sign of consenting, and another emissary was accordingly employed. This led to a second visit by the Count to the Palace, after which frequent interviews took place between him and members of the Cabinet. Nothing definite transpired, however, until yesterday, when the majority of the vernacular newspapers in the capital published an announcement that Count ITO had at length agreed to accept the Presidency, and that an official notice of the fact would appear in a few days. It seems probable, therefore, that the matter has now been absolutely settled. Before assuming that Count ITO's hesitation to fill the post arose from the cause generally assumed, namely, reluctance to remove himself from the field of active politics for a lengthy period, it has to be remarked that, according to his own theory, no disability of that kind attaches to the position of President of the Upper House. Count ITO in more than one speech delivered last year, declared emphatically that the Cabinet must stand entirely aloof from party politics. The Count, who understands questions of this nature at least as well as any one in the empire, must foresee very clearly that the time is not far distant when Japanese Cabinets will hold office as representatives of the majority in the Diet; in other words, when they will hold office by the will of the party which succeeds in returning a majority of the members. But at present the

theory of the Japanese polity is not only that the Ministers of State receive and retain their portfolios entirely by the will of the Sovereign, their appointment to a tenure of office being thus absolutely independent of the Diet, but also that a Cabinet actively presided over by the EMPEROR himself, must not be exposed to reconstruction at the caprice of a political party. So long as this theory can be maintained in practice, it is plain that an interchange of offices between the Minister President of State and the President of the House of Peers need not present any incongruity or entail any inconvenience. We greatly doubt, therefore, whether Count ITO's reluctance to accept the latter post was due to the motive popularly assigned. It seems to us much more reasonable to attribute the Count's hesitation to his strongly expressed resolve not to take office again for a lengthy period. Last year, when he retired from the Presidency of the Privy Council, he let it be distinctly understood that he desired to stand aloof from official life during a long interval. In this announcement he was beyond question sincere, and only considerations of great weight can have moved him from his purpose. Such considerations, it appears to us, are easily discernible. The introduction of parliamentary institutions in Japan is an experiment of incalculable interest. It would be difficult to assign any limit to the effect which success or failure will exercise upon Japan's national reputation. The hitherto firmly held creed of Western nations is that conditions compatible with constitutional government are either indigenous in a State, or result from long years, centuries even, of education and effort. Some observers go so far as to claim that the interest attaching to Japan's case is not confined to her own destiny but extends to every country not yet blessed with parliamentary institutions, because, if Japan succeeds, her precedent will justify others in attempting an equally rapid transition. We do not share this view, being persuaded that the Japanese people possess special qualities which adapt them for the remarkable rôle they are now playing, and which will carry them safely over the difficulties lying in their path. But there can be no doubt that civilized nations will be eager spectators of the ordeal which Japan has voluntarily chosen to undergo, and that the verdict depending on the result is vital for her. Count ITO, before all Japanese statesmen, is responsible for the Constitution, and the question naturally arises whether his patriotic duties ended on the 11th of February, 1889, when the Minister President of State received the precious document from the hands of the Sovereign. We do not for a moment think that they did end then. The framing of a Constitution at once in touch with the circumstances of

the nation and in harmony with the spirit of parliamentary government was a great and memorable achievement. But the carrying out of the Constitution is even more onerous and important. To enact laws may be difficult, but to interpret them wisely demands even higher faculties. It will rest, for the most part, with the Presidents of the two Houses to interpret the Constitution. Many perplexing questions will certainly arise, and it seems almost essential that Count ITO's services should be available to answer them. The Houses, too, though absolutely new to their work, will be expected to establish precedents for the guidance of future sessions. No estimate, indeed, could be excessive of the responsibilities devolving upon the first Diet, of the difficulties it will have to contend with, and of the inferences that will be drawn from its conduct. The duty of assisting at such a crisis is almost obligatory on Count ITO. In a certain sense he may be said to be the father of the Constitution, and it devolves upon him to see that the healthy child born under such happy auspices does not degenerate into a deformity in its early youth.

NATURALIZATION OF BRITISH SUBJECTS IN JAPAN.

THE possibility of a British subject being naturalized in Japan under existing circumstances has been discussed more than once, and on each occasion the discussion has elicited strong comment that Englishmen do not enjoy in Japan the full liberty guaranteed to them by their own institutions under which they are supposed to live here. The Naturalization Act of 1870 provides that "a British subject in any foreign State may renounce his allegiance to HER MAJESTY by becoming naturalized in that State." Hence, to cursory controversialists it seems plain that a British subject in Japan should be at liberty to avail himself of the privilege granted by this Act. But there is an obstacle not apparent at first sight, namely, that according to Great Britain's construction of her Treaty with Japan, the latter cannot be regarded as a foreign State for any legal purpose. All the laws of England are operative in respect of British subjects in Japan just as though—to use the objectionable but expressive formula of the Order in Council—just as though this empire were "conquered or ceded territory." It would plainly be a flagrant contradiction to claim, on the one hand, that the laws of England are operative in respect of British subjects in Japan to the same extent as if Japan were conquered or ceded territory, and on the other to assert that Japan may be regarded as a purely foreign State for the purpose of privileges granted by those laws. The fact is that, so far as British law is concerned, a British subject in Japan is on the same footing as

he would be were he living in London. An Englishman in England certainly could not take advantage of the denationalizing privilege granted by the Act of 1870, and neither can an Englishman in Japan. For all legal intents and purposes, the two are on the same footing. Japan is not a "foreign state" in the sense contemplated by the Naturalization Act.

The particular case which recently gave rise to a renewal of this controversy was that of a British subject who wanted to marry a Japanese. It does not appear that his primary purpose was to become naturalized in Japan. To complete a legal alliance with a lady upon whom he had set his affections, was the extent of his aim. But the lady happened to be registered as the head of her family, and so long as she occupied that position marriage with her could only be effected by her husband's taking her name. This is a point concerning which Japanese law is very explicit and very inflexible. Under such circumstances the union could not be accomplished unless the man became a naturalized Japanese subject, and it was his unsuccessful attempt to do so that reopened the controversy as to the scope of the Act of 1870. Japanese law provides only one course by which a foreigner can become a naturalized Japanese subject, namely by adoption into a family for marital purposes. This course has been followed by at least one American citizen, for the view taken by the United States of Japan's status *quoad* the laws of the Treaty Powers differs considerably from the view taken by England. Thus, in the case we are considering, the Englishman preceded by the only available route. But he suddenly found it blocked by the *non possumus* of his Consul; which incident has been strongly criticised, on the ground that no reference whatever need have been made to the British Consul by the Japanese. That is a misconception, we think, due probably to a confusion of ideas between the ceremony of marriage and the act of naturalization. If a British subject desires to marry a Japanese woman according to the forms prescribed by Japanese law, the British Consul need not be consulted at all. If he desires to marry her according to the forms of British law, the assistance of his Consul is of course indispensable, and a document must also be obtained from the Japanese Authorities certifying that there is no objection on their side to the marriage. All this has now been thoroughly cleared up. Much uncertainty existed about it formerly. Our readers probably remember a case tried in the Probate and Divorce Court in London last spring. The plaintiff, a British subject, moved the Court to recognise the validity of a marriage contracted by him with a Japanese lady according to the forms of Japanese law, and the Court sustained his petition. It was thus finally decided that the Japanese marriage law is

applicable to a British subject residing in Japan. The hearing of the case by Sir JAMES HANNEN only occupied a day, and the question, when placed under the lens of British judicial acumen, assumed such simple and logical dimensions that no one dreamed of doubting the justice of the decision. Still less could any one have suspected that long years of legal discussion and official obstruction had preceded the final submission of the issue to a British Court. We do not propose to enter here into the details of the story, but only to note the particular feature of it which bears upon the recent case. That feature was a strange doctrine, advanced by the Japanese Authorities and maintained by them for years, namely, that in order to extend the Japanese marriage law to a foreign subject or citizen, the coöperation of his Consul was essential. The alleged ground of this theory was derived from the fashion of the Japanese marriage ceremony, which is purely a civil rite, consisting in the registration of the woman as an inmate of the man's house in the capacity of wife. The certificate of registration having been duly signed and sealed, an entry to that effect is made in the official records by the Head-man of the district in which the newly married couple reside. It was asserted by the Japanese Authorities that, for the purposes of the ceremony, the functions of Head-man must be discharged by the Consul of the would-be husband's nationality. Of course this was a misconception, the more remarkable inasmuch as it showed that the Japanese Government, while maintaining, as they had always done, that the provisions—though not the penalties—of their territorial laws apply to every foreigner residing in the Empire, were nevertheless unprepared to carry their contention into practice, or to take any step in such a sense without the consent of a foreign Consul. Still the difficulty was obstinately interposed, and could not be removed until years of discussion had brought sufficient light to bear on the question. It is just possible that the Kanagawa Authorities, unaware of what had occurred in Tokyo, may have taken a similarly mistaken view of the course to be followed in respect of the recent marriage. We can hardly think so, however, for Governor ASADA is an able official, thoroughly conversant with all matters of international bearing. Besides, as we have already noted, the question was one not of marriage merely, but of naturalization. To the latter it is beyond dispute that the Consul must be a consenting party, and no British Consul could so consent without direct opposition to the interpretation attaching to the Treaty in the eyes of the British Government. From a British Consul's point of view, his nationals are no more at liberty to remove themselves from British Jurisdiction in Japan, whether by process of naturalization or in any other

way, than they would be were they living in the United Kingdom. Whether this position is based on a correct and tenable interpretation of the Treaty is a different question, open to much discussion. Great Britain's reading may be in some degree arbitrary, but it has enabled her to assume in practice a logical and efficient attitude, which is more than can be said of all her colleagues in their dealings with Japan.

A ROYAL KOREAN FUNERAL.

THERE is one thing which the Confucian cult has stamped upon its adherents, namely, the great significance of the marriage ceremony and of the funeral ceremony. Death is practically apotheosis and the event of the funeral often has a triumphal side which is unknown among Caucasian races. The funeral of an eminent personage in Korea has none of the solemnity or dignity which attend the funeral of such a personage in the West. One would have thought that a great national festival was in progress by the way the country people flocked into Söul to witness the funeral pageant of the QUEEN DOWAGER of Korea. Perhaps it will be well to say a word herein regard to the history of this really remarkable woman. Her life is evidence enough that even in a country where the position of females is little better than in Persia or Turkey, a woman may by power of will and force of character wield almost any amount of influence. She was born about 1807, and became QUEEN about 1820, and from that time to the day of her death she exerted an influence second to almost none in the kingdom. Her death removes a powerful conservative element, and for this reason has some considerable political and social significance. The first ten years of her married life witnessed the entrance of the missionaries of the Société des Missions-étrangères of Paris and the persecution of the Romanist converts. In 1839 occurred the greatest religious persecution in Korea with the exception of the one in 1866. About 1845 the KING died leaving a young boy as heir to the throne. The mother acted as Regent until he attained his majority, a space of five years. He then ascended the throne and reigned eleven years. Upon his death, his son not yet being of age, the grandmother waived her right and allowed the mother to assume the reins of Government during the interregnum of one year. The son then began to reign, and continued until his death in 1864, leaving no issue. It should be observed that the grandmother and the wife of this KING belonged to rival families, and much depended on which of them should become Regent. The grandmother, entering the room where the KING lay expiring, demanded the seals of State which the QUEEN held folded in the flowing skirts of her dress. The younger woman,

overawed by the vehemence and strong personality of the elder, gave up the seals, and immediately the edict went forth that the QUEEN DOWAGER, had appointed a distant member of the Yi, or reigning family, as Cadet KING, and that the Regency was in her hands until he should attain his majority. The young boy's father practically controlled the affairs of State. Soon after this occurred the French missionaries became implicated in political matters and were seized and put to death, nine in all. The ill-fated expedition of Admiral ROZE and the marauding expedition of some unprincipled freebooters subsequently aroused the most intense feeling throughout the country: general persecution of native Romanists began which carried off thousands upon thousands. Then followed the accession to the throne of the heir appointed by the QUEEN REGENT, treaties with Japan and China, and finally treaties with Western Powers, and the opening of the country. Such are some of the scenes through which this woman passed, and through all of which she exerted a powerful influence.

Her funeral was the same in all respects as that of an actual KING, and all the mourning rites were carried out with the same punctiliousness. Every Korean citizen must doff his black hat and wear a white one for the space of three years. He must also wear white shoes and eschew parti-coloured clothing. Five months elapsed between the death and interment, and during that time most elaborate preparations were made. Diviners selected by the aid of their magic a propitious spot for the Royal grave. All the paraphernalia of the funeral procession were minutely prepared. Some hundreds of thousands of dollars were necessary for the accomplishment of all this. During some months the two Royal mints held back their whole product in anticipation of the heavy expenses to be incurred on the day of the funeral. The funeral procession itself was an imposing spectacle. First came thirteen gaily-coloured sedan chairs, hung with silk drapery, each borne upon the shoulders of twelve men. They were much larger and were carried much higher than ordinary sedan chairs. In them were supposed to be borne the historians who write the history of the deceased. Then came singly or in pairs a number of banners, each of which was furnished by one of the various guilds in Söul. One was furnished by the silk merchants, another by the shoe merchants; the tobacco-nists, iron-mongers, rice dealers, hatters, and various other bodies sending banners varying in gorgeousness and size. They cost from one hundred to two hundred thousand cash each, or from ten to twenty pounds sterling. The standards were thirty feet high and surmounted at the very top by a handsome bunch of peacock feathers brought over from China for this purpose. Below this bunch was a cross-bar from

which hung the banner, made of brocaded silk of the very finest quality bordered by silk of another colour but equal quality. The edge was serrated and the centre panel bore an inscription in Chinese characters, while from the ends of the cross-bar hung gaily coloured cords terminating in tassels or knots. Above the cross-bar small bells were suspended. Both the main standard and the cross-bar were covered with different colours of felt on which were fastened gilt and tinsel figures of dragons and men and various other conceits. Each banner had three carriers, who relieved each other from time to time, and each flag was followed by a multitude of men of the guild which furnished it.

On either side of the street was a single line of soldiers bearing, in lieu of guns, blue silk flags with red Chinese characters sewed on. Some of them also carried immense paddles with which they were supposed to keep back the crowd if it pressed too hard upon the lines. The funeral procession, according to custom, had to start at night. On both sides of the street, at intervals of six or eight rods, were placed immense torches made of brushwood, and as they were lighted the fierce glare set off the gay colours of the flags and of the clothes of the bearers and soldiers, and gave the whole thing a weird unearthly aspect different from anything that one sees in other countries. After the banner-bearers came gaily dressed men bearing long poles on which were hung scrolls each embodying a eulogy on the deceased, written by some high Korean official. Fifty or sixty of these made a striking element of the parade.

An adjunct not to be omitted from the description was the devils, or what cannot be better described than by that term. They were masked men on horses, the masks about two feet broad and having two pairs of eyes and a hideous grinning mouth. These devils or imps were supposed to scare away all evil spirits and protect the procession and the dead from the infernal powers. They were well calculated to do so, to be sure.

So far, we have described merely the vanguard of the main procession. At the head of the main body rode a General mounted on a splendid charger surrounded by a crowd of liveried servants. The General held in his hand the wand of authority, and was in truth the master of ceremonies, the Marshall of the day. Impossible to describe his costume further than to say that all the colours of the rainbow were represented. Not far behind him came the chair in which the deceased was accustomed to ride while living. It was a gem of Korean art, although Korean art does not appeal especially to Western taste. It was borne high on the shoulders of about twenty men. Behind it followed a curious thing: an immense piece of cloth carried on numerous poles

and used for making an inclosure within which the palace women might sit and wail at the tomb without being open to the gaze of sightseers.

The procession now grew denser and noisier. The glare of the torches, the clouds of dust, the hoarse shouting of the soldiers and bearers all united to make a most curious scene. Before the spectator had time to examine the elements of the crowd, however, the preliminary hearse or catafalque came in sight. We say preliminary, for in all Korean funerals of importance there are two catafalques, and no one is supposed to know in which one the body is. It was an immense oblong affair surrounded by a railing or balustrade and inside this was the silk draped bier. Red and green were the predominant colours, although gilt played an important part. The whole was upheld by a number of long poles and ropes, between the meshes of which the bearers, more than fifty in number, stood, the ropes passing over their shoulders. From the four corners long ropes extended forward and backward and hundreds of men, grasping these ropes, either aided in pulling the catafalque along or pushed the crowd of spectators back. Immediately behind the catafalque came the most singular part of the whole procession, six immense horses made of paper stretched on wooden frames. The most uncouth and ugly looking beasts imaginable, they were nevertheless intensely spectacular. The crowd burst into roars of laughter and cheers as these ungainly figures trundled by on rough wooden carts. The horses were about twelve feet high, and, mounted on the carts, they loomed up nearly twenty feet. They were supposed to accompany the spirit of the dead to the other world and provide means for its posthumous locomotion.

The second catafalque followed, larger and more magnificent than the first. High up on the front stood a man clothed in mourner's clothes, carrying in his hand a bâton, and another stood at the rear, but what their office was it was difficult to ascertain. Behind this catafalque came another great cloth to shelter the female mourners, and then a long line of officials and mourners, flags, soldiers, and last, but not least, the howling excited rabble. It was a scene worth seeing, but one which to see once sufficed. Many a long year had passed since Söul witnessed a similar spectacle, and for the sake of the nation's pockets, if for no other reason, we trust that a still longer interval may elapse before occasion arises for another such funeral.

IN NIGHT SWEATS AND PROSTRATION USE HORSFORD'S ACID PHOSPHATE.

Dr. CHAS. CUTMORE, M.R.C.S., 5, Hogarth road, Kensington, S. W., says:—"I have found it extremely valuable in the last stages of phthisis, where exhaustion had set in after the night sweats. Also in debility and prostration arising from fevers. In atony of the stomach in dyspepsia it has done me good service."

REMARKABLE OPINIONS.

THE *Daido Shimbun* having now been recognised as an organ of the Constitutional Liberals, its utterances deserve consideration. But, on the other hand, they ought to be correspondingly considered before publication. Last year this newspaper made itself conspicuous by its opposition to Count OKUMA'S proposals. We greatly differed from the views taken by it then, but inasmuch as they have received the *cachet* of success, we should not comment on their repetition now if only a moderate degree of discrimination were displayed in advancing them. But in truth the *Daido Shimbun* exceeds the bounds of ordinary sense when it declares that the projects of employing aliens in the capacity of Japanese judges and permitting foreigners to own land in Japan were insulting to the national dignity (*Kokken wo keibetsu suru*). As to the judge question, it is useless now to raise any discussion, but with what pretence of reason can it be asserted that a privilege granted by Great Britain to foreigners would, if similarly granted by Japan, be an insult to the national dignity? It is true that in some of the British colonies the tenure of land by foreigners is subjected to various restrictions, and that in the United States of America and other Western countries the privilege is withheld altogether. It is also true that England herself did not depart from her conservative attitude in this respect until 1870. Still the fact remains that a foreigner may purchase land in Great Britain to-day. Liberality of such a nature has nothing whatever to do with the dignity of the nation. To imagine that it has is purely morbid sentimentality. We ought not, perhaps, to be surprised that the *Daido Shimbun*, having shown itself the victim of so strange a phantasy in one instance, should be equally unreasonable in another. Yet the comments which it proceeds to make about Tariff Autonomy are even more superficial than its ideas about the ownership of land. The one feature to be regretted, it says, in the new scheme of revision is that Tariff Autonomy is not recovered. Foreigners, it continues, think only of gain. "To allow them to trade and travel in the interior before Japan recovers her Tariff Autonomy, would be like placing the keys of the house in the hands of men who come to rob it. If only Tariff Autonomy be recovered, we do not object to the opening of the country; but if it is not to be recovered, better break off the negotiations and devote ourselves to developing the national resources." Now we do not suppose for a moment that the *Daido Shimbun* desires to place frivolous obstructions in the path of Treaty Revision, but such writing can only have that effect. In point of fact Japan recovers her Tariff Autonomy fully and completely from the day on which the revised treaty is signed. So soon as foreign States make

a covenant with her agreeing that certain duties shall be levied on their imports for a fixed term of years, they put their hands to an instrument recognising her Tariff Autonomy in the most unequivocal manner. Precisely similar covenants are made constantly between the Great Powers of the Occident. Indeed there is scarcely a Western country, the United States of America excepted, that enjoys absolute Tariff Autonomy in the sense contemplated by the *Daido Shimbun*. All are bound by conventions, and have no more liberty to impose duties at will on one another's imports than Japan has under the present Treaties. When Japan revises her Treaties, and signs a new tariff convention operative for a fixed term of years, the bargain will not be binding on her alone: it will be equally binding on the other high contracting parties, since they, in return, will pledge themselves to admit her goods too under conventional tariffs. If such a covenant impairs her Tariff Autonomy, it impairs theirs also to an exactly similar extent. As to the other phase of the question, the strange misconception of our contemporary that the wealth-getting eagerness of foreigners would make them dangerous denizens of the country unless Japan could exercise the right of altering her customs dues at will, we really fail to apprehend the connexion of ideas. Has the *Daido Shimbun* considered who they are that pay import duties? Certainly not foreign importers or manufacturers. Such a tax upon trade comes entirely out of the pocket of the Japanese consumer. It simply means that he has to pay so much more for his yarns and piece-goods. The only interest foreigners have in the matter is that burdens laid upon trade tend to cramp its development, and that the expansion of Japan's commerce may be checked if tariff rates are largely increased. That, we presume, is a contingency in which the Japanese themselves are at least as much concerned as foreigners. It is equally in the interests of both sides that the trade of the country should grow and prosper. The rôle becoming a sensible and patriotic journal is to encourage the diminution of all taxes upon trade, instead of seeking to foment a spurious agitation in favour of crippling the country's resources. If Japan's foreign commerce were strangled in its cradle, or stunted in its now promising growth, who would be the chief sufferer—Japan herself, or the various Powers among whom this trade, infinitesimal in comparison with their own, is divided? Can it be possible that, every reasonable prop having been knocked from under their feet, party politicians are about to raise a new edifice of obstruction on the chimera of Tariff Autonomy?

DISPUTED ELECTIONS TO THE HOUSE OF PEERS

IMPERIAL ORDINANCE No. 221.

We hereby order the following Rules for the Judgment of Suits relating to the Eligibility and Election of Members of the House of Peers, to be promulgated by Imperial Ordinance, believing it to be highly necessary to provide beforehand such rules rather than to postpone the same till the opening of the House of Peers. This ordinance shall continue in force until such time as the House of Peers may with the Imperial sanction promulgate rules to deal with such matters.

[His Imperial Majesty's Sign-manual.]
[Great Seal.]

Dated October 10th, 1890.

(Countersigned.)

Count YAMAGATA ARITOMO,
Minister President of State.
Count SAIGO TSUKUMICHI,
Minister of State for Home Affairs.
Count YAMADA AKIYOSHI,
Minister of State for Justice.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.
Count OYAMA IWAO,
Minister of State for War.
Count GOTO SHOJIRO,
Minister of State for Communications.
Viscount AOKI SHUZO,
Minister of State for Foreign Affairs.
Viscount KABAYAMA SUKENORI,
Minister of State for the Navy.
YOSHIKAWA AKINASA,
Minister of State for Education.
MOTSU MUNEMITSU,
Minister of State for Agriculture and Commerce.

Article 1.—The House of Peers shall elect a standing committee at the beginning of each term for the purpose of investigating suits relating to the eligibility and election of members of the House of Peers.

Article 2.—Any person qualified to vote in the election of a Count, Viscount, or Baron to the House, and any person qualified to vote for a member chosen from the class of highest taxpayers, who may raise an action according to Article 9 of the Ordinance relating to the House of Peers, shall sue the member elected, who shall be the defendant.

Article 3.—The plaintiff shall file a statement of his petition and send a copy to the President of the House, who shall deliver the same to the Committee above mentioned.

Article 4.—A statement of the grounds of claim and proof in support thereof shall be included in the petition, which shall bear the signature of the plaintiff.

Article 5.—The Investigation Committee above mentioned shall send a copy of the petition to the defendant, and require the defendant to produce a statement of his defence as well as a copy of the same, which shall be forwarded to the plaintiff within a fixed period.

The Committee may require both the plaintiff and the defendant to produce statements of reply and rebuttal should the same appear necessary.

Article 6.—Both plaintiff and defendant may transmit documents by post, and the time occupied in such transmission shall not be included in the period mentioned above.

Article 7.—The Investigation Committee may, through the President, demand from the Government documents relating to and in proof of the election of members.

Article 8.—Should matters showing a contravention of the Penal Code be apparent as the result of the examination, they shall be reported to the Minister of State for Justice by the President. The process of examination and decision shall not, however, be stopped or delayed by such discovery.

Article 9.—Should the defendant fail to produce a statement of defence within the time fixed, the Committee may at once report the result of its examination.

Should any person be able to prove that he has been unable to produce a statement of defence within the time fixed, owing to natural misfortune or accident, the President may fix a fresh period for its production.

Article 10.—Should the Committee lay before the President of the House a report as the result of their examination, the President shall bring the matter forward for the discussion of the House.

Article 11.—When the House has come to a decision on the subject the President shall order the Chief Secretary to prepare a copy of such decision according to the rules of debate (*gijiroku*), and serve the same upon the plaintiff and the defendant. No reasons shall be affixed to the decision of the House.

Article 12.—If the House of Peers decide the qualification or election of a member in a manner adverse to such member, the President shall suspend such member from his functions and report the matter to His Imperial Majesty.

Article 13.—A member who has been placed in the position of a defendant does not lose his status or right of speaking in the House until a decision as described in the last article is delivered. He may not, however, take part in the decision by vote of a suit in which he is concerned, though he may personally or by the medium of other members give explanations.

A member who is a defendant may attend meetings of the Committee in reference to a suit relating to himself.

Article 14.—In the case of an election to fill a vacancy after the meeting of the House in session, ten days after such election in the case of Counts, Viscounts, or Barons, and a similar period after the Imperial appointment in the case of highest tax-payers shall be the interval within which suits may be raised.

Should the sittings of the House close before the lapse of the period hereinbefore mentioned, and thus prevent the raising of a suit, such suit may be initiated within ten days after the opening of the next following session.

Art. 15.—Any complaint made by a member as to the eligibility of another member shall be disposed of in accordance with Arts. 3 to 13 inclusive. In such case, however, the periods provided in Art. 18, Rules for the Election of Counts, Viscounts, and Barons, and Art. 26, Rules for the Election of Members of the House of Peers from among highest tax-payers, shall not be observed.

DIPLOMATIC AND CONSULAR OFFICIALS.

IMPERIAL ORDINANCE No. 258.

We hereby give our sanction to the present Regulations relating to the Organization of Diplomatic and Consular Officials, and order the same to be promulgated.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated October 21st, 1890.

(Countersigned.)

Count YAMAGATA ARITOMO,

Minister President of State.

Viscount Aoki SHUZO,

Minister of State for Foreign Affairs.

Article 1.—The Organization of Diplomatic Officials shall be decided as follows:—

Minister Plenipotentiary, *chokunin* rank.

Minister Resident (*Henri Koshi*), 2nd class

chokunin rank or 1st class *sonin* rank.

Chargé d'Affaires (*Dairi Koshi*), 1st or 2nd

class *sonin* rank.

Councillors of Legation, 1st or 2nd class *sonin*

rank.

Secretaries of Legation, 2nd or 3rd or 4th class

sonin rank.

Attache (*hosakawan shiko*), 5th or 6th *sonin* rank.

Article 2.—Officials of *shimin* rank may be appointed Ministers Plenipotentiary as an additional office.

Article 3.—Consuls may also be employed as diplomatic officials (*gaiko jinukwan*) in places where Ministers are not stationed.

Diplomatic officials shall be of *sonin* rank.

Article 4.—The Organization of Consular Officials shall be as follows:—

Consul-General, 1st or 2nd class *sonin* rank.

Consul, 2nd, 3rd or 4th class *sonin* rank.

Vice-Consul, 5th or 6th class *sonin* rank.

Article 5.—Diplomatic and Consular officials not in actual office may be ordered to serve in the Foreign Department.

Article 6.—Commissioners of Trade (*Boyeku-jinukwan*) may be appointed to places where Consuls are not stationed.

Commissioners of Trade shall be under 2nd *sonin* rank.

Article 7.—Honorary Consuls or acting Consuls may be appointed in places where Consuls or Commissioners of Trade are not stationed.

Article 8.—Clerks shall be attached to legations and consulates.

Clerks (*shokusei*) shall be of *hannin* rank.

Article 9.—The Minister of State for Foreign Affairs may attach other assistants to legations or consulates should he consider the same necessary.

Article 10.—The number of diplomatic and consular officials not in actual office shall not surpass 20.

Article 11.—The organization of Diplomatic and Consular Officials, Imperial Ordinance No. 5, of the 3rd month of the 19th year of Meiji, shall be abolished.

PUNISHMENT OF BANKRUPTS UNDER THE COMMERCIAL CODE.

LAW No. 101.

We hereby give our sanction to the present Regulations relating to those who are adjudged bankrupts according to the Commercial Code, and order the same to be promulgated. We also direct that this law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated the 8th day of the 10th month of the 23rd year of Meiji.

(Countersigned)

Count YAMAGATA ARITOMO,

Minister President of State.

Count YAMADA AKIYOSHI,

Minister of State for Justice.

Any person adjudged bankrupt according to the Commercial Code, who shall have been guilty of criminal practices in connection with his bankruptcy, shall be punished according to the following distinctions:—

1. A fraudulent bankrupt shall be punished by *Kei-choyeki* (imprisonment with labour during from 6 to 8 years.)

2. Any one who has become bankrupt in consequence of his own negligence or error shall be punished with major imprisonment for not less than two months, and not more than 4 years.

CONSULAR FEES AND EXPENSES.

IMPERIAL ORDINANCE No. 258.

We hereby give our sanction to the present Regulations relating to the payment in foreign coin of Fees and Travelling Expenses of Consuls, and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)

(Great Seal.)

Dated October 21st, 1890.

(Countersigned)

Count MATSUKATA MASAYOSHI,

Minister of State for Finance.

The Fees of Consuls as well as their travelling expenses, as mentioned in the Regulations relating to Consuls of the Empire of Japan Imperial Ordinance No. 80, March, 1890, may be paid in foreign coin according to the ratio of exchange settled by the Minister of State for Finance.

AMENDED ORGANIZATION OF THE JUDICIAL DEPARTMENT.

IMPERIAL ORDINANCE.

We hereby give our sanction to the present amendment of the Organization of the Judicial Department, and order the same to be promulgated.

(His Imperial Majesty's Sign-Manual.)

(Great Seal.)

Dated the 10th day of the 10th month of the 23rd year of Meiji.

(Countersigned)

Count YAMAGATA ARITOMO,

Minister President of State.

Count YAMADA AKIYOSHI,

Minister of State for Justice.

The following paragraph shall be added to Art. 5 in the Organization of the Judicial Department: "A Vice-director shall be attached to the Finance Bureau."

TELEPHONE EXCHANGES.

As the construction of telephones in Japan is now approaching completion, the following Ordinances will be of interest to the foreign public:—

ORDINANCE No. 7 OF THE DEPARTMENT OF COMMUNICATIONS.

REGULATIONS RELATING TO TELEPHONE EXCHANGES ARE HEREBY PRESCRIBED.

Dated the 19th day of the 4th month of the 23rd year of Meiji, (19th April, 1890).

Count GOTO SHOJIRO,

Minister of State for Communications.

REGULATIONS RELATING TO TELEPHONE EXCHANGES.

Art. I.—The Department of Communications will establish a Telephone Exchange Office and several call-offices in those cities or towns where they may be deemed necessary, and, by concentrating to such Exchange Office the telephone wires for use by the subscribers and also those of the call offices, or by erecting wires between any two places, will facilitate the exchange of telephonic communication.

Note.—At the request of subscribers, the telephone wires may, however, be extended beyond the city or town limits.

Art. II.—The telephone wires and apparatus shall be established, and be kept in good working order by the Department of Communications.

Note.—Any damage caused by the improper use of the same by subscribers, shall be repaired by the Department at the expense of such subscribers.

Art. III.—Subscribers shall be entitled to make the following communications:—

1. Direct communication between subscribers within or without the limits of a city or town throughout the day and night.

2. Direct communication with any persons at call-offices within or without the limits of a city or town at the hours fixed.

3. Direct communication with postal telegraph offices or telegraph offices to transmit or receive telegrams at the hours fixed.

Art. IV.—Any person shall be allowed to make at call offices the following communications at the hours fixed, such hours to be fixed and advertised by the Department of Communications:—

1. Direct communication with subscribers.

2. Direct communication with others at call-offices.

Art. V.—The time allowed for each of the following communications shall be 5 minutes:—

1. Direct communication between any two cities or towns.

2. Direct communication between any two persons at call-offices, and direct communication between subscribers and others at call-offices.

Art. VI.—Subscribers shall not be entitled to rent the apparatus to others nor shall they be allowed to use it for any but their own account.

Art. VII.—The Telephone Exchange Office shall from time to time dispatch inspectors to the premises of subscribers to inspect the working state of the apparatus.

Art. VIII.—Any damage discovered in the wires or apparatus by the subscribers shall at once be reported by them to the Telephone Exchange Office.

Art. IX.—The term of the first subscription shall be fixed at two years, commencing from the day on which the wires and apparatus are furnished for use by the subscribers, and that of the second subscription at one or more years, no subscription being allowed for a less period than one year.

Note.—In case the wires and apparatus be furnished during any of the following quarters of the year, as specified below, it shall be understood that one year shall extend from the day on which subscription was made, to the end of the same quarters of the following year.

1st quarter January to March.

2nd quarter April to June.

3rd quarter July to September.

4th quarter October to December.

Art. X.—Subscribers not desiring to renew their subscription shall give notice to that effect to the Telephone Exchange Office, three months previous to the expiration of the term. If such notice be not given, it shall be understood that it is desired to extend the subscription over another year.

Art. XI.—Subscribers shall pay the sums fixed by the Department of Communications for the use of the wires and of apparatus according to the following stipulation, except in case special arrangements for such payment be made:—

1. In current money, quarterly at the Exchange Office, viz., in January, April, July, and

October of each year, in accordance with the quarterly arrangement specified under Art. IX.

2. When the subscription begins during any quarter of the year, the charges for that quarter shall be paid at the Exchange Office pro rata, in current money, according to the number of days, within one week after the day on which the wires and apparatus are furnished.

Art. XII.—In case subscribers fail to pay the charges when due, their communication shall there after be suspended.

Art. XIII.—Subscribers having apparatus fixed beyond the limits of the city or town, or any one subscriber having two or more apparatus fixed in one and the same house or grounds in one and the same circuit shall be charged the following rates in addition to the charges specified under Art. XI:—

1. For fixing the apparatus beyond the limits of the city or town 3 yen annually for every 3 chō, or any portion thereof, from the city or town limits.
2. For fixing two or more apparatus 8 yen per annum for every apparatus excepting the first one.

Art. XIV.—Subscribers desiring to remove the wires or to alter the position of the apparatus fitted up for their use in the same house or grounds shall apply to the Exchange Office. The expenses necessary for such removal or alteration shall be borne by such subscribers (the cost of wires, poles and apparatus, etc., being excluded).

Note.—Any difference in the amount of charges caused by the removal of the wires shall be counted from the day on which the work of such removal is completed.

Art. XV.—Any person speaking at a call-office, or one subscriber speaking with another subscriber or with any other person at a call office, in another city or town, shall pay the charges fixed by the Department of Communications, in accordance with the following conditions:—

Note.—Subscribers speaking with any person at a call-office in the same city or town shall not be charged.

1. Any person speaking at a call-office shall pay the charges in postage stamps at the same office.
2. Subscribers shall pay the charges for each month by the 10th of the following month at the Exchange Office.

Art. XVI.—Subscribers speaking with a postal-telegraph office or telegraph office in order to transmit telegrams in accordance with Clause 3 under Art. III. shall pay the charges in postage-stamps for each month by the 10th of the following month at the same office.

Art. XVII.—In case any damage is caused to the wires or apparatus and communication is thereby interrupted during a period longer than three days, a refund shall be made to the subscribers for the number of days more than three during which the interruption continues.

Note.—If such damage is due to the improper use of apparatus by subscribers as provided under Art. II, no refund shall be made.

Art. XVIII.—Any person desirous of becoming a subscriber shall forward a written application in the following form:—

Note.—If it is desired to have the apparatus fixed in the house or grounds of a third person, the written approval of the owner of such house or ground must be attached to the application.

(FORM OF WRITTEN APPLICATION.)

To the Engineering Bureau of the Imperial Department of Communications.

1. The undersigned, do hereby express my desire to subscribe to the Telephone Exchange according to the Regulations relating to Telephone Exchanges. Place and number of apparatus required hereinafter mentioned.

(Applicant's Name) _____
(Date) _____ His legal residence, occupation, etc.

Place _____
Number of Apparatus _____

ORDINANCE No. 8 OF THE DEPARTMENT OF COMMUNICATIONS.

The rate of charges for the use of the wires and apparatus under Art. XI. of the Regulations relating to Telephone Exchanges, and of the charges for speaking at call-offices under Art. XV. of the same Regulations, are hereby fixed respectively at 40 yen per annum for each circuit and 5 sen for each communication not exceeding 5 minutes, in the city of Tokyo.

Dated the 19th day of the 4th month of the 23rd year of Meiji (19th April, 1890).

Count GOTO SHOJIRO,
Minister of State for Communi-
cations.

ORDINANCE No. 13 OF THE DEPARTMENT OF COMMUNICATIONS.

The rate to be charged for the use of the wires

and apparatus under Art. XI. of the Regulations relating to Telephone Exchanges is hereby fixed at 35 yen per annum for each circuit in the town of Yokohama.

The rate to be charged for conversation at call-offices in Yokohama under Art. XV. of the same Regulations is fixed at 5 sen for each communication not exceeding 5 minutes, exchanged within the limits of the Yokohama Exchange.

Dated the 24th day of the 6th month of the 23rd year of Meiji (24th June, 1890).

Count GOTO SHOJIRO,
Minister of State for Communi-
cations.

ORDINANCE No. 14 OF THE DEPARTMENT OF COMMUNICATIONS.

The rate to be charged for conversations between Tokyo and Yokohama under Art. XV. of the Regulations relating to Telephone Exchanges is hereby fixed at 15 sen for each communication not exceeding 5 minutes.

This amount shall be paid by the person who makes the demand for the conversation.

Dated the 24th day of the 6th month of the 23rd year of Meiji (24th June, 1890).

Count GOTO SHOJIRO,
Minister of State for Communications.

CORRESPONDENCE.

THE PRESENT STATE OF UNITARIANISM IN NEW ENGLAND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mankind, it seems to me, is so steeped in ignorance and stupidity that anybody can get some hearers and followers on any point that he pleases. Why, in this last decade of the 19th century a crack and quack physician invented the "elixir of life" and a large crowd of credulous simpletons beheld him who let impure blood be injected into them got poisoned and died. The last number of the *New York Independent* speaks of a new Christ in the West who has found a good many followers with whom he has retired to some secluded place and is living in a state of moral filth and sewerage. This state of things, however, is more frequent in the religious world than in any other department of human life. Hitherto we have had the "Oxford movement" the "Unitarian movement," the "Broad Church movement," and before this much abused century rolls into the past God knows how many more "movements" and "isms" will be showered upon a suffering humanity.

What I say, or intend to say, is fully illustrated by the rise and decline of Unitarianism in New England. When Doctor Channing preached his once famous but now altogether forgotten sermon on Unitarian Christianity, and the final disruption was imminent, not only individuals but even Churches not belonging to Channing's denomination left their fold and followed him. Everybody thought that the kingdom of God was being gradually realized and consummated in Channingism. I have often asked myself why this should be the case. Did these men not know that Unitarianism in one form or other had agitated the peace of the Christian Church from Arius down to Socinus and so on? Evidently Channing had preached nothing new on the subject; and anybody who knows something about Christian theology and Church history must have learned that the savant of Boston was far inferior in mental capacity to his two afore-mentioned prototypes.

Of course I don't say this only concerning Unitarianism, because there are other isms which cannot be explained unless it be by the test of the same canon. Take the case of Mormonism. There is every cause to believe that Joseph Smith was a thick-headed and know-nothing charlatan, but to-day his religion is more flourishing, and exercises more influence in shaping the future of the country than the religion of Dr. Channing. There is not the slightest doubt that just as the author of the former culture was a bad man in the full sense of the word, the author of the latter was a good man; but to-day while Mormonism is making rapid progress in the States, Unitarianism is sinking with Quakerism and other similar insignificant sects in the "Limbo Infantum" of inactivity.

It cannot be denied that Unitarianism has many attractive points. It appeals to reason in opposition to faith. It reduces religious duties to their lowest minimum. Hence such a religion—if it can be called religion—will be always attractive to those who have not plunged themselves

deeply into the spirit of humanity, those who have a vague idea of a supreme power which does not trouble itself about the affairs of this world. To such an individual Unitarianism will always be attractive. But on the other hand it will, *per se*, lack that religious furor which is the vitality and the motive power of a visible community whose aim is to reach things transcendental which cannot be apprehended by physical means.

I think nobody possessing an honest conscience will deny the statement that Unitarianism, which came out of Dr. Channing's movement, is rapidly decaying. This statement is not originated by the enemies of the sect, but is gathered from data supplied to the annual religious census taken by the *New York Independent*, a very honest and independent paper. Then the question comes up: why should the religion of Channing based upon an apparent and attractive rationalism decay, and that of Joseph Smith based upon fraud progress? Unless it be that Unitarianism at first has undermined the foundation of its fabric and then has begun building enormous superstructures upon it, while Mormonism has left the foundation untouched (the Mormons are orthodox in regard to the Trinity and the Incarnation) and built some contemptible huts over it. To this I would add:—

1.—As I have said before, religion is like a living organism, the slightest cut or amputation is liable to bleed the body to death. The Reformation of Luther is the greatest monument which humanity has achieved. It has no parallel in history hitherto and will in all probability have none hereafter. Still—I hope nobody will be offended by what I am going to say—still its results upon the whole body have not been very beneficial. It has not reformed what it intended to reform, viz., the Church; and its usefulness has been almost counterbalanced by the present divided state of Protestantism. One more illustration. Perhaps no other religious movement in the 19th century has been so ridiculed in the Protestant world as the Tractarian movement under Keble and Pusey. It would be worthy of the contempt showered upon it if the movement had taken the shape of a new sect; but the wisdom of its leaders forbade it, and to-day its spirit has pervaded and permeated the whole body of the Anglican Church. It has conquered those who thought they had conquered it. It has infused a new life into the whole body! I believe if Dr. Channing—or others who have hitherto intended in the future to form new sects—had remained in his own communion and developed his doctrines and infused his spirit it would be more profitable in every respect. Channing was a Trinitarian in his spirit, but a Unitarian in his mathematics.

2.—The causes of this decay, to a certain degree, are to be found in the split in Unitarianism itself. From the beginning the movement took the shape of a theological discussion rather than a moral and religious awakening like the Reformation, or the 19th Century Methodism. Therefore the development of Unitarianism resembles a great deal the diminution of Hegelianism into the right and left as represented by Meineke and Strauss respectively: the former gravitating towards orthodoxy, the latter falling into a sort of mechanical monism. Soon after Channing had disappeared his school was divided into two camps, the right represented by Dr. Clark, author of the "Ten great religions" and Dr. Hale, author of the "Ten times one," which in the Unitarian Arithmetic have proved to be equal to one! And the left was represented by the famous Dr. Theodore Parker. The former camp has been unable to satisfy the religious instinct of those Unitarians who possess such a feeling; and the latter have found Parkerism not radical enough to their taste; hence to-day the hall from the platform of which Parker harangued his anathemas against Christianity, and predicted its immediate downfall, has been abandoned to the atheistic howlers. Hence to-day Dr. Channing's camp looks to me like the vessel which came down from heaven to St. Peter full of every clean and unclean animal.

3.—I think from the beginning the influence of Channingism upon the moral and intellectual life of New England has been much exaggerated. Who can for a minute contrast it as a moral force in the States with Methodism or Congregationalism? As a religious body, under whatever form of creed, it has not been a great power for the eternal palengenesis of humanity. I know it was very active in the slavery struggle, but it should not be overlooked that slavery took entirely a local political aspect, and if Unitarianism was a product of the South undoubtedly it would be found on the other side. As an intellectual movement it has produced some of the best American authors and men of genius, like Emerson, Holmes, Lowell, and some others, but these names, it should

not be forgotten, do not belong to the sect as its guides since their professions are entirely in another direction. As regards the rest, I sympathize with the French savant who after reading a few pages of the "A history of transcendentalism in New England," shut it and said, "Such stuff can either come out of hell or of Boston!" I know well what encomiums have been showered upon "La religion de Mr. Channing" by M. Renan. But anybody who has a little knowledge of Mr. Renan's trend of mind knows well that whenever the author of the "Vie de Jesus" intends to praise an object, he ramples down all honesty, truth, and logic under his feet. He will use almost the same expressions whether he is speaking of Moses, Jesus, or of Mohammed; whether of Christianity, of Atheism, or of feticism. A man who does not believe in God nor in His Son, but will say—"Le jour où il (Jesus) prononça cette parole:—'The hour cometh, and now it is, when true worshippers shall worship the father in spirit and in truth'—il fut vraiment fils de Dieu," &c., shows that Renan is a very dangerous guide in a rocky sea during a great tempest.

What will be the future of Unitarianism in Japan only the future itself can unfold. Thanks to Mr. Knapp, the religious duties have not only been reduced to their last minimum, but have been annihilated altogether. Evidently it is an abuse of language to call Mr. Knapp's ideas Unitarianism, unless the title be taken like the "x" in algebraic formulae to mean anything from Buddhism down to Atheism. I really do not see any reason why all Buddhists should not accept Mr. Knapp as another reincarnation of the original Buddha, and recognize him at once as their leader to wage their battles against Christianity.

Mr. Knapp, as every body knows, has brought the "Gospel of Character" and the "Religion of Sympathy" into Japan. Hitherto I have watched him very closely to see some symptoms and fruits of his ideas, but I am sorry to say until the present day I have not seen any. A man who claims to be the Apostle of such a religion evidently will manifest it in every action that he performs and every word that he utters. Has Mr. Knapp built a hospital, an orphanage? If he has, he has a right to claim what he claims for his religion. Has he or have his satellites visited the poor and fed them, the naked and clothed them, the sick and comfortless and comforted them? If they have, evidently they are right in what they say, that the tree is known by its fruits; it is an infallible criterion. Knappism also will be known by its fruits.

Hitherto, so far as I know, it has not shown such a tendency; the leader and his associates have confessed philanthropy by their words and denied it by their actions. Their new environments here in Japan do not give us any hope or expectation of such a grand spiritual transformation. Of course I would be the last man to charge Mr. Knapp with such stupidity as to think that the drinking of wine with Count Kuroda and Dr. Kato is an act of high philanthropy.

The Gospel of Character and the Religion of Sympathy are very high sounding words; but unless they be consummated in tangible actions, they will turn their sublime position into ridiculous. I am sorry to say that even now when I hear of the "Gospel of Character" I am reminded of those Oriental pseudo magicians who carry big and pretentious clients upon their backs, and as they reach a public rendezvous put the chests upon the ground and work themselves up into the highest pitch of excitement, and run to and fro and shout at the top of their voices "Men! women! children! come! come! see wonders! miracles!" As soon as a large concourse of people have gathered they begin begging, and when this finishes they perform a few commonplace things and disappear at the first opportunity. I think I know a little about human nature, because I possess a little bit of it myself. I know how often those psychological messages and appearances, which have no existence in the world of reality, into what props they are turned; what gigantic hopes we build upon them; like those Persian tramps who go to hot baths early in the morning and swallow a pennyworth of hashish and dream the whole day that they are kings, possessing magnificent palaces and beautiful queens. I know well what transcendent future we often portray to ourselves, in which we find ourselves great reformers in the moral, political, or other world's surrounding humanity. To disturb rudely such a happy dreamer is cruel. Perhaps the reader will think that I am unjust to Mr. Knapp. God knows I am not. I would have written nothing against him, his mission, or his theology, if he had himself followed his duties as a labourer for the amelioration, both physical and spiritual, of the condition of his fellow men. I think God has allowed such an enormous amount of sin to exist in this world of ours in order that the exercise of virtue should

be developed perfectly in every human being. If Mr. Knapp had followed such a path I would not have anything against him. But since his coming, it seems to me he has done nothing but write and speak against those who, in spite of all their weaknesses and imperfections, have done far more than he has done or will ever do in any kind of good works.

I am pretty well acquainted with the history of all religious and moral revolutions from Moses and Sociates down to Rammahum Ray and Rabbinoitch; I do not know in all this wonderful catena of great men a single person who has exaggerated the value of his mission, and his own personal powers and influence like Mr. Knapp, with the exception of the late Soudanese Mahdi.

Mr. Knapp has again and again asserted that his little finger is thicker than all the missionaries' loins put together. Of course he has a perfect right to think any thing he pleases about the thickness of his little finger; but for my part, I not only think that his little finger is not thicker than our loins, but I think he has got no little finger at all.

A few words more about the present "crisis" in the Churches of Japan, and I am done. That there is a change in the churches cannot be denied; but its causes must be sought in the physico-psychological idiosyncrasies of the race rather than in other places. This is evidently not a "crisis," because uniformly a crisis is caused by some activity, but in this case there is absolute inactivity. The Churches of Japan in their present condition are like the journey of Christian in the "Pilgrim's Progress" while passing through the land called, if I recollect rightly, Euclyptus; the effect of whose atmosphere upon foreigners was to produce stupor and drowsiness. Whether in passing through this land the churches will be lulled to sleep and final death I shall leave to the future. But the symptoms are encouraging in the fact that the foremost leaders among the Japanese Christians are fully alive to the gravity of the situation.

I cannot agree with those who ascribe this situation to the divisions of the sects represented in the field or to the dogmas of the Christian religion. Everybody knows that at present there is a great reaction against studying English and other European languages; will Mr. Kato trace it to the doctrine of the Trinity? And most of the Japanese ladies are giving up foreign dress; can the cause of the reaction and change be ascribed to the dogma of the incarnation.

The spiritual metamorphosis of a race is not the process of a few days or of a few years, but that of ages, and during these ages the wheels of the machinery will produce many revolutions and counter-revolutions until the new creature comes out in an infinitely higher rank. When the process of the transformation is short, the durability of the new creation also will be short. Japan at present is in the throes of birth to a new and higher spiritual existence; blessed is the man who helps it in such a moment.

Thanking you deeply for the kindness shown to me always by the *Japan Mail*.

I remain, very truly yours,

ISAAC DOOMAN,

Nara Eiwa Gakko.

October 23rd, 1890.
[We doubt whether Mr. Doman is correct in his conclusion that there is a great reaction in Japan at present against studying English and other languages. No symptoms of such a reaction have made themselves apparent in the capital. We trust that our correspondent will give some fuller information on this interesting point.—Ed. J.M.]

THE LATE PERFORMANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Before leaving Japan I wish to express publicly my sincere thanks to the ladies and gentlemen who so kindly came forward and did all in their power to endeavour to render successful the two performances of "Our Italian Cousin." The earnestness with which they devoted much time and trouble to the study of their parts, and the pains which they took to attain perfection therein, I can only acknowledge by returning them my most heartfelt thanks. To Mr. W. G. Bayne I would wish particularly to record my appreciation of the uniform kindness which he has extended to me during my stay in Yokohama, and the energetic manner in which he has made my interests his own. While regretting that the public have not more unanimously responded to the efforts made by the ladies and gentlemen who so ably assisted me, I cannot lose this opportunity of thanking the few faithful friends and compatriots who gave me such zealous proofs of their support and approval.

I am, etc.,

E. MAJERONI.

Yokohama, October 27th, 1890.

THE MISSIONARY MEMORIAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You published in the *Japan Mail* a few days ago the Missionary Memorial regarding Treaty Revision. My presence here for a month, owing to illness, is the reason why my signature was not attached to the Memorial. In order that my position on that matter may not be misunderstood by my friends and others, I respectfully request that you publish my name as endorsing said Memorial. Trusting that you can favour me to this extent, I remain

J. W. McCOLLUM, S.B.C., Kobe.

ROBERT A. THOMSON, A.B.M.U., Kobe.

Very respectfully, FRED. C. KLEIN.

Methodist Protestant Mission, Nagoya.

Kyoto Hotel, Kyoto, October 25th, 1890.

THE IMPERIAL VISIT TO MITO.

The above caption represents, perhaps, the greatest event in the history of Mito. It is the first time in all its history that it has been favoured by a visit from an Emperor. Nor is it at all improper that it should be thus favoured; for this city and province have always been strongly Imperialistic in sentiment. Although Iyeyasu made one of his own sons Prince of Mito, and established there one of the fields with which he engirdled and protected Yedo, it was by Iyeyasu's own grandson, Mitsukuni (Gikō), the second prince, that a strong feeling of hostility to the Shōgunate and of loyalty to the Emperor was inspired. And to the vigorous policy of Noriaki (Rekkō) in the present century was due in no small degree the successful opposition which culminated in the Revolution of 1868. In coming to Mito, therefore, their Imperial Majesties visit one of the most intensely loyal cities in the Empire.

It is needless to say that the announcement of the proposed visit of the Emperor and the Empress produced great excitement in this place, and became at once the topic of conversation, to the exclusion of the much-discussed subject of the weather! As soon, of course, as it became a positive matter, it was necessary to begin preparations to receive Their Imperial Majesties in a suitable manner. A special session of the City Assembly was convened. Committees of citizens were appointed in each ward (*ku*) to look after the matter of public decoration. Subscription papers were circulated in all parts to raise extra sums for the extra expenses. Coolies and convicts were put at work, with cart-loads of stones to repair the roads, especially those over which Their Majesties were expected to pass. Private fences, hedges, haws, houses, etc., were put into repair; and bustle reigned supreme. Moreover, I ought to speak of the topic of dress, of *kimono*, *obi*, *hakama*, *haori*, *tabi*, *geta*, *kanzashi*; of frock coat, silk hat, gloves, etc.; but, as these are personal matters, they came under observation before the great day only from the fact that everybody was exceedingly busy!

By Saturday, October 25th, the public decorations began to be set out. On each side of the streets was a row of pine posts, or small bamboos, or ever-green draped posts. These were connected with cords, from which hung lanterns [white and red (*hinomaru*) or all red], straw wisp and paper streamers, as in the decorations of the New Year. At two diagonal corners of street crossings were little Mount Fuji's of sand with a little salt sprinkled on the summits—these are emblems of purity. In many places were arches, more or less elaborate and beautiful; and in other places long strings of lanterns hung from three or four sides of a high pole. The railway station was adorned with signal flags, green, red, and white, hung in pairs with colours alternating. The station yard was adorned with hundreds of lanterns, and with a magnificent evergreen *torii*, beneath which the Imperial procession was to pass. Out in Lake Soma also a long line of lanterns was set up. Thus all parts of the city presented a gay and loyal aspect.

Sunday, October 26th, was a bright day, perhaps, even a little too warm. Early in the morning the crowds began to flock in from the country, and the city people began to flock out on the streets; so that by noon every road along which the Imperial procession was to pass from the station, was filled as much as was allowable. I asked some friends how many people there were all together, and received answers ranging from "50,000" to "100,000." But as the population of Mito is only 20,000, the true total was probably not much over the lower figure given above. The police, of course, were kept very busy preserving the lines, but did not have much trouble with turbulence; for a Japanese crowd is proverbially good-natured.

At the station special places were allotted respectively to Princes, officers of the Army and Navy, officials, members of the Diet, members of provincial, municipal, town or village assemblies, etc., according to rank. From about noon these persons began to arrive at the station and take their places. Princes Arisugawa and Kitashirakawa had arrived a day or so before; and on the regular noon train a number of Princesses came. All these ladies were in European dress, and made a fine appearance.

At about two o'clock the special Imperial train arrived and was welcomed with fire-works. The Emperor, and afterwards the Empress, passed from the train through the station on matting, and seated themselves in the carriages. The band in the meantime was playing "*Kimi-ga-yo*." The procession then advanced up the hill; at the post-office turned to the right twice, and then proceeded toward the old castle grounds near by. Some of the people essayed shouting or singing, but were promptly suppressed by the police; so that in the main their Majesties were welcomed by a silent, but none the less loyal, throng. Such a custom may be dignified, but seems tame as compared with the even noisy enthusiasm of the European or American peoples.

In the castle grounds were drawn up, first the Normal School pupils, then the Middle School pupils, then the pupils of various Elementary Schools, and last of all, those of the Kindergarten just before the front gate of the Normal School. The pupils and teachers of the Normal and the High Schools greeted their Imperial Majesties, either by the military salute with guns, or by removing their hats and bowing; while the pupils of the lower institutions greeted them by singing "*Kimi-ga-yo*." It is estimated that about 3,000 pupils were in line.

The Imperial party are entertained in the commodious, modern, foreign style buildings of the Normal School in the old castle. From either an historical or a practical point of view, there could be no more appropriate or comfortable location. The buildings are well adapted to accommodate a large company; and the spot is not only beautiful, but is hallowed by many historical associations with the name of Imperialism.

This morning the Emperor and the Empress left the *Ansaisho* (temporary lodging-place) at eight o'clock, and proceeded by special train to Shishido. From there they rode in carriages about three miles to Iwama-hara, where the Imperial Bodyguards are stationed for their autumn drill. Your correspondent tried yesterday, but in vain, to ascertain the programme for to-day, and did not learn it until he received the *Ibaraki Daily News* this morning. It was then, unfortunately, too late to reach the field in time for the sham-fight of the morning. It is stated, however, that 16,000 or 17,000 troops are engaged in the manoeuvres. The plan of campaign was as follows:—The troops were to be divided into a northern, or foreign army, and a southern, or Japanese army. The former, having captured Hakodate and Muroan, had advanced part of its force toward Niigata, and had sent the fleet to attack Choshi (in Shimosha) and Mito. The southern, or Japanese army, had sent one division to protect Niigata, and had kept the remainder in this vicinity to protect Mito. The Imperial party reached Mito on the return trip at two o'clock, and were again greeted by an immense throng. To-morrow they go again to the field where the Bodyguards are stationed, and hold the formal review. On their return to Mito, the Emperor will visit the *Kencho* (Prefectural Offices), and the Empress will visit the Tokiwa Park. Their Majesties will leave here for Tokyo on Wednesday morning at 8 o'clock.

CLEM.

Mito, October 27th, 1890.

II.

In my former letter and in a telegram, I referred to the matter of a decision concerning the victory in the sham battles. I must now explain more particularly the meaning of the words "victor" or "victory." No general decision concerning the ultimate issue of the conflict was given. Judgment was passed upon this movement and that movement, this retreat and that advance, etc.; and victory may be said to have rested with one army, in the sense that its movements were generally commended.

In regard to the number of troops engaged I have not been able to ascertain anything with certainty. In one telegram I stated the number at 17,000; on the battle-field I was informed personally by an officer that there were about 15,000; but the *Ibaraki Daily News* puts the number at considerably less.

I was also misinformed about the presence here of Prince Kujo and Count Oyama, neither of whom came; and I omitted the name of Prince

Tokugawa Iyesato, the heir of the last Shogun, who was conspicuous in the old feudal dress of the nobles.

On Monday, October 27th, His Royal Highness Prince Kitashirakawa made a visit to Ishioka; while Her Royal Highness, Princess Kitashirakawa and Madame Hanabusa, took a trip to Orai on the sea-shore.

Their Imperial Majesties on the 26th and 27th had the pleasure of seeing many ancient books, pictures, and other relics. Some live salmon and "sea-eels" (*awabi*) were brought in a little boat, and exhibited to the Emperor, who purchased them. It seems, that, as salmon do not live long after being taken out of the water, a live salmon is quite a rare sight in this city.

Monday evening, October 27th, a large party was given at the Kōdō Kwan to the Princes and other notables.

The visitors to Mito have, of course, been numerous. In a former letter I gave estimates varying from 30,000 to 100,000; and in this morning's paper I found an estimate of about 40,000. The number of guests stopping at the inns is, of course, officially known; but besides those a much larger number stayed with friends or relatives; or, living near by returned home at night, to come again the next morning; while many slept in the parks or fields.

The weather has been favourable throughout the whole period. One evening it rained a little, but not enough to do serious damage. The days have been bright and warm, even a little hot; while the evenings have been mild, and bright with lantern light and moonlight; in fact, last night it was full moon.

Yesterday (Tuesday) may, perhaps, be called the great day. Extra trains were run, in fact, have been run every day, but even these could not accommodate the immense crowds. The *Mail* representative left on the first train in company with a representative of the *Boston Transcript*, and reached Shishido station about 7.30 o'clock. As it was early and cool, we walked to Iwama, about three miles distant, and then rode on to the Nami plain, about two miles farther. In a short time the sham battle commenced; and before long the Imperial party arrived on the scene of action. The *Mail* had been honoured by Governor Yasuda in having its representative ranked as a *Kunshi*; so that, by means of the yellow flannel badge tied around the right arm, we were enabled to pass freely about, and into the very midst of the battle, even to the spot where the Imperial party were viewing the conflict.

As I am totally unacquainted with military science or phraseology, I shall make no attempt to explain the various manoeuvres. I was informed that the contest was well carried on and showed a good knowledge of tactics. Even to one wholly unacquainted with such things, and viewing them for the first time, the manoeuvres were extremely interesting. The battle began about 9.30 a.m. and continued till noon.

After a rest and an opportunity to obtain refreshments, the troops proceeded to the parade-ground. Here at about 2 o'clock the officers of the Body-Guards were called before the Emperor to hear the report of the affair, and the criticisms of the movements. The Imperial party, led by His Majesty, and accompanied by the band, proceeded down the line, and returned to the grand stand. Then the troops, led by the band, marched in review past the Imperial party; and consumed about 45 minutes in that operation. After this the Imperial party went to Shishido, and returned to Mito by their special train. A large number of the spectators also reached Shishido, either by walking or riding, in time to return by the regular train leaving a few minutes later.

Upon their return to Mito the Imperial party divided; the Emperor visited the *Kencho*, and the Empress made a trip to the two parks of Mito.

This morning about 7 o'clock the various schools again took position in the castle grounds to greet their Majesties as they left. It was exactly 8 o'clock by the city bell, when the Imperial party began to pass out the front entrance of the Normal School, and the little children of the Kindergarten started up "*Kimi-ga-yo*." A few minutes later they were at the station, and soon left Mito. Long before this, we suppose, they have safely reached Tokyo.

After this departure the Normal School was thrown open to special persons; and an opportunity was given to view the *ansaisho*. But only the matting, screens, and chairs were left to reflect the Imperial magnificence.

The Imperial Visit to Mito is thus a thing of the past. The decorations are being taken down; the crowds are disappearing; and everything will resume its former state. But Mito, always loyal to the Emperor, will be more loyal than ever.

Mito, October 29th, 1890.

IMPERIAL UNIVERSITY SPORTS.

The annual sports of the Imperial University took place on Saturday in the University grounds. Fine weather favoured the event, and though the number of entries was rather below those of former years, the various items were as interesting and as warmly contested as ever. The programme began at one in the afternoon, and being carried out with promptitude and punctuality was finished before five, but the process of calling out the names of the winners (which ceremony was gracefully performed by Mrs. Divers) occupied a long time, so that darkness had set in ere the visitors left the scene. Perhaps the most noticeable competition was the pole jumping, in which Ishikawa easily cleared 7 ft. 9 in. Three members of the Yokohama Cricket and Athletic Club were present and ran in a race set apart for members of the Club, Eytan taking the lead and winning easily. The judges were Professors Kikuchi, Knott, and Yamaguchi. The Imperial Guards Band was present and played at intervals. The following is a list of the events:—

100 YARDS RACE.

First Heat.

T. Kato	1	Hayashi	3
Tanabe	2		

Time, 11.2 sec.

Second Heat.

Matsubara	1	Saito	3
Noda	2		

Time, 11.6 sec.

Final Heat.

Tanabe	1	Saito	3
T. Kato	2	Noda	4

Time, 10.8 sec.

THROWING THE CRICKET BALL.

Samushima, 77 yds. 2 ft. 10 in.	1
Momina, 75 yds. 1 ft. 3 in.	2
Shishido, 75 yds. 1 ft.	3
Ishikawa, 68 yds. 6 in.	4
Matsubara, 64 yds. 2 ft. 1 in.	5

LONG JUMP.

Kinoshita, 16 ft. 1 in.	1	Matsui, 14 ft. 1 in.	4
N. Kato, 16 ft.	2	T. Kato, 14 ft.	5
Kawai, 14 ft. 6 in.	3		

220 YARDS RACE.

First Heat.

Tanabe	1	Nozoye	3
Hayashi	2		

Time, 28.6 secs.

Second Heat.

Saito	1	Sasada	3
Narita	2	Ijima	4

Time, 28.8 secs.

Final Heat.

Hayashi & Nozoye	1	Tanabe	3
	2		

Time, 29.4 secs.

PUTTING THE SHOT.

F. Sato, 31 ft. 8 in.	1	Matsubara, 30 ft. 4 in.	3
T. Momma, 30 ft. 4 in.	2	S. Ota, 29 ft. 11 in.	4

HIGH JUMP.

Kinoshita, 4 ft. 9 in.	1	K. Tsutsumi, 4 ft. 7 in.	3
Kakehi, 4 ft. 8 in.	2	Ishikawa, 4 ft. 6 in.	4

440 YARDS.

Naruta and Tanabe, tie	1	Yamashita	4
Edakuni	3		

Time, 6.4 secs.

THROWING THE HAMMER.

Matsubara, 78 ft. 8 in.	1	Ishikawa, 77 ft. 3 in.	3
S. Ota, 78 ft. 4 in.	2		

MOMBUSHO SCHOOLS RACE—440 YARDS.

Takada	1	Iki	3
Fukushima	2		

Time, 6.6 secs.

POLE JUMP.

T. Ishikawa, 7 ft. 9 in.	1	S. Ichioke, 7 ft. 5 in.	3
Oshima, 7 ft. 8 in.	2		

SPECIAL MEMBERS' RACE—220 YARDS.

Matsuzaki	1	Tamba	3
Sakurai	2		

Time, 31.8 secs.

ONE LEGGED RACE.—(50 Yards.)

Ota	1	Momina	3
Nakaya	2		

Time, 10.6 secs.

YOKOHAMA ATHLETIC AND CRICKET CLUB MEMBERS RACE.—(Once Round 365 Yards.)

J. Eytan	1		
	2		

Time, 47.6 secs.

THREE LEGGED RACE.

Kinoshita	1	Kato	2
Kawa	2	Kuroiwa	3

Time, 31.8 secs.

880 YARDS RACE.

Shibaru	1	Noda	3
Edakuni	2	Narita	4

Time, 2 min. 34.4 secs.

GAKUSHI RACE—(220 Yards).

Ushioda.....	1	Saga	3
Kubo	2		

Time, 30.6 secs.

OBSTACLE RACE.

First Heat.

Kato and Iwaoka .. tie	Kawai	4
Nakaya.....	3	

Time, 1m. 18.3 secs.

Second Heat.

Tsutsuni	1	Ota	3
Matsubara	2	Ichioika	4

Time, 1m. 14.8 secs.

CONSOLATION RACE—(Once Round).

Hiri	1	Fujise.....	3
Iisuta	2	Morita	4

Time, 57.4 secs.

A VISIT TO A STRANGE PEOPLE.

In one of Kotzebue's voyages it is related that when the great navigator was coasting along the island of Saghalien he used to make frequent incursions into the interior for the purpose of procuring supplies for his ship and for exploring the country. During one of these inland expeditions he came across a singular race of people, differing in all respects from the surrounding natives. They were small in stature, no more than three feet in height, with fair hair and blue eyes, and he goes on to describe their habits and mode of life. As nearly all the old navigators were fond of drawing somewhat on their imagination in describing anything out of the common, very little attention has probably been paid to the description of this pigmy race. It was my good fortune some years ago to be able to verify the story of the old Russian to some extent when I was on board a schooner trading between Vladivostok and Chirikov Bay. I had heard the people on shore in Chirikov, especially the Ainu, on several occasions speak about a strange people living in a valley among the mountains and holding no intercourse with any outsiders, and pronounced by the Ainu to be "uncanny." This awakened my curiosity to a high degree, and, remembering Kotzebue's story, I determined to penetrate into the stronghold of this strange race, if possible, and ascertain for myself the truth of their existence. I had no opportunity to do anything until September, as our stay at Chirikov was always too short for such an expedition, while in the latter part of that month we were assured of detention for a week at least. So my chance came. I had at first great difficulty in procuring a guide, as all the Ainu were very shy about going towards these particular mountains, but I finally secured a young fellow from the opposite side of the island, who could not withstand the offer of a bright red shirt and a red blanket. He promised to take me as far as the top of the range overlooking the valley, and there wait for my return, of which he evidently had some doubts. The distance was not far, but the entire absence of roads made the travelling a long and serious undertaking. I brought with me a week's provisions, which were carried by the Aino in addition to his own. My rifle, an old and tried companion in many a former expedition, I carried, besides a Smith and Wesson's revolver. I took a few old knives and trinkets, picked up on board or in the store on shore to distribute as presents among the strange people to secure their goodwill. It was on a Tuesday morning when we left the settlement. I had kept my projected trip, quiet, but it leaked out somehow, as quite a crowd assembled to see me off, the Ainu ominously shaking their heads at my foolhardiness. My guide took almost a straight course through bushes and brambles, fording streams, and climbing steep hills; and I had to moderate his pace after a while, as at the rate he was going I would have soon been exhausted. We now kept on at a reduced speed and with more frequent halts, but still we made good progress and at nightfall were at the foot of the last mountain range, where I concluded to remain for the night. My guide took me to an old tumbledown grass hut, formerly occupied by Ainu, and where I staked my fire and boiled my coffee. He then collected a quantity of dry grass and herbs, which made a soft and fragrant bed. Next morning we were up at daylight, and found the mountain in front of us concealed in masses of fleecy clouds, which dispersed as the day advanced and the sun rose. Its ascent was more difficult than that of any we had encountered the previous day, and my guide seemed to be uncertain about the right direction, or else the proximity of the "uncanny" people had thrown his ideas into confusion, for we had often to retrace our steps after coming in front of some precipice we found it impossible to scale. At length the topmost ridge was reached,

and before us stretched a deep undulating valley, extending for miles to the northward, and watered by several small streams that twisted and coiled about like snakes among the green grass and trees, and surrounded on all sides by ramparts of well-wooded hills. My guide hinted now that his services were no longer required, as he had brought me to the place agreed upon, and he did not wish to stay on the mountain top. I thereupon dismissed him, and, telling him to wait for me at the hut where we camped the previous night, in a few minutes he was out of sight. I had determined to reach the top of the range before stopping to lunch, which I now took in grand solitude before I started on the descent. Going a short distance along the summit of the ridge I soon struck a barely perceptible path, made either by man or beast, and this took me to the foot of the mountain, and continued along the bank of a small brook winding through the verdant carpet, dotted with low bushes covered with red berries. So far, I had seen no sign of anything human, but, coming suddenly round a dense thicket of tall trees, two fields separated by a well trodden path were right at my feet. The farther I advanced along this path the more conspicuous became the proofs that I was approaching the habitations of the natives. Rude agricultural implements were lying about, and several baskets made of twigs were in sight. The crop, which had already been gathered, consisted of beans apparently, as I detected some of these dropped on the path in divers places. Turning round to the right I perceived a pair of eyes watching my movements over a low hedge. They were quickly withdrawn immediately I looked in that direction, and I then heard the clatter of shod feet running away. I stepped across the field, and, finding a narrow gap in the hedge, squeezed myself through. A tolerably good path followed the hedge on this side, and led, as I conjectured, to the native village. I knew that the moment was now drawing near which would decide whether the natives would meet me as friend or foe; and, grasping my rifle firmly in my hand, I kept on my way, but—tell it not in Gath—with a lonely beating heart. I was not long kept in suspense. Hearing many voices ahead, I stopped, and in a few minutes a great concourse of people came in view. My fears of being received by hostile hordes vanished at once, and I almost blushed with shame as I gently transferred my rifle to my shoulder. The natives as they thronged the road in front of me waved green branches of trees, and sang or rather chanted in low tones what was apparently a psalm of welcome. They greeted me with oriental salutations by putting their hands to their foreheads as I drew nearer. Young and old, men and women, came out to receive me, and their faces were lit up with joy as they crowded around me. Any one I happened to look directly at instantly bowed his head with humility and glanced at me with a deprecating smile. They invited me with friendly gestures to enter their village, and I was conveyed to the largest house. A couch of dried skins was pointed out to me to rest upon, and a large wooden beaker of milk was handed to me for refreshment. A tub of warm water was also brought to me, and a couple of damsels hastened to divest me of boots and stockings, and carefully wash my feet, some of the more ancient dames superintending the operation.

The people were not exactly pigmies, but were shorter and slither than the Ainu, averaging, I should say, about 5 feet. Their complexion was lighter, and several had brown hair and gray or blue eyes. The Ainu are a heavily bearded race, but these people had generally smooth, broad faces, not perhaps handsome, but mild and inoffensive in expression. The women were smaller and slither than the men, and many of them were almost white. I saw but very few children among them, which is probably due to continued intermarriage. Their clothing consisted of tightly fitting garments, made of some coarse native material and the skins of animals; the women and men being dressed almost alike. The men had their hair cut short across the forehead and tight round, but the women wore the hair long, twisted in a knot, and fastened at the back of the head with large horn pins. The houses were low and built of stones and thatched with grass, and each had a wide porch in front; the dwellings contained only one room, which constituted sleeping room for the whole family, and kitchen, with a hole in the roof for the smoke, like the Ainu. Rude wooden platforms were ranged round the walls, seats by day and couches at night. All their cooking vessels were made of a brown, unglazed earthenware, of which material, beside wood and basket work, all their other household utensils were also made. After my feet had been washed I lit a cigar, and offered another to a venerable looking old man who seemed to be the patriarch of the crowd; he lit it, took

a draw or two, and then passed it, with a wary face, to another man who did the same, and so on, till it was passed through the crowd and then returned to me. Evidently tobacco did not please them. I now made signs that I desired to have a look around the village, when they all jumped up with alacrity and offered their services. Before I left the house I took the cartridges out of both rifle and revolver, to prevent an accident, as they were continually fingering them. My clothing also excited their curiosity; but if I showed the least symptom of impatience they immediately desisted from touching my clothes. They were, indeed, the most harmless people I ever came across. Their houses were all of the same build and internal arrangement; the village was built on both sides of a narrow creek spanned by three primitive bridges. Many of the houses were unoccupied and in ruins, a sure sign that the population was decreasing and that the people were gradually becoming extinct. On the outskirts of the village I perceived a larger building surrounded by a high hedge. I soon saw that they objected to my entering it, and I refrained from inquiring. The only trouble I had was that I could not speak to them; the Russian and Aino words that I knew were not understood, so all our communications were made by signs, a very unsatisfactory method of obtaining information. They spoke a language in which many words sounded familiar to me, but they pronounced them with such rapidity that I could make nothing of it. About their customs, religion, and government I could find out nothing.

I arrived on the afternoon of Wednesday, and during the next day I paid visits from house to house and was well entertained everywhere. Dried venison, broiled trout, eggs, beans, and several sorts of sweet berries was the kind of food generally set before me, and as the people seemed to feel hurt when I refused to partake of any, I consequently consumed an unusual quantity. I had seen all there was to see, and I had learned all I could learn about them, so, after having distributed the trinkets among them, I started on my return on Friday morning. The whole population, to the number of 59, as I counted them, followed me to the foot of the mountain, singing a plaintive dirge, and, after having pointed out the path to me, they prostrated themselves as I ascended. I wanted a couple of them to accompany me up the mountain, but to this request they gave a decided refusal. It took me longer of course to climb up than to come down, and, as I missed the path a couple of times, it was noon before I reached the summit. I now fired off my rifle to attract the attention of the Aino before I descended the other side, and when I got to the bottom he was waiting for me. He surveyed me, however, with some distrust and seemed to be very shy in coming towards me. At the time this appeared strange to me, and he even refused to eat the food I offered him. That night we slept in an unoccupied Aino hut,—at least I did, the Aino preferring to sleep outside. We arrived at Chirikov in the afternoon of the next day, and I went immediately on board the schooner where I had to relate my adventures to an admiring audience.

Next day an old Russian, from a settlement on the other side of the island, came on board, and, after having introduced himself, told me, in excellent English, that he had heard something about my journey the previous evening and asked me to oblige him with a recital of it. He listened to me without interruption. Now and then I saw a peculiar smile on his lips, but he said nothing until I had finished. "Honoured sir!" he began, "You are, I doubt not, a great traveller." I bowed my head. "You may now, perhaps, have discovered a strange race, as you say, but"—here he made a pause, "I think, you have simply made a visit to the leper settlement instead!" After giving me a few minutes time to digest this, he continued; "Some 50 years ago or more, leprosy was introduced on the island by the shipwrecked crew of a whaler. The malady spread quickly until the Government collected all persons having any symptoms of the disease and deported them to a valley among the mountains, supplying them with some provisions and tools, but where they afterwards had to shift for themselves, and were not allowed to hold any communication with anybody outside on pain of death. They were strongly guarded at first, but after some examples had been made, the vigilance was relaxed, as none attempted to escape, and they were finally forgotten. Ainu, Russians, and natives of other countries were sent there. Their descendants are living there now, and these are the people you have been visiting, and you have been the recipient of the leprosy's hospitality. I advise you to say no more about your journey, because if the 'Little Father,'—here he took off his hat—"should hear about it, he might perhaps

send you there to join them, and his ears and eyes are sharp and his arms long." He ceased, and looked at me with a meaning smile as I sat mute and perplexed. Knowing something about the paternal care taken by the "Little Father" of his children, I promised to follow the old Russian's advice. I left the schooner in Vladivostok, but did not consider myself quite safe until I was clear of Russian territory. Was Kotzebue's story a myth? or was the old Russian only playing on my fears?

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, October 9th.

A few hours after my last letter to you was mailed, the President signed the Tariff Bill, and both Houses of Congress adjourned *sine die*. In the Senate, on motion of a Democrat, thanks were tendered Vice-President Morton for the able and impartial manner in which he had presided over the body;—in point of fact, Mr. Morton's *forte* is button-hole diplomacy, and not Parliamentary management, and his duties throughout the session have been performed by Mr. Loggins. The members of the House did not stand upon the order of their going, but, mindless of the usage which requires a vote of thanks to the Speaker, they ran away as fast as they could, and when the hour came for adjournment, the Speaker looked over his desk, and only saw two members present.

Mr. Reed has certainly managed to alienate not only his political opponents, but the members of his own party. He has acted as if the House was a school, and he was the schoolmaster. At the same time, he has made an enemy of his former friend and patron, Mr. Blaine. I send an issue of *Puck*, in which you will find a cartoon illustrating the situation. In an imaginary "Presidential chair" Blaine sits at one side, squeezed against the arm of the chair, while Reed has forced his bulky body in on the other side, and poor little Harrison is flattened between them. Reed lowers threateningly at Blaine; the latter retorts with a look in which contempt and grief struggle for the mastery. The gifted man from Maine has in effect been slain by the leader of his own household. He is hoist with his own petard. It was Blaine who, by falsely assuring the workmen that protection was the mainstay of wages, induced them to elect Harrison President; and now the spoils of war go to another. In the next National Republican Convention, Blaine will not be the one man fit for the highest post of honour; Reed and McKinley will contend for the prize, and Blaine will glower in the background. They will reap the harvest he sowed. He saw his mistake too late; vainly he tried to stem the torrent he had let loose; he played Girondist to these new Jacobins, and will repeat the part of Vergniaud, with the guillotine omitted.

Congress dissolved, Mr. Harrison started out on a junketing tour through the West, which affords him an opportunity of repeating the pretty little speeches for which he is famous. It is sweet to hear him announce to his fellow-citizens that correct behaviour is the key to happiness, and that virtue is its own reward. Mr. Blaine, it may be observed, is not with him. He sulks in his tent at Washington. Unless he can pick a quarrel with England, his political career is ended.

The last incident of the session was the receipt of the report of the Commissioner of Pensions, Mr. Green B. Raum. This document shows that 537,944 persons are pensioners on the bounty of the United States, 66,637 of whom were added to the list last year—a quarter of a century after the close of the war. Raum's administration of the Bureau was the subject of an investigation by Congress, and it was shown that in considering pension claims, the cases represented by an agent named Lemon were given preference over others. It was also shown that just prior to this arrangement, Lemon who had had no previous business relations with Raum, endorsed his note for \$12,000. The Republican members of the Committee report that they can see nothing wrong in this, and whitewash Raum.

Social circles in the East are in a flurry over the arrival of the Count of Paris, who spent a year in the United States army during the war, and was one of the gignards by whom McClellan was surrounded. He left the army because he was satisfied that the country was going to the how-ows. Ever since then he has been conspiring in a feeble, fitful, underhand way against the Government of his own country. All which to the contrary notwithstanding, New York and Baltimore are dining and winning him, and laying their fairest virgins at his gony feet.

Next to the Count, the Jews are the leading

object of attraction in the East. Rabbi Joseph of New York has resurrected Sir Moses Montefiore's scheme to colonize the Jews in Palestine, and lots of money are offered to carry out the enterprise. There are two difficulties in the way. Palestine could not support the Jews if they went there, and they haven't the least idea of going. The children of Israel know too well where they are well off. Their lives have fallen in pleasant places in this country. They are all traders—merchants, bankers, shopkeepers, or lucksters—and they are making money. No Jew ever earns his living in the United States by manual labour. To barter, to dicker, to buy and to sell, are his destiny, and he fulfils it well. As a rule, they are honest, enterprising, quick-witted and liberal. They are at the head of all progressive enterprises. They are the best patrons of the theatre: any house which happened to be boycotted by the Jews would have to close its doors. But there is no bigotry about them. They enjoy the "Merchant of Venice," and "Samuel of Pozen" as heartily as the Christians. If they could get over their tendency to be obtrusive and presuming, they would be a delightful element in society.

The organization of the new states and territories is giving rise to the usual squabbles. Oklahoma is taking upon herself territorial honours. An inter-state contest is going on there over the choice of a capital city. The Lower House decided in favour of Oklahoma City; but while it was debating a motion to reconsider, Speaker Daniels signed the bill, and Representative Perry started with it in his pocket for the Governor's office. He was detected, and the whole house followed him in quick pursuit. The air was full of cries of "Hang him! hang him!" which added wings to his flight. When his wind gave out, he handed the document to Representative Nesbitt, who sped on his course. But his condition was poor; the crowd overtook him and forced him to return with the bill to the house where the Governor's signature was erased.

Clerical circles are rather distressed over a criminal case which has just ended at Scranton, Pa. The Rev. Peter Roberts of the Congregational Church, while a student at Yale College, loved a fair maid named Husaboe, and she poor thing, returned his love not wisely but too well. Before her baby was born, he took her to a doctor who undertook to help her out of her trouble, and which she was lying ill at death's door, the Rev. Peter fled to wild Wales, where according to Borrow, such trifling performances as his are not noticed in a man. But the fair Husaboe followed him, and so harassed him that he returned to this country promising to make her an honest woman. He changed his mind when he got a church, and swore that the wronged girl should never be Mrs. Peter. Then her wrath arose, she sued him, and a sympathetic jury gave her \$3,000 damages, which it will take Peter a long time to earn by expounding the gospel according to the lights of the Congregational Church. Miss Husaboe will probably move into Missouri, where, as in Lapland, ladies with her experience are in lively demand among hachelors inclined to matrimony.

A more tragic case of unhappy love has just come to light in this state. A pretty girl of German birth named Louise Eastinger loved a young man, and was deserted by him. She left her place of abode, and removed to Redwood City, where she won the heart of a substantial citizen named Wehrlin. They became engaged, and, contrary to usage, she insisted on an early day for the wedding. The man bought and furnished a cottage for his expected bride, and the wedding was celebrated with due ceremony and circumstance—the whole country having been invited to the marriage feast. At 4 a.m. bride and bridegroom left for their new home. As became a gentleman, Wehrlin left his bride alone for a while in her apartment; then, after a suitable delay, he knocked for admittance. She replied that he could not come in. He expostulated, but in vain; and after vainly trying the strength of the door and the bolt, he returned rather sheepishly to his uncle's house, where the wedding had been performed. When daylight broke, he was advised by his friends to insist on his rights, and he returned to his cottage and broke open the door. A dreadful sight met his eyes. His wife, in her night-dress, was stretched dead upon her bed, her wedding clothes being scattered on the floor. A doctor who was summoned declared that she had died from poison.

No judicial inquiry has been instituted, but it is privately understood that the poor girl was convinced that compliance with her husband's demands would have revealed to him a story which would probably have ended their conjugal life then and there.

There has been a terrible explosion at the famous Dupont Powder Works at Wilmington, De-

laware. It appears that a soldering iron with which a workman was sealing some cans of powder became too hot, and set fire to the powder. Six magazines were destroyed, nearly a hundred houses were blown up, eleven persons killed, and a score or more wounded. The explosion was heard at Philadelphia.

The end of the noted outlaw—Rube Burrows—is reported from Alabama. He had been caught and was on his way to prison, when he asked his captor to hand him his saddlebags, in which he had some crackers. The request was granted; but instead of crackers, the outlaw drew from his bags two revolvers with which he covered the deputy sheriff, bidding him unlock his handcuffs. The deputy complied, and Burrows might have gone free, had it not occurred to him to try to recover the money which the sheriff had taken from him the day before. He walked into town, met the man who had his money, and in the scuffle which followed, was shot dead.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

The following notice has been sent to all members of the Photographic Society of Japan:—
Sir,—The following letter has been received from Mr. S. Cocking of Yokohama:—

Yokohama, 4th October, 1890.

TO THE SECRETARY OF THE PHOTOGRAPHIC SOCIETY OF JAPAN, TOKYO.

DEAR SIR,—With the view of bringing more prominently before the notice of the members of the Photographic Society the use of Bromide paper, we herewith beg to intimate to the Committee our willingness to present certain prizes, viz.:—1st prize, \$15.00; 2nd prize, \$10.00; 3rd prize, \$5.00, for the best three prints.

We also will present to the Society the paper to be used by the exhibitors. With respect to the details of the competition we will leave that to the discretion of the Committee, making only the following conditions ourselves, viz.:—

1st.—That the negatives must be taken by the exhibitors, and the prints printed by them.

2nd.—That all the exhibits must be on the paper presented by us.

3rd.—That the prize photos are to be our property. We shall be pleased to have you present the above proposition to the members at your next meeting, and if same is accepted kindly inform us to whom the Bromide paper shall be sent, and at what time.

Yours faithfully, (Signed) COCKING & CO.

The Committee unanimously decided to accept Mr. Cocking's generous offer, and the following conditions were made.

That the work be exhibited, on a date to be fixed by the Committee, pictures being without mark whereby it can be told by whom they are done.

That the judging be by a ballot of all who attend the exhibition.

That members of Committee shall not take part in the competition.

Should you wish to compete you are requested to apply to the Secretary, before 10th November, stating what size of paper you would wish to have, when your application will be considered by the Committee.

I remain, Sir, yours truly,

W. K. BURTON.

9, Kaga Yashiki, Hongo, Tokyo.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—TUESDAY, October 28th, 1890.

FUJII V. SPENCER.

Fujii Kinjiro sued Percival Spencer for \$39.30, alleged to have been incurred for sundry work done for the defendant.

Defendant said he had received no detailed account from the plaintiff, besides which the amount claimed was exorbitant. He had never seen the account (his Honour showed defendant the account). He could prove that many of the items were incorrect. There were only four men employed on the 19th inst., whereas in the account the plaintiff had put twelve men. The \$5 balance from the contract money was correct. The \$4.50 for broken fences ought not to have been in the account. The contract was, "and have everything ready for your next performance, a balance of \$5 to be paid." The \$5 for bamboo poles was incorrect. The \$2 for curtains was right. The \$8.20 for 12 carpenters ought to be \$2.80. The repairs for the dressing room were not correct.

Fujii Kinjiro deposed that there were extra ex-

penses. The \$5.00 was simply a balance from the contract of the first ascent, and was to be paid at the second performance, if witness was punctual and had everything ready. The other items were different expenses. The 12 carpenters was made up of 5 employed for two days and two others to do sundry jobs. There were other little expenses in connection with the enclosure, two men not being sufficient, and which witness had not included in his account. The repairs to the dressing-room took place on the Saturday previous to the last ascent. In connection with the ascent a momban was needed as things got lost from the dressing-room. Witness did not employ a momban but went himself and employed his time in repairing the dressing-room. The fence round the room and also the interior of it required some repairs.

The defendant showed an account on the back of which was a receipt, and said the plaintiff had agreed to put the fences up for the next ascent for \$30. The plaintiff's representative wrote out the account. Mr. Schmidt, defendant's assistant, was present at the time.

The plaintiff said he did not know anything about the account and receipt which the defendant showed him. His account was not written in Japanese and was something like the one produced, but he could not say positively that it was the account. He signed the receipt for \$26. He received \$36. He did not understand what were the terms of the receipt. The document produced was not the contract.

By the defendant—There was no interpreter present when I received the \$36. The receipt was drawn up by the defendant. I went with an interpreter to the Grand Hotel. Before I signed the receipt it was interpreted to me.

Sakuma Ihei, a jinrikishaman, said that the plaintiff had told him about the contract he had made with Mr. Spencer and said that as he did not understand English he was a great deal perplexed as he was to have had the place ready on Sunday but owing to some delay it was not ready and Mr. Spencer had fined him \$10. After that the plaintiff took particular care to have everything ready by the proper time. Witness was employed by the plaintiff to go messages and went with him on the 17th to the Grand Hotel about a promise made by the defendant as to the repair of the place for the next ascent, when defendant said he would pay the \$3 balance at the next ascent. The work in the Public Gardens was finished by six o'clock on Saturday evening. They went with the account to the Hotel on Sunday morning, but defendant said they must come in the evening. They went then but he was out.

By the defendant—The work was finished on Saturday. It was begun on Friday. I was not present when you paid the \$36.

Percival Spencer deposed that he gave the plaintiff the order to put up sundry temporary timber. It was to be done for \$30 and he was to start at 7 o'clock. At that time he was not there, and was not found till nine o'clock. Witness's assistant, thinking he might be stuck for money, advanced him \$10, but he did not go on, and a Chinaman was engaged to do the work for \$25. When the Chinaman started on the work the plaintiff at once began and evidently bought the Chinaman out by giving him \$10. There was one addition to the contract work, which was some timber put up and tied in place for a dressing-room, valued at about \$3. When witness paid him \$35, \$5 was to stand over till next time. Witness told him to put up some fence curtains, and a little other work was done which could only be valued at a small amount and the \$5 more was to cover the whole of it. When the plaintiff brought his account there was a balance of \$9.50. Witness wrote a letter asking that a proper account in English be sent in. There were no repairs done to the dressing-room. There were no fresh materials, and the man was only told to go and tie up some boards.

Louis Schmidt deposed that there were four men and one boy employed on Saturday. There was not one man there on Friday. There were some on Sunday, but the only work they did was to move a pole. The dressing-room was made of some boards which were there from the first performance. If they got \$1.50 or \$2 for it that was ample. The room was not taken away, but was simply taken down, the posts being left standing. There was an interpreter present when the \$36 were paid.

His Honour said he believed Mr. Spencer's account of what took place, and after reducing the price of some of the items and taking out some which were wrong, he gave judgment for the amount of \$18.90 with no costs.

Before J. TROUP, Esq., Acting Assistant Judge.
TUESDAY, October 28th, 1890.

ALLEGED ASSAULT AND THEFT.

John McAlpine charged T. Davis with having stolen on the 26th instant the sum of \$196.

John Dobbie McAlpine, engineer, deposed that on Sunday afternoon he left his residence on the Bluff to call on some friends. He hired a *jinrikisha* and, finding his friends not in, he told the man to drive him around a bit. He stopped at a public house, not knowing where he was, having only come ashore on Saturday night for the first time. He had not been there long when one of the sailors from the ship he had come from came in and the accused with him. Witness asked them to have a drink. Later on the accused asked him to stand another drink, which he refused to do, as he had too much himself. He saw that the accused was trying to stop him from leaving the house, but he managed to get out. He had not gone far, however, when he found that he had lost his money. He went to the police station and reported the matter, and went accompanied by two policemen to find the house he had been in, but could not find it. The policemen left witness to continue the search, and he went back home and left the matter in their charge.

By the accused—I don't know in which house you assaulted me, and took my money from me. You laid hands on me to keep me from getting out.

By the Court—I had about \$196 in my pocket in Japanese one yen notes. There were two packages. One was \$100 unbroken and the other had a few dollars out of it. I have not got the money back.

Chino Ichiya, a jinrikisha man, employed by the mistress of the house where the complainant was staying, deposed that between three and four o'clock in the afternoon of Sunday last he took the complainant to a saloon in Sakai-cho. He left the place at a little after four o'clock, and went to another saloon in Motomachi. When it was getting dark he said he would go to No. 5 where he was taking his meals. Just then he met the accused, who asked him to stand another drink. They went together to the corner of the Public Gardens and the complainant then said he wanted to get out of the jinrikisha. As he was getting out witness saw two bundles of Japanese notes fall from his pocket. Accused took them and having nodded to witness ran away. Witness put his jinrikisha down and ran after him, but in Chinatown near No. 125 he lost him, and at once went to the house where his master was staying and reported it to the mistress. He, with a youth and a man about 30 years old, went to the police station and reported the matter.

By the complainant—I saw no real quarrel between you and the accused at Sakai-cho.

By the accused—I did not see you take the money from the complainant's pocket. It was after the lights were lit that you ran away with the money.

By the Court—The money was on the ground when the accused took it. I saw two bundles and knew it was my master's money. One of the bundles spread out in the road and the other fell solidly. I don't know what they were tied up with. I could see nothing around the loose bundles of money.

Charles Loperly, late steward of the *Swatara*, at present living at Ortiz's house, deposed that on Sunday last when he went home he heard the mistress call upstairs that witness had come in. Witness went to the back and afterwards went upstairs, where he saw something on the table in a handkerchief. There were present Ortiz, Davis, and another man. As soon as Ortiz saw witness he turned round to prevent witness seeing what was on the table. Witness was going to bed, when Ortiz said they had better go downstairs, which they did. Witness heard him say to Davis that he must give him (witness) "a dollar out of it." Witness, however, did not know what "it" was, but Ortiz said it three or four times. They then went downstairs to the other room. As soon as they went into the room they locked the door. Davis afterwards said that if witness would give evidence in his favour and say he was sick for so many days with rheumatism he would give him \$9. Witness heard Ortiz tell Davis to give the money to the missis as it would be safe with her, and to say that he was sick for three days and could not walk. After they had finished their business they opened the door and told the missis it was all right and that she was safe. Witness could not say exactly that it was money he saw, but they were counting some paper notes. He believed it was now in Ortiz's private room.

By the accused—I saw you upstairs counting paper notes. I did not see you give Ortiz any money to keep, but heard him say so. Ortiz

told you to give the money to the missis. It was at Ortiz's boarding house that Davis asked me to give evidence in his favour.

John Ortiz, a boarding house keeper at No. 106, Honmura, deposed that Davis was boarding at his house. He did not take any money into the house on Sunday last to witness's knowledge. That night two new men went to his house to sleep. The accused was in witness's house all day and had his breakfast, tiffin, and supper sent up to his room.

Thomas Philip, a Chilean, deposed that he came out in the *Kii Maru* from England. He did not see Davis take any money into the house. He was in the house all day.

By the complainant—I remember letting a glass fall to the floor. It was not Davis who said, "Don't give him any more drink." It was another coloured man. I do not know in what house it was I let the glass fall. I had tiffin at the boarding house and afterwards went out but got back by four o'clock.

Nojii Yoshitaro, a boy in Ortiz's house, deposed that Davis was in the house during the whole of Sunday, and did not go out at all. Witness took him his breakfast, tiffin, and supper upstairs. Witness did not see Davis have any money in the house. Witness had been with Ortiz about two months.

Loperly, recalled, said the accused was not in all day, but was out.

His Honour said with regard to the charge of assault there was no evidence to support it; it therefore would not be proceeded with and was dismissed. As regarded the other charge he asked accused if he had any defence to make.

Accused said on Sunday morning when he woke up about five o'clock he felt a headache and was unwell. He told Ortiz that he would have to send his breakfast upstairs as he was sick and could not go down. It was sent up, as were his dinner and supper. Witness stopped in the house the whole day until Monday morning about 12 o'clock, and did not go anywhere. About 12.30 on Monday the Court Constable came to him, took a summons out of his pocket and gave it to him (accused). Not knowing what it meant, he took it down to Frank who read it to him. He thought it very strange as he was not out of the house the whole day. He knew nothing about the money.

His Honour said the charge of assault was dismissed. The accused would be committed for trial on the charge of larceny. The complainant would be bound over for \$400 to prosecute.

PUSS ON PEGASUS.

A MEW FOR MERCY.

Awake, my lyric mews,
And help me to diffuse
Some pity in mankind for my relations,
When, their masters all away
For a summer holiday,
They are left behind to suffer sore privations.
It makes my whiskers burn
With indignation when I learn
How many a petted tortoiseshell and tabby
To starvation point comes down,
When the family's out of town.
(There's a sample of home Rule for Mr. L-bby!)

Once in Egypt whose'er
Killed a cat (excepting Care)
Got his instant *coup de grace* (see Diodorus);
We were then a nation's pride,
And when any of us died,
The Pharos and the fellah wept in chorus.
O, the life that there was ours,
O, the larking in the bowers,
And the dreams of future dignity as mummies!
O, those days of long repose
Mid the lotus and the rose,
And the dainties that regaled our little—appetites!
O, those nights upon the tiles,
O, the dalliance and the wiles,
And the serenades that shook the Liliyan welkin,
As, conscious of his place
In a consecrated race,
Loud and louder rose the voice of great Grimalkin!
Then to think in London dens
(*Horresco referens*)
The heirs of such prestige should be neglected,
And pine through lapse of "laps"
Of that beverage, perhaps,
Which has always as our birthright been respected.
Tis hard to bid adieu
To the honour we once knew
On the banks of Cleopatra's noble river,
And on weather-beaten leg
Of a casual meal to beg
From the basket of the man-of-lights-and-liver.
So, good people, don't forget,
When you take us for a pet,
To that pleasure are attached some obligations;
And your duty 'tis to see,
Ere you "take your hook" and flee,
That our larder is supplied with proper rations.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Husey, reports:—Left Kobe the 22nd October at noon; 00.30 p.m. turned back strong gale from the eastward and heavy rain; anchored off Higo at 4.30 p.m. weather clearing; left for Yokohama passed Oshima the 23rd at 3 a.m., with a fresh wind from E.N.E. and rain; 11 a.m. wind shifted to N.N.W.; 3.30 p.m. shift of wind to E.N.E. with rain and freshening to a strong gale with

heavy rain; passed Rock Island at 7 p.m. a strong gale throughout the night with heavy rain. Arrived at Yokohama the 24th October at 9 a.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 17th October at 0.30 p.m.; had weather dull and overcast with moderate to strong northerly wind and beam sea. Arrived at Nagasaki the 19th at 6.30 a.m. and left the 20th at 5 a.m.; had moderate breeze with cloudy weather throughout the passage. Arrived at Shimonoeki the 21st at 5.35 a.m. and left at 6.30 a.m.; had light to moderate winds and fine weather till midnight; thence to port drizzly rain. Arrived at Kobe the 23rd at 3 a.m. and left the 24th at noon; passed Oshima at 8.16 p.m.; thence to port strong N.E. winds to moderate N.E. gale and heavy sea. Arrived at Yokohama at 4.30 p.m.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Hakodate the 22nd October; had light variable winds to Shiiya-saki; thence continuous rain with moderate to fresh S.E. winds to Kinkasan at 0.23 on the 23rd. Arrived at Oginobama at 1.45; fine and clear; fresh N.N.W. winds. Left the 24th at 6 a.m.; had strong wind from northward increasing to strong gale; passed Inuboye at 8 p.m.; reached Noshima at 2.32 a.m. on the 25th; high sea and hard gale from N. Arrived at Yokohama at 6.30 a.m.

The Japanese steamer *Sagami Maru*, Captain Walter, reports:—Left Hakodate the 25th October at 2 p.m.; had fresh breeze from S.E. and fine weather to about 9 p.m. wind shifted to the S.E. with rain and increased to moderate gale with high sea. Arrived at Oginobama the 26th at 2 p.m. and left the 27th at 6 a.m.; had same wind and weather to noon; thence moderate winds and fine weather.

Per Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 27th October at noon; had light variable winds and fine weather to Oshima, which passed at 8.50 p.m.; had fine weather throughout to port. Arrived at Yokohama the 28th October at 6 p.m. Passed a large sailing ship off Kannon-saki bound up to Yokohama.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Hakodate the 27th October at 2 p.m.; had light variable winds with heavy easterly sea to Shira-saki, and light S. winds with N.E. swell to Inuboye, which passed on the 29th at 0.53; rounded Noshima at 9.17. Arrived at Yokohama the 29th October at 1 p.m.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Kobe the 29th October at noon; passed Tomaga-shima at 2.15 p.m.; abreast of Oshima at 8.45 p.m., had fine clear weather and light northerly breeze and smooth sea; reached Rock Island the 30th at 0.5 p.m., moderate N.E. winds and slight sea; passed Sagami at 1.10 p.m. Arrived at Yokohama at 6.30 p.m.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left Hongkong the 25th October at 2.23 p.m.; met O. & O. steamer *Gaelic* the 26th at 1.30 a.m.; had moderate N.E. monsoon with strong current most of the passage. Arrived at Yokohama the 31st October at 8.56 a.m. Passage, 5 days, 16 hours, 51 minutes.

LATEST COMMERCIAL.

IMPORTS.

The Import Market so far shows little or no signs of improvement, in the face of the drop in exchange; the Native Markets continue very depressed. Prices are all more or less nominal. Sales for the week amount to 75 bales English Yarns and 200 bales Bonbays.

Brown Takan	4.15 to 4.20

EXPORTS.

RAW SILK.

Our last issue was of the 24th inst., since which date business has continued on much the same scale, settlements by foreigners being 678 piculs, divided thus:—*Hanks*, 53; *Filatures*, 307; *Re-reels*, 274; *Kakeda*, 44. There have been no direct shipments during the week, so that the total business is comprised in the above figures. We have now a fair amount of daily business both for Europe and America, although the Market news from both worlds still remains very discouraging.

The low rates of Exchange current during the past few days have doubtless tempted buyers to operate, but a sudden strong rebound in the value of Silver causes present rates of Exchange to be higher than they were a week ago, and the tendency to buy is accordingly checked, for, so far, holders will make only a fractional reduction in their demands.

Quotations given below show some decline on those of a week ago, but it has not been sufficient to induce general business. In spite of the daily settlements, which are about 100 piculs on the average, the arrivals from the interior have increased the stock to 16,200 piculs. The great bulk of this is in *Filatures*, and for this class holders are more inclined to be current than any other. *Kakeda* are in comparatively small stock, and have held their own well during the week, while as for *Hanks* the supply is so small, and the Native demand so good, that transactions for Export are well nigh impossible.

As we noted in our last, holders will have to take less money before any very large or extensive business can be done; at the same time we repeat that they will not be very anxious, so long as they can dispose of about 100 piculs per day.

The settlements have again been principally for the American Trade, the business for Europe being very small. It is interesting to compare the statistics given at foot with those of last year. Settlements to date last year were 22,400 piculs

against 6,300 only this year, while the stock on 31st October, 1889, gave the small figures of 5,100 piculs against 16,200 to-day. A better commentary on the dull state of trade during the present season could not be given.

There have been two shipping opportunities during the interval; the Canadian steamer *Parthia* on the 25th inst. carried 439 bales for the New York trade, while the French mail steamer *Natal* on the 26th had 337 bales for France and Italy. These departures bring the present export figures up to 5,874 piculs, against 18,213 last year and 12,484 at the end of October, 1888.

Hanks.—There was a little trade at the beginning of the week, principally in *Shinshu* at \$580 and \$560. One parcel of *Shimonita* also brought \$580, with some common *Hachoji* at \$530. Since then nothing has been done, holders being very firm.

Filatures.—These have declined about \$10 on the week, which is by no means the equivalent for the rise in Exchange. In *Extras* a parcel of *Utsunomiya* was done at \$700 for new silk and \$690 for old crop. No. 2 silks of *Mino* and other districts were done at \$645, \$640, and \$630. In full-sized Silks the latest sales give the following prices:—*Shinshu* \$647½, \$642½, and \$640 for various chops all grading No. 1. In *Kushu* one parcel was sold at \$645, followed by a repeat at \$640; even these prices at the present rates of Exchange seem to be above the limits which the majority of buyers have in hand.

Re-reels.—A fair amount of business has been done in these, also at some small reduction on last week's rates; a long line of *Kirihana* No. 1 was hooked at \$620 with No. 2 at \$600, *Bushu* sorts also bringing \$600. Later in the week a good parcel of *Shorusha* was done at \$600, with *Fine Girl* and *Kaura* at \$630. These so far have been the lowest prices made, but with the rising Exchange holders will have to take less money if they want to keep moving.

Kakeda.—Purchases in this class have not been large; as noted above, the stock is not of an unwieldy size, and holders have been pretty firm in consequence. The latest purchase noted is a parcel of *Tiger* chop at \$600 per picul, with *Black Lion* at \$597½; prices which cannot be called cheap. In other sorts nothing has been done.

Stock, 31st October	16,200	5,100	11,850
Available supplies to date	22,500	27,500	26,450

WASTE SILK.

Another brisk week, settlements being 1,650 piculs, divided as follows:—*Cocoons* 85, *Noshi* 800, *Kibiso* 710, *Mawata* 55.

Prices are well maintained; at the same time holders have shown themselves fairly current, adopting a wise policy of meeting buyers on a fair basis and lightening their stocks while shippers were in the humour to operate. The consequence is that settlements to date are larger than those of the same date last year; a very marked contrast to the state of things in the Raw Silk Market.

All kinds of *Waste* have shared in the demand

with the exception of *Neri*; *Noshi* and *Kibiso* of good quality being most patronized.

The French Mail Steamer *Natal* on the 26th inst. took 513 bales of *Waste* and *Cocoons* for various European Ports, and the German steamer *Agia* took 21 bales of *Noshi* for Trieste. These departures bring the present export figures up to 6,243 piculs, against 7,292 last year and 6,169 in 1888.

Pierced Cocoons.—About 80 piculs have been hooked at former prices, and it seems as though, like the former parcels, they would be destined for the Lyons market.

Noshi.—Large business in the best kinds, the highest price paid for *Oshu* being \$147. *Joshu* has been done at various prices ranging from \$84 downwards, some very common being booked at \$76. *Mino* has passed the scales at \$130 per picul for prime quality and \$120 for seconds.

Kibiso.—This has again been in strong demand, *Filatures* ranging between \$95 and \$120; while *Re-reels* brought \$87½, *Mino* \$72½ and \$62½, according to quality.

Mawata.—This has been again purchased for Bombay, price for best reaching \$200 per picul; seconds have been done at \$190 and \$187½.

QUOTATIONS.—(NEW WASTE.)

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:-

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest also suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Bontes, Tugs, Stern Wheel Paddle Steamers, and Boats in France, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 15. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 13. 95.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth as food and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1891.

NOW READY,

WITH COLOURED PLAN.

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents. To be obtained at the Japan Mail Office, or of K. & W. WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, NOV. 8, 1890.

DEATHS.

On November 2nd, at No. 12, Tsukiji, Tokyo, Mrs. MARY B. TAFT, wife of Rev. G. W. Taft, aged 22.

On the 4th inst., at 1 a.m., at 19, Bluff, Yokohama, EDWARD MORRIS, for many years Manager of the Hongkong and Shanghai Bank at that post, aged 57.

SUMMARY OF NEWS.

A SHOCK of earthquake was felt in the capital on the 2nd instant at 9h. 30m. 30s. a.m.

HER MAJESTY THE EMPRESS paid a visit to the Shiba Detached Palace on the afternoon of the 7th instant.

THE publication of the *Chusei Nippo*, the organ of Viscount Torio, commenced on the 3rd instant in Tokyo.

MR. KUWABARA KAIHEI, formerly chief of Kitateshima-gun, was appointed head of the Bonin Islands on the 4th instant.

HIS MAJESTY THE EMPEROR will proceed to the Yokosuka Naval Head-quarters on the 11th instant, to inspect the fort at Tomitsu.

THE Kyushu Railway Company was permitted by the Railway Bureau on the 1st instant to open communication between Akama and Ogagawa.

CAPTAIN KAWARA YOICHI was ordered by the Minister of State for the Navy, on the 4th instant, to proceed to England to complete his studies.

A TELEGRAM has been received by the Naval Department to the effect that the *Hiei* and *Kongo Kan* arrived safely at Singapore on the 1st instant.

AN action raised by Mr. Koidzumi Katsusaburo, against Mr. Mutsu, Minister of State for Agriculture and Commerce, asking that an alleged illegal act by which copper mining operations at Sarasawa have been suspended, should be annulled, was decided in the Tokyo Court of Appeal in favour of the defendant on the 1st ultimo.

THE *Tsukuba Kan*, which has left Japan for the Hawaiian Islands with a number of graduates of the Naval College, arrived at Honolulu on the 4th October last.

HIS IMPERIAL HIGHNESS PRINCE FUSHIMI, who had proceeded to Ibaraki Prefecture in connection with the manoeuvres there, returned to the capital on the 31st ultimo.

MR. ONISHI HIDEHARU, a third class surgeon of the War Department, has been ordered by the Minister of State for War to proceed to Germany to complete his studies.

MR. TANABE SAKURO, an engineer of the Kyoto City Government, was appointed Professor of the College of Engineering in the Imperial University on the 30th ultimo.

AN outbreak of fire took place on the night of the 2nd instant in a house at Kojimachi, Jusanchome, Kojimachi-ku, and thirty-seven houses were entirely destroyed before the flames could be extinguished.

THEIR MAJESTIES THE EMPRESS and EMPRESS-DOWAGER paid a visit to the new villa of Count Oyama at Sendagayamura on the 31st ultimo, where their Majesties witnessed a performance, returning to the Palace at about 8 p.m.

MR. MASAKI TAIZO, Consul at Honolulu, received the additional appointment of a diplomatic official on the 1st instant in accordance with the Regulations relating to Diplomatic and Consular Officials promulgated recently.

THE Sanitary Bureau in the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 4th inst., was 43,210, resulting in 29,844 deaths.

MR. FUJITA SHIRO, a private secretary of the Minister of State for Communications, was permitted by the Decorations Board on the 1st instant to accept and wear a decoration conferred on him by the Emperor of Prussia.

AN ordinary Cabinet meeting was held on the 4th instant at which there were present Counts Yamagata, Oyama, and Goto. Viscounts Aoki and Kabayama and Mr. Mutsu. The proceedings lasted from ten in the forenoon till three in the afternoon.

AN ordinary meeting of the Cabinet was held on the 31st ultimo at which there were present Counts Yamagata, Yamada, Saigo, Goto and Oki, Viscounts Aoki and Kabayama and Mr. Mutsu. The proceedings lasted from ten in the forenoon till five in the afternoon.

THE election to fill the vacancy caused by the death of Mr. Miura Giken, member of the Lower House for the ninth district of Hiroshima Prefecture, took place on the 31st ultimo. Mr. Inouye Katsugoro, a leading member of the Equal Treaty Association, was elected.

MR. YAMATAKA SHIURI, manager of the Imperial Museum, was decorated with the Third Class Order of the Zuihoshon on the 1st instant, and Mr. Sakata Haruo, a secretary of the Agricultural and Commercial Department, was decorated with the Sixth Class Order of the Rising Sun.

ABOUT 700,000 Buddhist believers in the province of Aki have decided to present a petition to the Imperial Diet asking that Article XII. of the Law of Election for Members of the House of Representatives, by which Buddhist priests are disqualified for seats in the Lower House, should be revised.

A MEETING of the Privy Council was held on the 4th instant, at which there were present Counts Oki, Terajima, and Soyejima, Viscounts Yoshida, Sano, Fukuoka, and Enomoto, and Messrs. Kono, Tanaka, and Osaki. The proceedings were opened at ten in the forenoon and closed at four in the afternoon.

THE graduation ceremony of the Tokyo Hogakuin (Law Institution) took place on the 2nd instant in presence of various high officials of the Educational Department. Addresses were delivered by Mr. Masujima Rokuichiro, President of the Institution, and Mr. Egi Chu, a councillor of the Educational Department.

THE half-yearly meeting of shareholders of the Mito Railway Company was held on the 30th ultimo at the Bankers' Club, Sakamotocho. The receipts for the six months ended the 30th September last amounted to yen 24,515.029. A dividend was declared at the rate of 5 per cent. per annum, after providing for the usual expenses and an appropriation to the reserve fund.

A REPORT issued by the Home Department shows that 48 earthquakes were felt in the Empire on 24 different days in September last, the largest number being felt on the 6th, when there were 6 shocks. The greatest number of earthquakes was felt between 12 noon and 1 a.m., and 12 a.m. and 1 a.m. The most severe oscillations took place between 12 a.m. and 1 m., their area being also greatest at that time. The hours which were most free from earthquakes were between 3 a.m. and 5 a.m., and 9 a.m. and 10 a.m. The provinces visited during the month were Nemuro, Ishikari, Mutsu, Rikuchu, Uzen, Ugo, Echigo, Iwashiro, Iwaki, Hitachi, Shimosa, Kazusa, Awa, Musashi, Shimosuke, Kozuke, Shinano, Kai, Sagami, Idzu, Suruga, Totomi, Mikawa, Owari, Mino, Ise, Shima, Kawachi, Kii, Higo, and Satsuma, Higo having no less than 14 shocks. The disturbance most extensively felt was that which occurred on the 6th, extending over 13 provinces. The provinces in which the most severe shocks were felt were Sagami, Kai, Musashi and Suruga, in other provinces the tremors being generally weak.

THERE is but little life in the Import market, which is doubtless partly due to the constant fluctuation of exchange; Yarns and Shirtings are unchanged in value, but there is very little doing. The Metal market is generally characterised by dullness, while prices are weak. Small sales only have been effected in Kerosene, and the recent better feeling in the trade seems to have passed away. The stock is very heavy, there being not less than 800,000 cases on hand. Sugar is hardly looked at, and quotations are nominal. There has been somewhat more enquiry for Silk, though actual transactions have not been large, buyers saying that they cannot pay the prices asked. Meanwhile, stock increases, and is now close upon 17,000 piculs, an unprecedented quantity at this time of year. Waste Silk has been taken in fair quantities, prices are well maintained, and holders appear to be strong. The Tea trade has been small, and the season is now drawing to a close. Exchange has again fluctuated, though not to the extent of recent variations. The latest movement, however, is a further decline.

EDITORIAL NOTES.

POLITICAL PARTIES.

THE *Koku-Hon*, writing on this subject, declares that the time has not yet come for the formation of any permanent political parties. It regards existing parties as simply provisional, and says that they will have to undergo a series of disintegrations and amalgamations before they settle down into efficient and stable bodies fit to serve the purposes of Government by party. The character of a constitutional government being directly affected by the character of the political parties existing under it, the *Koku-Hon* emphasises the importance of excluding from every party all factious and clan elements. Notwithstanding the existence of a number of political parties for more than ten years, none of them as yet enjoys the consideration and respect usually paid to political parties in European and American countries. As an illustration of the fact that the time is not yet ripe for the formation of truly representative parties in Japan, the *Tokyo Journal* cites the case of the recent movement for the amalgamation of progressive parties. When that movement first came on the *taps*, it seemed likely to carry every thing before it, resulting in the formation of a party of commanding influence. What has been the fact. The first ardour of the promoters of the scheme soon cooled down, and the only fruit of so much noise and so much agitation has been the organization of the Constitutional Liberal party—a party not by any means distinguished for cohesion, and already fast losing the activity it at first manifested. Our contemporary does not, however, lay the whole blame to the charge of the leaders of the party; for the failure of their efforts, it thinks, is to be ascribed to the general condition of politics in this country. Japanese political leaders are very well acquainted with the theory of parliamentary government in the West, but they lack what is more important than mere theory, practical experience. Further, what course of progress will be taken by Japanese Society and politics under the new régime to be soon inaugurated? The question cannot possibly be answered by reference to the history of any European or American nation. Thus, the conditions under which political parties are to move being as yet indeterminate, our contemporary thinks it premature to look for the formation of any permanent and intelligible association. At present political parties are in course of fermentation, and it will, according to the *Tokyo Journal*, be some years before we shall be able to have the ultimate products of the process. Under these circumstances, not a few politicians of eminence are reluctant to join any of the existing parties, not because they do not agree with the principles professed by such parties, but because they know very well that all these associations are in their nature provisional, and that permanent parties have yet to be formed. Until the transitory period in the history of political parties in this country is over, it will be impossible, in the opinion of our contemporary, to carry into practice the theory of government by party. Lastly, with reference to the members of the House of Peers, our contemporary, unlike the *Kokumin-no-Tomo*, whose opinion on this subject has already been noticed in these columns, seems to approve their independence of political parties, at least for the present. For the present they are wisely inclined to maintain strict neutrality between the different contending parties; but when parties truly representative of the people shall have arisen, the peers will no longer be either able or disposed to stand aloof from parties; for, unless the members of both branches of the Legislature are united by party ties, it would be impossible to carry out party government.

CHRISTMAS CARDS.

Among the most successful applications we have seen of Japanese art industry to the purposes of Western life, the hand-painted Christmas cards sold by Messrs. Kelly and Walsh are decidedly noteworthy. These little tokens of

friendly recollection are really admirably executed. As water colour pictures they merit high praise, and they derive additional interest from the fact that they combine the methods of the Occidental studio with the peculiar graces of the Japanese school. The artists have chosen for their subjects delightful little glimpses of the exquisite scenery of this country, pleasant incidents from the every-day life of the people, views of rural hamlets or luxurious houses and gardens in the metropolis, and representations of agricultural or industrial pursuits and doings. Nothing could be better calculated to convey to our friends at home an idea of our surroundings in this distant land, and a no small recommendation is that the cards are ridiculously cheap. In no other part of the world could such work be done for such paltry prices. There is just one point which might be mended, and that is the printing of the phrases of felicitation. The system now pursued, apparently, by Messrs. Kelly and Walsh is to procure the cards from Europe or America with the legends of the season already impressed on them in gilt type. These are then handed to Japanese artists, who paint pictures on them. But in nine cases out of every ten, we imagine, the recipient of a card with a printed inscription concludes at once that the picture also is produced by some mechanical process, and thus fails to understand that he is coming into possession of a beautiful little water-colour. Why not omit the printing, and let the senders of cards add their own felicitations in their own hand-writing? This would impart personality to the memento while avoiding the deceptive inference suggested by printer's type.

THE ECONOMICAL POLITICIANS.

We agree with the *Fiji Shimpō* in ridiculing the idea that Japan cannot afford to hold fête on the Emperor's birthday. It appears that certain leading members of the Constitutional Liberals, Messrs. Sugita Teichichi, Fujita Magohi, Kataoka Kenkichi and others, having been invited to the ball which is to be given by the Minister of State for Foreign Affairs and Viscountess Aoki on the 3rd instant at the Rokumeikan, met together and seriously discussed the advisability of declining to attend. Mr. Fujita seems to have been the chief suggestor of objections. He explained that while it would undoubtedly afford himself and his friends pleasure to go to the ball, the question appeared to call for serious reflection, inasmuch as the principle of the Constitutional Liberals is to advocate retrenchment, and to discomenentance all expenditure for luxurious purposes. This suggestion did not meet with general approval, some of those present being of the opinion that the ball would offer a good opportunity of acquiring knowledge on many topics. It was finally decided to submit the problem for consideration by the committee of the Party. To apply the economical principles of the *Rikken Tsin-to* to the annual ball on His Majesty's Birthday, an entertainment that has now received the sanction of long custom, would be a curious way of commencing retrenchment. Such cavilling strikes us as somewhat childish. Unless Japan is to retire into her shell altogether and assume the attitude of an impecunious anchorite, she must perform her social duties, and foremost among them is the exercise of hospitality on the day of national fête. All civilized countries follow this habit, and whether it be a good custom or a bad, Japan cannot afford just now to set the example of departing from it.

THE P. AND O. BRINDISI EXPRESS.

THE Peninsular and Oriental Company, which does everything in the most thorough style, has published a pamphlet explaining the conditions under which a special train service between Brindisi and Calais was organised for the convenience of passengers by the Company's steamers. For some time it had been recognised that an improvement in the overland service was necessary, more especially as the quantity of mail matter for conveyance *via* Brindisi had increased so much that accommodation for

passengers threatened to become unprocurable. The obvious way out of this dilemma was to organise a special train for passengers only, and this having been accomplished, the "P. & O. Brindisi Express" became an active institution on the 18th of last July. It replaced the regular Indian Mail Service, by which no passengers were carried after July 11th. The pamphlet from which we take these particulars contains the following:—"In order to secure the establishment of the Special P. & O. Brindisi Train de Luxe specially for and confined to passengers by the Company's steamers, considerable pecuniary sacrifice has been entailed by the P. & O. Co., but there will be no increase in the charge for this expensive journey to the passenger. The Special Train will consist of a Restaurant Car, fitted with all necessary appliances for cooking, hot meals being served in the dining saloon during the transit, in the same manner and style as in the best Continental and English Services; and Sleeping Cars for 48 passengers, provided with every convenience for the journey—the whole being of the most modern and perfect description. It will run from London in connection with the Paris Club Train of the South Eastern and London, Chatham Companies leaving Charing Cross and Victoria Stations at 3.15 p.m. each Friday afternoon and will proceed express *via* Paris arriving at Brindisi at 4 p.m. on Sunday, there being no change of carriage throughout the whole distance between Calais and Brindisi."

VISCOUNT YENOMOTO ON COAST DEFENCE.

VISCOUNT YENOMOTO is represented by one of our vernacular contemporaries as having spoken some timely words of wisdom on the subject of coast defence. Anxiety having been expressed in certain quarters because Hokkaido is not provided with forts and naval stations, the Viscount, who has lately paid a visit to that district, explained that in his opinion Yezo is not likely at present either to be an object of attack or to be regarded as a favourable basis of operations, for it possesses few harbours suitable for men of war, its resources are still imperfectly developed, and it is a cold bleak region during the winter months. The case is very different, the Viscount explained, with respect to the southern coasts and islands of Japan. Throughout those districts excellent ports abound, and abundance of supplies are procurable. The Goto Islands, for example, have an anchorage fit for the largest vessels, and absolutely secure in all weathers, as experience has proved. An enemy gaining possession of these islands could inflict great loss on Japan. Yet the place is not equipped with so much as a single fortress, telegraph wire or detachment of troops. Oshima in the Satsuma sea, Saigo in Oki, and other places are harbours giving anchorage for ten or twelve ships of war. Yet these places also are not in any way secured. Hokkaido may be regarded without anxiety, but it is urgently necessary that the Goto Islands and so forth should receive military attention.

FISH.

THAT the seas surrounding Japan teem with fish of all kinds is well known, and it has generally been supposed that the Japanese showed as much industry and were as successful as other nations in availing themselves of the provision thus made by nature for their use. But such does not appear to be the case, according to statistics published by the *Tokyo Shimpō*. The export of marine products has, indeed, greatly increased during the *Meiji* era. In the first year of that era the total value of such exports was only five hundred thousand *yen*, whereas last year it amounted to 3½ millions. These are gratifying figures, but if we enquire a little further the record is not so rosy. The total number of persons employed in fishing is eight hundred thousand, and their aggregate gross earnings yearly are only sixteen million *yen*, which gives an average of twenty *yen* per man. In Sweden, on the other hand, a country which has nothing like the same length of sea-coast as Japan, the average annual earnings of each person employed in the fishing trade are two

hundred *yen*. Moreover, while the exhibition at Stockholm in 1880 showed that the number of varieties of fish in the seas about Sweden is only about sixty, it is known that there are seven hundred varieties in Japanese waters; a wealth of fish unknown anywhere else. Scarcely any European country with a seaboard takes less than seventy or eighty million *yen* worth of fish annually, and it is therefore evident that Japan does not utilize her opportunities to anything like their full extent. The *Tokyo Shimpō* thinks that want of proper legislation has much to do with the question. No attempt is made to fix open and close seasons, or to control the methods of taking fish. Everyone is free to do exactly what he pleases and when he pleases. The appliances of the fisherman are also pronounced by our contemporary to be so defective that fishing is limited to the vicinity of the coasts, and distant waters are left untouched. The fishermen are not prepared even to grapple with a shark. Instead of being glad to see one, and setting to work to capture it, they give it a wide berth. Farther, they are without capital, do not take the trouble to accumbulate any, and have no apparatus for ascertaining the condition of the deep sea. These considerations are urged upon the attention of the authorities by the *Tokyo Shimpō*.

THE CHANGE IN THE RAILWAY RULES.

On the 18th of October the Railway Department issued new rules to regulate the periods covered by the tickets of persons travelling by line. A great deal of liberty had previously been granted to the public in this matter, and as the new rules curtailed this liberty, some expressions of discontent were heard. It was provided by the altered by-laws that all journeys of less than 50 miles (English) must be performed within one day, unless a new ticket were purchased from the point where the journey was broken. From fifty to a hundred miles, two days were allowed; from a hundred to two hundred miles, three days; from two hundred to three hundred miles, four days, and from three hundred miles upwards, five days. The *Hochi Shimbun* offers an explanation of the change. It says that dishonest persons took advantage of the former system. Thus, a man would buy a through ticket from Tokyo to Kobe. At Osaka he would alight, and then forward his ticket by post to a friend in Tokyo. The latter would thereupon buy a ticket from Tokyo to Shinagawa or Omori, and being thus enabled to enter the train, would journey right on to Kobe, giving up his friend's ticket at the latter place. Meanwhile the friend would have proceeded to Kobe by paying his fare from Osaka thither. In this manner two people travelled from Tokyo to Kobe at the cost of one ticket plus single fares from Tokyo to Shinagawa and from Osaka to Kobe. This was very clever and very unscrupulous no doubt, but we do not see that the change of rules obviates a repetition of the dishonesty. An interval of five days would amply suffice to accomplish the trick. A passenger arriving in Osaka in the evening might post his ticket the same night. The letter would be delivered in Tokyo on the following day, or at latest on the second day, and another passenger might then proceed leisurely to Kobe with the same ticket. The only effectual plan would be to mark the ticket of anyone breaking his journey, and to require passengers to show their tickets at intervals *en route*. We imagine that such a system is already in force, and if so the chicanery described by the *Hochi Shimbun* could not possibly be perpetrated, unless the guards on the line were very careless.

PRINCE SANJO AND THE HOUSE OF PEERS.

The Lord Keeper of the Privy Seal has addressed to the Council of Nobles (*Kazoku-Kaikan*) a memorandum of some importance. The following is a translation:—"His Majesty the Emperor having granted a Constitution, has established a bicameral Diet, of which one part is the House of Peers, composed of the five orders of nobility. The Princes and Marquises sit in perpetuity, the Counts, Viscounts and Barons elect certain of their orders to represent

them. In addition to these there are Imperial Nominees and Members chosen from among the highest tax-payers. But, as its name truly indicates, the House consists chiefly of Peers, to whom the Emperor has delegated the function of assisting His Majesty in the exercise of the legislative prerogative, that constituting their chief duty. The large numbers of the three lower orders of nobility makes it necessary that they should choose members from among themselves, but for the rest there is no distinction between those who are members and those who are not: all are equally bound to aid in the work of legislation, and since this responsibility devolves on all alike, they must unite their strength for the common cause. The nobles who are chosen to be members have to perform the important function of adopting measures to secure public peace and good order, and it is of the greatest moment that due investigations should be made to that end. The subjects to be investigated, however, are very numerous, and include a comparative study of various laws. It is not possible for one person to undertake the work alone. Steps should be taken to form a Committee of Investigation including as much ability as possible. The Council of Nobles (*Kazoku-Kaikan*) was organized that the nobility might render service to the State, as His Majesty the Emperor explained when calling the Council into existence. Its members have now an important duty to perform. The section of investigation should therefore be increased and arrangements made to collect law books for examination not only by the committee but by the nobles generally. The matter is one of urgency at the present juncture. The ordinary expenditure of the Council ought to be reduced as much as possible and the money thus saved should be devoted to the purposes of the Investigation Committee, any deficiency being made up by the members at large. The time for the opening of the Diet is now close at hand. There is no leisure to take counsel with my brother nobles, and I have therefore expressed my views in writing. I look for your reply by the 29th instant (29th of October) and shall conclude that those not answering by that day are in favour of my project, which will be carried out in accordance with the decision of the majority." The above is signed by Prince Sanjo in his capacity of President of the Council of Nobles.

COMPETITIVE POETS.

The *Chinese Times* has tried the experiment of inviting competitive English renderings of German and French pieces. The example chosen from German literature was a well known poem of Körner's, and the following excellent translation secured the first prize:—

I am awake! In rosy glory
Around me shines the springtide day;
It draws me from my attic storey,
Its bell-notes call my heart away.
The sun breaks through his cloudy prison,
Little his radiance glads my eyes;
To me he lingers still unrisen
For my heart's sun has yet to rise.
Along the street gay life is thronging,
I reckon not of the crowd and press;
My thoughts fly forth on wings of longing;
To know thee near is happiness.
Entrancing fears my heart beleaguers,
With timorous joy my senses swell,
What time I pass with footsteps eager
The corner which I love so well.
Then let me hang with clearer vision
Where thy dear window o'er me gleams
While rapture, restful yet Elysian,
Transports me to my land of dreams;
Till hopes perfected crown my dreaming
Till Faith at last is lost in Sight.
And thy loved eyes upon me beaming
Fill all my life with heavenly light.

SVASTIKA.

THE EMPEROR'S BIRTHDAY.

Tokyo was unusually quiet yesterday for an Emperor's birthday. The review of the troops in garrison, which generally constitutes the principal event of the day, had to be postponed on account of His Majesty's indisposition, and thus the city, instead of being enlivened by strains of martial music and the rattle of *feu de joie*, remained undisturbed until noon when

the boom of big guns rolled but from the saluting battery and the ships lying off Shinagawa. In the evening the Minister of State for Foreign Affairs and Viscountess Aoki gave a reception at the Rokumeikan. A vast number were present, probably some fifteen hundred, including Princes of the Blood, Ministers of State, nobles, members of the Corps Diplomatique, and other notables, official and private, foreign and Japanese. The building as usual was beautifully decorated, and though the crowd seemed denser than ever, it was observed that either owing to special arrangements or because consideration is becoming a more widely practised virtue, a reasonable space was left for the dancers. The Japanese have evidently lost much of the enthusiasm which for a time threatened to reconcile them to round dances in Occidental style. The disposition to take part in these was rarely evinced last evening, but the square dances always enlisted a strong contingent of Japanese ladies and gentlemen, who went through every figure and step with notable precision. There was, we regret to say, a total absence of Japanese costumes, but it could not be inferred that this was due to any revival of the fancy for foreign fashions on the ladies' part. Rather must it be attributed to the fact that what may be called the foreign-frock-wearing section of the Tokyo fair sex alone were present. Doubtless the novelty of these huge balls has to a great extent worn off, and Japanese ladies no longer emerge from their quiet homes to assist as interested and slightly surprised observers at entertainments not altogether congenial to the national taste. Judging from the demeanour of some of the guests, however, it was conjectured that a ball in Western style still presents novel features to certain Japanese, for a numerous knot of gentlemen, probably provincial members of the Diet, watched the proceedings with sedate but palpable curiosity. The Yokohama community was not very largely represented, the long railway journey and the unseasonable cold of the evening doubtless acting as deterrents. It need scarcely be said that all the arrangements were perfect, that the refreshments and supper were excellent, that the music was good, and that a brilliant display of fireworks delighted not only the guests, but also a concourse of thousands of sight-seers covering the Hibiya Parade-ground and the adjacent streets.

* * *

In Yokohama many business places were closed and in all the public offices, both Japanese and foreign, holiday was celebrated. Most of the ships in Harbour and all the men-of-war, dressed, and at midday the war-vessels fired a salute.

DOINGS IN THE DIET.

Among the various predictions uttered with respect to the probable doings of the Diet, a striking one is published by the *Yomiuri Shimbun*. It is to the effect that a small party among the members of the House of Representatives is bent upon agitating for reforms of a most drastic character. The principal items of their contemplated programme are the three Departments of Communications, Education, and Agriculture and Commerce. Instead of the Department of Education they advocate the establishment of a Board (*Tokugaku-in*) with an official of *chokunin* rank at its head. The Department of Communications they would replace by a Post Office Bureau, entrusting to private enterprise the greater part of the functions now performed by the Department. As for the Department of Agriculture and Commerce, their opinion is that it may be swept away altogether, since its duties could be equally well discharged by Chambers of Commerce and similar bodies. Even the business of the Bureau of Government Forests, they think, might be dispensed with, and its work performed by Local Governments. No doubt all this would signify an appreciable diminution of the public expenditure, but that there is the smallest chance of such a programme being carried out, we do not for a moment suppose. The band of politicians who are said to have pledged themselves to this pro-

gramme must be of exceedingly diminutive strength if they consist chiefly of ex-Senators, since the number of the latter elected to the House might almost be counted on the fingers of one hand. We do not ourselves look forward to any remarkable achievement on the part of the Diet during its first session of three months. By the time it has passed the Budget and discussed the various bills submitted to it by the Government—which bills, according to the Constitution, take precedence of measures initiated by the Diet itself—there will be very little left of its three months' existence. Three months from November 25th to February 25th will only give about sixty sittings, if Sundays, national holidays and the New Year's recess be subtracted. The lowest estimate of Government bills to be submitted puts the number at twenty-two, which means something less than three nights per bill. Of course all proposals of a fiscal nature, including the abolition or reconstruction of Departments of State, might be introduced into the debate on the Budget, but changes so radical as those attributed to the coterie of ex-Senators are not likely to occupy the attention of the House for any lengthy period.

COUNT SOYESHIMA.

THE interviewers have been visiting Count Soyeshima and asking his opinions about the burning question of the day. The comet replied in part sentimentously and in part sagely. He gave it as his opinion that since the solution of a problem like Treaty Revision depends largely on the effective strength and wealth of the Empire, the difficulty of success is very great. But he then went on to explain that the mood of the people is also a very important factor, and he illustrated this by referring to his own experience as Minister of Foreign Affairs. In those days no sooner was one question settled than another cropped up, in the shape of the assassination of a foreigner or the burning of a foreign Legation. The British Representative, too, at that era, was a diplomatist of somewhat imperious type and, moreover, foreign troops were quartered in Yokohama. Among foreign officials the Japanese had only one friend, Mr. F. O. Adams, the First Secretary of the British Legation. A hard matter, therefore, was the conduct of the country's foreign affairs in those times. Count Soyeshima's retrospect evidently afforded him little satisfaction, and he was strongly disposed to compare it with the different state of affairs to-day existing. Now, however, no less than then, he declared that a dignified, unanimous and quiet attitude on the part of the Japanese nation was before everything essential, with which verdict we fully agree.

GOLD IN JAPAN.

AN interesting statement is published by the *Nichi Nichi Shimbun* with regard to the quantity of gold coin in Japan. We read that according to an examination recently undertaken by the Authorities, the total value of the gold coin held by the Banks and in circulation is 89,270,000 *yen*, to which must be added a sum of about 25 millions constituting a part of the Treasury reserve for the redemption of paper money. Compared with the records of the *keicho* era (1596-1614), which is always referred to as the golden period of Japanese history, these figures look insignificant, the value of the gold coin held by the Government and the Banks, together with that in circulation at the close of the sixteenth century, having been no less than 346,450,000 *yen*. This latter figure is decidedly striking. If it be trustworthy, and the records are said to be beyond doubt, the quantity of the yellow metal held by the Japanese nation three centuries ago was very remarkable. At the same time it has to be observed that the currency of those days was practically gold and gold only, the subsidiary coins alone being silver, with the exception of a limited number of silver *ryo*. Silver was as scarce then as it is now plentiful. Moreover, the habit of hoarding was general. From the Shogun down to the pettiest feudal baron everyone aimed at accumulating in his store-house a stock of gold

for use in times of trouble. Now-a-days one scarcely ever sees a gold coin in Japan. Though nominally using a gold standard the nation employs silver only for currency purposes, and we should not have been at all surprised to learn that the stock of gold coin represented only half of the amount ascertained by recent researches.

THE LAST OF THE SIDE-WHEELERS.

By the disappearance of the *Nagoya Maru* whose destruction has already been decreed, the last of the old side-wheelers, the presence of which has almost since the first days of Yokohama as an open port been such a prominent feature of our harbour, will be removed. Some three months ago the *Hiroshima* was taken over to Kanagawa where she has since been in the hands of the spoilers, her deck fittings, smoke-stack, engines, &c., gradually disappearing till now little remains of her but her lower timbers and the fragments of her wheel shafts. A day or two ago the *Nagoya* was taken over to fulfil a similar doom, and now lies within a cable's length of the *Hiroshima's* wreck, in readiness to pass through the same process. Both ships have had somewhat of a history, the greater part of which is no doubt familiar to more than one of those whose memories will carry them back to the earlier days of the Pacific Mail in Japan. The *Hiroshima*, which is now, we believe, some thirty six years old, was built for the Vanderbilt line and having made a trip to England went thence to Australia, making a record which was not broken up till two or three years ago. Afterwards she found her way to San Francisco, and was employed running in the Southern trade. In 1869 she came to Japan as one of the first steamers of the Pacific Mail, bearing then name of the *Golden Age* and after running for some years on the Pacific line she passed into the hands of the Mitsu Bishi Co. The *Nagoya* a much newer ship came out to Japan as the *Oregonian* in 1868. Both vessels were employed on the Shanghai mail line by the Japanese companies who successively owned them, till the *Yokohama Maru*, *Tokio Maru*, and other new ships were put on. Though to the landsman's eye sister ships, the two side-wheelers were much different, the *Nagoya* having heavier engines, considerably more beam (and consequently much greater cargo capacity) and having very shallow draught.

THE OLD QUESTION.

OUR readers will scarcely need to be told, we imagine, that the topic of Treaty Revision continues to fill many a column of the vernacular press, sometimes in the form of editorial notes, sometimes in the form of interviews with men of reputation, and sometimes in the form of fragmentary intelligence, indicating chiefly the perplexity and uncertainty of the writer. We read, for example, a statement that, according to the hundred and sixty-sixth article of the Civil Code, the contention raised by certain foreign land-renters in Yokohama—that inasmuch as they have been holding land for over twenty years without any limit of period, right of ownership is now established—has no validity, for the Code fixes the limit of emphyteusis at fifty years. This point may have some interest, but it certainly possesses no practical value, for there is not the smallest fear that foreigners will be disturbed in their holdings as a result of the revision of the Treaties. They are now in the position of lessees only, but on the completion of Treaty Revision they will doubtless be registered as owners, and can receive title-deeds if they please. The provision of the Civil Code referred to is that an emphyteusis, that is to say, a lease of an immovable for a long term, cannot exceed fifty years; but the same section enacts that leases of immovables made previously to the promulgation of the Code for a fixed term of even more than fifty years will remain valid for the full term assigned to them. There is also a provision with regard to leases that have been formally agreed to as leases in perpetuity: it is enacted that a special law, issued sub-

sequently to the promulgation of the Code, will provide for the power of the emphyteuticary to purchase the right to receive rent, and the conditions on which such purchase are to be made. The matter cannot, therefore, be dismissed in the summary fashion adopted by one of the vernacular journals. But, as we have already said, there is not the slightest ground for apprehension that any vexatious or onerous conditions will be imposed upon foreign land-renters—or foreign land-owners as they will then become—by the terms of the revised Treaties. Passing from this question, which has at least the merit of being worthy of notice, we enter the region of interviews, and are introduced to Count Soyeshima contrasting the evil days of his own tenure of the portfolio of Foreign Affairs with the pleasant places of power and consideration in which the lot of a present Foreign Secretary is cast; or again, we find ourselves with the French Minister, into whose mouth are put some wholly imaginary assertions about his attitude towards Count Okuma's proposals and his attitude towards Viscount Aoki's programme. Then we have estimates of the disposition and character of Her Britannic Majesty's Representative, and strange complaints that whereas England blocked the way and Germany opened it last year, the positions are now reversed and England is the pioneer, while Germany holds back. Need we say that truth is enshrined in only the most infinitesimal fraction of such stories, the other parts being pure invention? Even more applicable is this caution to the accounts given of the Revision programme and history. One newspaper asserts that, so far from the negotiations having made marked progress, they have not even commenced, nor is the Japanese Government certain that it will undertake them at all. Another, with no less assurance, declares that a settlement is in sight, and that Japan will very shortly obtain what she has long aspired to. Then again, we are assured that the new draft has been purged of the conditions which hurt the national pride last year, or threatened to be injurious to Japanese interests, whereas another metropolitan journal says precisely the opposite, and warns the people to keep their eyes open as foreigners are on the point of getting everything they want. To give these various *canards* and conjectures in detail would be merely to waste our space and weary our readers. We refer to them here solely for the purpose of showing that our silence as to the publication of so much idle comment and mythical intelligence must not be construed as indicating any absence of such matter from the columns of the vernacular press. We may note, too, *en passant*, the peculiar fact that the versions appearing in this Japanese newspaper or that, are carefully reproduced by one, if not both, of our local English contemporaries, and treated with serious consideration. Is it to be inferred from this that Yokohama, having held a meeting to publicly protest against a programme concerning which information was alleged to have been procured from a perfectly trustworthy quarter, is still ignorant of the measure against which it raised its voice so emphatically? The inference appears rather extravagant. Yet if Yokohama knew what it was doing on September the 11th, why do its local journals collect and give seeming credence to scraps of information furnished by the vernacular press six weeks later, and if it did not know, why on earth did it protest?

THE SILK MARKET.

"THE state of the Yokohama silk market," writes the *Shogyo Shimpō*, "which has never been active this year from the beginning of the season, is at present so dull that the foreign houses look as if they were enjoying holidays more numerous and unwelcome than those observed in connection with the Negishi Races. Such being the case, and there being also some indications of further depression, the Japanese merchants in possession of large stocks are naturally feeling very anxious. Already the firm of Messrs. Hara & Co., being in possession of a far larger stock than any other house this year, showed signs of beginning to sell off, and a general forced sale seemed imminent, but the

prices momentarily cooled the business ardour of the foreign merchants, and the anticipated event was postponed. The foreign merchants, who have not received as many orders as usual from America this year, and who are well aware of the existence of a surplus stock, seem resolved to adopt the course of beating down the price of silk as much as possible, and waiting for a general forced sale on the part of the Japanese. Under such circumstances, selling off by one Japanese firm of consideration would lead to a sudden and general change in the market, and silk merchants are anxiously watching the movements of Messrs. Hara & Co. Whether selling off at present would be a wiser plan than holding until the market assumes a better condition, is a difficult question to solve, but there seems to be a strong feeling in favour of manfully disposing of the stock now before forced sales at too low figures become necessary. Some think that the stock of silk in Yokohama having reached, on the 31st of last month, thirty thousand bales, an amount never heard of since the opening of the port, it would be wise policy to unload at once. This is indeed a problem as puzzling as it is important."

MR. MOTLEY OF SHANGHAI.

FOR genuine naïveté the *North China Daily News* latest utterances on the subject of Treaty Revision deserve the palm. At the close of an article written chiefly, so far as we can judge, to prove that the cruet-stand is the centre of civilization in Japan, that journal gives us the following information:—

The Japanese are taking with much zeal to entertainments in foreign style. They give each other dinners at their semi-foreign hotels, and the cruet-stand occupies a very prominent position in their feasts, for the Japanese banqueter is not particular as to the appropriateness—to the foreign taste—of the condiments he employs, and he employs them freely. In feasting, as in almost everything else, the Japanese looks up to foreign ways as superior to his own; whatever his newspapers may say, the ordinary Japanese still regards the foreigner as a superior being, and shows it by his incessant endeavours to imitate him. As long as this is the case, it is unreasonable to imagine that he feels really insulted by extraterritoriality, or will be really aggrieved if he does not get the treaties with foreign Powers revised on the basis of equal rights. It seems certain that the demands for the abolition of extraterritoriality is not a popular demand; it may be very reasonably diluted whether the people, as a whole, want to have the country thrown open to foreigners; even if, with that concession, they buy the withdrawal of consular jurisdiction. The Diet meets in a month, and then perhaps we shall get at what the real feeling of the country is; we say perhaps, because the people generally did not take much interest in the election of members of the Diet, and their members may not, at first, represent them accurately. But the Diet will be a splendid means of political education, and it will not be long before the electors do take an interest in their parliament, and then we shall know what their real wishes as to treaty revision are; and when the country is thrown open, the demand for cruet-stands will become larger still.

It is hard to discover whether the writer of this intends to be taken seriously. His ignorance at all events is amusing, and if the qualities of some of the condiments usually contained in cruet-stands could be imparted to his style, he might pass for a fifth-rate jester. But at present silliness is his only title to be diverting. Some one of his calibre was needed to discover that because the Japanese are beginning to like beef, and because they are also beginning to eat mustard with it therefore they don't want the Treaties revised. *O sancta simplicitas!* "Let the doors be shut upon him; that he may play the fool nowhere but in his own house."

THE PROGRAMME OF THE INDEPENDENTS ("TAISEI KAI").

We read in the *Fomuri Shimbun* that the Committee of five—Messrs. Oyagi Bichiro, Motoda Hajime, Okata Ryoichiro, Yendo On, and Tsuda Moichi—appointed by the Independents (*Taisei-kai*) to investigate the special subject of law, have completed their labours and presented a report embodying a number of suggestions, of which the following are the principal:—Changes in the Organization of the Courts of Law; postponement of the date of operation of the new Commercial Code; reform of the regulations as to public meetings and political parties; certain changes in executive methods; repeal of the Peace Preservation Regulations; explanation of the 67th Article of the Constitution; reform of the law of statistics; reform of the Prison Regulations; and abolition

of the Appeal Court of Hakodate. Such an extensive programme of reform certainly indicates that, like all new brooms, the Independents want to sweep clean. Their proposal to postpone the date of operation of the new Commercial Code strikes us as a little surprising, seeing that those who were most opposed to the speedy operation of the Code are said to have discovered, on careful investigation, that their objections are not well founded, and that the Code presents very few features calling for alteration.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for September, showing the foreign trade of Japan for the month:—

	1890.		1890.	
	SILVER YEN.	TAELS.	SILVER YEN.	TAELS.
Exports	6,755,786.080	4,276,919.010

THE "GAKUSHU KAI-IN."

THE *Gakushu-Kai* of Tokyo is an institution originally modelled on lines similar to those of the Royal Society of England. It was organised eleven years ago when Count Saigo held the portfolio of education, its declared object being to bring together men of conspicuous learning and philanthropy, not only for purposes of debate, but also to open correspondence with bodies of like nature in other lands. Its earliest members, according to a sketch given in the columns of the *Mainichi Shimbun*, were Messrs. Fukuzawa Yukiichi, Kato Hirayuki, Kanda Kohei, Nishi Shu, Tsuda Mamichi, Mitsukuri Shinryo, and Nakamura Masanao—a group of scholars brilliant enough to raise the new society at once to a very high plane. The members were empowered to add to their number by election, and they exercised this power to a limited degree. By and by, however, Messrs. Fukuzawa and Tsuda resigned, and the death of Mr. Mitsukuri still further reduced the

original band. In 1886 the rules of the Society were amended, and a provision was inserted to the effect that fifteen special members might be nominated by the Crown. It does not appear, however, that this provision was acted on in more than two cases, that of Count Terashima and one other gentleman. At present the total membership is only twenty-seven, from which fact alone it may be gathered that the Society has not attempted to fill a place corresponding with that occupied by its foreign models. Influenced probably by this reflection, the Government has now sought to give the Society an impetus by issuing, for the first time, rules determining its constitution. A translation of the Imperial Ordinance bearing on the subject will be found elsewhere in our columns. Nevertheless the object of the new Ordinance is not to extend the membership of the Society to any great extent, since it provides that associates chosen by the members shall not exceed twenty-five, and associates nominated by the Crown shall be limited to fifteen, making forty in all. The *Gakushu-kai* in now becomes practically a section of the Educational Department, with a President and two Directors, each receiving a trifling salary of 300 yen annually, evidently of the nature of a contingent allowance. A similar allowance is also to be made to members over sixty years of age, provided that their number does not exceed ten. Judging by the terms of the Ordinance, it appears that the *Gakushu-kai* is to be a species of deliberative assembly to which the Minister of State for Education may submit educational questions for discussion and advice.

DISCOVERIES.

THE genius of discovery should always be treated with reverence. We therefore reproduce, from the columns of the *North China Daily News*, a paragraph which proves that certain newspapers in Germany are highly gifted in that respect:—"The *Export*, a German mercantile paper, warns the manufacturers of the Fatherland against the apparently guileless Japanese gentlemen who visit Europe in search of knowledge. They are particularly fond of and interested in all sorts of ingenious mechanical processes; and the German manufacturers have always been most kind in showing them over their factories, and explaining to them the various uses and mysteries of the various machines. Now these Japanese have gone back to their own country and turned on their benefactors. With the aptness and quickness characteristic of their race, these tourists have quickly picked up the secrets of European factories, and established similar factories in Japan. The Germans have just awakened to the fact that, as the *Export* points out, the Japanese are competing with them in China in the beer trade, and are already making Swedish matches, silk umbrellas, cheap woollen stuffs, metal buttons, and petroleum lamps. For the two last-named articles, says the *Export*, the Chinese market will soon be entirely closed to German manufacturers." It is too bad of the Japanese to have behaved in this manner. The *Export*, however, does not carry its warning quite far enough. It ought to have added another item to the iniquity of the Japanese, namely, that they actually employ German brewers to manufacture the beer which competes with the German product in Chinese ports. As for matches, we fear that the Japanese are quite incorrigible in that matter. They so were ungrateful as to begin making matches years ago and they have pushed the industry to a very high point of development.

THE "JIJI SHINPO" AND THE "DAIDO SHIMBUN."

THE *Jiji Shimpō* stated in a recent issue that the *Daido Shimbun* had been acquired by the newly organised National Liberals and was to be made their organ. The *Daido* denies this with some indignation. It says that the newspaper is now the absolute property of Mr. Sanyō Shigeyasu, and that preparations are in progress to increase it considerably in view of the opening of the Diet. The idea of disposing of it to another political party has never been entertained.

Mr. Suyehiro is a leading member of the Constitutional Liberals, and it is not in the least likely that he would suffer his journal to be converted into the organ of an opposing party. "The *Fiji Shimpō*," adds the writer of the contradiction, "has not betrayed ignorance of political party matters now for the first time. A little more caution would become it. This latest fabrication is startling, and we beg our provincial contemporaries not to be misled by it." The trouble is in such a case that the circulation of the *Fiji Shimpō* in the provinces far exceeds that of any other political journal of Tokyo, so that unless "the pink paper" itself publishes a withdrawal of its error, the denial of the *Daido Shimbun* will be comparatively inaudible.

PICTURESQUE JAPANESE.

SPEAKING of the death of Canon Liddon, the *Pall Mall Budget* writes:—"The attendance at St. Paul's Cathedral when Liddon was in residence was probably the most cosmopolitan of any ever seen in any church. Only on the occasion of his last sermon there were present Japanese Christians in their picturesque costume, an African priest, a distinguished lay member of the Greek Church, and representative members, probably, of every religious denomination. Of late years he has not alluded explicitly so much as he had been in the habit of doing to public events but his sermons always had an indirect reference to what was uppermost in the minds of his hearers." We should like to know what were the "picturesque costumes" here alluded to. It is generally supposed that Japanese living in London wear the same dress as the British denizens of that city, and it has not yet been suggested by any critic that they wear it in a specially picturesque manner.

ACCIDENT TO A CHINESE MAN-OF-WAR.

REFERRING to the reported loss of two Chinese men-of-war, the *N.C. Daily News* of the 25th ultimo said:—"The report which we mentioned on Wednesday of the loss of two vessels belonging to the Peiyang squadron, was not altogether unfounded, for two of the ships had an uncommonly narrow escape. The *Chingyuan* and a consort were coming down from Vladivostok, when the *Chingyuan* bumped over the rocks off Cape Bruat, her consort running unharmed between the rocks and the Cape. The *Chingyuan* was very seriously damaged, her stem being broken, and her ram driven in, a lot of her outer bottom torn away, and the inner bottom pierced by the rocks, and one of her propellers stripped of all its blades. She got into port with several compartments full of water, and had a very narrow escape of foundering with all on board. She was ordered to come to Shanghai to be docked, after the necessary temporary repairs had been effected. It was little short of a miracle that her consort got through safely; another instance of China's proverbial luck.

THE IMPERIAL VISIT TO MITO.

BEFORE the Emperor's departure from Mito, His Majesty awarded 200 *yen* each to Fujita Jirozaemon, Fujita Seinoshin (well-known by his *nom-de-plume* "Tōko"), Toda Ginjirō and Aizawa Tsunezō, famous Mito *literati*, and Imperialists; and 200 *yen* to the *Chirei-sha*, where many patriots are enshrined. The Emperor and the Empress were also graciously pleased to grant 300 *yen* to the Normal School, in whose buildings they were lodged, and 100 *yen* to the city of Mito, which welcomed them so heartily, and presented such a gay and beautiful appearance during their stay. The Imperial party left the Castle grounds on Wednesday morning at 8 o'clock, and took the train for Tokyo, having had fine weather during their stay at Mito, and the greatest enthusiasm displayed everywhere.

MR. COLBORNE BABER.

We take this from the *Chinese Times*:—"The Royal Geographical Society's obituary notice of Mr. Colborne Baber includes some interesting reminiscences from the pen of his father, who

was at the time of his son's birth in 1843 headmaster of the school which has since developed into Dulwich College. Among other things he gives the following verses which mark an incident in Mr. Baber's early experience which left a deep, and his father seems to think a permanent, impression on his mind:—

Why are the fond forsaken?
Why do the dear ones die?
Shall we from death awaken,
To find the loved ones nigh?
It is but empty seeming,
An idle tale and vain,
That I am always dreaming
Of meeting thee again!
O fondest, truest, dearest!
In that sweet heaven above,
I wonder if thou hearest
The voice of thy true love?
The voice that often moved thee,
As none could move before;
The voice of him who loved thee,
And lost thee—dead Lenore.
Hast thou the same sweet presence
As in the happy past,
Or art thou but an essence,
That wanders in the vast?
Or does that same sweet spirit,
That filled a form so fair,
Shine high heaven inhabit
The shape that angels wear?
Oh! my heart, my heart is aching
With longing to be free,
If death has any waking,
I shall awake with thee.
Such burning thoughts come thronging,
And thrill me more and more,
With an eternal longing
To be with thee, Lenore."

THE CONSTITUTIONAL LIBERALS.

At the last meeting of the Constitutional Liberals (*Rikken Jiuyō*) a report was presented, says the *Nichi Nichi Shimbun*, from the Committee appointed to examine the question of Treaty Revision. The report explained that although this subject had attracted much attention of late and given rise to various rumours, there did not, on accurate investigation, appear to be sufficient grounds for the excitement. It was added, however, that as the question occupies a prominent place in the political programme of the Party, the fullest attention should be given to it. At the same meeting the *Daido*, *Koko*, and *Jiyu* newspapers were declared to be the organs of the Party.

SOAP.

We take this from a home exchange:—"Soap was unknown to the ancients. It is fact, however, that the word soap does occur in the translation of the Old Testament, but the original Hebrew words *Nether* and *Borith* were better translated as meaning mineral and vegetable alkali. Homer was unacquainted with soap, and from the following we gather that the Greek ladies cleansed themselves first with alkaline water, and then, in order to remedy the caustic alkaline effect, anointed themselves with oil or fat.

They seek the cisterns where the Phœcean dames
Wash their fair garments in the limpid streams;
Where gathering into depths the falling rills,
The lucid wave a spacious basin fills;
The vestures cleansed, o'erspread the shelly sand,
Their snowy lustre whitens all the strand;
Then with a short repast relieve their toil,
And o'er their limbs diffuse the ambrosial oil.
—Homer's *Odyssey*.

Soap is first mentioned by Pliny, who informs us that the Gauls manufactured a soap from goat's tallow and the alkaline ashes of beech-wood. It was introduced by the conquerors to the Roman dames to afford a means of beautifying the skin, and with a view to reduce the dark colour of their hair to that of the Teutons. After this, another substance, the crude fat obtained from sheep's wool, known as *Oesypus*, was most extensively employed as a cosmetic. Ovid informs us that the Greek ladies employed this *Oesypus* with very satisfactory results, as a safeguard against wrinkles, and to promote the growth of the hair. The Roman ladies, learning of the success attending the employment of *Oesypus*, were not slow in following their example, and very soon adopted it as their favourite article for the toilet. When Rome was conquered by the Barbarians, this favourite unguent

appears to have fallen into disuse, and we hear nothing more of it until a few years ago, when an industrious chemist on the Continent (Professor Liebreich), carefully made the crude product "*Oesypus*" a matter of research. The result was his discovery of "*Lanoline*," a pure, regenerated "*Oesypus*," which in appearance is like a thick cream. He discovered, moreover, that this "*Lanoline*" was really the natural fat of the skin and hair, and when employed as a dressing for these tissues it rendered them supple and healthy. As opposed to the ordinary glycerine oils and fats employed in the manufacture of cosmetics, it caused a complete revolution. Everyone has experienced the disagreeable effects of ordinary soaps, which invariably contain an excess of alkali. "*Lanoline*" afforded a means for overcoming this important defect, and in "*Lanoline*" Toilet Soap we find an excess of the fat natural to the skin, which renders it smooth, supple, and healthy, instead of dry, harsh, and inclined to chaps, as was the case with the toilet soaps of the past. In addition to its employment in the manufacture of toilet soap, "*Lanoline*" Cold Cream, "*Lanoline*" Pomade, and Toilet "*Lanoline*" are prepared. These preparations are all natural to the tissues; and instead of acting as irritants, they afford a means for supplying nutrient material which promotes *metabolic force*, and conduces to a healthy condition of the skin and hair."

COUNT HIGASHI-KUZE.

Some scandal-mongers having spread a report that the sum of seventeen thousand *yen* had been spent by Count Higashi-Kuze to secure his nomination to the Vice-Presidency of the House of Peers, a friend called upon the Count and elicited from the latter a laughing comment on the tale. The new Vice-President explained that as a Privy Councillor he received a salary of four thousand five hundred *yen* annually, whereas his emoluments as Vice-President will be only two thousand *yen*. He thus loses two thousand five hundred *yen* per year, and since his term of service as Vice-President is seven years, the total loss will be seventeen thousand five hundred *yen*. It is quite true, therefore, to say that he has expended seventeen thousand *yen* to procure his present appointment, though the manner of expenditure is not precisely what rumour indicated.

THE THREE BANKS.

DRAFT regulations for the organization of a Bank of movable property (*Dosan Ginko*), an Industrial Bank and a commercial Bank, were supposed to have been prepared some time ago and submitted for deliberation in the proper quarters. A rumour was recently circulated, however, to the effect that the idea of founding such establishments had been abandoned and the task of revising the regulations given up. The *Shogyo Shimpō* now explains that, according to trustworthy information supplied to it, nothing of the kind occurred. The Regulations have actually emerged from the hands of the Legislative Bureau and been laid before the Cabinet. But the latter has decided that the organization of the three Banks had better be debated by the Diet, and it is accordingly intended to embody the draft Regulations in a Bill to be laid before that body.

WHAT WILL BE THE SELLING PRICE OF TSUSHIMA?

"How earnestly Englishmen regard the Eastern Pacific question," says the *Fiji Shimpō*, "may be gathered from a proposal recently put forward by an English naval officer in an essay, a prize essay, on Coast defence, namely, that England should buy the Islands of Tsushima, and make there a naval station as well as a trading port. Everybody knows that Tsushima lies in an important situation dividing, as it were, the China seas and the Japan seas, and that not only did the Russians once attempt to obtain possession of the islands, but the English Government also wishes to have one of the Tsushima ports opened for foreign commerce. Further the Japanese Government has already made special arrangements for the defence of the

islands and has built a fort on the isle of Chikubu. The essay, alluded to above, after treating of the insufficiency of the British naval force in the Eastern Pacific, goes on to say that Hongkong does not meet the requirements of the situation as a coaling station, and proposes to approach the Japanese Government with a view to the purchase of the islands of Tsushima. We may smile at the ridiculous idea of a British officer's thinking that the Japanese Government would sell Tsushima. To an outsider, however, a small piece of isolated land, as Tsushima looks on the map, not unnaturally appears a fair object of barter and likely to be gladly disposed of so soon as the bidding reached a fair amount. What is certain, however, is that should Japan show any disposition to get rid of the islands, buyers would not be lacking. Were we to put up Tsushima for sale at auction in the world's market, who would offer the highest sum, and what would the amount be? We should like to know."

DEATH OF MR. EDWARD MORRIS.

WE read with deep regret the death, which occurred at an early hour this morning, of Mr. Edward Morris, manager at Yokohama of the local branch of the Hongkong and Shanghai Banking Corporation. The deceased gentleman had been ailing for a long time, his health entirely giving way towards the close of last summer, despite the closest medical attention. On the 24th of August last he went to Hakone, and a week later on the 31st he was taken ill. The deceased gentleman had been in indifferent health, and under the latest attack (which consisted of serious complications of heart disease) he rapidly sank, and at length passed quietly away. Mr. Morris had been a bank manager for fully thirty years. He came out to the east to join the staff of the Agra Bank, and after acting for a long period manager in Shanghai of that institution, he entered the Hongkong and Shanghai Bank in 1872, as sub-manager at Hongkong, afterwards acting as agent at Calcutta. He took charge of the interests of the great banking corporation at this port in February, 1884, in succession to Mr. John Walter, and in his hands those interests have since been guarded and advanced with such energy and enterprise that his removal means an almost irreparable loss to those whom he so ably represented, as well as to the public at large. The deceased gentleman did not publicly take any prominent share in the affairs of the community, but his influence was ever exerted for good, and from no movement directed to worthy ends was the substantial aid and support of Mr. Morris ever withheld. His well known figure will be long missed by the community, and his memory will be treasured with the highest respect by all in whose minds unflinching integrity and high dignity of character constitute claims to human esteem.

ANOTHER VIEW OF COUNT ITO'S NEW OFFICE.

It seems that every one is not unanimous in approving of Count Ito's appointment to the Presidency of the Upper House. Viscount Yuri, a nobleman of whom the public hears very little now-a-days, though at one time he was counted a personage of note, has been telling a reporter of the *Nippon* that Count Ito cannot undertake to discharge the duties of President without loss of prestige. As the opponent or chief of the present Cabinet the Count would be occupying a proper position, but since all the members of the Cabinet are men who rank below him politically, it is difficult to see how he can conveniently fill a post which places him, in a certain sense, between the Cabinet and the Legislature. Such is Viscount Yuri's view, but we confess that it is too subtle for our appreciation. No one ignores the fact that Count Ito makes a considerable sacrifice, from a personal point of view, in accepting the Presidency of the Upper House. But his duty to his country undoubtedly requires that he should lend his active assistance to the successful accomplishment of the great work, the preliminaries of which are virtually of his arranging. The

interpretation of the Constitution in practice demands almost as large an exercise of skill and judgment as its compilation, and Count Ito, before all Japanese statesmen, is best qualified to act as its exponent. Before considerations of such moment points like those raised by Viscount Yuri seem to us to possess little significance.

THE OSAKA CHAMBER OF COMMERCE AND THE NEW COMMERCIAL CODE.

It has already been explained in these columns that the Tokyo Chamber of Commerce decided, by a majority, to recommend the postponement of the time for putting the new Commercial Code into operation. The Osaka Chamber of Commerce, however, takes a different view, and regards the speedy operation of the Code as matter of congratulation. Some time ago, the latter Chamber chose a Committee of fifteen of its members to examine the Code carefully, and this Committee reported the result of its investigations at an extraordinary general meeting of the Chamber, held on the 27th ultimo. The report, distinctly favourable to the Code, was adopted by a majority of those present at the meeting. We find in various vernacular journals a tolerably detailed *resumé* of the document. It runs as follows:—"Your Committee is of the opinion that the provisions of Chapters 1 to 5, Part I. of the Commercial Code, are of practical importance for the due regulation of commercial dealings, though it must be admitted that some points are novel and slightly vexatious. Your Committee holds that any embarrassment likely to be caused by the operation of the Code will be out-balanced by the good effects produced by it. Chapter 3 contains important rules which are evidently needed, as the question of trade-marks occupies much attention in the commercial world at present. Article 23 of that chapter will be especially beneficial when taken in conjunction with the Law of Bankruptcy. Chapter 4, which relates to account books, will also produce excellent results at the cost of very little trouble. Every merchant who cares for accuracy and system should keep books of the kind there prescribed, whether the law directs or does not direct him to have them. If he does not do so, his own carelessness is to blame. Further, no penalty is inflicted for not keeping these books; the only consequence is that the merchant who does not keep them is placed at a disadvantage in the event of a civil suit. Chapter 5 regulates the relations between employer and employee, and will materially help to render trade safe and easy. To take an example; this chapter provides that a merchant may be represented by his agent in Court, instead of being obliged to appear in person or be represented by a barrister, as the Code of Civil Procedure directs. There are not a few novelties in this last part, but they are manifestly beneficial and should be put into practice without delay. Turning to the Second Section, we are of opinion that Chapter 6, Part I. of the Code, should also be put into operation speedily. Our reasons are; first, that rules like those contained in this chapter are absolutely needed to correct the numerous abuses arising from the present imperfect law of companies. Secondly, that though the provisions of the chapter differ from those of existing laws, the difference is not sufficient to be embarrassing. Thirdly, that persons forming companies are intelligent merchants of, or above, the middle class, and will therefore be able to understand the new rules. Fourthly, that no postponement of the operation of the Code is required in respect of these provisions, inasmuch as the procedure laid down gives quite sufficient time for companies to make the necessary arrangements. And fifthly, that this chapter almost exactly creates the system which our chamber advocated in a memorial presented some time ago to the Authorities. With regard to the Third Section, your Committee finds that the provisions of Chapters 7 to 10, Part I. of the Code, do not materially differ from the methods now in vogue, and that merchants will experience no difficulty in complying with them. Slight amendments may be desirable, but they

furnish no ground for postponing the operation of the Code. As for the Fourth Section, the system prescribed by Part II. of the Code sufficiently resembles existing customs. Maritime merchants will not be at all perplexed by it. Indeed many of these merchants have no knowledge of existing laws, so the enactment of new ones will concern them very little. It will only be a benefit to them to be able to find the rules applying to their business clearly and succinctly laid down. Your Committee believes that this portion of the Code should be carried out without delay. It should be noted that your Committee invited owners of ships registered in Osaka to attend a meeting for the purpose of discussing this point, and that, with very few exceptions, all were in favour of the views here recorded. In respect of the Fifth Section, which relates to Insurance, your Committee is equally in favour of putting it into speedy operation for the following reasons:—First, there should be no objection to the application of such rules to fire and life insurances which were introduced from abroad or are essentially non-indigenous. This applies with even greater force to forms of insurance which have still to be introduced. Secondly, systems of insurance being of Western origin ought to be regulated by laws similar to those enforced in the West. Thirdly, as a policy of insurance under the new law will have the rules applying to it accurately recorded on its face, the insurer and insured alike will know exactly what they are doing. Fourthly, your Committee believes that the rules contained in this chapter closely resemble those actually in force at present. Fifthly, underwriters, whose business is insurance, can have no difficulty in comprehending the law. Sixthly, there are no reasonable grounds to apprehend that insurers will attempt to take advantage of the ignorance of the insured. Seventhly, the object of insurance, namely to secure people against loss, will be sensibly promoted by these improved regulations. Again, with regard to Chapter 12, Part I. of the Code, we are in favour of its speedy application, because (1) anyone acquainted with the present law as to bills and notes can have no difficulty in understanding the provisions of this chapter. (2) It is true that the new law is more complicated than the old, but this seems inevitable in view of the great extension of the dealings to which it applies. (3) There is a strong probability, in the opinion of your Committee, that the use of bills and notes will be developed by the operation of these new regulations. (4) It will be of immense advantage to commercial men that the use of cheques is placed on a clear and safe basis. Finally, your Committee thinks that the Regulations relating to Bankruptcy, as set forth in Part III. of the Code, ought to go into operation speedily because (1) The existing law of bankruptcy is imperfect and gives rise to great abuses which will be obviated by the New Code. (2) The main part of this Section relates to civil procedure. (3) The excellence of the new law is that while it prescribes severe penalties for fraudulent bankrupts, it deals leniently with an honest man who fails through pure misfortune or error of judgment."

It appears to us that this report does infinite credit to the Osaka Chamber of Commerce. Clear and comprehensible reasons are assigned for each opinion; in marked contrast to the vague objections raised by some persons in Tokyo, who are either unable or unwilling to explain the grounds of their objection.

ORGAN RECITAL.

WE learn that the Second Organ Recital and Concert in the Union Church is fixed for Tuesday, the 25th instant. The chorus-work is expected to be particularly good on this occasion, the organ itself is rapidly settling down into perfect condition, and we may look for another musical treat on that evening. We understand that it was at first intended to have the Recital on Thursday, the 22nd—a day peculiarly appropriate to such a function, it being allotted in the calendar to Cecilia, the patron-saint of organists—but the departure of

the American mail on that day has made it necessary to postpone the performance until the 25th.

With reference to the above paragraph, we are glad to find that there is a movement on foot for reviving our local Choral Society. We hail this announcement with delight. We believe that the ladies and gentlemen who are assisting at the Organ Recitals will form the nucleus of the new society, a fact which is in itself a guarantee of success. We have only to add that Mr. Keil is devoting himself with his characteristic energy to the *renaissance*, and our readers will be at once assured that Choral music will soon flourish in our midst.

THE NEW CONSERVATIVE ORGAN.

ON the birthday of the Emperor there appeared in Tokyo the first number of a conservative newspaper under the name of *Chusei Nippo* ("Just and Neutral Daily News"), known to be an organ of the *Hoshu Chusei-Ha* (the Conservative and Neutral party) of which General Viscount Torio and his friends are said to be principal figures. The *Nippon* writes of the new paper that *Koko* (the World) appeared and *Jiyu* (Liberty) followed and now *Chusei* (Impartiality) has come forward. A Count as reporter and a Viscount as editor set an excellent example to the newspaper world. Unfortunately we have found nothing of special interest in the Count's reporting, nor can we discover from the first issue whether the Viscount's editorship will prove to be brilliant, but we think we shall not be alone in ranking this spirited and grave *Chusei Nippo* at the head of the three recently born papers. In order, however, that our readers may be able to judge for themselves what motives inspire the new journal, we translate its opening article:—"The Neutral Conservatives, true to their pledge and purpose of independence, stand neutral among political parties. To their camp belong men who, adhering to conservative principles, are inspired by strong sentiments of loyalty towards our Sovereign and love for our country. In a brief space not yet amounting to two years our Party has become what it is. To complete its internal organization and to enable it to compete with other parties, something more than a monthly periodical is needed. The opening of Parliament, too, is close at hand and Governmental measures of various sorts will doubtless be taken. Under such circumstances a daily newspaper is indispensable, and for this reason the *Chusei Nippo* is published. Placing our conservative principles on the same level with our attachment to hearth and home, we shall labour to the very limit of our capacity to propagate our creed. Henceforth it shall be our duty to discuss the advantages of official measures, from questions of economy and law to those of art, industry, and education. We shall give intelligence about Government and people and about local conditions, not seeking the applause of others or bowing to their opinions, and never practising deception. Strict veracity shall be our rule both in controversy and in intelligence, and we shall always keep moderation in view. But when the duty devolves on us of discussing grave issues or exposing serious errors, we shall not hesitate to resort to strong language. Such is the programme of the *Chusei Nippo*."

Following the above declaration of faith and purpose, comes an article by Viscount Torio under the title of "Apprehension of what Impends." The gist of the Viscount's essay is thus:—"Since the treaties with foreign nations were concluded, we, the people of Japan, have all done what we respectively could for the welfare of our country. Yet looking back at the state of affairs since the Restoration, we see that these efforts have simply produced the effect of injuring the nation, and now the evil one to the country has reached a point almost irremediable. If things were allowed to proceed in this way there would be reason to apprehend a result of extremely disquieting character. The causes which have conspired

to produce such a lamentable state of affairs may be various, but we think that the chief reason is to be sought in men's tendency to assert what each individually thinks to be for the public advantage, but in the heat of such assertion forgetting the interests of the country he desires to serve, and allowing himself to become engrossed in pure controversy. The time is past, however, when people can pause to dispute about what would be beneficial to the nation. The day has come when opinions must be put to the test of practice. That being so, the vital question of the hour is what position should those who are true-hearted and faithful to the country assume in order to best discharge their duties." Here the Viscount's essay stops. We must wait for the conclusion until the 7th instant, when the next number of the new journal will appear. The exordium, however, is well calculated to excite interest. The Viscount's extraordinary proposition that all Japan's efforts since the Restoration have only resulted in doing her harm, is certainly the most sweeping and startling thesis yet advanced by any public writer. We should like to hear the gallant and noble editor prove such an assertion, but from the fact that his article has already been carried to the stage of advice for future guidance, we fear that he intends to leave his main position undemonstrated. At all events it is both curious and unpleasant to find such a close connection asserted between the foreign treaties and the nation's serious injury. The injury, indeed, is not visible to ordinary people, and we wish that, for the sake of others less gifted, he would fill in the details of the vista he perceives.

"THE JAPAN ECHO."

THE *Japan Echo* has made its *début*. If we were surprised at the courage of its projectors before the breadth of their purpose could be gauged, our sentiment of astonishment is increased now that the first copy of the *Echo* lies before us. The *Echo* is a periodical of twenty-four pages, its paper luxuriously thick, its type large and clear, and its general get-up excellent. It has illustrations also, but of these the less said the better. They are decidedly bad. Some accident appears to have happened at their publication. In future issues we are promised an improvement, for which there is practically unlimited room. The letter-press, however, is decidedly good reading. The style is fresh and vigorous. So long as it retains these recommendations the reader not unwillingly closes his eyes to the occasional intrusion of other qualities not equally pleasant or praiseworthy. The sanguine rôle proposed for itself by the *Echo* is that of a journalistic judge. It intends to sit on a little rostrum away in Tsukiji, or perhaps Hongo, and there, clothed in the ermine of impartiality and wearing the wig of justice, to pronounce verdicts between the views of contemporaneous controversialists. It does not under-estimate the difficulties of such a function, but humbly promises "to hold the scales as evenly as poor erring fallible man can be possibly expected to do." And we are bound to say that, in our opinion, its first essay has succeeded. The editor gilds his pills with good humour and delivers his strokes with a padded weapon. He pats one side on the back while decreeing its efforts a failure, and slaps the other on the cheek to chasten its pride of success. We dare not hope that such a mood will be permanent. The black-pudding seller, set up by the two slaves of comedy to rule in Athens, found that his only fate was to squint when he sought to fix his right eye on Caria and his left on Carthage. Will it fare with the *Echo* as it did with the black-pudding man, and shall we ultimately have a dose of Athenian Billingsgate in lieu of the modesty and moderation which mark the opening moments of the new sovereign's career? Perhaps not: we sincerely hope not. If a judge has really arisen in our midst, may he prove a Solomon of sagacity and a Job of gentleness. But whence is his reward to come? We grieve to think that so much effort must go unrewarded. There is no fund to draw upon for such purposes in these sterile regions. Already ill-

starred editors toil to make bricks without straw and to gather figs off thistles. The poor *Echo*, fulfilling the fate of its name, will find itself "feeding its grief amid the voiceless mountains" and waiting vainly for some auriferous sound to re-awaken its dying tones.

THE GRAND CROSS OF THE BATH AND PRINCE KOMATSU.

A CORRESPONDENT of the *Jiji Shimpō* writes from England as follows:—"The British Government seldom confers its Orders on sovereigns or subjects of foreign nations, and consequently few Englishmen receive foreign Orders. Only to show special good-will does Her Majesty's Government confer its Orders. The Emperors and Kings of various States in Europe and two or three Dukes have received the highest British order, that of the Garter, and this has been done to prove the friendly relations existing between those nations and England. Of other foreign sovereigns, only one wears this decoration, that is the Shah of Persia. It was conferred on him at a time when the British Government vied with the Russian Government to gain the good will of Persia, and it must be considered as a wholly unusual event. It is said that sometime ago the Queen of England wished to present the Emperor of Japan with the inferior order of the Star of India, but the Emperor declined to receive it. Whether this is true or not cannot be ascertained by outsiders, but if the offer was made, it is easy to imagine that it may have produced the feeling described. I think it was quite proper that the presentation of an order of high merit should be made to Prince Komatsu, who ranks high among the Imperial family, and is in such an important position as General in the Army and Commander of the Imperial Guards. The circumstance may fairly be hailed as an evidence of happy relations between England and Japan. Besides, His Imperial Highness Prince Komatsu attended the ceremony of the Queen's Jubilee, as representative of the Emperor, in 1887. He appears in the picture painted by order of Her Majesty to commemorate the occasion, and thus his visit will long be remembered by the Queen. This must have been one reason for conferring such an honour on him. Now-a-days, too frequent presentations of Orders in the intercourse of nations have caused them to be looked upon almost as childish, but England's gifts of this nature must be differently interpreted. I do not, of course, say that this event will have any direct effect on the relations between Japan and England, but as those relations lately tended to become rather strained on account of England's apparent preference for China, and as the Japanese had grown somewhat offended by the haughty ways of the English, the conferring of the Order should be taken as a gracious act on the part of the Royal Family of Great Britain, intended to mark the latter's sense of the importance of her relations with Japan. The good feeling thus evinced by England should be reciprocated by the Sovereign and people of Japan."

MR. FUKUCHI ON POLITICS AND LEARNING.

MR. FUKUCHI, formerly editor of the *Nichi Nichi Shimbun*, of whom nothing has been heard since he thought it necessary to retire from public life in consequence of the imputations cast upon his fair fame in connection with the celebrated bribery case in the Tokyo City Assembly, recently emerged from his seclusion and delivered an address before the Elocution Society on the subject of Politics and Learning. Mr. Fukuchi is always interesting and original, and his lecture attracted considerable attention. The gist of it was as follows:—"In studying the relation that exists between politics and learning, an instructive example is furnished by Japan's modern history. The fall of the Tokugawa Shogunate, if its real causes are investigated, will be found to have been due to a conflict between the political system and the educational methods of the time. A salient event of the era was the appearance of foreign men-of-war off the coast of Japan in 1853.

This incident involved remarkable consequences, for instead of managing everything autocratically as had hitherto been the habit of the Yedo Court, reference had thenceforth to be made to the Emperor and to the nobles. What was the reason of this necessity? Why was not the Shogunate competent to deal with national affairs in the same independent manner as of old? The reason is to be sought in a conflict between the systems of education and administration. During 200 years the nation had been studying the Chinese classics and deriving from them ideas of government quite at variance with the principles on which the administration of the Shogunate was based. Absorption in these studies did indeed give peace to the nation but cost the Shogunate its place of power. Men versed in the *Shisho* and *Gokro* had come to understand that the Shogun was not the real ruler of the State; that the source of authority was primarily with the Emperor, and that even as the heads of the *Sei* and *Shin* dynasties assisted the *Shu* dynasty of China, so the Shogun's true function was to act as his Sovereign's lieutenant. The Bakufu, on the contrary, had long acted on the principle that its authority was absolute, and that no sanction but its own fiat was needed for any of its acts. In short, the scholars of the day advocated a system of limited monarchy; the Shoguns pursued a despotism. The final result was the Reformation. In the face of such a grave national emergency as the advent of foreign vessels of war, the officials of the Bakufu found themselves embarrassed. It was no longer possible for them to act without reference to the Throne and the nobles. One measure adopted to meet the crisis was the founding of the *Shohei Gakko*, the first university of Japan. There able men were expected to assemble by degrees and assist the Government. Nagai Gemba, Hori Oshie and many other eminent scholars graduated at the University and were appointed to posts of high trust. But the counsels tendered by all these students were in accordance with the teaching of the Chinese Classics: they urged the necessity of consulting with the Crown and the nobility. Thus the Bakufu ultimately found itself confronted by the Throne and the Nobility, and was thrust out of power by the combination. Thenceforth a new line of progress after Dutch models was taken by the country, but from about the year 1873 England became Japan's example, and English science and polity received universal respect. The study of English systems must produce an effect analogous to that produced by the study of Confucian systems in the years preceding the reformation. It is merely idle to expect anything else. With the example of the past in sight, the tendency of the present is unmistakable, and to fight against it or seek to repress it would be futile.

THE JAPANESE ARMY.

"THE Japanese army was organised," says the *Choya Shimbun*, "with the idea of being able to put into the field at any moment two hundred thousand troops of all arms, consisting of the men with the colours and the First and Second Reserves. But the strength of the First and Second Reserves at present does not amount to even one half of the contemplated establishment, and the cavalry is so deficient in numbers that it does not represent the force required to serve with the colours alone. It is stated that if the three bodies, namely, the troops with the colours and the First and Second Reserves, were mobilized to-morrow, barely a hundred and forty thousand men would be found available, and that the Military Authorities look forward to ten years as the time that must elapse before the original scheme can be fully carried out. Among officers holding high rank, as Generals and Colonels, some are not acquainted with the systems of strategy and tactics employed in the present era, and among junior officers some have had no actual experience in the field though their standard of education is high. Sufficient care, too, has not been exercised to devise a system of promotion by merit, and the result is that good soldiers find themselves holding rank inferior to that of

men who are by no means their equals in military attainments and capacity. With regard to the private soldiers, there is no doubt that the system of training has the effect of transforming them from rough and uncouth beings into well set up men with a certain amount of education, and that the new scheme of conscription exercises a beneficial influence on the mass of the nation. But it may be doubted whether the men are not distinguished by immorality and love of display rather than by courage and steadiness. Drunken soldiers are too often seen reeling before wine-shops or lounging in casinos. Finally, with regard to national defence, we scarcely trust ourselves to speak, seeing that our faintest hopes have not been realized in the matter of coast defence. It is true, indeed, that the Shimonoseki Straits, the Gulf of Tokyo, and the Tsushima Straits are pretty well defended, but even in their case more strength is needed."

* * *

This is a pretty sharp indictment. Perhaps it is needed, but to close readers it seems to be inspired by a desire to find fault rather than to criticise honestly. The point which strikes us especially is the complaint about insufficient coast defences. The political parties in opposition to the Government cry out constantly about excessive taxation and talk of reducing the revenue largely. How they are to accomplish this, and at the same time to spend millions of *yen* on building fortresses and buying big guns, we do not clearly perceive.

LAWN TENNIS.

The dirge of Lawn Tennis is thus sung by the *St. James's Budget*:-

The lawn-tennis season of 1890 is over, and the votaries of croquet and archery are still able to point out that their prophecies are in process of fulfilment; and that although neither of the amusements which it displaced are likely at present to regain their position the popularity of lawn-tennis is rapidly diminishing. Five years ago it reigned supreme, defaced our laws, disfigured our dunes, hitherto mentioned in other people's, and demoralized our garden-parties, at which it was then a *sine qua non*. It is still a good, healthy, pleasant game played under suitable circumstances, but as an all-pervading tyrant its reign is virtually over. It has been done to death by its keenest admirers. Cricketers have always despised it, rightly or wrongly; the man of muscle who can play an innings of a hundred runs, or field through the hottest day without flagging, mistrusts a game at which his sisters, cousins, and even his aunts, can shine—sometimes to the extent of being able to beat him if he takes up his net among them.

"Clap-d-d-d! a woman's game!" he says, and even its male professors are not always what he calls "men." Still, in a small way, such as rustic and country-house cricket, lawn-tennis has had its revenge; and its decline in popularity is not due to a rival, but results from the zeal of its keenest admirers. The young man who is possibly a really good player, and who at all events considers himself too good to play with ladies; the young ladies who, while declining to practise sufficiently hard to render themselves good partners in an ordinary four-handed game, still insist upon playing with men of their own choosing, and refuse to be relegated to ladies' or "duffers'" sets, have alike had something to do with the matter, as well as those men who, making it the study of their lives, play winter and summer if they can find any one whom they think good enough to play with them, and a court good enough for them to play upon. Lawn tennis needs a court, and not merely a lawn, if it is to be well played and really enjoyed; but at the same time a host does not always like to hear that his grass is mossy, his service-line an inch too near the net, his balls too light, or his posts the wrong height. It may be wrong for him to ask people to play and not provide the best possible apparatus; but he does not enjoy being told so.

A few years ago lawn-tennis was welcomed as a new attraction at garden-parties. Its success was due to the fact that they thought it attracted the men and amused the girls. Now the men have found that they rarely get enough good sets on a good court to make it worth their while to go in flannels, and that the flannels which are good enough for a quiet set at home or for wear at cricket are not quite what they care to stroll about in at a social "function." And if it is so with them, what is it with the fair sex? They have long ago discovered that to play in a "good dress" on a hot afternoon ruins the dress, while the dress itself interferes with their play; and that to walk about after playing in a few games clad in a costume admirably serviceable but not always elegant or becoming, while rivals have been sitting cool and in their smartest frocks watching their struggles with a supercilious eye, is not always pleasant. Both sexes have discovered long ago that lawn-tennis in itself is a game which must be played hard to be enjoyed, and is utterly unsuited for purposes of flirtation. And the man who likes to sport with Amaranthus in the shade knows that he will enjoy it more the more because he or she, or both of them, have just been toiling and perspiring in the sun. Women on such occasions think of their personal appearance; so do men; small blame to either of them. In the country many clubs are formed of members who meet to play on fixed dates at one another's houses in rotation. These are generally successful and pleasant enough; but they are liable to suffer from hostesses using the club-meeting as a nucleus for a garden-party. They want a

crowd and they like to kill two birds with one stone, and they get people, especially men, to their houses who would otherwise stay away; but the lawn-tennis players do not care for a mob of people, dressed as if for Cup Day at Ascot, strolling round their courts and getting in their way, and the bird most effectually killed is the lawn tennis. Archers and croquet-players will very likely have their day again in a modified degree; but though they may have predicted the decline of lawn tennis, they will not have caused it. Its most formidable rival now is golf. It has many points in its favour, but is a game which requires space and conditions for its development usually not to be met with just where lawn-tennis is most feasible. As a game for a few players fairly matched who have two or three hours to spare and are fond of exercise, lawn-tennis is unrivalled; but still the rage for it is not the rage of half a dozen years ago.

JAPAN'S TRADE.

A CERTAIN Count, quoted by the *Mainichi Shimbun*, refers to the state of Japanese commerce as follows:—"The present tightness of the money market and depression of trade are entirely attributable to exceptional circumstances connected with the country's foreign commerce. Owing to the sudden rise in the price of silver, caused by the action of the United States, the most important staple of Japan's export trade, silk, has been kept out of the market and accumulated in Yokohama. On the other hand, the failure of the rice crop last year necessitated importations of foreign rice into Japan to the extent of ten million *yen*. Thus, on one side, more than ten million *yen* worth of silk has been held back in Yokohama, while on the other, ten million *yen* worth of rice has been brought into the country, the net result being that Japan has suffered to the extent of twenty million *yen*. No wonder that trade is dull under such circumstances. Lamentable as the record seems, however, close scrutiny indicates that it is not so bad after all. The Yokohama Customs Returns show that from January to September, the value of the country's imports exceeded that of her exports to the extent of 26 million *yen*. But out of this total it appears on enquiry that only some ten million *yen* worth have actually been sold to Japanese, the rest being still in the godowns of the importers. As a matter of fact, therefore, the purchases of the nation exceeded its sales by only twelve or thirteen million *yen* at most, and since the twenty thousand bales (Japanese) of silk now lying in Yokohama must find their way westward eventually, their price will very nearly correct the balance. Moreover, the rice crop this year is exceptionally good: some estimates put it at twenty per cent above the average yield; some at fifteen per cent. Assuming that it is only ten per cent better than usual, and taking the average crop at 40 million *koku*, we have a surplus yield of 4 million *koku*, which, at 5 *yen* per *koku* represents twenty million *yen*. If a deficiency of ten million *yen* in last year's crop produced such a marked effect on trade, a surplus of twenty million *yen* this year ought to be equally efficacious in the opposite direction. On the whole, therefore, there is not much reason for despondency.

A STRANGE STORY.

IN the Washington *Reveille* we find the following strange story:—"A year ago last August the schooner *Challenge*, then cruising for seals in Alaskan waters, left eight of her crew on two banks of sand, one twenty miles from Kodiak, the other forty miles out in the Arctic sea. It seems that the cruise of the schooner had not been profitable, and these Japs, desiring to remain, were landed on the sandbanks, with provisions for six months, and two of the ship's boats, together with guns and ammunition. On the main island, which is four miles broad, there were several Indians who were working for another company. They reported that the island was not habitable during the stormy months of January and February. Four of the crew, Azuma, Mizuta, Nosaka and Takeda, were left here, while Kane, Yoshida, Kishimoto and Okano were left on a smaller bank twenty miles further out, and outside of the ordinary cruising ground of sealers. There is no timber on either island, and the hunters were obliged to dig caves in the sand for shelter from the winds which blow with great violence except in the months of June and July. Except in those

months a small boat can be used but very little, and is launched with difficulty. At certain seasons there are eggs on the island, but in the winter the banks are as desolate as the Sahara Desert. The Japs are Bellingham Bay Japs, and their friends here are much (Vancouver) concerned about them, as they have not been heard of in thirteen months. To add to their anxiety, it is reported by a Seattle countryman that in January a great hurricane swept over the islands, which was followed by a tidal wave. One of the men has a woman on the Sound to whom he was greatly attached, and it is considered improbable that if alive he would remain away so long."

THE TREATIES.

"THE Treaties must be revised on a basis of equality. What one side concedes the other will concede; what one side withholds, the other will withhold. This is a very pretty doctrine so far as the text of the Treaties is concerned, but in practice it will not bear scrutiny. Suppose"—we translate from the *Fiji Shimpō*—"that Japan agreed to allow English ships to engage in her coasting trade on condition that her ships should be free to engage in the British coasting trade. British vessels would then come to Japan and, competing with our ships, would rob them of their trade, but if Japanese ships went to England and attempted to compete with British vessels, they would not have the least chance of success under existing circumstances. All the advantage would be on England's side, and Japan would have no compensation. The present programme of Treaty Revision approaches much more closely to lines of equality than did the programme of Count Okuma, but what arrangements are to be made about the cabotage? In former years it is recorded that Frankfort signed a treaty with England, in which there was included an article providing that the vessels of Frankfort should enjoy the same privileges as the ships of England. Considering the position occupied by Great Britain as mistress of the sea, this covenant appeared a very fine thing for Frankfort. But in point of fact it made no difference at all in Frankfort's favour. Great Britain continued to monopolise the maritime carrying trade as she had done before, and Frankfort's newly acquired privilege turned out to be in reality a new embarrassment. The question is then, what kind of equal covenant is this which Japan is expected to make with Western Powers."

The *Fiji Shimpō* puts these words into the mouth of a Japanese who lately returned from Europe. They sound like wise words, but it is only sound, we think. A foreign ship coming to Japan, and attempting to wrest the coast-wise trade from the hands of its present holders, would have a stiff task before it. Such competition would depend almost altogether on organization of a nature hardly to be accomplished by foreigners alone in this country. Foreigners in cooperation with Japanese might make a fight, but even then they would be heavily handicapped—so heavily that shrewd ship-owners are not at all likely to try the hazardous experiment. The field for foreign enterprise in Japan does not extend in directions where the Japanese have already proved their capacity to act independently, and where success hinges entirely on securing Japanese custom. Native shippers would not come to foreign freight-agents if they could go to their own with a tolerably equal prospect of good and efficient service. The Japanese are not made that way. As a mere question of privilege, Western Powers might desire to avoid any discrimination against the ships of their nationals, but so far as concerns the practical value of such a privilege, foreign shipowners would not probably care two straws about it. There is such a thing as being too sharp. People afflicted with that tendency not infrequently over-reach themselves, a fact to be borne in mind by certain Japanese.

THE DESTRUCTION OF INSECT PESTS.

IN view of the great loss annually borne by crop-growers in consequence of the ravages of insect

pests, the investigation of means of prevention and protection has always been watched by the public with deep interest. The most ingenious instruments for purposes of fumigation and for spraying deadly mixtures have been brought into use, but their application must in the nature of things be imperfect, and their effects very partial. It has been recognised that no attack upon an insect pest is more certain and fatal than that of the enemy which nature, with marvellous prudence, has provided to check the ravages of each species, and for this reason natural history pursuits when directed to useful ends have for practical people a real and vital interest. Systematic and organized research will always of course achieve more satisfactory results than the labours of individual investigators; but the work accomplished by such a body as the Entomological Division in the U.S. Department of Agriculture must in a very large degree be furthered by students, who from the most distant parts are kept in communication with the central staff at Washington. Recent numbers of *Insect Life*, the bulletin of the Division, contain striking illustrations of the value to agriculture of such investigations. In the early part of 1888, the ravages of the Fluted Scale (*Icerya purchasi*) among the orange groves of California, had become so serious that the Department of Agriculture determined to take active measures with the hope of introducing into the infested districts such natural enemies of *Icerya* as might stay the spread of the destructive species if not exterminate it altogether. To this end Mr. Albert Koebele, a Californian agent of the Entomological Division, was despatched to Australia and New Zealand to observe the dreaded *Icerya* (indigenous to those countries), and to investigate its parasites and natural enemies with a view to their introduction into California. Mr. Koebele returned from his trip about March, 1889, bringing with him several species which were pronounced to be natural enemies of the pest. With one only of these, however, are we concerned, *Vedalia cardinalis*, the Australian Ladybird, for so completely did this invaluable little insect effect the destruction of the Scale, that no other enemy of the latter could, by reason of the extermination of its food supply, find a foothold. This is how, according to Mr. Koebele, the Ladybird disposes of its victim:—"As soon as the female Ladybird was among the Scales she became quiet, stopped, and deposited an egg upon the twig. As soon as this was done, she turned around and devoured the same, which took her about half a minute. A few moments were spent in cleaning herself, and then another egg was brought forth and eaten. After this and another wash she attacked and devoured a half grown Scale. This was eaten into from the back, very quietly at first, yet in a little time she became lively, almost furious, tearing the Scale off from its hold by the beak and turning it up and down in the air with the mouth-parts, assisting in this with the anterior legs. In about one minute this was devoured and nothing but the empty skin left, after which she went to work, business-like, and deposited eggs quietly, sitting at rest upon the Scales, and every few minutes thrusting an egg in between or generally under them. A very large Scale was lifted with the posterior legs and the egg thrust beneath."

Even more interesting than the above, because vested with a local interest, is the reported discovery in the United States of a most dreaded pest, the Gipsy Moth (*Oenocera dispar*) and the detection soon afterwards by Rev. H. Loomis, of Yokohama, of one of its most deadly enemies. The moth in question—the caterpillar of which, unlike some larvae which confine themselves to one class of food, devours with equal relish a wide range of leafage from the foliage of the apple tree to that of the Norway spruce—is said to have escaped during some experiments with silk-worms in Massachusetts in 1870, but curiously enough did not manifest itself as a pest till 1889. From the great number of its food plants, the spread of this scourge is viewed with much apprehension, the more so because while in Europe a large number of natural enemies have been observed, not one has yet been noticed in

the States. It now seems clear that in Japan a most effective enemy exists. Mr. Loomis, who is well-known as a devoted student of natural history, and whose entomological collection is beyond doubt the most extensive and complete that at present exists of Japanese specimens, had his attention directed to the caterpillar in consequence of its attacks upon a wisteria growth within his compound, which in a very short time was all but stripped of its foliage. Suddenly, however, its advances were checked, and even more rapidly than it had appeared the pest vanished. The cause was easily found. It consisted in the presence of the eggs and grub of one of the moth's natural enemies, the eggs having been deposited in or on the caterpillar, which thus became the food store of its unwelcome guests. The operations of the enemy were sufficiently attested by the numerous small cocoons found adhering to the dead larvæ. Mr. Loomis has not yet been able to hatch from the eggs of the parasite—if parasite it be—but has established, almost as a certainty, that they are those of an ichneumon fly. He has transmitted specimens to Washington, and it seems pretty certain that the gipsy moth's enemy is one of the species of *Apanetes*, the colonization of which in the infested districts in the States would undoubtedly produce effects with which the application of Paris green or other poisons is not at all comparable.

THE CHION-IN IN KYOTO.

THE pecuniary difficulties into which the celebrated temple of Chion in Kyoto has been plunged owing to dishonesty on the part of persons who had access to its seals, were recently explained in these columns. The question was submitted to the Law Courts and decided against the temple, but subsequent confession made by the perpetrators of the fraud, who had quarrelled over the distribution of the booty, inspired a hope that the old adage would be verified and that honest folks would come by their own when thieves fell out. The representatives of the temple appealed from the judgment of the lower court, but the appeal seems to have gone against them. Why this should have been the case, assuming the correctness of the confession ascribed to the perpetrators of the fraud, we cannot conceive, for it will be remembered that the gist of the confession was that copies of the temple seals were made, and employed to raise money; an act for which the temple certainly ought not to be held liable. Possibly the appellants failed, after all, to establish that forged seals had really been employed. The Japanese system of seals opens the door to easy fraud, as was well explained some time ago by Mr. R. Masujima, in a paper read before the Asiatic Society. Where there is question of imitating a man's handwriting for the purpose of forging his signature, a calligraphic expert can generally detect the genuine from the spurious with tolerable certainty. But to distinguish the impression made by two seals, of which one has been engraved an exact facsimile of the other by a skilled artizan, must be a task in most cases beyond the ability of human eyes. Unless such a distinction were established by testimony of the persons using the false seal, or in some other manner, it is evident that the temple must be held responsible for documents bearing all the marks of authenticity. At any rate, things appear to have gone against the temple, and though the loss entailed was only seventy thousand *yen*, a comparatively paltry sum which the members of the powerful sect supporting the Chion-in might easily subscribe and which, indeed, there was recently talk of subscribing, it is now asserted that a decree of bankruptcy will be issued against the temple, and that all its belongings, with the exception of the heirlooms and articles essential to the performance of daily service, will be sold by public auction, even the edifice itself and the furniture of the gardens being included in the bill of sale. The *Nippon*, from which we gather this information, adds that intelligence of the intended sale having quickly reached the ears of an American merchant at Kobe, he immediately opened

negotiations with the priests, and offered a sum of two hundred and seventy thousand yen for the temple and its belongings. The idea of the purchaser is to transport the building to New York and set it up there, as far as possible in exactly its original condition as to the structure and its surroundings alike, so that people in the United States may have an opportunity of seeing a celebrated Buddhist temple of Japan exactly as it stood on its original site. The *Nippon* laments the prospect of such a finale, and says that it will be a bitter reflection to the parishioners of the temple, the mortuary tablets of whose friends and relatives are deposited there. At bankrupt's sales, however, distinctions of nationality are not regarded among the buyers, and if a foreigner makes the best offer, to him the property must go. We heartily echo the *Nippon's* hope that some steps may be taken to raise the necessary money in Japan. It seems absurd that property which would fetch nearly three hundred thousand yen in the open market—assuming our contemporary's figures to be correct—cannot be taken as sufficient security for a loan not exceeding one fourth of that sum, and it seems equally unaccountable that the money cannot be raised by subscription. The Chion-in is one of the very finest temples in Kyoto. Not alone is the building a good specimen of Japanese architecture, but its surroundings and the whole plan of its construction constitute a beautiful feature of the Western capital. The removal of such an edifice would be little short of a national disgrace.

TAXES.

Now that the first session of Parliament is drawing near, the politicians who have talked so much about the necessity of reducing taxation are beginning to think seriously of the details of their project. Of course it is easy to name many imposts which the people would be glad to see diminished, notably the taxes on confectonary, weights and measures, draught cattle and vehicles, and above all the land tax. Concerning the last, everybody is practically agreed that it must be made lighter in the interests of agriculture. But the question is, how are administrative expenses to be met if the revenue is reduced to this extent? Evidently new taxes must be imposed, or the cost of government must be cut down, and no one appears to be clear as to how either of these ends is to be achieved. The *Hochi Shimbun* has an article on the subject, in which it is stated that the possibility of imposing a tax upon silk cloth or establishing a tobacco monopoly has been mooted, but neither of these schemes would be easy to carry out. The tax upon trades and the income tax seem to be the only resources capable of expansion. The *Hochi* says that if any person has a good programme to propose, the public would like to hear it. We suspect, however, that the much discussed fiscal reforms of political parties in opposition will prove very impracticable when they come to be reduced to legislative measures.

THE JAPAN RAILWAY COMPANY.

It speaks very highly for the management of the Japan Railway Company that despite the heavy losses caused by the floods of last summer, not only in respect of actual injury to the line but also in consequence of interruption of traffic a dividend of eleven per cent. could be paid as the result of the half year's working ending the 30th of September. The repairs of the roads had been almost completely finished by that date, and it may be presumed that the outlay thus entailed was included in the accounts of the half year. Yet a sum of 837,486 yen was available for the payment of dividend. Rumours were persistently circulated at one time that the expense involved in repairing the lines and the loss caused by interruption of traffic would amount to nearly two million yen, but it is happily evident that this estimate was a wild exaggeration.

THE HOUSE OF PEERS.

No attempt has been made, so far as we know, to classify the members of the Upper House ac-

cording to political parties. The task would be extremely difficult, for, as a rule, the nobles have never identified themselves with any of the movements in the political world during the past ten years—we except, of course, peers of recent creation, as Counts Itagaki, Goto, and so forth—and it goes without saying that the Imperial nominees as well as the representatives of the highest tax-payers are, for the most part, men of neutral views. At present the sum of our information about the Upper House is confined to the following analysis of its members, given by the *Mainichi Shimbun*:—Ten Princes of the Blood; ten Princes; twenty-one Marquises; fifteen Counts; seventy Viscounts; twenty Barons; sixty-one Imperial Nominees; forty-five Representatives of the Highest Tax-payers. In other words, the Nobility, apart from the Princes of the Blood who are not likely to take active part in the debates, musters 136 members, while the Imperial Nominees and the representatives of the highest tax-payers number 106.

GOLD AND SILVER RATIOS.

The *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 1st instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100) Silver Yen.	Pound Sterling (Per £1) Silver Yen.
27th	121.000	A.M. 5.957 P.M. 5.962
28th	120.700	A.M. 5.962 P.M. 5.9142
29th	120.500	A.M. 5.889 P.M. 5.895
30th	119.200	A.M. 5.765 P.M. 5.765
31st	117.100	A.M. 5.871 P.M. 5.871
1st	118.800	A.M. 5.871 P.M. 5.871
Averages	119.550	5.8857

The above averages show for gold coin an increase in value of yen 1.067 per cent., and for the pound sterling an increase in value of yen 0.0013 as compared with the previous week.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 1st instant were as follows:—

Convertible Notes.	Reserves and Securities.
Yen.	Yen.
Notes issued 88,739,148	Gold coin and bullion 24,995,247
	Silver coin and bullion 19,534,848
	Public Loan Bonds 23,470,450
	Treasury Bills
	Government bills 11,000,000
	Other securities 4,734,182
	Commercial bills 15,000,721
	88,739,148

Of the above total issue of notes, the sum of yen 5,418,442 is in the treasury of the Bank, and yen 72,320,706 in actual circulation, the latter showing an increase of yen 1,794,452 as compared with yen 70,526,254 at the end of the previous week.

SAILING RACE.

The final race of the season for 17 raters took place on Saturday and resulted in a win for *Sayonara*, which even without her time allowance of 5m. 9s., easily took first place. On handicap for the remaining places *Jessie* won second prize and *Petrol* third. *La Belle* did not finish. The following are the times:—

Rating.	1st Round.	Finish.	Allowance.	Time.	Corrected
	h.m.s.	h.m.s.	m.s.	h.m.s.	h.m.s.
<i>Jessie</i>	16.....	4.10.15	4.32.30	—	4.32.30
<i>Petrol</i>	10.....	4.30.30	4.30.00	—	4.43.00
<i>La Belle</i>	10.....	4.29.00	4.47.00	—	4.47.00
<i>Sayonara</i>	13.....	4.11.00	4.10.00	5.09.....	4.04.41

Handicap for Second and Third Prizes.	Corrected Time.
m.	h.m.s.
<i>Jessie</i>	allows.....4.32.30
<i>Petrol</i>	2.....4.41.00
<i>La Belle</i>	2.....4.45.00
<i>Sayonara</i>	6.....

BALLOONING BEFORE THE EMPEROR.

It is stated that His Majesty the Emperor has signified his desire to witness the aeronautic performances of Mr. Spencer, and that arrangements have been concluded for an ascent in the grounds of the former Palace, where the Imperial Prince now resides, on the 12th of the

present month. Speaking of this reminds us that a large additional space is now being added to the grounds of the Prince's Palace. The green bank resting on a stone foundation which surrounds the old enclosure is being carried on so as to include the whole space between the roads on the north, east, and west of the Palace. The grounds when thus enlarged will be of very great extent, and if the added portion is laid out with anything like the taste and skill displayed in the making of the beautiful garden familiar to those who have the honour of witnessing the Palace Chrysanthemum fêtes every autumn, the result will be a park worthy of old Japan.

REGULATIONS OF THE DIET.

In the draft regulations of the Diet, there is an article which provides that "members who desire to speak on the questions noted in the *Giji Nitai* (daily list of subjects to be submitted for deliberation) shall intimate to the secretary before the meeting is opened their names and their intention to speak for or against the bills in question." Several vernacular papers report that a section of the members of the House of Peers is strongly opposed to this regulation, on the ground that it practically means the imposition of restraint on speech and is besides quite unnecessary in the Upper House, the members of which will not be animated by party feelings. This opinion prevails among members who had seats in the late Genro-in (Senate) and who form a large and influential section. The question is causing some anxiety in the minds of those who framed the draft, for they point out that, without some regulation of the kind complained of, the duties of the President are likely to be exceedingly arduous. It will be very difficult to regulate the debate if members are allowed to speak when they please.

GOLDEN WEDDINGS.

It is a curious fact that just as Yokohama is celebrating the golden wedding of a man whom all delight to honour, a similar ceremony should have been performed for the first time in Japan by a Japanese. We read in the *Hochi Shimbun* that Mr. Chiba Taizo, an inhabitant of Nakatsuyama in Miyagi Prefecture, finding the fiftieth anniversary of his wedding day at hand, and seeing himself surrounded by children and grandchildren, determined to mark the day by a festival. He accordingly advertised the fact, and invited all his friends to a convivial entertainment. "This," says the *Hochi Shimbun*, "is the first instance of a golden wedding (*Kin-kansetsu*) being celebrated in a Japanese household. The custom exists in the West but has not before been observed in Japan."

DR. HEPBURN.

The numerous friends of Dr. and Mrs. Hepburn have subscribed to present to them a memorial on their golden wedding which fell on the 27th ult. Dr. Hepburn has lived the best years of his life in Japan, and each year has placed him closer to the hearts and higher in the esteem of his fellow-residents. The good he has wrought in our midst is incalculable, and the fragrance cast upon Christian propagandism by the flower of his blameless life has done more for the cause of Christ than any eloquence or zeal could accomplish.

H.M.S. "FIREBRAND."

Says the *N.-C. Daily News* of the 25th ult.:—"A telegram was received late on Thursday night by Mr. Hughes, and handed to Commander Tisdall, directing the latter to proceed with the *Linnet* at daylight yesterday to search for the *Firebrand*. The men who were ashore on leave had to be hunted up, and the vessel proceeded in the morning as directed. Three steamers have seen the *Firebrand* this week; the last one, the *Mecfoo*, passed close to her on Wednesday at 4 p.m. She was then at anchor off the Taichows, and as she did not hoist any signals it is presumed she did not require any assistance. It is stated that the *Firebrand* has a quantity of naval stores on board for the

Zinnel. Instructions were also sent to Woon-sung to intercept the *Wanderer*, and direct her to go to the *Firebrand's* assistance." The *China Mail* of the 24th also reports the despatch on that date of the *Redpole* and *Rattler* to search for the gunboat, which is stated to have been 22 days out from Hongkong. Subsequently it was reported that the *Firebrand* had arrived at Wenchow, short of coals, but all well.

MR. SPENCER'S PERFORMANCE IN TOKYO.

THE loss of Mr. Spencer's balloon, as reported from Kobe, will probably interfere with his projected performance in Tokyo. It appears to be more or less uncertain when the latter event is to take place. The latest idea was that Mr. Spencer's ascent would form a feature of the Imperial Garden Party on the 10th instant, but rumour, reported by the *Tokyo Shimpō*, now re-asserts that the date formerly spoken of, namely the 12th instant, will be adhered to, that the ascent will be from the space outside the Niju Bridge in the former Palace grounds, and that, in addition to the usual list of *invitees*, the pupils of the Nobles' Schools for girls and boys will be present.

THE EMPEROR AND THE FUTSU FORT.

It is stated that His Majesty the Emperor proposes to pay a visit to Yokosuka on the 11th instant, and that the occasion will be taken advantage of to fire the guns recently mounted in the new Fort at Futsu. There are twelve of these guns. His Majesty will be accompanied by a number of high officials of the Army and Navy, and will be received by the Prefects of Chiba and Kanagawa.

THE IMPERIAL GARDEN PARTY.

MONDAY next, the 10th instant, has been fixed as the date for the Imperial Garden Party.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The vernacular press is at present full of rumours concerning the contemplated formation of a great new political party, to be called the *Kokumin Yiyu-to*, or, if we may believe a later report, the *Yiyu Club*. The originators met at the Oyū-kwan, Asakusa, on the 1st instant. From the speech said to have been delivered on that occasion by Mr. Ayai, it appears that the new party, or at least most of the originators, are as liberal in their political views as the members of the Constitutional Liberal party. Mr. Ayai laid particular emphasis on the importance of promoting the unity of the nation and raising its status among the civilized Powers of the world. The meeting was attended by several members of the Diet and other politicians, representing the Prefectures of Yamana-shi, Aichi, Hiroshima, Toyama, Ishikawa, Kanagawa, Chiba, Kochi, Fukuoka, Nagasaki, Kumamoto, and Nigata. Mr. Ayai stated that there were several gentlemen who had been prevented from attending the meeting by political reasons, and this statement has led to various surmises as to who these gentlemen may be. Rumour connects with the new party the names of Count Goto, Viscount Tani, Viscount Miura, and even Count Inouye, Mr. Mutsu, and some of the leading merchants of the capital. As usual most of these gentlemen have been interviewed by newspaper reporters. From the accounts of the interviews, it is evident that there is little foundation for the rumour that Mr. Mutsu is connected with the new party; neither does it appear probable that Count Inouye has anything to do with it. As to Count Goto and Viscounts Miura and Tani, there is no denying that they are, either directly or indirectly, concerned in the scheme. The organs of the *Kaishin-to* and the *Rikken-Yiyu-to* adopt a tone unfavourable and even bitter towards the new party. Indeed it is an open secret that the latter is being organized in opposition to the Constitutional Liberal party. As to the method of procedure, some of the originators propose to maintain for the present no party organiza-

tion, but simply to unite under the name of the *Yiyu Club*. The probable number of the Representatives in the Diet belonging to the party is variously estimated at from about twenty to seventy. The originators propose to hold another meeting on the 20th, at which the details of the scheme will be discussed. Meanwhile, several members have been despatched to the various Provinces to win adherents to the party.

Another event that has given rise to much newspaper criticism and discussion is the drastic changes that have been effected in the *personnel* of judges and public prosecutors. The judiciary used to be the most unpopular branch of the Japanese service in the opinion of young men of enterprise and ambition. It was usually complained that promotion was slow and that men in the higher ranks had little capacity or inclination to discover the merits of their subordinates. Perhaps to retrieve this unpopularity, promotion has now been freely given; so freely indeed that remonstrances are already heard to the effect that the Authorities in the Department of Justice have gone too far in the opposite direction. But in matters of this kind, more accurate information than the newspapers possess is essential to a true view of the situation.

The question of Treaty Revision still continues to occupy the attention of the press. But not one of the leading papers shows that it has obtained any accurate information on the subject. Some state that negotiations are being carried on with the British Government, while others assert that negotiations are at a standstill. It is discernible, however, that an important turn is taking place in discussions on the affair. Hitherto questions relating to Consular jurisdiction have engrossed the larger portion of all controversy on this subject, but of late more attention is being paid to the economical and commercial aspects of the subject. It is highly probable that, should concessions be given to any Power in matters concerning commerce and navigation, there would instantly be raised a loud outcry by the majority of the metropolitan papers and by most of the political parties.

Four banking schemes of great magnitude are reported in the papers. Three of them—the Movable Property, the Industrial, and the Agricultural Banks—are it is said, to be laid before to the Diet in the coming session. The fourth is proposed by Buddhists, their purpose being to obtain funds for the propagation of their religion. According to the *Choya Shimbun*, two Movable Property Banks, each with a capital of 2,000,000 *yen*, are to be established, one at Tokyo and the other at Osaka. The object of these banks is to advance money on the security of shares and stocks of companies, two-thirds of the face value of which have been paid up. The capital of the Industrial Bank is put at 10,000,000 *yen*. The Agricultural Banks are to be established throughout the country, with a capital of 50,000 *yen* each, for the purpose of advancing money to farmers on the security of land. The Industrial and Agricultural Banks are to be closely connected, one of the objects of the former being to supply the latter with funds if necessary. The newspapers recommend the Authorities to make these schemes public as soon as possible, because questions of this nature require serious consideration and careful research on the part of the public in general and the members of the Diet in particular. With reference to the Buddhist Bank, the *Yiji Shimpō* remarks that the promoters of the affair are taking a step which can have no other effect on the public mind than to show the decline of Buddhism. It would, says our contemporary, be a pitiable and ludicrous sight to see Buddhist priests at the counting table, forgetting that what they really need is not money but virtue and religious enthusiasm. Did they possess these two qualities, they would have no occasion to think about *yen* and *sen*, for funds would be willingly contributed by

believers and followers. The *Yiji* points to the great temples which adorn every hillside in the country, and asks who founded these splendid edifices. Were not their founders poor moneyless devotees, who thought little of worldly pleasures, but by undagging zeal and nobility of heart succeeded in infusing their religious enthusiasm into the breasts of their hearers?

The remarkable Imperial Rescript addressed to persons engaged in education throughout the country, is commented upon by the whole press of Tokyo with warm approval. Great gratitude is expressed for the deep interest manifested by His Majesty in educational matters. The Rescript may be briefly described as an explanation of the fundamental principles of moral education to be imparted in schools.

Every political party is now busily engaged in the investigation of public affairs. The object of these investigations seems to be two-fold; to obtain the necessary information for discussing bills introduced by the Government in the Diet, and to procure materials for proposing reforms in the various administrative departments. The *Choya Shimbun*, which, like many of its contemporaries, attaches little importance to these investigations, asks the parties whether they have made up their minds as to the basis of the national policy. Until this question is determined, the *Choya* thinks it of little use to investigate minor points of administrative business. In another article, the same journal, writing on this subject, recommends the various parties to publish the results of their investigations. Politicians out of power have hitherto complained that the Government keeps everything secret; but these very persons are now doing what they condemned the Authorities for doing. The *Nichi Nichi Shimbun*, writing on the same subject, alludes to the difficulties which the so-called Investigation Committees experience in their researches, and recommends the Government to make public at an early opportunity the bills which are to be introduced in the Diet, for then every party will be in a position to turn its investigations in the right direction. The *Yiji Shimpō* after alluding, in its characteristic airy manner, to the "prevailing fashion" for political investigations, observes that one of the alleged purposes of these investigations is said to be the discovery of a means of economizing public expenditure. What is meant by economizing public expenditure? Does it mean a reduction in the actual amount of the expenditures, or simply the introduction of more economical methods in the employment of the public funds? With economy in the latter sense, our contemporary is entirely at one; but if the object of the parties be merely to reduce the actual number of *yen* spent by the State, the *Yiji* cannot but express emphatic disapproval of the course proposed. It believes that the expenses necessary for the maintenance of the army, navy, and other Departments of State, must yearly increase rather than diminish as the country advances in civilization.

In a series of articles just concluded, the *Yiji Shimpō* discusses the question: what are the natural courses in which the energies of the Japanese should be employed? The matter is examined from historical, geographical, and social points of view, and the conclusion is reached that commerce and navigation are the proper spheres of action for the Japanese, while as to the polity of the country, loyalty to the reigning dynasty should be the keystone.

The *Mainichi Shimbun* is carrying on a discussion as to the date when the Commercial Code ought to be put into force, but its articles are not yet concluded. The *Hochi Shimbun* suggests the amendment of the Law of Election. The *Nippon* is engaged in reviewing the recent history of finance. These essays are so long and interesting, that we think it desirable to give them fuller notice in future issues.

OUR BELIEF IN THE SUPER-NATURAL.

LADY WELBY, who is one of the most distinguished thinkers of the day, recently delivered a remarkable lecture before the British Association at Leeds. The gist of what she said may be very briefly stated. From the earliest days of history human thought has been in plain process of evolution. Instincts which in their pristine shape inspired the commission of savage acts, have gradually been modified until, though still obeyed, their exercise is subjected to law and philosophy. The sanguinary revenge of the naked barbarian has been transformed into the statute that imposes penalties for crime, and the iron law is in its turn yielding to the nobler instinct of forgiveness. So it has been in every phase of thought with one notable exception. That exception is man's belief in the supernatural, or to put it more crudely, his belief in ghosts. Whatever civilized folks hold to now-a-days in other matters is founded on tangible evidence, but without a particle of really credible testimony they cling obstinately to their faith in supernatural beings and a life beyond the grave. This, Lady WELBY declared, is a sudden break in the development of the human mind; a backward step "from the process of induction from facts into a region of mere illusion." If any one had ever seen, heard, or even smelled a ghost, there would be some reason to account for the general faith in a world of ghosts. But no one has ever had such an experience. No one has ever seen a spook even in a dream. Why, then, has man always believed, and why does he still believe, "in a thing he never saw or heard of and for which, through all the cycles during which he has been accumulating from experience the materials of thought, he has found no evidence whatever?" Such unreasoning credence seems entirely opposed to the hypothesis that the human intellect is a result of evolution and that, as education improves and knowledge widens, the tendency of men's minds is to abandon every idea for which no authority can be found either in the investigations of science or in the testimony of established facts. Lady WELBY appears to have confined herself to stating the position, without making any attempt to explain it. The *Spectator*, always interested in such subjects, formulates an explanation in these words:—

To us, and we suppose to all Christians who have thought upon the subject, there appear to be only two reasonable answers to that question. One, which in practice is, of course, quite futile, is that primitive man actually had evidence that he had seen or heard at some time or other that which inspired conviction in his mind. He became as sure of another life as of the action of sunlight, and for the same reason, because he had watched its manifestations. This, which was the universal theory of the ancient world, and is still held by a good many theologians, is we quite admit, a purely conjectural hypothesis. We know little, except by conjecture, of the experience of primitive man, nothing whatever of his mind, and, above all, nothing whatever of his thoughts about things

non-material. He may have had a great many, as some existing savages have; or he may have had none, as seems to be the case—and possibly only seems—with some of the very lowest tribes. He may have been closer to the invisible world than we are, as the legends of all races affirm; or he may have been, as the modern animals are supposed to be, much further off. There can be no evidence on the subject, and, except as an intellectual exercise, it must always be useless to discuss it. The other answer is that, whatever the truth about the evolution of thought—and part of the theory is almost visibly true—some thoughts must be intuitional, must, that is, have been generated in man originally by some external power. Nothing is self-generated; and yet they do not spring from experience, which, in fact, so far as material experience is concerned, denies and refutes them. The first of those thoughts—it is not the only one—is that idea of the future state to which Lady Welby refers as the great "break" in the evolution of mind, the conception which should have burdened its recipients in the great race, and so extinguished them, but which, on the contrary, on evidence admitted by materialists, made them run the faster. That thought certainly did not come from experience; and if it did not, what becomes of evolution as a theory explaining fully the existence of the present mind of man?

This explanation certainly leaves much to be desired. It amounts to nothing more or less than a claim, first, that the belief in a future state is founded on miraculous manifestations vouchsafed to man in his pristine condition but never once repeated after the commencement of the really historical era; secondly, that our faith in a life beyond the grave is an instinct, born with us and as ineradicable as our craving for food and drink. The former hypothesis no longer deserves serious consideration; the latter virtually removes the whole problem from the sphere of discussion. But if faith in a future state be instinctive in the human breast, how does it happen that such a faith was incomparably weaker in remote ages than it is now? When PLATO wrote his *Phædo*, how many of his countrymen were prepared to treat his doctrine of the immortality of the soul with anything but ridicule? On the other hand, how many educated men can be found to-day who really and sincerely believe that death is the end of life? An instinct which has nothing to do with reason ought not to be strengthened and developed in proportion as the sway of reason becomes more supreme. Yet it has certainly fared thus with man's belief in the supernatural. The more intellectual the world becomes, the more tenaciously does it cling to its faith in a future state. The spread of civilization is, in effect, synonymous with the propagandism of creeds, the keynote of which is the duty of preparing for eternity. Of course all this is not absolutely incompatible with the instinctive theory. A noble instinct is none the less an instinct because it is strengthened and developed by the growth of knowledge and the sway of reason. But it seems easy to conceive how this faith, originally founded on impressions independent of reason yet not unreasonable and as natural as they were powerful, ultimately received the endorsement of science, and so far from representing a break in the continuity of mental evolution, is in fact a further evidence of that evolution. Men

in the early ages of the World's history, however undisciplined their intellectual forces may have been, were capable of affections and impressions that utterly refused to be dissipated by the death of the beings which had inspired or produced them. Strong feelings may centre about familiar objects of inanimate nature, or about pets of the animal genus, but the blank left by the destruction or death of such objects is something wholly different from the blank left by the death of a human friend. The personality of the latter is not buried with him. It lives, and asserts itself again and again, with varying intensity, in the lives of his survivors. It has never been possible that men should accept the separation of the grave as absolutely final. Something, call it a mere creation of memory, a suggestion of instinct, or a mirage of affection, seemed to remain, and from the sense of its impalpable presence grew the belief that our communion with it would be closely renewed when we too should have passed through the same mysterious ordeal. Only a small interval divides the shadowy preception that a link indissoluble even by death can be established between human beings, from the confident *non omnis moriar* of SOCRATES. The Greek philosopher, weaving for himself a faith out of impressions which he perceived to be common to all, offered a genuine example of the evolution of human thought. By and by the age of the supremacy of science commenced. The physicist began to interpret nature with a degree of accuracy never even dreamed of in ancient days. At what conclusion did he finally arrive? That matter is absolutely indistinct; that in the economy of Nature not an atom of any gas or a particle of any solid is lost. Everything is eternally recovered, re-combined, and re-utilized. Here then was a new basis for the old faith. If matter in all its various forms is thus preserved against the smallest loss through all the ages, why should annihilation be the perpetual fate of that which we know to be incomparably superior to matter, that which exercises over matter power absolute within the limits of Nature's laws? We cannot tell, cannot even conceive, what the soul of man may be. We cannot so much as say whether he has a soul. But we know of a surety that the faculty which separates him from and makes him immeasurably superior to every object in the world, is wholly independent of the corporeal matter which, though dissipated at his death, is eternally secured against destruction. We know, too, that of all the immense labour he has expended on the cultivation of his mind and intellect, none is transmitted to his children, and only a small fraction is utilized during his life for permanent results. Knowing all this, does reason bid us believe that his soul, his spirit, call it by what name we please, per-

ishes when it ceases to animate his body? Does reason bid us believe that the noblest and grandest thing in the scheme of Nature is the one and only thing doomed to destruction? It does not seem that to admit such a belief would be consistent with the continuity of the evolution of thought. On the contrary, that continuity is testified by the spread and strength of the very faith which Lady WELBY calls a break in the development of the human mind.

THE SOUTHAMPTON STRIKES.

EXCHANGES to hand by the French mail place us in possession of full and exhaustive accounts of the lawlessness at Southampton which, according to Reuter's telegrams, necessitated the intervention of a military and naval force. One of the leading local journals, the *Hampshire Independent*, devotes more than a fourth of the space available in its weekly issue to what reads like a fair and unbiassed report of each day's proceedings; and to the *Independent* we are mainly indebted for our knowledge of the affair. It was clearly recognised long before the mail left that the trouble had been gathering force some time, and though *The Times*, in its customarily positive manner, attributes the deplorably serious developments to the alleged hesitancy and incapacity of the Mayor,—whose conduct was subsequently pronounced by special resolution of nineteen of his brother magistrates to have won their "grateful appreciation" by its "courage, firmness, and yet moderation * * * under unexampled and critical circumstances"—there are not wanting signs that a considerable share of public censure will ultimately rest upon the Dock Company and other employers. For this reason: that in face of the unanimous resolution of the Directors of the Chamber of Commerce, deploring the difference between employer and employed and offering their services in the formation of "a Board of Conciliation between the two interests," the representatives of the shipping and commercial interests of the town and port of Southampton, while willing to enter into personal communication with their own men, declined by equally formal and deliberate resolution "to recognise any outside interference." Indeed, it would seem that the obstinate attitude of the employers in refusing to recognise the Labour Union is responsible for the strike of the dockers in the first place. The local journal calls the strike "as remarkable in its origin as regrettable in its consequences." More or less agitation among the dock labourers of the port, we read, had existed for several months, and as the employers "decided that they would in no way recognise the union, or treat with its delegates," the men felt that there was "no prospect of their demands being conceded

without a preliminary struggle." They consequently discussed the wisdom of resorting to a strike, and finally agreed tentatively upon a date when work should cease. The strike was averted, however, thanks mainly, it is said, to timely warning given by the press, which "at once" led to the employers informing "their workmen that increased pay would be given." The employers, with a few exceptions, we are quoting the *Hampshire Independent*, still refused to deal with the union, consistently asserting their determination to deal only with their own men, but sensible and unprejudiced people as well as not a few even of the disputants, "admitted that they were wrangling over the shadow regardless of the substance," and that "both sides were to a certain extent beating the air." Then it may and doubtless will be asked what occasioned the strike, the call for the military, and the subjection of a part of the town to what was virtually a state of siege? The answer is, inopportune action on the part of the Dock Company, the largest of the employing bodies, in inaugurating and prosecuting a policy designed to convert casual into permanent work; and the suspicion and mistrust of the dock hands who professed to see in the Company's purpose an endeavour to go behind the promises extracted and to effect "by underhand methods" a reduction of pay beyond even the original limits. The men went on strike on Monday the 8th of September, and work of every description was speedily at a standstill not only in the docks, and on the steamers there discharging and loading, but in a great measure at the London and South-Western Railway Terminus. Those who have passed through Southampton will recall that the freight lines cross the street separating the dock-wall from the railway yard, thus permitting uninterrupted conveyance of goods to and from the immediate vicinity of the ship's side. It was this that gave the strikers their strength. They resolutely blocked the way to any and all trains not carrying mails alone. The police were powerless to keep the road clear, and no driver could dash his engine into a solid mass of men. The accounts of the struggles at the gates at these points show that they were repeated and severe and stubborn, and even when, on the evening of Tuesday, the 1st Battalion of the Yorkshire Light Infantry arrived from Gosport, it seemed that nothing short of opening fire would disperse the surging crowds. After well nigh two hours' work, however, during which several of the officers and civil officials were seriously injured, the troops charged at the double and cleared the districts affected. The threatening state of affairs continued all through Wednesday, the strikers resorting to well-devised methods to prevent control of the dock entrances both by land and water, boats

containing dockers picqueting the Itchen River, until a gunboat and patrol boats were sent in response to urgent summonses despatched to the Admiralty Authorities at Portsmouth Dockyard. Mass processions paraded the town until the corporation prohibited further demonstrations of the kind, but beyond wrecking the front of the Mayor's place of business no damage was done or attempted to private citizens or their property. Save in one or two isolated cases, when the men captured a train for instance, no wanton spirit of destructiveness and malice would appear to have been engendered, the vast crowds of discontented persons heeding the voices of their leaders and sympathisers. The accounts mention, for example, that the arrival of the military "was greeted by loud and prolonged cheering on the part of the dockers, which was renewed with even greater intensity when the order was given to unfix bayonets. The local clergy and one or more of the Borough Magistrates were active in their efforts to effect a compromise, Canon SCANNELL, and the Rev. W. W. PERRIN, of the Established Church, and the Rev. J. LEACH forming part of a deputation which on Thursday sought an interview with a meeting of masters at the South-Western Hotel. The only result of this was, scarcely credible though it seems, a point-blank refusal to receive the deputation, accompanied by the announcement that "they would see no one except their own employés, and were determined to maintain their position." Notices, inviting a resumption of work at specified rates of pay eventually paved the way to a return to the normal condition of things, neither party, strictly speaking, having won the day. It is somewhat singular that the military should have been summoned, "notwithstanding the fact that there had not been a single arrest in connection with the strike." Altogether it must be admitted that the ancient borough will not emerge with much credit from an affair which drew world-wide attention for the moment, and which it is estimated will cost Southampton an extra rate of not less than twopence in the pound. Neither Magistracy, Dock Company, employers, nor employed can look back upon the unhappy week with any satisfaction. As the *Independent* says, "the prestige of the place must necessarily suffer."

In the *Daily News*' article on this subject we observe the following significant passage:—"The time has gone by, and for ever, when the various questions of labour could be settled, or even could be regulated, without the concurrence of the working men. The employers have to recognise the claims and the credentials of those who represent the authority of Union organizations. The Unions of trades and of labouring associations have become a power in our day which it is perfectly absurd to fancy that the employers or the com-

munity can ignore. The working classes now are only doing that which, * * * the employers have been free to do for generations and almost from all time in civilized society." The Hampshire journal also has a powerful leader on the same subject. We reproduce portions of the concluding paragraph, as they embody in an effective way views most moderate and fair-minded men will be willing to endorse:—"Working men have a right to combine, but they have not a right to coerce; they may be justified in resisting their employers, but they are not justified in terrorising the community generally * * *. Trade Unionism has done great good in the past; it may do still greater good in the future. But it must be remembered that it has its duties as well as its rights. It is protected by the law, and it must respect the law. It enjoys liberty, and it must not countenance oppression. Legislation has enfranchised labour and made workers free; they in their turn must cherish this freedom and must not themselves become tyrants. This, as a rule, is admitted and recognised: we hope the "New Unionism" will preach no other doctrine."

THE COMMERCIAL CODE.

LAW No. 103.

We hereby give our sanction to the present Regulations relating to the postponement of the carrying out of the Commercial Code, and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 8th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

For the present the Commercial Code, Law No. 32, of the 23rd year of Meiji, shall not be carried out in Okinawa Prefecture.

PUBLIC OFFICES AND DOCUMENTS.

LAW No. 100.

We hereby give our sanction to the present Regulations relating to public offices, public officials, the seals of public offices, documents, licences and tickets (*kansatsu*), and order the same to be promulgated. We also direct that these regulations shall come into force on and after the 1st day of the 11th month of the 23rd year of Meiji.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 8th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

Articles relating to Government offices (*kancho*) and offices (*kancho*) in the Penal Code shall be applied to public offices; articles relating to Government officials, to public officials; and articles relating to the seals of Government offices, and documents, licences, and tickets, to the seals of public offices, and to documents, licences and tickets.

HORSFORD'S ACID PHOSPHATE FOR ABUSE OF
ALCOHOL.
It relieves the depression therefrom.

RANKS AND SALARIES OF LOCAL OFFICIALS.

IMPERIAL ORDINANCE No. 226.

We hereby give our sanction to the present amendment of the Ranks and Salaries of Local Officials.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 10th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—The yearly salaries of governors, secretaries, chiefs of police (*Keibuchō*), chief tax collectors (*Shuzōchō*), and superintendents of prisons (*Tengoku*) of cities and prefectures, shall be as follows:—

	Three cities and prefectures where open ports and head-quarters are.		Other prefectures.	
	Yen.		Yen.	
Governors	4,000	3,500		
Secretaries	2,000	1,500		
Chiefs of police	1,400	1,100		
Chief Tax Collectors	1,400	1,000		
Superintendents of Prisons	800	600		

Article 2.—The Governor of the City of Tokyo may specially receive yen 4,500 per annum.

Article 3.—The yearly salary of one councillor shall be yen 1,000 and of the other yen 700.

Article 4.—Headmen of rural districts shall receive yen 600 yearly.

Headmen of rural districts specially appointed by the Minister of State, for Home Affairs shall receive yen 800 yearly.

Article 5.—Superintendents of islands (*toshi*) shall receive yen 1,200 yearly.

Article 6.—A Governor's salary may be subject to a special addition of not more than yen 500 in one year, above the sum mentioned in Articles 1 and 2.

The salary of the chief of police of the City of Osaka may be subject to a special addition of not more than yen 300 in one year.

Article 7.—Each of the councillors of the Cities of Tokyo, Kyoto, and Osaka, and the prefectures of Kanagawa, Hyogo, Nagasaki, and Niigata, may receive a special addition of not more than yen 200 yearly.

Article 8.—Headmen of rural districts specially appointed according to paragraph 2, Article 4, shall not number more than 150.

Those Governors whose salaries are specially increased according to paragraph 1, Article 6, shall not number more than 20.

Article 9.—All ranks and salaries of local officials, except those regulated in this ordinance, shall be in accordance with the ordinance relating to the ranks and salaries of higher officials, Imperial Ordinance No. 6, of the 19th year of Meiji, and ordinances relating to ranks and salaries of *hannin* officials, Imperial Ordinance No. 36 of the same year, and Imperial Ordinances Nos. 74 and 75 of the 23rd year of Meiji.

THE TOKYO GAKUSHI-KAI-IN.

IMPERIAL ORDINANCE No. 264.

We hereby give our sanction to the present Regulations relating to the Organization of The Tokyo Gakushi-Kai in and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 24th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YOSHIKAWA AKIMASA,
Minister of State for Education.

Article 1.—The Tokyo Gakushi-Kai-in is established for the purpose of assisting education by promoting the status and value of sciences and arts, and its control is vested in the Minister of State for Education.

Article 2.—The Tokyo Gakushi-Kai-in shall be composed of members chosen from among men of the highest virtue and learning.

The mode of election and number of members shall be as follows:—

- (1.) Members specially chosen by the Crown, 15.
- (2.) Members elected by recommendation of members, 25.

The election of members nominated by the other members must be sanctioned by the Minister of State for Education.

Membership shall be for life.

Article 3.—Members of the Tokyo Gakushi-Kai-in shall express their views and opinions relating to any branch of science which constitutes their special study, and shall report on matters relating to sciences, arts, and teaching.

Article 4.—The Tokyo Gakushi-Kai-in shall discuss any question relating to sciences, arts, and teaching, emanating from the Minister of State for Education; its members may engage in debates at its meetings and express their views to the Minister of State for Education.

Article 5.—Members of the Tokyo Gakushi-Kai-in above 60 years of age may be granted a special allowance of yen 300 yearly, the number of such members being limited to ten.

Article 6.—One president and two directors shall be attached to the Tokyo Gakushi-Kai-in. The president and directors shall be appointed by the members from among themselves and with the sanction of the Minister of State for Education. Their terms of office shall be one year. They may, however, be re-elected.

Article 7.—The President shall superintend the affairs of the Kai-in and take charge of any debates that may occur. His duties may in his absence be conducted by a director. The director shall assist the President in conducting the affairs of the Kai-in.

Article 8.—An annual allowance of 1,300 yen shall be granted to the president and directors. Members, however, who are in receipt of the allowance mentioned in Article 5 shall not come under this article.

Article 9.—Two clerks shall be attached to the Tokyo Gakushi-Kai-in, and *soku* of the Educational Department shall be appointed additionally when required. Clerks shall be under the orders of the president and directors, and shall deal with miscellaneous affairs.

Article 10.—The Tokyo Gakushi-Kai-in may frame its own bye-laws with the permission of the Minister of State for Education.

LOCAL GOVERNMENTS.

IMPERIAL ORDINANCE No. 225.

We hereby give our sanction to the present Amendment of the Organization of Local Governments, and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 10th, 1890.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—The following officials shall be attached to each city and prefecture:—

A Governor, a Secretary, a Chief of Police, a Chief Tax Collector, Councillors; Engineers; a Superintendent of Prisons, *Zoku*, *Gishu*, Police-inspectors (*Keibu*), *Zoku* of Tax Offices, Clerks of Prisons, a Chief prison Inspector (*Kanshuchō*).

Article 2.—The Governor shall be a *chokunin* official.

Article 3.—The secretary shall be a *sonin* official.

Article 4.—The chief of police and the chief tax collector shall each be below 2nd *sonin* rank.

Article 5.—There shall be two councillors below 3rd *sonin* rank.

Article 6.—The superintendent of prisons shall be under 4th *sonin* rank.

Article 7.—*Zoku*, police inspectors (*keibu*), *soku* of tax offices and clerks of prisons shall be of *hannin* rank, and the chief prison inspector shall be under 3rd *hannin* rank.

The *hannin* officials of all cities and prefectures shall be fixed as follows:—

<i>Zoku</i> , police inspectors, clerks of prisons, and chief prison inspectors	6,296
<i>Zoku</i> of tax offices	5,606

The settled number of *soku*, police inspectors, clerks of prisons and chief prison inspectors in each city and prefecture shall be decided by the Minister of State for Home Affairs; and the settled number of each shall be decided by Governors of cities and prefectures with the permission of the Minister of State for Home Affairs.

The settled number of *soku* of tax offices in each city and prefecture shall be decided by the Minister of State for Finance.

Article 8.—Engineers and *gishu* may be attached, if necessary, to city or prefectural Governments according to the Regulations relating to Ranks and Salaries of Engineers (*gyutsu-kwan*), within the limits of the settled estimate of salaries of *hannin* officials.

Article 9.—Governors shall be generally under the guidance and superintendence of the Minister of State for Home Affairs, but shall be under the control of the Minister of State for each Department as to affairs which come within the province of that Department, and shall carry out laws and ordinances, as well as control administrative affairs of their offices.

Article 10.—Governors shall issue city or prefectural ordinance applicable to all or a part of their province with regard to the administrative affairs of their office, by virtue of their official power or by special order, within the limits of laws or ordinances. The period for the coming into force of city or prefectural ordinances shall be 7 days after the date on which they are promulgated within the jurisdiction by the *Official Gazette* or other special means, except in cases where a date of enforcement is specially provided. In islands the period shall, however, be reckoned from the day following that on which they arrive at the office of a rural district.

Article 11.—City or Prefectural ordinances may be annulled or suspended if the Minister of State for Home Affairs or other Minister having chief responsibility relative thereto consider them likely to injure the public interest, or to contravene rules, or subvert authority.

Article 12.—Governors may, by letter to the commanders of military divisions (*shidan*) or of head-quarters (*ryodan*), require the presence of troops if such be deemed necessary in case of an extraordinary and sudden occurrence, or for protection.

Article 13.—Governors shall control all officials under them, and report the faults or merits of officials of *sonin* rank to the Minister of State for Home Affairs or the Minister of State having chief responsibility relative thereto, but shall deal according to their discretion with officials under *hannin* rank.

Article 14.—Governors shall reprimand officials under them according to the provisions of laws and ordinances, and memorialize the Minister of State for Home Affairs, or the Minister of State having chief responsibility, in the case of officials of *sonin* rank, but shall deal exclusively with officials under *hannin* rank.

Article 15.—Governors may reward officials of or under *sonin* rank who are specially meritorious, within the settled estimates of their office, and memorialize the Minister of State for Home Affairs, or the Minister of State having chief responsibility, as to officials of *sonin* rank and deal exclusively with officials under *hannin* rank.

Article 16.—Governors may if necessary engage employes (*yatoi-in*), within the settled amount of the financial estimate relating to the salaries of *hannin* officials.

Article 17.—Governors may establish bye-laws for disposing of the affairs of their offices.

Article 18.—Secretaries shall discharge the duties of Governors in the absence of the latter.

Article 19.—In each local government there shall be a Governor's secretariat.

Clerks and *soku* shall be attached to the Secretariat of each Governor.

Article 20.—The following affairs shall be dealt with in each Governor's Secretariat:—

- (1.) Affairs relating to the promotion, removal and status (*naibun*) of officials.
- (2.) The receipt of documents (*uketsuke*).
- (3.) The custody of the seals of the city or prefectural government.
- (4.) Affairs relating to foreigners.

Article 21.—The following offices shall be established:—

Office for Home Affairs.
Office for Police Affairs.
Direct Tax Office.
Indirect Tax Office.
Prison Office.

Article 22.—The secretary, as chief of the office for Home Affairs, the chief of police, as chief of

the office for Police Affairs, the chief tax collector, as chief of the Direct and Indirect Tax Offices, and the superintendent of prisons (*tengoku*) as chief of the Prison Office, shall control officials under them according to the orders of the Governor and deal with the affairs entrusted to them.

Article 23.—The following four sections shall be attached to the office for Home Affairs, and their respective business shall be as follows:—

FIRST SECTION.

- (1.) Matters relating to meetings for the election of members, city or prefectural meetings, rural district meetings, municipality, town or village assemblies, meetings of public associations and so forth.
- (2.) Matters relating to the internal economy of the municipality, town or village, city or prefectural taxes, and the Distress Relief Fund.
- (3.) All other matters in addition to the above which do not belong to another section.

SECOND SECTION.

- (1.) Matters relating to agriculture, industry, commerce, and works.
- (2.) Matters relating to Government land and the purchase of land for public use (*tochi shuyō*).

THIRD SECTION.

Matters relating to scholastic affairs, sanitation, military affairs, shrines, and the census (*Koseki*).

FOURTH SECTION.

- (1.) Matters relating to the city or prefectural finances.
- (2.) Matters relating to the expenditure and receipt of city or prefectural taxes, as well as of the Distress Relief Fund.

Article 24.—The Office for Police Affairs shall deal with affairs of higher and administrative police (*gyosei-keisatsu*).

Article 25.—The Direct Tax Office shall deal with matters relating to the assessment (*fukuro*) of direct taxes; and the levying of taxes, as well as the cost of the same.

The Indirect Tax Office shall deal with matters relating to the assessment of indirect taxes, and the punishment of offenders against the rules regulating the same.

Article 26.—The Prison Office shall deal with affairs relating to prisons.

Article 27.—Councillors shall give their opinion at the request of the Governor, and shall conduct discussions and prepare drafts of documents.

They shall be appointed chiefs of sections in the Office for Home Affairs, or may assist in the business of any office or section temporarily, in accordance with the orders of the Governor.

Article 28.—*Zoku* shall be appointed chiefs of sections of the Office for Home Affairs, except where councillors hold such posts as additional appointments.

Article 29.—The Governor shall settle the divisional sections of the affairs of the Office, for Police Affairs, the Direct and Indirect Tax Offices and the Prison Office, and report the same to the Minister of State having chief responsibility relative thereto.

Article 30.—If there should arise temporary business in addition to that provided for in the preceding articles, Governors shall, according to their own convenience, decide the office or section which shall deal with the same.

Article 31.—*Zoku* shall be attached to sections of the Division for Home Affairs as well as the Governor's Secretariat, and shall transact miscellaneous business according to the orders of their superiors.

Article 32.—Police Inspectors (*keibu*) shall conduct business relating to police, and have charge of the police constables (*junsu*) under them, according to the orders of their superiors.

Article 33.—*Zoku* engaged in connection with taxation shall be attached to the sections of the Direct and Indirect Tax Offices, and shall deal with miscellaneous affairs, according to the orders of their superiors.

Article 34.—Clerks of prisons shall deal with miscellaneous affairs according to the orders of the superintendents of Prisons (*tengoku*). In the absence of a Superintendent the head clerk shall represent him according to the orders of the Governor.

Article 35.—Chief Inspectors of Prisons (*Kan-shucho*) shall visit and inspect prisons and control and give orders to inspectors of prisons (*Kan-shu*), according to the orders of superintendents of prisons.

Article 36.—Police Stations shall be established in each rural district and municipality, and branch police stations shall be established at various other points within the jurisdiction.

Two or more police stations may be established

in the municipalities of Kyoto and Osaka with the permission of the Minister of State for Home Affairs, and the chief of police shall make appointments to the office of chief of a police station or of a branch police station.

Article 37.—Regulations relating to police inspectors and inspectors of prisons shall be specially decided.

Article 38.—Direct and Indirect Tax Branch Offices shall be opened where necessary in cities and Prefectures. The Minister of State for Finance shall decide their distribution, as well as the boundaries of their jurisdiction.

Article 39.—*Zoku* engaged in connection with Taxation may be appointed Chiefs of Direct and Indirect Tax Offices.

Article 40.—Prison surgeons and instructors shall be appointed and treated as *hannin* officials. Their settled number shall be decided by the Governor, who shall obtain the sanction of the Minister of State for Home Affairs.

Article 41.—Matters relating to the police and prison administration of the City of Tokyo shall be dealt with in accordance with the Organisation of the Metropolitan Police Board.

Article 42.—The following officials shall be established in each rural district:—

A rural district chief and rural district clerks.

Article 43.—The chief of a rural district shall be below 3rd *sonin* rank.

Article 44.—Clerks of rural districts shall be *hannin*, and their settled number shall be decided by the Governor, who shall obtain the permissions of the Minister of State for Home Affairs.

Article 45.—Chiefs of rural districts shall enforce laws and ordinances within their districts and control the administrative affairs of the same, in accordance with the guidance and control of the Governors.

Article 46.—Chiefs of rural districts may carry out, at their own discretion, matters specially entrusted to them by Governors or entrusted to them by laws and ordinances.

Article 47.—Chiefs of rural districts shall control the headmen of towns and villages in their districts as to administrative matters, and superintend them as to their common affairs.

Article 48.—Chiefs of rural districts shall report to Governors the appointment and removal of clerks of rural districts.

Article 49.—Chiefs of rural districts may issue police regulations as to matters entrusted to them by laws and ordinances, or by Governors. Seven days after the day on which such regulations are promulgated by usual or special means, they shall come into force, except in the case of those the date of enforcement of which is specially mentioned.

Article 50.—The police regulations of rural districts may be annulled or suspended if a Governor, or the Minister of State for Home Affairs, or the Minister having chief responsibility, shall consider them to be injurious to the public interest, against former regulations, or subversive of authority (*Kengen*).

Article 51.—Clerks of rural districts shall conduct miscellaneous business according to the orders of chiefs of rural districts.

If the chief of a rural district is absent, the head clerk of such district shall represent him according to the orders of the Governor.

Article 52.—Insular offices shall be specially established in islands as provided for Imperial Ordinance.

Article 53.—The officials of an insular office shall be as follow:—

Superintendent (*Toshi*).

Clerks.

Article 54.—The superintendent shall be below 2nd class *sonin* rank.

Article 55.—Clerks shall be *hannin*, and their settled number shall be decided by the Governor within the settled number of *hannin* officials of the city or prefecture.

Article 56.—The superintendent shall dispose of the administrative affairs of the island according to the guidance and superintendence of the Governor, and may deal with matters entrusted to him by the Governor.

Article 57.—The superintendent may issue police regulations according to Article 49. Article 50 shall be applied to the police regulations mentioned in the last paragraph.

Article 58.—The superintendent shall report to the Governor the appointment and removal of clerks under him.

Article 59.—The superintendent shall as to administrative affairs control officials of towns and villages within his jurisdiction.

Article 60.—Clerks shall deal with miscellaneous affairs according to the orders of their superintendent.

If the superintendent of an insular office is absent, the head clerk of the office shall represent him according to the orders of the Governor.

FUNERAL OF MR. EDWARD MORRIS.

Late yesterday afternoon the remains of Mr. Edward Morris, the Yokohama manager of the Hongkong and Shanghai Banking Corporation, were interred in the General Cemetery, in the presence of a crowd of mourners comprising all the leading business men of different nationalities in the Settlement.

Out of respect for the memory of the deceased gentleman, the banks in town closed at tiffin time, and practically the chief business houses did the same. The coffin was conveyed at four o'clock from the residence of the family at No. 119, Bluff, to Christ Church, where a service was performed by Rev. Mr. Irvine, who was assisted by Rev. L. B. Cholmondeley, the musical share being rendered at the organ by Mr. Choje. At the close of an unusually impressive service, Mr. Irvine said it was not necessary for him to speak to his hearers at any great length concerning the character or life of the lamented friend whose funeral service they were celebrating. Nor was it necessary to select any special words to form the text of the few remarks he should speak regarding the deceased gentleman. The text was here, in themselves. No further indication was needed of the varied links by which Edward Morris was united to this Settlement. In some respects his death was of an unusual nature, different from that of many of the friends whom they had had to mourn from time to time, in the many years the Settlement had existed. Because it was one of those rare instances where the father of a family, surrounded by that family and leaving them for the most part grown up to manhood and womanhood, was taken away here at his very post, and with that family around to witness and to mourn for his death. For most of us there was a sad place in the corner of our hearts. A father or mother had passed away far distant from us, though not forgotten. Yet to some it was merciful that distance did intervene at times, because for strong and deep natures to see passing away from their very midst the prop and the staff of the household was a grief which only those who have experienced can understand. It was not because Edward Morris represented in this community the commercial heart of the place; it was not because as they knew he was a man who did with all his might whatsoever his hand found to do, and was respected by all classes of business men with whom he had to deal, as a business man who thoroughly understood his work; or because before the hand of sickness was laid upon him and while strength and energy were still his, he was known by his staff for his capacity and insight, and for his special adaptation to his particular branch. It was because the family by which he was surrounded were here among them to-day; and he would go farther and say that the influence of that English home had been felt widely and deeply by the little community to which they belonged; that the spirit which it breathed of affection and dutifulness, of love and care from the parent to the child, and of kindness and many little deeds which were known to many here—these were the things which more than any effect of his position here caused them to show their grief and sorrow and sympathy that he should have been taken away from among them as he had been. Nay, more. They had seen his sons growing up to manhood; they could recollect the loss of his dear son at home, and remember what the deceased gentleman then passed through. They saw the sons rising up to manhood and entering business here and in the sister port, and they saw a daughter who united them to the capital by new and valued ties. They could not over-estimate the importance of the steady, diligent, kindly life and the high principle that existed in that household. Therefore they would, he knew, join with him in praying earnestly from their hearts, and in wishing most deeply and strongly, that God would be both the Father of the fatherless and the God of the widow, and that his blessing would rest upon them.

At the conclusion of the service the coffin, which had hitherto rested in the chancel, was conveyed to the hearse, the strains of the Dead March in "Saul" echoing through the church as the mourners quitted the building. Mr. E. Morris and Mr. P. Morris, sons of the deceased gentleman, were the chief mourners, and the pall was borne by the following gentlemen—Messrs. M. Kirkwood, son-in-law of the deceased; G. W. Butt, manager of the Hongkong and Shanghai Banking Corporation, Kobe; Alex. Center, agent, Pacific Mail and O. O. Steamship Cos.; N. J. Hansen, Judge of H.B.M. Court for Japan; Dr. Wheeler, Dr. Baelz, Messrs. J. P. Morrison, W. R. Ben-

nett, N. P. Kingdon, R. Johnstone, A. H. Dare, Hongkong and Shanghai Bank; and T. B. Glover. The members of the Chamber of Commerce attended in a body, having resolved on this method of showing their high esteem for the dead; the staffs of the Hongkong and Shanghai Bank and the other foreign banks of the Settlement attended and walked near the coffin. A striking feature of the funeral was due to the circumstance that many persons carried wreaths, of which there must have been over half a hundred, some of the greatest beauty both in colour-harmony and design. Among those who walked to the cemetery after the hearse were the Belgian Minister, the Hon. the Master of Napier, Messrs. F. Walkinslaw, Donald Fraser, J. A. Jeffrey, C. H. Wilson, C. H. Balfour, J. T. Boag, J. Rickett, Macpherson, Captain Wilson Walker, Messrs. A. Schultz, N. F. Smith, A. O. Gay, G. H. Alcock, C. L. Anderson, J. T. Griffin, J. Mendelson, J. Ph. von Hemert, W. J. Kenny, B. Gillett, W. G. Bayne, F. H. Trevelthick, H. C. Piggott, O. Keil, Geo. Sale, Paymaster Macdonald, U.S.N., Dr. Hall, Messrs. F. H. James, R. N. St. John, A. F. Macnab, Dr. Tripler, Messrs. A. Brent, J. W. Cridgishank, R. A. Wylie, W. B. Walter, A. C. Read, Gower Robinson, V. Blad, E. B. Jones, E. B. Watson, C. J. Stome, W. Aitchison, A. L. Robinson, Professor J. Milne, Messrs. J. F. Lowder, A. B. Walford, W. D. S. Edwards, J. Corder, J. A. Fraser, O. Reimers, Pereira, F. A. Saway, Captain Bougonin, Messrs. Wilkin, J. D. Hutchison, Marquis Nembini-Gonzaga, &c.

On reaching the cemetery, which was entered from the lower gate, the coffin was carried by the pall bearers up the hill-side to the grave, which had been dug close to the upper fence of the inclosure. At the side of the grave a short service was read by Rev. Mr. Irvine, after which the coffin was lowered to its last resting place. The grave was completely covered by the wreaths brought by mourners. Among these were offerings from the Chamber of Commerce, Mr. Thomas Jackson, manager of the Bank at Hongkong; the staff of the Bank at Yokohama, the Bank staff at Hyogo, the Yokohama Cricket and Athletic Club; the First National Bank; the boys and coolies of the Bank, and the Chinese shroffs also sent wreaths, and among others who sent similar tokens were Mr. Kirkwood, Mr. and Mrs. H. Steele, Mr. F. Walkinslaw, Mr. W. G. Bayne, Mr. and Mrs. E. B. Watson, Madame Neyt, M. and Mme. E. Blanc, Mr. J. D. Hutchison, Mr. A. Center, &c.

CORRESPONDENCE.

THE BRITISH CONSUL AND BRITISH MARRIAGES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In to-day's *Mail* you say that if a British subject wishes to marry a Japanese woman according to the forms prescribed by British law "the assistance of the Consul is of course indispensable." Allow me to point out that this is an error. A British subject may be married by the clergyman without the intervention, or even the knowledge, of his Consul; and such a marriage is registered in London, and is as valid legally as if it were performed in a church there.

I am Sir, your obedient servant,

CHURCHMAN.

October 29th, 1890.

[We referred to the civil ceremony only. The religious ceremony is quite another affair, and had no connection with the subject under discussion.—Ed. J.M.]

RAILWAY MANAGEMENT IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As one's experience of railway management in Japan increases, the felicity of Professor Chamberlain's phrase "nuddle-pated folk when it comes to matters of business" strikes even the most friendly foreigner. A month would seem sufficient time for a change in train service to get itself registered on the bulletin boards at the chief railway stations. But the time table, English at least, at Shimbashi continues to assure foreigners that connection is made at Takasaki for Yokogawa by the train leaving Shimbashi at 8.10 a.m. though no train has left at that hour for a month at least, the present time being 7.30 a.m. With the station time-table wrong it is not surprising that the daily newspapers of Tokyo, Japanese, go on assuring their readers that the train leaves at 8.10.

Really it is not amusing even when one is told in the most "good-natured, artistic" fashion that the train has gone forty minutes

previous while the time-table still insists that an early breakfast and hurried departure were not in vain. It is not too much to ask that official time-tables tell the public when trains go, instead of contenting themselves with ancient history.

Yours, &c.,

October 31st, 1890.

BELATED.

CHRISTIANITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As the age goes on from year to year, all new discoveries and inventions seem to be more or less pointed at Christianity. It has been proved over and over again, by deep, thorough and lengthened study that there is nothing in science which can in any way tarnish the veracity of scripture, but on the contrary, it establishes every word which God has uttered in connection with the formation of the earth. Attacks are generally made by those who have scarce passed the threshold of science; just as a young man at home, having made the first step toward a public school teacher, dangles his gold washed watch chain, but finds after a few years rubbing that the brass appears. God's word has withstood the scorn and worldly wisdom of centuries, and sits to-day enthroned as the "Light" giving power challenging dispute.

Christianity holds that the Bible, from the first word in Genesis to the last word in Revelation is the inspired Word of God—not a part here and there according to the fancies of men, but every word as given by the Prophets and Apostles under the power of the Holy Ghost. If the Bible, *in toto*, be not the Word of God, who will take upon himself the responsibility of deciding what part or parts are genuine and what spurious? A certain sect tells us to reject all passages that relate to the Blood of Jesus Christ, God's Son cleansing us from all sin, as they cannot bear the thought of innocent blood being spilt to save the guilty. If you take your Bible and cut out from it the "Blood" passages you have nothing but a useless tatter left—no cleansing, no peace, no calm in a dying hour, no coming King, no resurrection, no Glory. Christianity cannot live if this part of the Word be not reliable. When it is argued that the doctrines of this so-called Christian sect just suit the natural mind, no blacker mark could be scored against it. Anything and every thing that falls in line with man in his natural condition before God is only a house built upon the sand which must irretrievably perish before the storm, or a bubble which will burst under examination. Man naturally is a lost sinner and needs a salvation to deliver him from perishing, man is a "Broad Way" traveller and must be arrested or he shall enter destruction by the "Broad Gate."

Another voice is now heard in Japan saying that Christ is not divine. The band, sect, or company from which this voice proceeds, by such a pernicious doctrine are endeavoring to lead those who have professed faith in our Blessed Redeemer away from the simplicity which is in Christ. This sect deny the fact that Christ is divine and yet call themselves Christians. Most extraordinary! Can there be such a thing as Christianity, in its true significance if Christ be not divine? Most emphatically we answer, no. Without the Blood of Christ Christianity cannot live, and without the divinity of Christ Christianity must be thrown into the same category as Buddhism, Confucianism, Shintoism, &c. Christ never could have atoned for the lost if He be not divine. "Without controversy, great is the mystery of godliness,—God manifest in the flesh."

Again, Christ, when on earth claimed that He was divine, and the Apostles hold, in their writings, to the same truth. Christ said:—"I and my Father are one," "Before Abraham was I am," "All power is given unto me in heaven and in earth." "I adjure thee by the living God," said the high priest, "that thou tell me whether thou be the Christ the Son of God." "Jesus saith unto him, Thou hast said: nevertheless I say unto you hereafter shall ye see the Son of Man sitting upon the right hand of power and coming in the clouds of heaven" If such utterances be not from a divine person they are nothing short of blasphemy. Scores of passages can be quoted, proving, if they mean or prove anything, that Christ is divine. Now fancy a sect that profess to be Christian—followers of Christ—and yet deny that which Christ constantly claimed himself to be. Nay more, if Christ be not divine, this so-called sect have for their leader the greatest imposter the world has ever heard of or seen. They may try to explain away, reject, or alter the Word to suit their own notions, but if the Bible can be treated in this way, the quicker we abandon the whole thing the better.

All who hold such views, whatever else they may

be, whatever they may seek to do, are not within the Christian Church. This we say from the authority of God's Word, "Every spirit that confesseth not that Jesus Christ is come in the flesh is not of God." Here we have, "God manifest in the flesh" pure and simple. It is an utter impossibility to be a Christian—a follower of Christ, redeemed from the curse of the law, and to deny the cleansing power of the Blood or the divinity of Christ. All such sects are not plantings of the Lord and will be rooted up—they are blind leaders of the blind and shall fall into the ditch—sad and deplorable end, yet awfully true.

Such views may be stigmatized as "old" and "not according to the spirit of the age." Most heartily do we admit this, and at the same time rejoice that we hold to the "old time religion." We believe in development and advancement in Christianity, but not developing out of it. There is a great deal of useless controversy concerning science and religion. Many supposed scientific darts shot at Christianity are only the "crackling of thorns under a pot," soon to result in smoke and ashes by their own energies. These Christian forms are without power—saving and uplifting power—and are only the latest of the devil's devices to delude and destroy, and should be treated as such. Many of these attacks upon Christianity and also pretences at being Christian should be dealt with on Solomon's plan: "Answer not a fool according to his folly lest thou also be like him. Answer not a fool according to his folly lest he be wise in his own conceit." These are not contradictory propositions, but two sides of the one case with reasons for each. Acting thus, and at the same time clinging fast in life and teaching to the Word will carry God's children safely over many difficulties.

Yours, &c.,
October 25th, 1890.

R. H.

A DISCLAIMER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to your remarks about me in your note on the Yokohama Local Press in your issue of the 31st ult., kindly allow me to make an explanation about the phraseology of the letter you quote from the *Nichi Nichi*. One of my students called my attention to the paragraph in that journal alleging that I was to become editor of the *Fapan Herald*. As this was the very first I had ever heard of the matter, I naturally authorized him to contradict the statement at once. The letter in the *Nichi Nichi* was penned by him, and the first time I saw it was in the issue of that paper of the day following. Of course I admit that I ought to have seen his note before publication, but it so happened that I was called off elsewhere on important business and had no opportunity of doing so. I regret that the word "reputation" was employed,—with respect to that your remarks are quite pertinent and proper; an old pressman has no earthly reason to be ashamed of his profession. It is certainly news to me to learn that "for several days it has been matter of common talk that Mr. Murdoch was likely to be the new editor of the *Fapan Herald*." So far from being at all approached on the matter by any one interested, I could not at first make out precisely what my informant was talking about. The other observations in your note call for no special notice.

I am, etc.,

JAS. MURDOCH.

Tokyo, November 1st, 1890.

JAPAN AND THE CHICAGO EXPOSITION.

The following speech was delivered lately by Mr. Kuki before a large meeting of artists, exhibitors, and officials of the Educational Department at Mukojima:—

GENTLEMEN,—I wish to take this opportunity to express our gratitude to Mr. Goward for visiting our Exhibition, and at the same time for the detailed speech that he has just delivered. Although he modestly refrained from expressing criticism as to the exhibits in connection with our exhibition, I hope there may be an opportunity for his doing so, for any criticism coming from such an accomplished stranger as our guest will be profitable to you. As to the World's Columbian Exposition which he represents, he spoke in detail; but from the middle part of his speech, I feel that his modesty prevented him from sufficiently enlarging upon the magnitude of the interests which the United States have for us. I therefore beg to trespass upon your attention to show that from

every point of view there are reasons why our people must make extraordinary efforts in connection with the World's Columbian Exposition. Since I first heard of the exposition, I have used every occasion to impress upon both the Government and the people, and on all persons whom I considered to be related in any way to it, the necessity of making a special endeavour at this time. It is needless to say that since Mr. Goward's arrival, my interest in the matter has been redoubled. Since the time when Commodore Perry came here, the conditions of our country have rapidly changed, the tide of events has turned to progress; and a constitutional representative government is now to be established. These facts, it may be, are not now worth mentioning. Throughout these various changes, the feeling that Japan and the United States are sister countries, with friendly relations, is prevalent on both sides and has never been changed. Many difficulties have occurred; but the friendship between Japan and the United States has not once been interrupted. Before I proceed to state actual proofs of the friendliness and warm feelings of the United States, I wish to call to your remembrance the name of Mr. Harris, the Minister of the United States, who did his utmost in behalf of Japan after Commodore Perry. He came when the country was in a difficult position. The famous Mr. Seward was then Secretary of State. It seems that Mr. Harris's friendly intercourse with our country gave to his people at home, who naturally could not know the condition of Japan, a feeling of impatience, for Mr. Seward often urged and instructed him to decide on arbitrary measures. He nevertheless insisted on his course in the face of the higher authorities. Much is due to his influence that Japan did not venture in dangerous waters and was gradually able to lay the foundation of our present system. We must never forget this friend. The evidences that the United States have always preceded any other nation in giving friendly recognition to Japan in regard to diplomatic and economical questions are many. To quote important instances: the re-payment of the Shimomoseki indemnity was an act which finds no parallel in the history of other nations. The treaty of extradition made during my stay in Washington, obviously showing the recognition of mutual independence and of our judicial autonomy, is a new event since the opening of Japan. We often hear complimentary phrases and polite expressions in diplomatic circles, but nothing similar to this case where in reality Japan is treated on terms of perfect equality with the civilized nations of the West. Indeed, the articles of the treaty are far more special than those of the treaties that were made between the United States and other European Powers. Moreover, as to the revision of our treaty, the United States appears never to hesitate, if the condition of Japan seems to warrant a new treaty. And fortunately our people seem to be fully sensible of the friendship of the United States. Of the many foreign victims of conservative frenzy, only one American was sacrificed during the present transition when stubborn, vagrant Japanese wandered here and there cutting people down like melons. Further, think of the actual commercial relations between Japan and the United States. Raw silk, tea, fine art objects, miscellaneous goods, and grain, etc., are principally exported to the United States. According to recent returns, the Americans import over 20,000,000 yen of Japanese goods, while we import only about 5,000,000 yen of their goods. The case is reversed with the Europeans, whose exports exceed their demand for our goods. This is owing to the generosity of the Americans, and to the fact that they have such a good market in Europe, and that they have no time to endeavour to carry away the money of such a country as our own. Specially in recent years the increase of their wealth was phenomenally rapid, and in the short interval of ten years, this increase has enabled them to take the first rank in the world. When I was in the United States in 1884, I noted their wonderful progress since I had passed through in 1872. Still more, the progressive changes in Chicago, where the Great Exposition is to be, and the inland States, Nevada, Oregon, California, etc., has been almost beyond conception. At the French International Exposition of 1878 there were more than 50 Japanese merchants, and they used to say that the English bought articles that cost 10,000 yen after looking twice, the French five times, the Germans ten times, but the Americans only once. In short this is effected by the wealth of the United States as well as the generosity of the people. Indeed, the richness of their soil is a natural blessing. They, living far from other powerful nations, are seldom interfered with. It is well that they continue to observe the principle of the Washington and Monroe doctrines:

"We do not attack others nor let them attack our own." This principle being in fact suitable to the national policy, they are naturally on as good terms with small weak nations or newly civilized nations as with powerful nations, and thus it is by no means accidental that they should have the respect of all. International laws are thought to be binding on all the nations, but they are not quite recognised by any but the American nation. It may be seen by this that the Americans have such power that other nations cannot imitate them. In case of international dispute no European nation could offer to act as umpire, before it had thoroughly considered the result of its arbitration as well as the situation of its own territory. But on the contrary, the American nation can at once arbitrate without the least consideration for its own safety. An example is the late war between China and France. Those, therefore, who opened our country to foreign intercourse are Americans; they are particularly friendly with our people, and it is by the feeling between sister countries that their friendship to our people is so different from that to other new nations. The United States, therefore, being a friendly country, our people have the duty as well as the obligation of doing their best for the World's Columbian Exposition, in addition to the historical fact, spoken of by Mr. Goward, that Japan was the cause of Christopher Columbus' discovery of America. As most of those present here are distinguished artists, I will lay before you a few thoughts about art exhibits. In all civilized countries, fashion is very changeable. It occasionally happens that women's dress is three or four times changed by fashion during one season. The best kinds of straw hats exported from our country many years ago were at first much in demand at between 2½ and 3 dollars; but three or four years afterwards, the price falling to forty or fifty cents, they were heaped together with rubbish in the corners of shops. It is practically impossible that our people can compete with Europeans so long as we continue to occupy a lower position in respect of improved methods. Look at the state of the telegraphs, posts, and means of transportation generally, which are the most useful instruments of competition for trade purposes, and you will find that Japan has nearly ten times as much loss of time and expense as Europe. For this reason also it is impossible that our people can compete with Europeans. What, then must they do? The fine arts of Japan cannot of course be compared with those of Greece, but judging from their special characteristics, we may see that they have in some points been thought worthy of comparison with Grecian standards. Until recent years our ancient art objects were secretly shut up in Buddhist shrines, and to say nothing of foreigners, even Japanese were not able to examine them. On that account there were many things practically unknown to Japanese as well as to foreigners. But in recent years, with the assistance of a few American gentlemen, minute examination of our art treasures has been made and we have seen that the value of our ancient art was more than we had imagined. If these hitherto concealed products of our ancient art be exposed to the world at large, we firmly believe that impartial Americans will hesitate to say that they are not worthy to be compared with those of Greece. Encouraged by this exalted and hopeful gift of the ancients, and brought up in this beautiful atmosphere, you have already the basis of literary ability as well as of art. How happy then is the opportunity that has arrived for you to raise your standard in the United States, directing your attempts towards making the art of Meiji the brightest page in the art records of Japan. If you fortunately accomplish this object by such great efforts, and if you succeed in making the fine art of Japan esteemed by your friends the Americans, as equal to those of Greece or France, you need no longer be compelled to engage in impossible competition. And you may expect to stand in such a position as will enable you to control fashion to some extent. The distinguished gentlemen who are present here have only just enough time to design their work for the Columbian Exposition. They must not lose this opportunity. They must determine to pay for the friendship of the United States, and also add to the glory of our country by making great efforts. I have mentioned that the American people are extremely friendly to our nation, and have also referred to the reciprocal feeling existing among our people. The World's Columbian Exposition is a great opportunity to express this feeling. The exhibition will be a great advertisement for our future commercial transactions. Gentlemen, is this not a great opportunity to exert ourselves? This evening, I am here at the kindly invitation of Mr. Okakura, and having heard Mr. Goward's speech I wish to again thank him for his trouble and also to lay my mind before you. As to the details of the exhibits I hope to speak more fully hereafter.

A NIGHT ON DEADMAN'S ISLAND.

During the summer of 1878 I was employed on board of a schooner belonging to a Russian-American firm in Vladivostok extensively engaged in the business of collecting and curing seaweed on the island of Saghalien, where they had several large stations, employing quite an army of Russians, Chinese, and Ainios. During the summer we made regular voyages between Vladivostok and Chirikov Bay, where the largest depot was situated, and whence we returned deeply laden with seaweed ready for the market. Occasionally we brought over a number of Chinese coolies to relieve the time-expired men, and sometimes a Russian official or a clerk from the office in Vladivostok would take a passage with us; in fact, we carried passengers every trip, as our schooner was the only means of communication between the mainland and that part of Saghalien where we traded. We generally had several days' detention in Chirikov every voyage, and took the opportunity to make short excursions into the interior, hunting in the wild and thickly wooded country around the bay. There were three Europeans aft, the captain, mate, and second mate, and six half-breed Russian sailors forward, and on these expeditions two Europeans and two sailors usually made up the party. On the particular voyage to which I refer we had two passengers, neither of whom were in any way connected with our business, but both were fond of sport and adventure, and not afraid to rough it. I will call one of them Smith and the other Brown. As usual, we had several days' leisure after the stores for the settlements were discharged, and then a hunting trip to extend outside Cape Zintro, the southernmost point of the bay, was unanimously decided on; the captain, myself, and the two passengers to constitute the party, with two of the sailors to pull the boat. At daylight the next morning we left the vessel, and in a light land breeze we soon reached the beach. Our armament consisted of four repeating rifles and two shot guns, and we considered ourselves able to cope with any number of bears or wolves, the only dangerous animals on the island. It was really a splendid day for such an expedition; not a cloud in the sky, a roseate tint on the eastern horizon blending with gold where the morning sun just appeared above the water line. We started together, but before long we had separated, each one going his own way, having arranged to rendezvous about four o'clock on the beach. Our day's sport produced one deer, two land otters, and several foxes, each animal with an adventure attached to it of course; and Smith had seen the tracks of a large bear on the sandy shore inside of the cape, and as he wanted all of us to participate in the search for it, he had considerably left the animal alone and returned for our cooperation. It was rather late in the day to begin bear hunting, so we determined to pull around the cape and land on a small island inside the point and there pitch our tent for the night. The evening was calm; a light haze had set in, but not enough to obscure anything within a mile or so. The little island, as we approached it, appeared on the water like a veritable gem, a green bower floating in the sea, a vision of unsurpassed loveliness. We landed on one side where the vegetation grew down to high water mark in rank profusion. "What a lovely spot!" exclaimed Brown, as he kept his seat after the boat had touched the shingly beach, with his eyes riveted on the island. "What a lovely spot to catch the ague in!" remarked the more practical Smith, as he jumped ashore. We carried the boat well up among the bushes, and while the sailors were gathering wood and starting a fire the rest of us busied ourselves with rigging up the tent on a slightly elevated plateau in the middle of the island. The fire was lit outside one end of it, and the coffee pot was soon on, and the venison steaks broiling. We collected a large heap of grass, over which we spread sails and blankets, and made ourselves comfortable for the night. While supper was preparing we walked down to the water, in which we all had a plunge which greatly refreshed us after the day's fatigue. Supper over, we threw ourselves on our improvised couches, lit our pipes, and related our respective adventures during the day. The night was dark, but the stars twinkled with unusual brilliance. Everything was still around us; not a leaf stirred in the surrounding trees. The cuckoo's cry could be heard from the neighbouring shore, whence also an occasional yelp or howl sounded shrilly in the stillness. Our voices gradually ceased as we succumbed to the unnatural quiet around us, and we laid silently gazing at the countless known and unknown bodies performing the functions allotted to them by their creator. One of the sailors had just re-

plenished the expiring fire with several billets of wood, and had retired to his nest in a corner of the tent, when suddenly a strong puff of icy cold wind swept over us and almost lifted the tent bodily up, tearing the fastenings adrift and making a general wreck of it. It was over in a moment, and then everything was as still as before. We had to get up and secure the tent, and collect our apparel which had been sent flying in all directions. "That's a white squall," said the captain, showing off his nautical knowledge. "Somebody is walking over my grave," said Brown, wrapping himself up in a blanket, shivering. The same cold, disagreeable feeling passed through all of us, and we were to muffle ourselves in the blankets and retire inside the tent. The fire, which had also been scattered, was gathered together and soon blazed up again, throwing a cheerful light over the interior. I was just beginning to doze, when a loud "whiz" started me up into a sitting posture, —the tent was full of smoke and not a vestige was left of the just now so brightly burning fire. What had happened? We called up the sailors and told them to start the fire afresh, but after several attempts they had to give it up, as all the wood had apparently been thoroughly drenched in water and would not ignite. The captain called them a set of fools, and got up himself to light it, but as he was groping about in the dark a sudden push from behind sent him spinning on top of the black and sodden embers. He naturally imagined that one of us had played him this trick, and gave vent to his indignation, in the midst of which another thrust sent him on top of us, which effectually silenced him for the time. We advised him to get under the blankets, but just as he was covering himself the blanket was pulled out of his hands and thrown over to the other side of the tent; at the same time I felt a poke in my ribs from beneath, as if somebody was showing a stick up through the grass on which I was lying. Smith and Brown were accusing each other of pinching, while the two sailors had an altercation between themselves in their corner. We shouted inquiries in half a dozen languages, but no response was made, the cuckoo continuing to utter his plaintive cry from the clump of trees nearest us on the main island. We huddled together after this, though sleep was out of the question, for a while at least, and pipes were again lit. We were not troubled any more, and our courage rising, just followed jest, as we arrived at the conclusion that the affair resulted from natural causes. Finally Smith, who had a fine voice struck up "John Brown's body," and we all joined in the chorus; little imagining how appropriate that song was in the place we were camping. After another song had been sung we proposed to lay down again when Brown, looking at his watch, said it was midnight. "Now," quoted Smith, "is the witching hour of night, when graveyards yawn. . . ." he had got that far when the tent collapsed, enveloping us in its folds, while the same icy blast swept over us as before. It was with some difficulty we extricated ourselves, and emerged in the open and looked about us. Nothing could be seen,—all was still and calm! "Served us right for quoting scripture in this place," muttered the captain, in an angry tone to Smith. "It was not scripture!" he replied. "Yes, it was, and it was really uncalled for," insisted the captain. I suggested that we had better get our traps down to the boat and go on board, to which proposal all agreed, except the captain, who would not, and we had to remain. We left everything where it was thrown, and sat down on the ground with our backs against the boat, while the captain paced up and down, and there we remained until morning without any farther manifestations from the unseen. The time passed slowly, and it was with a sigh of relief that I saw daylight appear. We left the green, alluring island behind us without regret as we pulled away from it towards the schooner, and by this time the captain had regained his usual good humour.

When our nocturnal adventure was related to the people on shore they exhibited great amazement, and congratulated us on getting away safely with our lives, as the island was said to be haunted and every one shunned it after nightfall. The story told about it is that many years ago an epidemic raged in Chirikov, and nine-tenths of the population died, to the number of many hundreds. The dead were conveyed to this island and there buried in one immense pit (on which, I suppose, we pitched our tent), and it was said that several living, but comatose, victims were mixed with the dead. The island was after that time called "Dead Man's Island." This is not an idle tale, but a fact, on which I make no comment, only that "there are more things in heaven and earth than are dreamt of in our philosophy."

CRICKET.

MR. HORNBY'S TEAM V. MR. EDWARDS'S TEAM.

This match, played yesterday, resulted in a win for Mr. Edwards's team. Two respectable scores were made on each side, Watson 34 and Hannay 36 for Mr. Hornby; Garde 22 and Shepherd 39 for Mr. Edwards. If Mr. Hornby had received a little assistance from the half dozen of his team whose wickets went down for "now!" he might have had a different showing in the end, but he did not set the example. Off 115 balls from Edwards only 24 runs were made, and in this essay he took six wickets and bowled eleven maidens overs. Hunter's bowling was also good—32 balls, 8 runs, 3 maidens, 4 wickets. Following are the scores:—

MR. HORNBY'S SIDE.	MR. EDWARDS'S SIDE.
Mr. Hornby, b. W. Edwards. 32	Mr. Garde, run out. 22

IN H.B.M. COURT FOR JAPAN.

Before J. TROUP, Esq., Acting Assistant Judge.
SATURDAY, November 1st, 1890.

ALLEGED STABBING ON SHIPBOARD.

Thomas Conway, seaman, of the barque *Abysinia*, was charged by Captain B. Robins Hilton with having on the 29th of July last assaulted W. Kelly and T. Bride on the high seas.

Bradford Robins Hilton, master of the barque *Abysinia*, deposed that when he went on deck on the morning of July 29th the mate informed him that the prisoner had refused to do some work he ought to have done. He had ordered him to take a bucket of water and clean up some tobacco juice which the mate said he had ejected while at the wheel. The prisoner refused, saying he had not done it. At eight o'clock when the watch was relieved and all hands were on deck, witness ordered them all aft to find out who had made the mess. The two men who had preceded Conway at the wheel did not chew tobacco, and as witness knew the mess was not there at eight o'clock the night before he was sure it was him. Witness had a great antipathy to tobacco chewing, and made it a rule never to allow it at the wheel, and that anyone who made a mess would have to clean it up. Conway denied it in a very loud, and not what witness called respectful, manner. The second mate Kelly then said the accused must have done it, and Conway pushed up to him and asked with an oath what had he to do with it. Witness could not remember all that was said, but eventually the second mate struck him. His manner was very aggravating and he dared the second mate to touch him. They had a scuffle and witness tripped the prisoner up on deck, told them to stop fighting, and told the second mate not to strike him. The prisoner then jumped up and ran to the main deck from the poop telling the second mate to go down and have a fair fight. The second mate followed him down. As he reached the main deck the prisoner was about 20 paces from him. He turned around, drew his knife and rushed towards Kelly. Kelly attempted to grasp the knife but was cut across the left temple, severing a small artery, from which he lost a great quantity of blood. Thomas Bride, a seaman, tried to take the knife from him, but the prisoner stabbed him in the left arm, and severed the main artery, and his hand was now useless. At one time he appeared so liable to bleed to death that witness ran for Mauritius for medical assistance. When within 300 miles of Mauritius he seemed so much better that witness concluded to resume the voyage. The detour lost 14 days. They got the knife from the accused and put him in irons. He resisted and threatened vengeance, especially against the man whom he had cut, Bride. Witness lashed him up to the mizen stays till he got a little subdued, and then put him in solitary confinement with irons on for a time; afterwards on promise of good behaviour witness allowed him to continue his work. About a fortnight after the occurrence, being short-handed, having two men disabled witness let him out to help work the ship.

Bride was in a very weak state and it seemed to make him nervous that Conway should be at liberty. So witness shut him up again. After about a month witness let him out again and he resumed his work for the rest of the voyage.

By the accused—I do not think I was the first to strike you. Kelly and you were in a struggle. I struck Conway once, but not first. It was when I tripped him.

By His Honour—The incident happened before we reached the Cape of Good Hope, latitude 36 deg. S. longitude 3 W. It was about a week from the time I bore away for Mauritius that I decided that his arm would heal. The blood would break out sometimes ten times a day. It was three weeks from the time he was cut before he showed signs of healing. He lost so much blood that if he had not been a man of great vitality he would have sunk under it.

William Kelly, second mate of the *Abyssinia*, deposed that he went on deck at four o'clock on July 29th. The mate asked who was at the wheel in witness's watch from eight to twelve. Witness told him they were called Liverpool and Charley. The mate said there was some tobacco juice at the wheel. Witness told him there was none at eight o'clock, and that neither of the men used tobacco. At eight o'clock the mate ordered all hands aft. The captain who was aft near the wheel asked who had spit tobacco juice at the wheel. Witness's two men said they did not use tobacco. The captain reminded them of the order given on leaving New York that there was to be no chewing of tobacco at the wheel. The prisoner spoke to the Captain in a very disrespectful way about spitting tobacco, and witness told the prisoner no one but him had done it. He called witness a liar; and, asking what he had to do with it, pushed right up to him. Witness took hold of him and he fell back and pulled witness on top of him. Witness let him go, and he got up and challenged him on the main deck to fight. Witness went after him and as he got to the foot of the ladder he turned around, and drew a knife and stabbed witness on the temple. He had another knife in his pocket but did not use it. Witness got hold of his hand trying to get the knife from him, and he cut witness in two or three different places through the clothes. Thomas Bride tried to take the knife. They got the knife from him and witness was bleeding from 20 minutes to half-past eight, and could not remember any more. He cut Bride in the arm.

By the accused—The captain was not standing between you and me when I first caught hold of you. The master did not strike you when I first took hold of you. I did not see the master strike you with a capstan bar. I do not know if you were lying on the deck when Bride was cut; you were on your feet when you made the other stab at me; you were not lying on the deck when you made a stab at my heart.

By the prosecutor—When I received the first cut Conway and I both fell down together. Conway got upon his feet again.

Thomas Bride corroborated in great part the previous evidence. He heard the master give instructions at the commencement of the voyage that there was to be no spitting at the wheel, and prisoner had repeatedly said he was dissatisfied with the order, which he said the captain had no right to make. Prisoner was the first to answer that it was not him when the master asked about the tobacco spitting over which the present trouble arose. After Kelly had been cut witness tried to stop prisoner, but before he knew anything the knife was through his arm. He was now a cripple, the lower part of his arm being paralysed. Witness did not kick prisoner in the side and ribs or strike him in the mouth. When prisoner said he would not be put in irons for the best man in the ship witness struck him with the hand that was not injured. He did not see the captain strike the prisoner on the side with a capstan bar and disable him. Witness did not see any one strike the prisoner when he was trying to take the knife from the prisoner. Witness had never said that the captain should put a spittoon at the wheel and that if he did not witness would spit there for spite.

Prisoner admitted having cut Kelly when he came down the ladder, but instead of injuring Bride he had himself been knocked down and did not get on his feet again.

The case was here adjourned till Tuesday at 10.30 a.m.

TUESDAY, November 4th, 1890.

Thomas Conway, a seaman of the barque *Abyssinia*, was brought up on adjournment from Saturday, charged with having wounded William Kelly and Thomas Bride on July 29th.

Roderick Mackenzie, able seaman of the *Abyssinia*, deposed that he saw the disturbance. He could not recollect the date. The Captain had given

orders to the men not to spit at the wheel. When he asked who had spit at the wheel witness did not think any one spoke. The Captain said that as Liverpool and Charley did not chew tobacco it was left between the accused and witness. Witness had been at the wheel from six to eight on the evening before, and the tobacco spit was not seen there at eight o'clock. The second mate said the accused had done it. The accused called him (the second mate) a liar, and used some bad language. They caught hold of each other. The Captain went to interfere and hit the accused a slight blow on the side of the head and tried to trip them both up. They were both down. The second mate, witness thought, was on the top of the accused. Mr. Kelly told the Captain not to interfere as he could manage. The Captain went back, and the second mate and the accused both got up. The accused put his hand to his hip, and Thomas Bride said he was getting a knife. The accused challenged the second mate to go down and have a square fight, and went down to the main deck, the second mate following him. The next thing witness saw was the accused going towards the second mate with his two hands over his head and a knife in one hand. Witness could not exactly see whether he cut him or not. They both closed and tumbled around for a while, and both fell down. Witness saw Thomas Bride swinging his hand and saying that he was cut. The mate interfered, and tried to take the knife from the accused, who tried to keep the knife, but it was taken from him. Witness saw blood on the mate's hand, but could not say where it came from. He saw the second mate strike the accused on the side of the head with his fist after he had been cut by him (the accused). They had considerable difficulty to put him in irons, and the captain gave him two or three blows with a capstan bar to quieten him, and witness saw the captain kick him once or twice. One of the sailors forward called Charlie kicked the accused. They put the irons on the accused and tied him to the fore stays, for how long witness could not say, but the Captain said three hours. Witness believed he got very good treatment since then. Witness saw Thomas Bride hit the accused while they were trying to put the irons on him; it was after he was cut. The accused sung out to the Captain not to allow any of the men to hit him after he got the irons on him.

His Honour adjourned the case till two o'clock for further evidence.

On resuming,

Dr. Stuart Eldridge deposed that he had seen Bride professionally on one occasion. He had examined his left arm and found the scar of a wound just above the wrist in such a location that if sufficiently deep it must have severed both nerve and artery. As a matter of fact that it had done so, so far as the nerve was concerned, was shown by the condition of the hand, which was almost entirely paralyzed and considerably wasted. The injury was of so severe a character as to practically incapacitate the man for any labour with that hand.

The accused asked that a witness he wanted should be brought, and in answer to His Honour said he supposed the evidence would be about the same as the previous evidence given. His Honour said it would not be necessary to get more evidence of that nature.

The accused said that on the morning of the trouble on the ship, the date of which he did not quite remember, he went on deck and walked aft, and saw that the men were working aft on the poop. He walked aft to relieve one of the men. Up to that time he heard no order from the master to muster all hands aft. He did not hear the Captain ask any one else if they had used tobacco, but he asked deponent personally if he had used any. Deponent told him he did use tobacco, and showed him a piece which he had cut from a half pound plug that morning and had put in his pocket. The master then asked him if he had expectorated at the wheel. Deponent told him he had not done so, but the mate accused him of having done it. Deponent wanted to explain to the Captain how he had come to notice the marks of expectoration during the night. He said that during the night when the mate first noticed them he did not speak to accused, but stood looking at them for full half an hour and also at witness to see if he would spit again. It was about 20 minutes past twelve o'clock. After he had stood there to see if witness would spit, he walked forward a little. Deponent took the opportunity when his back was turned to stoop down and rub his finger across the mess to ascertain if it was dry. He found it dry. After he had been relieved from the wheel the mate told him to get a broom and a bucket of water and scrub up his mess at the wheel. Deponent said he had not done it, and refused to scrub it up. The reason was that on two or three previous occasions deponent showed the mate

the tobacco spitting, and told him not to lay the blame on him. He said he would not blame him for anything he did not see him do, so deponent refused to scrub it up. At four o'clock the next morning he heard the mate and Kelly talking together about his having refused to scrub up the mess. Deponent afterwards heard Kelly and Bride speaking about it when he was in the fore-castle. He heard Kelly say "Wait till—" the hour he did not catch. There were then a few whispered words which he did not catch, and then he heard Bride say, "If he does—" and that was all witness could hear of whatever threat it was. At eight o'clock in the morning after he turned to, the master asked him if he spat on the deck at the wheel. Accused told him no, but the mate blamed him for it. The captain then asked the other two men who were at the wheel before him if they had done it. They said no, they did not use tobacco. The master then said it must have been him. Deponent wanted then to explain to the master by showing him what he had done the night previous, and that it was evident that it must have been there when he went to the wheel, when Kelly turned around and called him a foul name, and asked if he meant to say it was in his (Kelly's) watch. Deponent said he did not care when it was done, but it was there before he went to the wheel. Kelly then took hold of witness by the collar and said he would "do for" him. Deponent put up his hand to make him leave go, when the master struck him with both hands one after the other. Deponent could not see who it was that tripped him, but when he fell down the master kicked him a few times. Kelly had relaxed his hold of his collar, and deponent saw him push aside the master saying he could do for accused, and he was man enough for that. Deponent saw by the way things were going on he would have to use Nova Scotia law. Kelly seized him again when he was down and he (accused) told him to let him get up. Deponent knew that when the master did not check him for his interference he had all the officers to attack. He challenged Kelly on the main deck. He walked five paces, and turned, when he saw Kelly at the foot of the ladder on the main deck. Deponent drew his knife as he was walking over. He did not stab Kelly at random. He had the knife in his hand, there being about $\frac{3}{4}$ of an inch, that could go into the flesh of anyone it cut. He walked over and deliberately cut Kelly, giving him a slight wound on the left side of the head between the eye and the temple. Then Kelly and accused, after handling each other roughly for some time, both fell. Accused could not say whether it was the mate who fell on him, but he held on to accused's right arm until he had the irons on his right wrist, so he thought it was the mate. When accused fell, Kelly was kneeling on his legs, and punching him in the face and head. Some other fellows were kicking him, but he could not say who they were. He got a severe blow on the shoulder which was from a capstan bar in the hand of the master, and another severe blow on the side of the head by the captain from the same bar. The other fellows still continued kicking him in the stomach, side, and in the head and face, knocking several of his teeth out (accused here showed two teeth). He got another kick in the temple which dazed him for a short time. He did not remember when he lost hold of the knife, but he had a cut on the left hand when he came to his senses. The were still abusing and kicking him, and when he opened his eyes properly he saw the mate trying to put the irons on his left hand as well as on his right. He refused to go in irons, saying he would "rather die than go in irons." The mate and the steward and someone else tried to put his hands together to put the irons on. The master said "look out and keep quiet," and gave him a blow which he believed had injured him for life. It knocked him stupid and dazed for a moment or more. He was weak as a child. The next thing he saw was Thomas Bride, who said, "You have cut me," and then he gave him a blow on the right leg, at the same time asking the master's permission to give him another kick. That was the first he knew of Bride being injured. The master then took deponent and tripped him up to the mizen stay. Deponent asked for something to wash his mouth out as his teeth were all loose, and got the consoling advice to "spit 'em out." He then asked for something to keep the cold air from the wound on his head as it was bleeding profusely. Some time after the master came with a piece of rag with some balsam on it and put it on his head. It remained on till about midday next day. The master went in at dinner time, and when accused asked for a fresh application of balsam he looked at his head and said "it was all right." The severity of Kelly's wound or the master's order kept him below till eight o'clock that morning. Deponent distinctly heard Kelly tell a Dutch boy

who was on board that he would punch him or anyone else if they spoke to accused. The effects of the last blow he received from the captain bar at the hands of the Captain kept him passing blood for 17 days, and in the left side there seemed to be something like a stitch, moving from one side to the other, almost preventing him from drawing his breath. He was still affected by it, and thought it was due to lying on his chest furling canvas when entering port. The disrespectful language of which the master complained was that witness did not say "sir" to him at the finish of every sentence.

His Honour committed the accused for trial.

He was disposed to support the eight hours' Miners Bill, but not the general bill until it had been more carefully examined.

TIME TABLES AND STEAMERS.

TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05* 6.40, 8.35, 9.30*, 10.25, and 11.45 a.m. and 1.25, 2.30, 3.55, 4.45, 5.50, 6.50, 8.30, 9.55, and 11.15 p.m.
UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15, 10.22, and 11.30 a.m., and 12.45, 2.30, 3.45, 4.55, 5.50, 6.50, 8.10, 9.10, 10.05, and 11.05 p.m.
FARES—First-class, *sen* 60; second-class, *sen* 40 and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Kanagawa Stations. Those marked (†) run through without stopping at Omori, Kawasaki, and Tsurumi Stations.

TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9.10, 11.25 a.m., and 12.40, 3.25, 4.55, 5.35, and 7.15 p.m.; and KOZU (up) at 6.35, 8.40, 9.40, and 11.07 a.m., and 1.17, 2.45, 4.58, 7.25, and 9.46 p.m.

FARES—To Hologaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

Down trains at 6.50 a.m. run no further than Kyoto arriving there at 11.30 p.m.; at 10.10 a.m. no further than Nagoya, arriving at 10.10 p.m.; at 12.40 p.m. no further than Shizuoka, arriving at 9.50 p.m.; at 3.25 p.m. no further than Shizuoka, arriving at 8.45 p.m.; and the train at 5.35 p.m. runs to Kobe, arriving at 11.45 p.m. next day.

A tramway runs between Kozu and Yumoto (distance 4 ri) Jinrikisha may be hired between Yumoto and Miyakojima (distance 13 ri).

OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.30 and 9.40 a.m., and 12.05, 1.30, 4.03, 6.14, and 8.30 p.m.; KAMAKURA (down) at 7.41 and 9.51 a.m., and 12.16, 1.41, 4.14, 6.25, and 8.41 p.m.; and ZUSHIYAMA (down) at 7.50 and 10 a.m., and 12.25, 1.50, 4.23, 6.34, and 8.50 p.m.; YOKOSUKA (up) at 6.45, 8.55, and 11.20 a.m., and 12.50, 3, 5.10, and 7.45 p.m.; ZUSHIYAMA (up) at 7.01, 9.12, and 11.36 a.m., and 1.06, 3.16, 5.26, and 8.01 p.m.; and KAMAKURA (up) at 7.11, 9.22, and 11.46 a.m., and 1.15, 3.26, 5.36 and 8.10 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

TOKYO-SHIOGAMA RAILWAY.

TRAINS LEAVE UENO (down) at 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; UTSUNOMIYA (down) at 10 a.m., and 3.03 and 5.59 p.m.; SHIRAKAWA (down) at 8 a.m., and 12.36 and 5.41 p.m.; KORIYAMA (down) at 9.25 a.m., and 1.54 and 6.58 p.m.; FUKUSHIMA (down) at 7.35 and 11.33 a.m., and 3.45 p.m.; SENDAI (down) at 6.15, 10.25, and 10.40 a.m., and 2.30, 6.35, and 6.50 p.m.

TRAINS LEAVE ICHINOSEKI (up) at 6.40 a.m., and 2.50 p.m.; SHIOTAMA (up) at 7 and 11.05 a.m., and 3.10 and 7.15 p.m.; SENDAI (up) at 7.35 and 11.40 a.m., and 3.45 p.m.; FUKUSHIMA (up) at 6.40 and 10.26 a.m., and 2.35 p.m.; KORIYAMA (up) at 8.29 a.m., and 12.22 and 4.28 p.m.; SHIRAKAWA (up) at 6.35 and 9.47 a.m., and 1.40 p.m.; UTSUNOMIYA (up) at 6.20 and 9.05 a.m., and 12.18, 4.14, and 6.33 p.m.

FARES—Ueno to Utsunomiya, first-class *yen* 2, second-class *yen* 1.32, third-class *sen* 66; to Koriyama *yen* 4.10, *yen* 2.74, *yen* 1.37; to Fukushima *yen* 5, *yen* 3.32, *yen* 1.66; to Sendai *yen* 6.45, *yen* 4.30, *yen* 2.15; to Shiogama *yen* 6.75, *yen* 4.50, *yen* 2.25.

TOKYO-MABASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) (down) at 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; and MABASHI (up) at 6.55, and 11.50 a.m., and 2.50 and 5.50 p.m.

SHINJIKU-HACHIOJI RAILWAY.

TRAINS LEAVE SHINJIKU, TOKYO, (down) at 6.55 and 9.55 a.m., and 12.52, 4, and 7 p.m.; and HACHIOJI (up) at 5.25, 8.25, and 11.25 a.m., and 2.20 and 5.30 p.m.
FARES—First-class *sen* 90; second-class *sen* 60; third-class *sen* 30.

TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI (down) at 6.30 and 9.25 a.m., and 12.20 and 3.15 p.m.; and YOKOKAWA (up) at 8 and 11 a.m., and 1.50 and 4.55 p.m.

FARES—First-class, *sen* 75; second-class, *sen* 45 third-class, *sen* 25.

OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4.55 p.m.

FARES—First-class, *yen* 1.20; second-class, *sen* 84; third-class, *sen* 42.

UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 5.25 and 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 and 4.55* p.m.

* Through Trains to and from Utsuro.

KOZU-KOBE RAILWAY.

REPORTS.

The British steamer *Batavia*, Captain Williamson, reports:—Left Vancouver the 10th October at 4 p.m.; experienced a succession of strong westerly gales with heavy sea throughout the voyage, during which ship was hove to several times; sighted Inuboye light the 1st November at 0.30 a.m. Arrived at Yokohama same day; had fine weather on the coast.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 1st November at noon; had light winds and fine clear weather; passed Oshima light at 8.50 p.m.; had moderate to fresh northerly winds all the voyage. On the 2nd at 4.30 p.m. met British gunboat *Alacrity* coming from Yokosuka going south. Arrived at Yokohama at 5.30 p.m.

The Japanese steamer *Sagami Maru*, Captain Walter, reports:—Left Kobe the 1st November at midnight; had light winds and fine weather all the way. Arrived at Yokohama the 2nd November at 11.30 a.m.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Kobe the 3rd November at noon; had light variable winds and fine weather throughout the passage; passed Rock Island the 4th at 11.20 a.m. Arrived at Yokohama at 5 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Hakodate the 3rd November at 2 p.m.; had light westerly winds and fine weather to Kinkasan, which was passed the 4th at 10.30 a.m.; fine weather continuing to Inuboye, which was passed the 5th at 1.30 a.m.; cloudy with thick rain; thence to port. Arrived at Yokohama at noon.

The Japanese steamer *Wakanoura Maru*, Captain Hussey, reports:—Left Kobe the 5th November at noon; had light N.E. winds and rain; passed Oshima at 9.30 p.m. with light variable winds and heavy S.E. swell; the 6th at 3 a.m., a fresh breeze sprang up from the N.W. and continuing to 10.30 a.m., with fine clear weather; passed Rock Island at 1.30 p.m.; Cape Sagami at 4.30 p.m. Arrived at Yokohama at 7 p.m. Passed an American ship off Sagami bound in.

The German steamer *General Werder*, Captain Eichl, reports:—Left Hongkong the 1st November at 11 a.m.; through Formosa Channel had strong N.E. monsoon with rough sea; thence to port R. and N.E. winds and fine weather. Arrived at Yokohama the 7th November at 3.40 p.m.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 31st October at 0.25 p.m.; had fresh N.W. winds and fine weather throughout the passage. Arrived at Nagasaki the 2nd November at 6 a.m. and left the 3rd at 5 p.m. Arrived at Shimonoseki the 4th at 6.15 a.m. and left at 8 a.m. Arrived at Kobe the 5th at 5 a.m. and left the 6th at noon; had light northerly winds and fine weather throughout the passage. Arrived at Yokohama the 7th November at 3.30 p.m. Passed two sailing ships off Kanon-saki.

LATEST COMMERCIAL.

IMPORTS.

The position of the Import Market remains unchanged. A few transactions have been reported in various counts of English Spinnings at low rates, but there is no life in the business. Bombays are unchanged. Two or three sales of Shirtings have also been made at former quotations, but the market is lifeless. Sales for the week amount to 225 bales English Yarns, 65 bales Bombays, and 4,250 pieces Shirtings.

COTTON PIECE GOODS.

Grey Shirtings—84 in, 34 yds, 39 inches	\$1.35 to 1.50
Grey Shirtings—90 in, 34 yds, 45 inches	1.60 to 2.52

Nos. 10/14, Bombay	—

METALS.

Another wave of dullness appears to have swept over this market. Buyers are scarce, and the native dealers seem to be much discouraged at the bad state of domestic trade. Prices nominally unchanged, but weak. The stock of Nailrods is only about 20 tons, and it seems as though this class of Iron was being entirely superseded by Wire Nails.

Flat Bars, 1 inch	\$2.65 to 2.75
Flat Bars, 1 1/2 inch	2.75 to 2.85
Round and square up to 2 inch	2.65 to 2.85
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.80 to 3.00
Sheet Iron	3.20 to 3.40
Galvanized Iron sheets	5.80 to 6.00
Wire Nails, assorted	4.40 to 4.90
Tin Plates, per box	4.60 to 4.80
Pig Iron, No. 3	1.25 to 1.27

KEROSENE.

The better feeling reported in Tokyo a week ago seems to have passed away, and the market is once more dull. Recent sales have not been large, but holders generally are somewhat firmer, hoping for a continuance of low exchange. The stock here now is large, about 800,000 cases, say 450,000 American and 350,000 Russian.

QUOTATIONS.

Chester	\$1.65 to 1.67
Camel	1.62 to 1.65
Devon	1.60 to 1.62
Russian	1.55 to 1.57

SUGAR.

Next to nothing moving in Sugar, transactions scarcely being capable of making quotations.

White Refined	\$5.50 to 7.90
Manila	3.60 to 4.30
Taiwanfoo	—
Pentama	2.75 to 3.00
Namida	2.80 to 3.00
Cake	3.10 to 3.80
Brown Takao	4.15 to 4.20

EXPORTS.

RAW SILK.

Our last report was of the 31st ult., since which date settlements amount to 365 piculs divided

thus:—Filatures 216, Re-reels 268, Kakeda 81. In addition to these purchases by Foreigners, direct shipments have been 160 bales, making the total business of the week equal to 735 piculs.

The bulk of the above settlements were made before the departure of the *City of Rio de Janeiro*, which steamer carried about 1,200 bales, the largest shipment of the present season. Since she sailed the Market has been quiet; prices are irregular, some holders appearing anxious to sell, although they are not willing to accept very much reduction on previous quotations. Exchange has been fairly steady, closing about the same as last week.

Quotations given below show a further decline in some classes, while others are strong. It will be observed that the stock of Filatures alone now reaches 10,000 piculs; but notwithstanding this, we cannot purchase at much below last week's rates, although holders express their willingness to sell. Should the Market continue inactive for a few days, we look for a further decline.

The business done has again been mainly for America. There are telegraphic enquiries from Lyons, but at present holders and buyers fail to meet each other.

There have been two shipping opportunities since we last wrote, English and American Mails both taking Silk. The first named, *Ancona*, on the 1st instant, had 161 bales for Europe, while the *City of Rio de Janeiro* on the 5th instant took 1,194 bales for New York. These departures bring the export figures up to 7,271 piculs, against 20,176 last year and 14,898 to the same date in 1888.

Hanks.—There has been no settlement during the week, but as we write some purchases of common *Hachoji* are reported at \$525. Stock is small in this class and holders are strong.

Filatures.—These have declined about \$80 on the week, but shippers require further concessions before they will operate to any large extent. Trade in fine sizes is especially dull, and since the steamer left there has been nothing done in full sizes. Holders are round offering their wares, but have not as yet made up their mind to accept the prices which buyers can afford to pay.

Re-reels.—A fair amount of business was done at last week's quotations before the departure of the steamer; at the time of writing prices may be quoted \$10 lower, but without inducing any general business.

Kakeda.—These also show a decline of \$10 per picul, and some business has been done at the decline. Among the latest purchases are *Flower Girl* and similar silks at \$607 1/2, *Three Horsehead* \$575, *Tiger Chop* \$585.

In other Classes there has been no business.

WASTE SILK.

Settlements for the week amount to 800 piculs, divided thus: *Cocoons*, 51; *Noshi*, 649; *Kibiso*, 100. The large business noted in our last was kept up

during the early part of the week, but since then trade has fallen off and the total business of the week is only half that of the previous one. Prices are well maintained, and holders are strong, having sold largely during the last month and are not in a hurry to reduce their quotations.

The English Mail Steamer *Ancona* took 318 bales chiefly for Europe, and the *City of Rio de Janeiro* had 11 bales of *Mawata* for New York. These departures bring the present export figures to 7,239 piculs against 7,179 last year and 7,780 to the 7th November, 1888.

Pierced Cocoons.—Only 50 bales have been booked at previous rates, and the Market drags heavily along.

Noshi.—Again considerable business in the better kinds; *Joshu* being especially well patronised at prices ranging from \$80 to \$94 according to quality. *Oshu* has again been done at \$145, with fine *Bushu* at \$130.

Kibiso.—There has not been a large trade in this class; one parcel of *Sendai* brought \$113, and *Filatures* have been taken in small lots at from \$118 to \$124.

In other sorts nothing has been done; quotations generally remain unchanged.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest also suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in France, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams:—"Wadham, London." 1y. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THROAT WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BURN, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the Japan Mail Office, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, NOV. 15, 1890.

BIRTH.

At No. 135, Bluff, on the 10th inst., the wife of CHAS. W. JOHNS, of a Daughter.

SUMMARY OF NEWS.

THE *Hiyei* and *Kongo Kan* left Singapore on the 8th instant, *en route* for Turkey.

DON AUGUSTIN GONZALEZ DEL COMPILLO, Secretary of the Spanish Legation, has taken up his residence in Tokyo.

THE Chinese Minister was decorated with the First Class Order of the Rising Sun on the 1st instant.

It is intended by the Nippon Yusen Kaisha to develop communication between Nagasaki and Hongkong.

HIS IMPERIAL HIGHNESS PRINCE KITASHIRAKAWA left the capital on the 8th instant for Gumma Prefecture.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA (TAKUHITO) returned to the capital from Ibaraki on the 11th instant.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA (TAKUHITO) left Tokyo on the 11th instant for Yokosuka.

COUNT INOUYE, who left Tokyo on the 11th instant for Yamaguchi Prefecture, will not return to the capital till April next.

THE amount of silver coins struck in the Osaka Mint during October last was yen 1,655,220 (one yen pieces).

THE French Representative gave a farewell entertainment on the 7th instant to Captain Bougouin, *Attaché* of the French Legation,

who will leave Japan about the end of the present month. Some twenty Japanese and foreigners were present.

MR. TATENO, Minister Plenipotentiary, will, it is stated, be appointed Japanese Representative to the United States shortly.

HER MAJESTY THE EMPRESS attended the bazaar held in aid of the Tokyo Charity Hospital on the 13th instant at the Rokumei-kan.

THE line of the Kyushu Railway Company between Akama and Ogawa, having been completed, will be opened for traffic on the 15th instant.

A VIOLENT typhoon swept over the island of Torishima, Okinawa Prefecture, on the 22nd ultimo, 55 houses being destroyed or damaged, and 2 boats swept away.

HER MAJESTY THE EMPRESS, accompanied by Viscount Kagawa and several court ladies, paid a visit to the Shiba Detached Palace on the 7th instant.

THE number of visitors to the Fine Art Exhibition, Uyeno, during two weeks ended the 3rd instant, was 2,532, of whom 7 were special, the remainder being ordinary visitors.

THE total receipts of the Patents Bureau in the Agricultural and Commercial Department during the month of October last amounted to yen 1,388.65, which shows an increase of yen 164.074 as compared with the previous month.

AN outbreak of fire took place early in the morning of the 7th instant in a house at Nibancho, Niigata, and eleven dwellings were entirely destroyed before the flames could be got under control.

IN consequence of the recent storms in Kagoshima Prefecture 1,330 dwellings, 2 village offices, and 6 schools were destroyed, 97 boats being lost, and 16 persons killed. Much damage was also done to crops.

MESSRS. BAN SEIJUN, Ishii Ikujiro and Hara Shimato, merchants of Tokyo, were permitted by the Authorities recently to establish a private bank at Nishikicho, Kanda, under the name of the Kanda Ginko, with a capital of yen 50,000.

THE Chinese Minister, who is about to leave Japan for home, will give a farewell entertainment on the 15th instant at the Legation to Ministers of State and high officials of the various Departments.

AN outbreak of fire took place early in the morning of the 8th instant in a house at Kayechimachi, Nagoya, and thirty-four houses were entirely destroyed, four dwellings being partially burned, before the flames could be subdued.

MR. ARAI SAKU and two other merchants of Tokyo applied to the Authorities on the 7th instant for permission to establish a bank at Hongo under the name of the Tote Ginko (Eastern Capital Bank) with a capital of yen 150,000.

THE Sanitary Bureau in the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 11th instant, was 44,008, resulting in 30,611 deaths.

A MEETING of the Privy Council was held on the 11th instant, and was attended by Counts Oki, Sasaki, and Soejima, Viscounts Enomoto,

Fukuoka, and Sano, and Messrs. Kono, Tanaka, Osaki, Motoda and Inouye, the proceedings closing at 3 p.m.

MR. KAWAKAMI KUCHI, Director of the Commercial Bureau in the Foreign Department, left Tokyo on the 13th instant for Osaka, whence he will proceed to Korea.

AN outbreak of fire took place on the night of the 30th ultimo in a house at Kuroshimamura, Fugeshi-gun, Ishikawa Prefecture, and destroyed thirty-two dwellings, three houses being partially burned before the flames could be got under control.

THE line of the Sanyo Railway Company between Une and Nishigahara, having been completed, will be opened for traffic shortly. The line of the company between Funasaka and Kurashiki, which is now in course of construction, will be completed in February next.

MESSRS. YAMAMOTO HIROSHI and Nakajima Takeshi, of Tokyo, have applied to the Authorities for permission to establish a private bank at Horidome Nichome, Nihonbashi, under the name of the Yamamoto Ginko, with a capital of yen 100,000.

AN ordinary Cabinet meeting was held on the 11th instant, at which there were present Counts Yamagata, Saigo, Yamada, Matsukata, Oyama, and Goto, Viscounts Aoki and Kabayama, and Mr. Mutsu. The proceedings lasted from ten in the forenoon till three in the afternoon.

A POLITICAL lecture meeting was held on the 9th instant at the Tsuta Theatre, Yokohama, when speeches were delivered on the subject of treaty revision by Messrs. Akiyama Kotaro, Hamano Kyusuke, Kobayashi Sentaro, Mayeda Kagaku, Ayai Takeo, Kaji Suyekichi, and several other members of the Equal Treaty Association.

THEIR IMPERIAL HIGHNESSES PRINCES KOMATSU and FUSHIMI, Prince Sanjo, Viscount Hijikata, Minister of State for the Imperial Household, Counts Inouye, Terajima (Vice-President of the Privy Council,) Okuma, and Sasaki, Viscounts Enomoto, Sano, and Messrs. Motoda, Nomura, Tanaka, and Osaki, Privy Councillors, had the honour of dining with the Emperor on the 8th instant at the Palace.

THE Import market may still be described as stagnant, but if there is any change in the situation it is in the position of the seller, who now demands better prices—indeed has refused offers which are a distinct advance on the recent rates paid. This being the case, trade has of course been small, and the few hundred bales of Yarn sold have been English and Bombays in equal quantities. The Metal trade is depressed, and stocks are ample for some time to come. Prices for Kerosene are nominal and weak, the two large cargoes last arrived bringing the stock here to close upon a million cases. Sugar is dull, and the Tea trade is nearly over. The Silk business continues in a most unsatisfactory condition. There is now lying here an immense stock of Silk in good assortment and of high quality, but buyers cannot operate at the price for which it is held, and many holders will not listen to any offer that can be made. There has been a slight revival in the demand for Waste Silk, and though over 1,000 piculs have passed the scales, more business might have been done were buyers and sellers not so far apart in their ideas of values. Exchange has not fluctuated quite so much, and may be called fairly steady, though rates are not strong.

EDITORIAL NOTES.

THE "TOKYO KORON" ON DIPLOMATIC METHODS.

"The diplomatists of the world are wont to regard strategy and expedients as essential in international negotiations. At one time they employ persuasion; at another threats, resorting to a variety of devices. There is no apparent reason why Japan should not adopt a similar course in seeking to accomplish Treaty Revision, but in our humble opinion those who are entrusted with the task will not advance but rather gravely injure the national interest by such methods. What we desire to see is an effort to accomplish the country's object by means of the weapons of sincerity, publicity, and candour. We have perfect confidence in the ability and diplomatic competence of the present Minister of Foreign Affairs and those who are associated with him in the duty. Compared with the diplomatists of the West, they are doubtless not inferior in talent and experience. But Western diplomatists remind us of the old-time statesmen of China: the policy which they applaud in the morning will in the evening be replaced by another and opposite policy equally imperative in theory. Their cleverness and the skill which they have acquired from long practice are remarkable. Such men make no signal failures in negotiation though resorting to all sorts of devices, neither do they inflict injury on the national interests. But, on the other hand, if small statesmen without experience follow a similar course in diplomacy and resort to strategy, the experiment is more hazardous than that of putting a naked sword into the hands of a child. The diplomatic representatives of the great and strong States of the West, relying on the prestige and power of their country, may find strategy a very convenient weapon, but the representatives of a small and weak State like ours can derive no benefit by relying on the nation's prestige *vis-à-vis* the Great Powers of the West. Let their methods in negotiation be never so clever, they can only reach their goal by following the path of public justice and right. Nevertheless, it does not greatly concern us that our statesmen should resort to various devices in their dealings with foreign countries. If only ability to pursue that programme exists, its adoption need not involve serious discomfiture, but may, on the contrary, result in speedy attainment of the object in view. But if strategy be employed not only towards foreign nations but also towards the people of the country; if, for the purpose of accomplishing Treaty Revision various devices be used to deceive the people and to carry out a scheme of revision calculated merely to meet the needs of the moment, the injury done to the national interests may be most grave. If those entrusted with the task of revision, having decided on a programme, seek to obtain the support of public opinion, now by putting golden gags into the mouths of their opponents, now by working upon the feelings of politicians, or by other various stratagems, the result cannot fail to be evil. The problem of Treaty Revision is one of unparalleled national difficulty. To accomplish its satisfactory solution demands extraordinary effort. The arduous nature of the undertaking has been amply proved by the story of past failures. A problem of such magnitude cannot be achieved by the strength of a little band of statesmen. The whole nation must be made a party to the conference, to the end that by wide consideration and careful examination of all the facts, a really satisfactory scheme of Revision may be definitely resolved on. To seek a satisfactory issue through the medium of petty stratagems, by hood-winking public opinion and by stopping the mouths of critics, is the method of men who do not know the art of governing. Rumour says that the officials engaged in the business, dreading lest another ebullition of public opinion should interrupt the proceedings, have taken various steps to reach the politicians who led last year's opposition, to the end that things may be suffered to proceed quietly. If his report be true, it indicates the existence of

grave danger to the State. Therefore we cannot pass it over in silence. It behoves the officials concerned to consider this point carefully."

We translate the above from the *Tokyo Koron*. It is a species of Delphic Oracle, interesting because it leaves so much to the imagination of those interpreting it. All the early part of the article can only mean that instead of resorting to the usual methods of diplomacy, the Government should seek the direct coöperation of the nation—in other words, should submit its programme of Treaty Revision to Parliament, which is utterly out of the question, being a course of procedure as impracticable in Japan as it is everywhere. All the latter part of the article, which, like the postscript to a lady's letter, evidently enshrines the kernel of the writer's purpose, is nothing more or less than an accusation that the Government has endeavoured to obviate any fresh ebullition of ignorant and intolerant public opinion by appealing directly to the intelligence of political agitators. And what if the Government has done so? Several instances are on record of men who from violent opposition were converted to acquiescence so soon as direct converse with a Minister or Secretary enabled them to obtain a clear insight into the situation. If the Authorities are taking steps to enlighten the darkness of agitators who fondly imagine that all the world is at Japan's feet and that she need only be persistent and importunate in order to get exactly what she wants, then the Authorities are acting very prudently and patriotically. All this high-flown talk about national injury and so forth is veritable fustian. The section of intemperate political agitators who revolted against Count Okuma's programme last year, and who, according to the *Tokyo Koron*'s view, seem to labour this year under the hallucination that Japan is already in a position to claim exactly the same international treatment as that accorded by the Great Western Powers to one another—these agitators are not sole guardians of the national safety. If the interests of the country can only be served by suffering them to give full vent to their intemperate zeal and indiscriminating opposition, then the interests of the country are in a condition of decided jeopardy.

Since writing the above we find that the *Tokyo Koron* has withdrawn its article by means of the regular formula, an admission of incorrect information. But two lines of recantation cannot remove the impression produced by two columns of argument. It seems to us that, in this instance, the *Koron* allowed itself to be converted into an instrument for influencing public opinion in a manner diametrically opposed to the principles which it avowedly advocates.

THE AGRICULTURAL AND COMMERCIAL DEPARTMENT.

Among the economical schemes devised by reformers in opposition, the abolition of the Department of Agriculture and Commerce is the principal. It is said that many politicians, among both nobles and commons, are in favour of such a measure. The Department, however, was not established without full consideration. At the time when it was called into existence, some discussion took place within the Government, and very full investigations were made, with the result that the necessity of organizing the Department received full recognition. In view, however, of the strong probability that a motion will be made in one or both houses to do away with the *Noshomusho* altogether, and entrust the essential parts of its business to the Home Department, H.E. Mr. Mutsu, we read in the *Yomiuri Shimbun*, has directed the officials of the Department to prepare statistics and other information with the view of giving full answers to any questions raised in the Diet. The *Yomiuri* observes that it is easy to talk of incorporating the functions of the *Noshomusho* with those of other Departments, but that, in point of fact, such a proceeding would not be easy, since the *Noshomusho* includes several important Bureaux which are not represented in

other sections of the Government. The Bureau of Forestry, for example, is entrusted with business of such a character that, so far from abolishing it, there has often been talk of extending its scope, and even of raising it to the rank of an independent section of the Government. The same is true in a modified sense of the Bureau of Commerce and Industry and that of Mines. The *Yomiuri Shimbun* says that at a time when the public mind is turned to the improvement of agriculture as vitally necessary to the national prosperity, to propose the abolition of the Bureau of Agriculture seems like talking of diminishing the country's productions. We do not quite see the sequitur of this latter idea, believing, as we do, that agriculture in common with all other wealth-earning pursuits, has never owed much to official aid anywhere. With regard, however, to the broader question of abolishing the *Noshomusho*, if a strong feeling exists on the subject in the ranks of the opposition, it will be well that the subject should be thoroughly ventilated in the Diet.

ALLIANCE OF PARTIES IN THE DIET.

The contemplated organization of a new party, under the title of National Liberals forms the principal topic of present conversation among men interested in politics. Various speculations are made as to the probable effects of the new party's formation on the relative positions of existing parties. According to impartial observers, it is considered very likely that the Constitutional Liberals and the *Kaishin-to* will be drawn more closely together, while a section of the *Taisei-Kai* (Independent) will probably unite with the National Liberals. The *Kokumin-no-Tomo*, which is distinguished for its perseverance in promoting the coalition of progressive parties, seizes this opportunity to urge upon the members of the *Rikken Jiyu-to*, the *Kaishin-to*, and the *Taisei-Kai* the importance of coalition, at least on certain general questions. It is a remarkable circumstance that the *Taisei-Kai* is not invited by our contemporary to join the alliance. One can easily imagine that no small flutter is caused in certain political doves by the prospect of the rise of a powerful body of opponents. The three parties most strongly represented in the Diet are the *Rikken Jiyu-to*, the *Kaishin-to* and the *Taisei-Kai*, possessing respectively 120, 40, and 70 votes in round numbers. Neither of these parties separately will be able to obtain ascendancy in the Diet. Comparatively speaking, the first named has the greatest number of representatives in Parliament; and though its condition is not yet as orderly as is desirable, it is full of youthful vigour and contains many able politicians. Some people compare it to the short-lived Fujiyama at Asakusa; a tempest will suffice to shake its foundations. But the *Kokumin-no-Tomo* takes a highly favourable view of the party's prospect. That its basis rests on a firm ground is illustrated by reference to the decisive measures lately taken against certain members who had been disloyal to it. It has indeed a better chance of asserting itself in the Diet than any other party, but no party can hope to long occupy an ascendant parliamentary position with only 120 members. As to the *Kaishin-to*, our contemporary expresses profound regret for the want of enterprise which has twice prevented its amalgamation with the Constitutional Liberal party. To speak frankly, writes the *Kokumin*, the *Kaishin-to* has shown itself unworthy of the high estimate usually made of its dexterity in party manoeuvres. But speaking individually of its members, there is no lack of men of effective eloquence, wide information, and extensive experience. Thus the *Kaishin-to* may not be very powerful as an independent party, but its value as an adjunct to any large political combination will be unestimable. With regard to the *Taisei-Kai*, that party, or rather association, is said to contain two sets of elements of divergent tendency. The one set is desirous of making the association a closely united body, while the other is equally desirous of having the cohesion of the party as loose as possible. The members of the *Taisei-Kai* are not uniform in their political opinions, but there can be no doubt that a section

of them are devoted to liberal principles. Vernacular writers strongly recommend that section to ally itself with the Constitutional Liberal and other parties of progressive principles. Thus, none of the three parties above described being in a position to obtain the ascendancy in the House of Representatives, our contemporary advises them to form an alliance for parliamentary purposes. Such an alliance would be contrary to the Law of Political Associations, but there can be, in the *Kokumin-no-Tomo's* opinion, no fear of infringing that Law so long as the alliance is limited to members of the Diet representing the three parties. As the first step towards such a union it is suggested that the political investigations now being prosecuted independently by each party, should be conducted by a committee composed of equal numbers of the three parties. It might, however, be convenient to leave the present Investigation Committee of each party as a sub-committee charged with the duty of investigating minor points of special value and interest to the respective parties. The Central Investigation Committee could then make it their business to determine the general course which the allied parties should take in the Diet with respect to questions which they mean to take up in combination. The time is declared to be ripe for effecting such an alliance, and the *Rikken Jiyuto* is advised to make the first move towards reconciliation, for, being the largest and strongest of the three, it can take such a step without danger to its dignity and self-respect.

FAREWELL DANCE ON THE FLAG-SHIP.

PERFECT weather favoured the dance given on Saturday afternoon by Sir Nowell and Lady Salmon on board the *Imperieuse*. Amongst those who came off from the shore to enjoy once more the hospitality of the most hospitable of Admirals, and to take a last glimpse of a favourite ship, were H.E. Count Saigo, Admiral Belknap, Count de Bylandt, General Sir Allen Johnson, K.C.B., the Master of Napier and the Hon. Mrs. Napier, Mr. Bonar, Mr. and the Misses Loureiro, Mrs. Bailey, Mr. Mrs. and the Misses Hannon, Mr. and Mrs. F. T. Piggott, Monsieur and Madame Cazenave, Mrs. and the Misses Divers, Mr. and Mrs. Bayne, Dr. Cox, R.N. and Mrs. Cox, Mr. Walford, &c. Officers from the American and French men-of-war now in harbour and from the ships of the British fleet mustered in force, and lent additional brilliancy to a more than usually picturesque and enjoyable dance. A feature of the decorations was formed by the letters P.P.C. which, picked out in electric lights, glowed from between the hangings at the stern of the ball room—letters, a lady was heard so remark, which unintentionally but accurately described the sentiments of the guests on the occasion—Pleasure and Pain Combined.

LAWS OF THE PROPOSED NEW BANK FOR THE ENCOURAGEMENT OF INDUSTRIES (KOGYO GINKO.)

THESE laws, we read in the *Mainichi Shimbun*, consist of thirty-three or thirty-four articles. The capital is to be ten million *yen*, in shares of one hundred *yen* each. The object of the scheme is to make advances for the purposes of encouraging and promoting agricultural and industrial enterprise, and also for the purpose of permanently improving river embankment works belonging to prefectures, cities, towns or villages. Security will be required in the shape of immovable property. The Bank is to be in Tokyo: the project does not seem to include any branch establishments. Its president will be a *chokunin* and its vice-president a *sonin*. The Government will aid the establishment of the Bank as well as its management afterwards.

Another institution now contemplated is the *Dosan Ginko*, or Bank for movable properties. Its laws are to be submitted to the Diet this year. They consist of some thirty articles, and the capital is to be two million *yen*. The bank will have two establishments, one in Tokyo and one in Osaka. These laws when under exami-

nation by the *Hosei Kyoku* (Bureau of Legislation) were condemned as likely to exercise injurious effects on other existing banks, since the new Bank will be permitted to take public bonds, stocks, shares, &c., as security, and would thus, in the opinion of the Bureau, be placed in an unduly favourable position as compared with rival institutions. Objections on this score appear, however, to have been finally removed.

A third Bank projected by the Authorities is the *Nogyo Ginko* (Bank for Agriculture). Its laws are also to be submitted to the Imperial Diet. The capital is to be fifty thousand *yen*. The bank may have establishments in every locality, and the extent of the district to be included in the sphere of business of any establishment can be fixed by the promoters when making application for a charter. The *Kogyo Ginko* is regarded as a very promising institution, since it has to deal with an extensive and important class of business, but the *Nogyo Ginko* has only to do with agricultural operations and must take real property as security. Its prospects are consequently considered somewhat dubious, and what it can effect with a capital of only fifty thousand *yen*, we cannot easily conceive.

THE LAST CENSUS OF JAPAN.

In the *Official Gazette* of Saturday the results of a census carried up to December 31st, 1889, are given as follow:—

Number of houses in the whole of Japan	7,810,872
Total population	40,702,020

The above population divided according to classes gives the following results:—

Nobles and their families	3,825
<i>Shinoku</i>	1,993,637
<i>Heimin</i>	38,074,558

These figures, compared with the census taken in 1888, show an increase of 38,046 houses and of 464,786 persons. Statistics of ages are also given, and from them we learn that at the close of last year there were 65 persons who had attained their hundredth year in Japan; 45, their hundred and first year; 13, their hundred and second year; 11, their hundred and third year; 1, his hundred and fourth year; 9, their hundred and fifth year; 3, their hundred and sixth year; 1, his hundred and seventh year; and 1, his hundred and ninth year. The Cities and Prefectures having populations of over a million were as follow:—

Tokyo City	1,138,546 persons.
Osaka City	1,203,395 persons.
Hyogo Prefecture	1,533,400 persons.
Yamaguchi Prefecture	1,726,158 persons.
Saitama Prefecture	1,701,148 persons.
Chiba Prefecture	1,195,101 persons.
Ibaraki Prefecture	1,108,460 persons.
Aichi Prefecture	1,465,765 persons.
Shizuoka Prefecture	1,086,556 persons.
Nagano Prefecture	1,131,518 persons.
Okayama Prefecture	1,074,900 persons.
Hiroshima Prefecture	1,324,395 persons.
Fukuoka Prefecture	1,225,018 persons.
Kumamoto Prefecture	1,050,724 persons.
Kagoshima Prefecture	1,002,134 persons.

A SECTION OF THE UPPER HOUSE.

THE *Yomiuri Shimbun* thinks it likely that the section of members of the Upper House who have been elected from among the highest taxpayers will hardly be viewed with respect either by their colleagues of the House of Peers, or by the members of the Lower House. It is perhaps, our contemporary feels, only to be expected that some such feeling should exist, for plainly the class alluded to have gained admission to the Upper House, not by virtue of their intellectual superiority, but because of their contributions to the Treasury. There are two or three considerations which the *Yomiuri* ventures to bring forward in this connection. These members, numbering about forty, are by no means an insignificant section, and it should be their aim to devote their attention to matters relating to the public revenue, and to finance generally, for they ought to remember that they represent not only the highest taxpayers of the country, but also to a certain extent the interests of the lower classes. It will be specially their task, should disputes

arise between opposing sections, to act as mediators, but always with a view to the claims of the people at large. They should regard it as a duty to spare no efforts, in the hall of debate, in the waiting rooms, or in social gatherings, to make their colleagues acquainted with the true state of the lower classes; and—though indeed the obligation is incumbent on all the members of the Upper House—they should specially cultivate relations with the representatives in the Lower House, for it is by this means, and the constant and free interchange of views, that discord between the two houses may be avoided. It is not expected that they should attempt to vie with the peers in the luxury of their living and appointments; if they keep prominently before their colleagues the actual condition of the localities which they represent, they will amply fulfil their obligations.

TITLE DEEDS.

SOME two years ago title deeds were abolished, and it was provided that thenceforth the ownership of land and all transactions of its sale, purchase, or mortgage should be recorded in the Great Ledger (*Daicho*). People were not forbidden, of course, to have title deeds: they were only relieved of the necessity of having them, since for all legal purposes an entry in the *Daicho* sufficed. It is now stated that this system has proved inconvenient in practice, and that in some quarters a desire to return to the old method is manifested. The reason assigned for this dissatisfaction is that fraud has been facilitated, land which had already been mortgaged and registered duly in the *Daicho* having been a second time mortgaged by means of the old title deed. It is not easy to see how anything of the kind could happen with ordinary care. If legal advice were taken before lending money on the security of land—and legal advice is surely plentiful enough and cheap enough in Japan—it would be discovered at once that an entry in the Great Ledger is essential to the validity of the transaction, and an attempt to effect such entry would at once disclose the fact that the land had been already pledged. Nevertheless, the *Yomiuri Shimbun* says that not a few persons have suffered loss, and that a movement is on foot to induce the Diet to vote a Bill sanctioning reversion to the old system.

WOMEN AND THE DIET.

IN the provisional Rules of the House of Representatives, it is provided (65th article) that women shall not be admitted to the strangers' gallery. This provision has excited much adverse comment. A number of ladies, mostly Christians, have drawn up a memorial on the subject and forwarded it to the *Kaishin-to*, requesting its members to see that the obnoxious provision be amended when the House meets for business. The *Kokumin-no-Tomo* entirely sympathizes with these ladies, and advises them not to stop here but to exert themselves to regain also the other rights of which they are deprived by the Public Meetings Regulations. The *Nippon-jin*, which is distinguished by its conservatism in relation to social questions, joins the general attack on the obnoxious article of the provisional Rules. Our contemporary declares it extremely inconsistent in a Government which is, if anything, over-zealous in introducing Western customs and manners, to shut the doors of the Diet against the fair sex. There are, says the *Nippon-jin*, many Japanese ladies as competent as their Western sisters to take interest in practical politics, and it is particularly unjust to deprive them of the right of hearing the debates of the Diet.

The Rules in question being only provisional, it is believed by most persons that the discrimination against ladies will be removed after the opening of the Diet. The Authorities must have had some reason for enacting such an unpopular provision, but the public has not been informed of it, and for our part we are perplexed to conceive any adequate explanation of the veto. If the space available for visitors in the Houses of Peers and Representatives were too small to accommodate ladies, the case

would be different. But there is no lack of room. The interior arrangements of the temporary *Giji-do* are excellent. Most commodious provision has been made by the architect for every contingency. Even though this were not so, however, it is plain that the Authorities have it always in their power to regulate the system of granting orders for admission to the strangers' gallery, so that inconvenience or overcrowding can be avoided. What seems particularly regrettable about the restriction introduced into the provisional rules is that it tends to perpetuate the ostracism of women from the intellectual life of the nation. The Japanese woman at present is little more than a domestic drudge. She may be treated kindly by her husband and dutifully by her children. In these respects she is probably as well off as her Western sister. But rarely, very rarely, does she enjoy the privilege of sharing her husband's intellectual aims and aspirations. From that, the higher, side of his life she is virtually shut out, unless she extorts admission by some wholly exceptional ability or ambition. The biographies of great men in the West show how much they owed in many cases to the sympathy and advice of their wives, and how often the one unhappy page of their history was that comprising the story of a wife's inability to appreciate her husband's objects and to take a helpful place in the scheme of his life. It is true that the latter misery is seldom experienced in Japan. The Japanese wife, always docile and self-effacing, retires quietly into insignificance and inconsideration, careful not to mar though she be forbidden to make. But her intellect, often more subtle and discerning than that of the strong sex, is almost lost to the nation, and the perpetual passivity to which she is condemned cannot but tend to her mental, if not to her physical, deterioration. It is easy to assign causes which have conspired to bring about this undesirable state of affairs. Chief among them, perhaps, is the ideographic script, mastery of which never entered into the programme of female education, the consequence being that women had no access to the literature constituting the staple of men's reading. This drawback has been perpetuated in the pages of the vernacular press. In Europe and America women read the same newspapers as their husbands and brothers, and share the general interest in public questions. In Japan there are special journals for women. Printed in easy characters, and composed in comparatively simple language, these journals devote the greater part of their columns to pure gossip and worthless romances, the editors never seeming to remember that a woman's mind should occupy itself with other things than the amours of the city alleys or the title-tattle of social mischief-makers. The strangers' gallery in the Houses of Peers and Representatives might have done something to mend matters. Ladies might have gone there and learned without much difficulty all about the topics that absorb their husbands, fathers, and brothers, thus qualifying themselves to take an intelligent interest in public events, and to become intellectual helpmeets instead of mere household toys. Why the galleries should be closed against them we fail entirely to comprehend. Such a veto seems entirely contrary to the motive that has directed the Government's policy for many years, and we heartily echo the hope that a more liberal provision will be substituted.

SMOKING CONCERT.

THE third of the series of smoking concerts promoted by Mr. Bayne and his coadjutors for the purpose of relieving the financial difficulties of the Public Hall took place on Monday, and proved, like its predecessors, a most enjoyable entertainment. The house was well filled, and the various songs, &c., were accorded rapturous applause. Mr. Walford opened the programme with a capital rendering of "Gallants of England" and was followed by Mr. G. Robinson who, being in splendid voice, was peremptorily encored. In his place came Mr. Hopkins made up to resemble him so well that when he sang a parody on the previous song "T'was

only a year ago" the audience delightedly demanded more. Both gentlemen then appeared and sang a verse of the parody, and with this the house had to be content. The next number brought forward Mr. Townley, who was also in fine voice and afforded the audience a capital treat. Mr. Goodrich followed with a recitation, which was given with such spirit that he had to return and render another, "Little Richard." M. Launay, like the previous gentlemen, a well known figure at these concerts, was the next singer, and his efforts also were so well appreciated that he was recalled and gave the song "Madame, Bonjour," with which he delighted the audience at a former concert. A "Serenade," sung by Dr. Eames accompanied on the violin by Dr. Cox, also went capitally, being sung with rare taste and expression. Mr. Walkinshaw then sang a comic duet, accompanying himself on the piano, and in compliance with a universal demand gave another song with banjo accompaniment. Mr. A. C. Read followed with a capital rendering of the Irish strain "Start for Philadelphia in the mornin'," and Dr. Eames with another song and violin accompaniment, which were very deservedly encored. Mr. Hopkins gave a new and original sketch descriptive of a picnic, in which, as may be imagined by those who have had the pleasure of attending former concerts, he was excruciatingly funny. Being recalled he convulsed the audience with other comicities of voice and action, putting the cap on his previous efforts by an irresistibly ridiculous thing called "The Acorn and the Spud" the refrain of which ran:—

"For beneath a ragged waiscoat many a noble heart may thud;
And an acorn ne'er should sneer at a poor and lonely spud"

Mr. Launay followed with another French song rendered in his best style, and finally Mr. Walkinshaw gave a castanet solo to a polka accompaniment by the Band. The piano accompaniments were given by Messrs. Keil and Griffin. The Band was that of the *Imperieuse*, kindly lent by Sir Nowell Salmon and the officers of the flagship. Under Mr. Milo's skilful leadership the following selections were given with much acceptance during the evening—

Selection	Bishop's Songs	Hartman.
Song	"Stanichen"	Czibulsky.
Cavatina	Chorus and solo	Schubert.
Dance	"Irlandaise"	Thiere.
Polka	"Ton Bras"	Rietter.

AN INDICTMENT.

THE prosecution of the newspapers which recently offended against the Press Laws by publishing a memorial addressed to the Minister President by certain Kansei politicians, has exposed the Authorities to some damaging criticism. The document was injudiciously worded, and the character of its contents ought to have warned editors not to insert it without strict adherence to the course prescribed by the Regulations, namely, application for official permission. The implicated journals have consequently refrained from protesting against the fact that they were punished. They would have been justified, we think, in objecting to the severity of the sentence, for certainly it is extremely difficult to appreciate the necessity of sending an editor and publisher to prison for a month because they have published a document which, though technically interdicted, cannot fairly be called seditious and is certainly of great public interest. However, the newspapers unquestionably laid themselves open to a penalty of some kind, and with a commendable sense of dignity they refrained from crying out because they were beaten with many stripes where few would have sufficed. Probably they are wise enough to understand that the best way to enlist public sympathy is to take their punishment manfully. Thus at first everything seemed to go smoothly enough. But by and by the newspapers began to raise their submissive heads, and discover that the laugh was not entirely against them. The *Nichi Nichi Shinbun* takes a sort of gentle revenge in the following note:—"Reviewing the sentences pronounced by different courts of law in various localities against journals which had been guilty of the

same offence, we find some curious facts. The punishments inflicted on journals in the Western part of Japan were more severe than those inflicted in the Northern parts. The editor and publisher of the *Nagasaki Shimpō* were sentenced to two months' imprisonment and a fine of 50 *yen*, whereas the Tokyo editors and publishers escaped with one month and 25 *yen*. Still more remarkable was the procedure in the case of the *Tohoku Nichi Nichi Shinbun* of Sendai. Its printing plant was seized, at the outset. Then the plant was released, and finally the Public Procurator decided that the sentence need not be extended to the plant, because the type of the offending matter had been already distributed. Finally, we have the case of the *Hokkai* of Hakodate, which, being duly arraigned, was duly acquitted, the Court holding that it had not committed any offence at all. The law, in this matter, seems to have behaved like the cholera. Virulent in Nagasaki, the epidemic lost much of its severity in Tokyo, and did not reach to Hokkaido at all." This is very pretty ridicule, and will doubtless be read with relish by many people. But a little reflection shows that the recent newspaper escapade presented some very peculiar features. The Authorities, with proper wisdom no doubt, consider it necessary to protect the administration against unbridled newspaper attacks. But they can scarcely have foreseen that the process of protection might subject the administration itself to a very severe test of efficiency. Where and when has it been before recorded that a number of law courts throughout the country were required to try and pronounce judgment on the same offence almost simultaneously? If judges were cast in exactly the same moral mould, sentences delivered under such circumstances would doubtless be identical. But it is pretty certain that even in respect of a much simpler case than that of the newspapers, a common-place felony for example, British tribunals themselves would impose different penalties. As for the Hakodate judges, were we Japanese we should be proud of them, assuming that they really did take the independent view suggested by their verdict of acquittal. But another explanation offers itself, namely, that they acquitted the *Hokkai* because an insignificant provincial journal can scarcely be punished for reproducing the contents of its great metropolitan contemporaries' columns. Certainly a month's imprisonment supplemented by a fine would be an extraordinary punishment for such a peccadillo. Still the *Nichi Nichi Shinbun's* cholera simile is good, and will probably become a household word.

THE CONSTITUTIONAL LIBERALS AND THE DIET.

WE read in the *Kokumin Shinbun* an interesting statement of the measures which the Constitutional Liberals (*Rikken Jiyu-to*) intend to bring before the Diet. At the head of the list stand the recovery of Japan's Tariff and Judicial autonomy, and the establishment of relations with foreign nations on a footing of absolute equality. After this the most important reform is deemed to be reduction of the Land Tax from 2½ per cent. to 2 per cent. of the assessed value of the land. This would mean a loss of eight million *yen* of annual revenue, which deficiency the Constitutional Liberals propose to meet by economizing administrative expenditure, and, if economies to that extent are impossible, they advocate an increase of other taxes, notably of the income tax, the tax on houses, pleasure grounds and industries, together with the imposition of new taxes upon banks and railways. The other reforms contemplated are catalogued as follow:—The abolition of the Department of Education, and transfer of its duties to the Home Department. The institution of an inquiry as to the expediency of abolishing or preserving Upper Middle Schools. Postponement of the date for putting into force the new organization of the Law Courts, as well as of the date for carrying into operation the new system of City and Prefecture Government, and the Commercial Code. Reform of the Law of the Houses, and transfer to the Diet of the power of appointing, promoting, or removing all officials con-

nected with it. Cessation of State support for schools. Reform of the organization of the Government, and reduction of the number of officials. Placing the University on an independent footing. Reform of the Press and Public Meetings Laws. Determination of the meaning of Article 67 of the Constitution. Alteration of electoral districts so as to coincide with Cities and Prefectures; one member being returned for every eighty-two thousand (?) persons. Extension of the franchise to all persons paying national taxes to the annual amount of five yen, and reduction of the age for electors to 25 years. Appointment of Committees to enquire into financial and military questions. Abolition of Retired List Regulations.

THE IMPERIAL GARDEN PARTY.

ON Monday morning the prospect looked very gloomy for the Imperial Garden Party, the sky being overcast and rain falling steadily. It had been notified on the cards of invitation that, in the event of unfavourable weather, the party would be given up, but the Imperial Gardens would nevertheless be open to any of those invited who desired to view the chrysanthemums. This alternative appeared at one time inevitable, but happily before noon the rain ceased and some struggling rays of sunshine gave promise of a fine afternoon. It was not, however, a hearty effort on the part of the weather, for the air continued raw and cold, and the sun did not come out with sufficient strength to dry the ground. The arrangements for the party were not different from those usually made. His Majesty the Emperor did not appear to have recovered entirely from his recent disposition, but the Empress looked, as she always does, gracious and cheerful. The balloon ascent, spoken of at one time as a probable feature of the entertainment, had been given up, but the splendid display of chrysanthemums amply occupied the attention of the guests. A large number of naval officers, French, American, and English, were present.

THE MCKINLEY BILL.

THE London *Spectator* has the following pertinent remarks about the McKinley Bill:

Three things thus combined to bring about the McKinley Bill,—the failure of the present scheme of Protection to protect, the desire to do something for the farmer, and the necessity for keeping down the surplus. Those, however, who entered with a light heart upon the revision of the Tariff found that the task before them was not nearly so easy as they had at first imagined. They began by declaring that it would be their duty to see that every citizen should have his fair share of the benefits of Protection, and that the *egis* of the Tariff should be thrown over all the industries of the nation. Unfortunately for them, however, they had promised the one thing that they could not perform. It is impossible to make Protection fair all round, for the very simple reason that no distinction can be drawn between what are industrial products and what are not. In the abstract, the Protectionist wants to tax the manufactured article, but to let the raw material in free. It happens, however, that in many cases the so-called raw material is the farmers' industrial product; while on other occasions, what is a finished industrial product in one trade, is a necessary basis of industry in another. These facts were soon unpleasantly forced upon the Republican managers, whose one and only desire was to please all parties. The difficulty in which they were placed in regard to hides is characteristic of the whole situation. The duty here was taken on and off an almost incredible number of times, as first one and then another gust of interest prevailed in the Committee of Congress, till at last those responsible for the measure were at their wits' ends how to act. Originally a duty was placed on hides in order to please the farmers. But in a moment the whole boot trade was up in arms. "You are taxing our raw material," they cried, "and if you persist, you will ruin our trade, deprive thousands of men of employment, and place us at the mercy of the pauper labourers of Europe. How can we compete with them if we have to buy dear hides?" How the controversy ended we do not know, for the newspapers have made no serious attempt to follow the constant and almost hourly changes made in the Bill; but it is safe to say that whichever side has prevailed will leave the other bitterly discontented. It was much the same story in the case of "tin-plates," the article more bitterly debated than any other. "Tin-plates" are the great sheets of metal out of which cans and the tins for biscuits and preserves are made. There is already a duty on their importation, but the manufacturers wanted it raised, and to this the Committee of Con-

gress began by assenting. They forget, however, that a most flourishing American industry—that concerned with preserving meat, fruit, and vegetables—would be deeply injured. When the duty was raised, Mr. Armour, of Chicago, whose name may be seen on "corned-beef" tins in every grocer's on the face of the earth, hurried to Washington and declared that he could not and would not stand having the supply of tin-plates interfered with. The manufacturers, however, stood firm, and the battle raged with varying success in the Lower House of Congress, and then in the Senate till within a day or two ago. At one time it was proposed not to increase the Tariff, but to pay the manufacturers their slice of Protection direct, in the shape of a bounty. In the end, however, a different compromise was arranged—unless, indeed, it has been altered since—and according to the last despatches, tin-plates are to be free after October, 1895, "unless American makers turn out before that time one-third of the amount imported." Here, again, we have an example of the inherent incompatibility of the various interests at stake.

We cannot on the present occasion enter into the device, interesting as it is from a constitutional point of view, under which the President is to be armed by the new measure with special powers for extorting reciprocity from foreign nations, nor can we dwell upon other minor details of the Bill. The time to discuss them will arrive when the Bill has actually become law, and the last double-shuffle over this or that product has been performed. It may, however, be worth while to notice one fact about the woolen duties, as they are typical of the spirit in which Protection is applied in the McKinley Bill. "Woolen hosiery and underwear," costing 32 cents a pound, was taxed under the war tariff—that of 1861—at the rate of 90 per cent. Duties will now be levied thereon at the rate of 214 per cent. Again, cotton hosiery, costing 62½ cents the dozen, which used to be taxed at the rate of 15 per cent., will now pay duty at the rate of 110 per cent. To quote yet one more example, the dues on silk goods have been raised by 30 per cent., while those on ready-made clothing have very nearly been doubled. It is evident, then, that the promoters of the McKinley Bill intend to build a wall of exclusion round the American producer. What will be the end of the attempt remains to be seen. Professor Goldwin Smith, in a jubilant article, declares that the McKinley Bill is "the darkness before the dawn." It is always dangerous to prophesy, but we are inclined to believe him. The Bill cannot help the farmers, and when they find this out, they are extremely likely to withdraw their support from the Protection party. If the Democrats return to power, it will be as virtual Free-traders.

VISCOUNT KABAYAMA ON NAVAL AFFAIRS.

A FEW days ago, writes the *Yomiuri*, some person, calling on Viscount Kabayama, Minister of Marine, asked him whether the bill for increasing the Navy, rumoured to be now under deliberation in the Cabinet, would not necessarily add to the burdens of the people, and whether it might not be injudicious to bring forward such a scheme just when public opinion is in favour of reducing taxation. He was answered that those in office are well aware of the necessity of diminishing taxation and developing material resources, but the Navy of this country is at present insufficient to serve as a national defence, and without a sufficient national defence it is idle to talk of developing the material resources of the country. To make the Navy efficient is one of the means of enabling the people to prosecute their industries in peace and security. "When I think of the present condition of our Navy," the Viscount is represented to have said, "I am so tormented by anxiety that I can neither eat nor sleep."

The same journal reports that a bill for increasing the navy will surely be one of the chief questions submitted to the Diet; and that a certain member of the House of Peers had remarked with regard to the bill that a proposal to increase the navy is not unreasonable, but that to bring it forward in the first session of the Diet would not be a wise plan on the part of the Government, because even those members of the House of Representatives who are personally well disposed to the proposition may be constrained to oppose it owing to the pledges given by them to their constituents. This nobleman therefore recommended the postponement of the bill until the second session of the Diet.

BILLS WHICH THE GOVERNMENT PROPOSES TO SUBMIT TO THE DIET.

APART from the Budget, which will naturally form the first subject for consideration by the Diet, the Bills which the Government intends to submit to the two Houses, and which, in pur-

suance of that intention, are said to be now in process of drafting by the Legislative Bureau, will probably be as follow, says the *Yomiuri Shinbun*:—Rules for the organization of the three Banks of Movable Property, Industries and Agriculture. A Bill relating to postponed payments of taxes. Rules relating to public highways. A Bill relating to the relief of the poor. A Bill for the better determination of age for registration purposes. A Bill for the regulation of weights and measures. A Bill for the examination of silk-worms' eggs. A Bill relating to Barristers. In addition to the above the following are said to be still in the hands of the various Departments from which they emanate:—A Bill for raising a Naval Loan. A Bill for the prevention of cruelty to animals. A Bill relating to the Nakasendo Railway. Rules for allowances to diplomatic officials. A Bill relating to sanitation at the Treaty Ports. And finally, two or three Bills for transferring to the sphere of ordinary legislation matters hitherto regulated by Imperial Decrees, Notifications and so forth. It is not expected that all these measures will be submitted to the first Diet, but that the Government will select from them such as call for earliest consideration.

JAPAN'S NAVAL FORCES.

THE *Tokyo Shimpō* has a leading article under the heading of the "Japanese Navy," professing to be based on the remarks of an official in the Government. Says our contemporary:—The system of defence of a nation should be based on some standard or other. England for instance has war-ships of a gross tonnage of 940,000 tons, and stands above France in that respect; but if we deduct from the number some 300,000 tons for vessels required to defend the numerous territories and colonies possessed by England, we shall find that she possesses only 600,000 tons to defend the mother country. The tonnage of war ships possessed by France is about the same, and therefore the naval forces of England and France at home are equal and well-matched. There are other European nations which are equipped with navies for the defence of their coasts, but England and France are by far the greatest naval Powers in Europe. Now to solve the question of what shall be taken as a standard for the Japanese navy, we must consider what naval Powers we have to compete with. Looking at the different Oriental nations, we find that China is the only one powerful enough to enter the field with Japan; but to decide Oriental affairs now-a-days, we must consider the state of things in the West as well as in the East. Of the European Powers, England's interests require that she should act in combination with China, and Japan must therefore, in viewing the Chinese naval force, take with it as well the Pacific force of England. The eastern squadron of England is very powerful compared with those of other European nations in the East; its force, though subject to occasional changes, may fairly be taken at something like 40,000 tons. China has numerous small ships of war stationed in her larger rivers, but as they are only fit for use in rivers and inland seas, we may take her tonnage of war ships over 400 tons at 80,000 tons. That is to say we shall not be much beyond the mark if we regard the combined naval forces of China and England as equal to 120,000 tons, and take this figure as the standard for deciding on the naval force necessary for the proper defence of our country. Now let us look at the present state of the Japanese Navy. The gross tonnage of ships of war over 400 tons is only 56,000 tons, a figure less than the Chinese by 24,000 tons and less than the united Chinese and English fleets by 64,000; and as to our ships, with the exception of the two now in course of construction in France and one in Yokosuka, each of 3,000 tons, which will not be surpassed by any Chinese or English ship, the rest do not at all come up to the mark. There is here plain necessity for increasing our naval forces, the present state of which is truly miserable. To develop our naval force, we must have ships of war built, and the questions of what kind of ships are required, and how their power is to be computed, have to be

considered. A good fleet should comprise all kinds of ships required for various emergencies, and the proper choice of ships to organize a fleet will much depend on the form and position of the country to be defended as well as the circumstances of possible enemies. Some say that as Japan is surrounded by seas numerous ships are required, and therefore, if necessary, size should be sacrificed to number; but this is an incorrect view. Large ships of war are more effective than small vessels, and fighting ships, to be really effective, should be over 4,000 or 5,000 tons. England possesses numerous ships of war of several thousand tons; one, the largest in the world at present, being as much as 14,000 tons. We should be guided by this, and keeping the size of the ships of the possible antagonist in view, should be able to form a proper opinion. Finally, for the calculation of our naval forces, we should take the tonnage as a basis instead of the number of ships.

THE PERUVIAN MINING SCHEME.

IN "The Amazon Provinces of Peru," a book published two years ago, and forwarded to us by Mr. Oscar Heeren, a chapter is devoted to the silver mines of Yauli, which, our readers will remember, is the district that was chosen as a field of operations by the Japan-Peru Mining Company of disastrous memory. With regard to the Carahuacra Vein, which the company was organized to work, the following paragraphs appear in the above mentioned volume:—Carahuacra, situate to the south of Yauli, is the most renowned and productive vein in the district. It has been surveyed and found to extend for a distance of 5 kilometres (3 miles), and its thickness in places to be 30 metres (99 feet). These enormous dimensions rival the largest silver veins known, such as the Comstock in Nevada, which is 7 kilometres (4½ miles) long and in parts 60 metres thick; the Veta Madre of Guanajuato, 14 kilometres (8½ miles) long and 10 to 66 metres thick; the great vein of Zacatecas, of little less length than the former, and 10 to 22 metres (33 to 72 feet) thick; and the great vein of galena in Clausthal, in Prussia, 8 kilometres long (5 miles) and from 6 to 130 feet thick. The Carahuacra vein is superior to these in the richness of its ores. Its course is north-west to south-east, in which direction there is seen rising above the surface a gangue quartz of dark grey colour, interrupted by an accumulation of large boulders of dark grey colour lying in the direction of the gangue. It is composed of quartz, of grey or black colour, in which the ores are scattered in small irregular veins or nests, which makes the working somewhat difficult. There are ores of silver—native silver, ruby silver, rich *pavonado* (argentiferous grey copper ore), with much zinc blende, pyrites, and a little galena; the zinc blende is of different colours, yellow, chestnut, and black. The northern part is the better known, and up to the present time has almost exclusively produced the metal. Here also are the Carmen (San Antonio de Callapa), San Francisco, San Marco, and San José (Ventanilla) mines, which occupy, according to the *Padron de Minas*,¹ an extent of 1,600 yards (1,337 metres). The San Francisco Mine had been, without doubt, much worked during the colonial period, as is shown by the extent and depth of its works. In the San Francisco mine the predominating ore is ruby silver with zinc blende; in the San Marco, a mine likewise much worked, although not so much as the former, it is the *pavonado fino* (argentiferous grey copper ore), under which name they denote the grey copper ore of high ley of silver, which is generally 8 to 10 per cent.² The other mines are abandoned.

¹ The *Padron de Minas* is the official Register of Mines, published half-yearly. ² This is an extraordinarily rich ore.

PRISON REFORM.

ACCORDING to the *Mainichi Shimbun*, the Government has been constantly trying to improve the prison system, which, however, is a problem of great difficulty. Even in Europe, the construction of prisons, the allotment of tasks to prisoners, their food, and their clothing require most careful investigation.

It is said that the Department of Home Affairs has decided to appoint a committee in order to investigate and discuss difficult questions relating to the prison system. The committee will consist of one president, eleven members, and two clerks. The Commissioner of the Keihokiyoku (Police Bureau) will be president, and the Vice-Commissioner of that Bureau, two councillors (*Sanji-kwan*) two architects, and two physicians of the Department for Home Affairs, two judges, commissaries or councillors of the Judicial Department, and two barristers will form the members, while the clerks will be drawn from the Police Bureau.

CHESS IN YOKOHAMA.

THE leading chess players of Yokohama are to be congratulated on their resolve to form a chess club. Some years ago very good chess used to be played in this Settlement, and we cannot doubt that much of the skill of that time is still available. There are, we believe, as many as fifty players of greater or less strength in Yokohama, and if even one half of that number combined to form a club, there would be no difficulty in carrying out the scheme. In Tokyo, also, there are about a score of players who have for some time talked of forming a club. Contests by correspondence might then be carried on between the capital and this Settlement, especially when the telephone is in working order. An annual tourney, in which chosen players of each club took part, might also be added to the novelties of our life in the East. Another interesting feature would be the investigation of Japanese chess, which evidently has a common origin with European. There are many very fine Japanese players who would soon develop great skill at the Western game if they took the trouble to study it. Possibly something might thus be added to chess literature, exhaustive as it seems to be already.

PROMENADE CONCERT.

THE promenade concert given on Tuesday by the band of the *Imperial* was very largely attended. The programme which we append, was listened to throughout with the very greatest pleasure by the large audience, and the entertainment altogether proved a high musical treat. Following is the programme, the selection of which, as well as its performance, reflect much credit on the musical skill and taste of Mr. Mollo, the conductor:—

Overture.....	"Don Pasquale".....	Donizetti.
Gavotte.....	"Le Chame".....	Thiers.
Selection.....	"Dinorah".....	Meyerbeer.
Valse.....	"Rosen aus den Sunden".....	Strauss.
Selection.....	"La Sonnambula".....	Bellini.
Polka.....	"Spanish Serenade".....	Lehot.
Selection.....	"Doris".....	Celifer.
Polka.....	"Garde du Corps".....	Fels.

COUNT ITO AS PRESIDENT OF THE HOUSE OF PEERS.

THE *Kokumin-no-Tomo* congratulates the Imperial Diet in general and the House of Peers in particular, on having obtained, as President of the latter, the services of a politician so prominent as Count Ito. Without pretending to estimate the Count's value as a statesman, our contemporary asserts that, most of the heroes of the Restoration having dropped off one after another, a foremost place must be accorded to Count Ito among the administrators of the present time. It is well known that he accepted the position with extreme reluctance, and only at the repeated request of His Majesty the Emperor. But the people, though on the one hand, glad to have so able a statesman at the head of the Peers, have, on the other, received the news of his appointment with a certain degree of suspicion and doubt, because he is generally supposed to hold peculiarly intimate relations with the present Ministry; so much so that he is often spoken of as its wire-puller. Interpreted in plain language, this assertion of the *Kokumin* seems to mean that some people regard Count Ito's acceptance of the post as part of a deep political scheme. While the Count was leading a retired life at Odawara, apparently engaged in rural pleasures and literary pursuits, the nation, according to the *Kokumin-no-Tomo*, never ceased to consider him the guardian of the

Cabinet, a living commentary on the Constitution, and the leader of the nobles. Indeed, so many followers has he among the Ministers and subordinate functionaries of the Government, that the Tokyo periodical is not surprised by the people's persistence in regarding him in the light above indicated. If the opinion of the mass can be taken as a proper standard of the value of statesmen, then our contemporary thinks that Count Ito is too able a statesman, too powerful a leader of the nobility, and too competent an authority on the Constitution, to be a good President of the House of Peers, which, when necessary, ought to bow to the will of the House of Representatives. With Count Ito's personal influence, his tact, eloquence, and sagacity, the *Kokumin* is certain that it will not be at all difficult for him to secure for the Upper House ascendancy over the Lower. But is such the true object of the Count? This question is distinctly answered in the negative. He is, we are told, too sagacious not to know that the only result of trying to make the Peers more powerful than the Representatives would be a fierce strife between the two, and that though the former might for a time obtain and exercise the supremacy, there would sooner or later set in a violent reaction, against which even the Count himself would hesitate to make a stand. In order to secure the peaceful working of the Constitutional machinery, the Upper House ought to be prepared to yield a step to the Lower. The Tokyo periodical, therefore, hopes that Count Ito will use his powerful authority for the establishment of precedents conducive to the harmonious working of the two branches of the Legislature. He is requested to imitate the example of the Duke of Wellington, who did not hesitate to sacrifice his popularity with his party for the sake of preserving harmony between the hereditary and representative branches of Parliament. Count Ito is specially fitted to act such part, for he is distinguished, above all, for the art of conciliation.

The *Koku-Hon*, writing on the same subject, takes a somewhat different line. It receives the news of Count Ito's appointment to the Presidency of the Upper House with mixed feelings of satisfaction and regret. After observing that he is reported to have accepted the offer only on condition that he will be relieved of the office at the end of the first session of the Diet, our contemporary proceeds to say that his appointment to the post has, on the one hand the effect of strengthening the position of the Yamagata Cabinet, and, on the other, that of lowering his place in popular opinion. Unlike the *Kokumin-no-Tomo*, the *Koku-Hon* is of opinion that the position of President of either House, especially the Upper, does not warrant its occupant in exercising any authority beyond that of keeping order during debates and generally within the House. Should the President of either House be allowed to meddle with the policy of the Government, he would be unable to properly discharge the original duties of his position. The *Koku-Hon* would, therefore, prefer for that post a second or third rate politician to a statesman of the first order possessing vast political influence. In support of this contention it points to the example of England and other constitutional countries of the West. As to the claim that, during the early stages of Constitutional institutions, it is important to put at the head of Peers a statesman of Count Ito's ability and constitutional knowledge, the Tokyo periodical replies that such a theory, though very common now, is nevertheless mistaken, for the duty of successfully carrying out the Constitution devolves upon the Ministers of State and not on the Presidents of the Houses of the Diet. Our contemporary, however, apprehends that Count Ito, being intimately connected with the present Ministers, especially Count Yamagata, may identify himself too closely with the success or failure of the Cabinet. In one sense the *Koku-Hon* regards his appointment with satisfaction, because of all statesmen he is best qualified to act as a mediator between the

Cabinet and the Diet, should any difficulty occur between the two. But considering the chief functions attaching to the post and also Count Ito's prospects as an active statesman, our contemporary very well understands the reluctance shown by him to serve the full term of seven years.

A curious utterance on the same subject is that of the *Nippon-jin*. Under the heading "Japan's Great Celebrity" (*Nippon no Daimyō-ka*) our contemporary writes thus:—"Count Ito is one of the statesmen who commenced the work of the Restoration. He is therefore one of Japan's celebrities. He determined the organization of the Cabinet and became Minister President of State. He determined the organization of the Privy Council, and became President of that body. He compiled the Constitution, and now becomes President of the House of Peers. All the greatest posts are occupied once by him. And his new appointment as President of the Upper House is to be only temporary. After it he will certainly become the Emperor's Representative abroad as Minister Plenipotentiary." Count Ito must be at once diverted and edified by all this commotion and comment. His critics seem to have only a faint idea of the immense responsibility that will devolve on the Presidents of the Houses in the first Diet, when wholly novel points of order will have to be constantly decided and interpretations of the Constitution given that will become precedents. Men like the writer in the *Koku-Hon* appear to found their opinions on the conditions existing in countries where parliamentary systems have been in operation for one or two centuries. In our opinion Japan has no statesman too great or too wise to place at the helm when the parliamentary ship is to be steered for the first time from the harbour of theory into the straits of practice. Unless Count Ito has lost the sagacity which has hitherto constituted one of his most prominent merits, he will know how to separate political ties from parliamentary duties. He has never been a party politician in any sense, and it is in the last degree improbable that he will choose this most unfitting time to become one. As for the objection that his relations with the Yamagata Cabinet are close, it seems to us both thoughtless and frivolous. The Presidents of both Houses must necessarily be men in close touch with the Government. They are so everywhere, and we see no reason why they should not be so in Japan. If it be correct, as the *Koku-Hon* asserts, that the smooth working of Constitutional institutions will depend on the Cabinet, then surely the President of the House of Peers, who has to interpret the Constitution, ought to enjoy the entire confidence of the Cabinet and hold intimate relations with it.

THE FOREIGN TRADE OF THE PRESENT YEAR.

The *Keisai Zasshi* of the 8th instant, writing on this subject, observes that the excess of imports over exports during the nine months from January to September amounted to no less than 25,383,537 yen in goods. In 1870, when the balance of trade was against Japan to an exceptional degree, the excess of imports did not amount to more than 19 million yen in round numbers, and again in 1876, when the balance tended in the same direction, the excess only amounted to about 11 million yen. Comparing these figures with those quoted above for the current year, it is no wonder—our contemporary continues—that financial and business men view the situation with uneasiness. In accounting for the causes that have led to such an unprecedented phenomenon in the foreign trade of the country, the *Tokyo* journal gives the foremost place to the extraordinary rise in the price of rice. The costliness of this staple operated in two ways: first, it completely stopped the exportation of the commodity, whereas the amount exported in the preceding year was 7,434,000 yen in value; and secondly, it caused a great quantity of foreign rice to be imported, the total value of the grain brought in during the nine months under consideration reaching no less

than 12,019,000 yen. Thus the condition of the rice market alone has helped to produce the above-mentioned excess of imports over exports to the amount of nearly 20 million yen. The next course operating in the same direction is the violent fluctuation of foreign exchange, which has placed export merchants at a great disadvantage. As an illustration of the dulness of the export market, our contemporary points to the fact that as many as 30,000 bales (Japanese) of silk are now in Yokohama still unsold. Even making due allowances for the unfavourable attitude of the American silk market, the *Keisai* cannot but think that, had foreign exchange been what it used to be, silk merchants would have fared far better. As to the economical aspect of the question, it is observed that an excess of imports over exports is not necessarily a lamentable circumstance. However, should the foreign trade continue in its present condition, serious results must ensue in the Japanese money market and in commercial and manufacturing circles. But the *Tokyo* journal assures its readers that trade cannot long continue in its present state. For when gold and silver leave the country in great quantities, as in the present instance, the inevitable consequence is an appreciation of the value of money, or in other words, a fall in the prices of commodities, the consequence being that home products will naturally seek foreign markets where better prices are obtainable. Already such results are discernible; the price of rice, for instance, has gone down very much, and when it has reached a certain point, the staple will again be exported to foreign countries. Moreover, foreign exchange has of late become very much more favourable, and our contemporary believes that the balance of trade will not be against Japan any longer. We (*Japan Mail*) do not quite follow this reasoning, especially in respect of rice, but the facts advanced by the *Keisai Zasshi* are interesting.

THE SILK TRADE IN AMERICA.

INTELLIGENCE has arrived by cable reporting another large failure in New York, the well known importing house of John T. Walker, Son & Co. having gone under. The telegram states that more failures were pending, as it was expected that the firm named above would bring down others with them. It further reports the Silk market demoralized, and in a state bordering on panic in consequence. Our merchants here, both foreign and native, who are engaged in the Silk business, are certainly entitled to our sympathy this year. Their chief market (New York) has proved a broken reed on which to lean: failures there have been frequent and troublesome ever since the suspension of the old firm of Louis Franke & Co. last April, and now the epidemic seems to have set in once more with renewed vigour. Doubtless a more healthy trade will spring up anon, and it will be better for all concerned when the unsound traders are weeded out; but meanwhile, what with the interference with trade caused by violent fluctuations in silver, the McKinley tariff-bill, monetary stringency in London, New York, etc., our Silk friends have a hard time just now, and we wish them well through it.

CABINET RESPONSIBILITY AND TREATY REVISION.

At the time of Count Okuma's failure to accomplish Treaty Revision, says the *Tokyo Koron*, an attempt was made to hold the whole Cabinet responsible, but in the end it was understood that the responsibility was limited to the Minister President and the Minister of Foreign Affairs. Such would be the ordinary rule: the Minister directly concerned in any affair and the chief of the Cabinet alone would be held responsible. But on the present occasion the Minister for Home Affairs, Count Saigo, and the Minister for Communications, Count Goto, have been included in the chain of responsibility, the result being that the whole Cabinet is virtually involved. For this reason it is said that a certain country, hitherto the most obdurate, has fallen in with Japan's proposals, and no serious difficulties are likely to be en-

countered in coming to a settlement. Before public discussion becomes warm, the whole thing will probably be arranged. Instead of the countless objections advanced and obstacles raised in previous conferences, there appears now to be no one disposed to make trouble, and it is likely that the present Cabinet, despite the failures of Counts Inouye and Okuma, will have the honour of solving the knotty problem.

We trust that the *Koron's* predictions may prove correct, but at the same time we must protest very strongly against the motive assigned by it for England's action, since England is evidently the obdurate Power referred to. Our contemporary's interpretation could only mean that the British Government hesitated to yield until it found itself confronted by the whole Japanese Cabinet; in other words, until no doubt could any longer be entertained that the Japanese Government, in its entirety, desired Revision. Such a view is at once wholly inconsistent with facts, and very unjust to England. The truth, now publicly known, is that England submitted her counter-proposals to the present scheme of revision long before the smallest notion existed that Counts Saigo and Goto would be joined with the Minister of Foreign Affairs as Plenipotentiaries. Every one possessing any knowledge of the situation is well aware that the nomination of the two latter Ministers had no reference whatsoever to the mood of foreign Powers, but was purely a measure of expediency in connection with Japan's domestic politics. Counts Saigo and Goto were appointed less than a month ago. Great Britain's counter-proposals, from which she has not, so far as we know, budged an inch, were communicated to Japan probably three months ago. Whatever liberality she has displayed must be attributed solely to her conviction that the time has come to be liberal; a conviction which had no more to do with the number or character of Japan's Plenipotentiaries than with the motions of the tides.

RICE.

ACCORDING to official estimates, to which reference is made in the *Hochi Shimbun*, the rice crop this year will fully realize the high expectations formed of it. The yield is now put at forty-three million *koku*, a harvest such as has not been known for twenty years. The annual consumption for food purposes, liberally calculated, is thirty-three million *koku*, and the quantity employed in *saké* brewing and for other purposes is three and a half million *koku*. It may be assumed, further, that a certain amount will be stored up by way of provision against the possibility of a bad harvest next year. Putting this last amount at two and a half million *koku*, there would remain a surplus of from three to four million *koku*, which will actually come into the market. Evidently the result of such an increased stock must be to drive down the price considerably. So low, indeed, would it probably fall if no measures to arrest it were contrived, that the plentiful harvest would prove disastrous rather than beneficial to the farmers. The *Hochi Shimbun* says that much anxiety is felt on this point. The one resource is exportation, and our contemporary recommends that the Government should resume its old rôle of exporter. Various reasons are assigned in support of this recommendation, but we confess that they do not appear to possess much force. It may be true, as the writer in the *Hochi* says, that the Government, having ample funds at its disposal and being under no necessity to deal in rice at one time rather than at another, is particularly favourably situated for watching the market and adapting its transactions to the state of the latter. But these considerations do not seem to outweigh the weighty objections always existing against official interference with the course of trade. If rice falls to a certain point there will always be plenty of private persons ready to export it, and we cannot entertain the smallest doubt that it is better to encourage the development of this natural outlet than to attempt to control the market by

Governmental meddling. Private enterprise is discouraged and deterred from the moment that it finds itself confronted by official competition.

BALLOONING IN TOKYO.

It was supposed at one time that the heavy rain which fell on Wednesday afternoon would prevent the balloon ascent, arrangements for which had been made in the large space outside the main gate of the Palace. Two hours, however, before the time fixed—half past two in the afternoon—it was understood that no postponement would take place, and despite a downpour of cold and tolerably heavy rain, a vast crowd assembled in the large area designated for the event; so large a crowd that its overflow completely blocked the gate beyond the castle moat and thronged every available place of vantage in the vicinity. No attempt was made to interfere with sight-seers so long as they kept outside the small space reserved for Mr. Spencer and his apparatus. Invitations had not been issued, but an intimation was sent to the various Legations that the ascent would be made at half-past two o'clock. Their Majesties the Emperor and Empress viewed the affair from within the Palace. Everything went off satisfactorily, but Mr. Spencer was again somewhat unfortunate in the place of his descent, for he alighted in the moat. Evidently water has an affinity for him at present, but of course this incident did not at all mar the character of the aeronautic performance itself.

MR. SPENCER'S AERIAL EXPERIMENTS.

We read in the *Fiji Shimpō* that Mr. Spencer's recent accident at Kobe has caused him much chagrin. In the course of his career as a balloonist he says that he has descended with his parachute on mountains, in valleys, on the seashore, and in tree-tops, but it never before happened him to fall into the water, and so narrowly escape death by drowning as was the case at Kobe. He is resolved not to leave Japan without making another effort to retrieve his reputation; so at least, writes our Tokyo contemporary, but for our own part we fail to see why a descent into the sea can fairly be regarded as a failure on the part of the aeronaut. Such accidents are always liable to happen, and the only comment to be made is that Mr. Spencer should be better prepared to encounter them. He evidently takes that view himself, for we read that he proposes hereafter to employ a water-proof parachute and to be furnished with means for keeping afloat.

A FAMILIAR DELUSION.

The *London and China Express* has a moderate and guarded article on the subject of Treaty Revision in connection with the protest of the Yokohama meeting. The article is chiefly conjectural, no details having reached London when it was written. It gauges pretty accurately, however, the cause of the foreign residents' objection to the unconditional surrender of Consular jurisdiction. But the writer advances one point which seems decidedly untenable, though it has been put forward more than once before. "The Government of Japan proposed," says our contemporary, "and as a matter of fact recognised, that foreigners were entitled to and should have a guarantee in the shape of a certain number of foreign judges." The phraseology of this sentence is somewhat confused, but the meaning intended to be conveyed is clear enough, namely, that, by proposing to add some foreign legal experts to her staff of judges, for the purposes of trials in which foreigners were concerned, Japan herself admitted the necessity of having such experts; admitted, in fact, that her own judges were not competent to undertake the duty. Surely this is a very unfair inference. The idea of appointing foreigners to the Japanese Bench was prompted entirely by a desire to satisfy the scruples of foreigners. It was not an admission that their scruples were justified: it was simply a concession to their want of confidence. Experience had abundantly proved and preliminary negotiations had plainly shown that unless some pledge of good faith were given, there existed no possibility of effect-

ing an arrangement. Japan was willing to give the pledge, but her willingness by no means signified that she doubted the competence of her judiciary. If a man, finding that another will not trust his verbal promise, offers to give a guarantee of sincerity, assuredly his offer cannot properly be construed as an admission that he does not deserve to be trusted. To rely on such an argument as that stated by the *London and China Express* is to admit the weakness of one's cause. If the contention holds in respect of the proposals of 1889, it must hold equally in respect of the proposals of 1886. The transition from a majority of foreign legal experts sitting on the Bench in every case that concerned a foreigner, to four judges of foreign origin sitting in the Supreme Court which could only be reached on a plea of error in law, was much more radical than the transition from four foreign Judges to no foreign Judges at all. People who consent to a compromise do not, by so consenting, admit that their right is imperfect. They only acknowledge their willingness to make some concession in the interests of an amicable understanding.

GOLD AND SILVER RATIOS.

The *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 8th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100) Silver Yen.	Pound Sterling (Per £1) Silver Yen.
4th	118.800	A.M. 5.8536 P.M. 5.8536
5th	118.500	A.M. 5.8536 P.M. 5.8536
6th	118.500	A.M. 5.8536 P.M. 5.8536
7th	118.500	A.M. 5.9259 P.M. 5.9259
8th	120.000	A.M. 6.0000 P.M. 6.0000
Averages	118.860	5.8973

The above averages show for gold coin a decrease in value of yen 0.690 per cent., and for the pound sterling an increase in value of yen 0.0116 as compared with the previous week.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 8th instant were as follows:—

CONVERTIBLE NOTES.		RESERVES AND SECURITIES.	
YEN.	Notes issued	YEN.	
100,316,216	100,316,216	24,095,247	Gold coin and bullion.
		30,061,616	Silver coin and bullion.
		18,476,450	Public Loan Bonds.
			Treasury Bills.
		22,000,000	Government Bonds.
		4,732,182	Other securities.
		15,169,721	Commercial bills.
	100,316,216		100,316,216

Of the above total issue of notes, the sum of yen 5,616,151 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and yen 72,700,065 in actual circulation, the latter showing an increase of yen 379,359 as compared with yen 72,320,706 at the end of the previous week.

CHINA AND JAPAN.

From time to time discussions about the treaty between China and Japan appear in the vernacular press. The latest is to be found in the *Mainichi Shimbun*. After noting the difference between the treaty privileges enjoyed by Japanese subjects in China and the subjects or citizens of other States, it says that some years ago, when a Japanese Plenipotentiary sought to have this corrected, Viceroy Li told him that the privileges given to Western folks had been granted under pressure of *force majeure*, and that China could not consent to extend them to another Power by the process of peaceful negotiation. The Japanese Plenipotentiary admitted the justice of this reasoning. Since then, too, there has been no occasion to regret the discrimination against Japanese, for the privilege of trading in the interior under passport has been less and less availed of every year by Occidental merchants, experience having shown that such business is troublesome, precarious, and not correspondingly profitable. The Japanese would be ill advised, according to the *Mainichi's* view, if they attached much

importance to securing this privilege or urged China to grant it in the revised treaty said to be now in process of negotiation, because not only would the concession be of little value, but it would involve a similar concession on Japan's side to Chinese subjects visiting the empire. At present Chinese residents or travellers are not permitted to go into the interior of Japan on passports as other foreigners are. If they were not only permitted to do so, but also suffered to trade and settle in the interior, the Chinese question would undoubtedly become for Japan what it is for America.

ALLEGED OPIUM-EATING IN JAPAN.

In the *Hyogo News* of the 11th instant the following paragraph appears:—

Travelling down from Osaka the other day by rail a curious instance of opium-eating was observed. The carriage was full of Japanese, many of them, apparently, subordinate officials, and the proceedings opened by one of them suddenly removing his white gloves and extending his hand to his neighbour coupled with a request for something. The latter complied by drawing a small bottle from the folds of his dress, and dipping a bodkin into it, a dark, brownish-looking substance adhered. This he rubbed on the extended hand, which the owner at once sucked with great gusto. This was repeated two or three times, three of those present taking part in it.

With reference to this, a Japanese correspondent writes:—"Among other curious reports made to the *Hyogo News* by foreigners who appear not to be much acquainted with Japanese customs, there is a remarkable falsehood that some Japanese were eating or sucking opium in a railway carriage between Kobe and Osaka. The truth is that these Japanese travellers were taking a well-known Japanese family medicine called *Shinyaku* (神樂). It is sold in small bottles, and its colour exactly answers to the description given by the writer in the *Hyogo News*. The Japanese are in the habit of eating it from the hand as a refresher, especially when they are fatigued by exercise or travelling." This explanation ought to have been sent to the *Hyogo News*, which would have been prompt to correct the misapprehension of its previous informant.

AN ELECTION PRITITION.

In Mr. Traill's "Saturday Songs" one of the gems is a description of the fate of a certain Colonel Blunt, who having stood for Barleyshire in opposition to Mr. Tennent Wright, is unseated for corrupt practices:—

"The Colonel stared a moment mute, then cried in wonder.
(Eh)
What! guilty—practices corrupt? Look here my lord, I say,
I only paid the farmers down what Mr. Tennent Wright
Had promised them 'in six months' time if he should win the
fight."
The learned judge maintained his frown, although there seemed
to slip
The faintest flicker of a smile across his rigid lip:
'You are a simple soldier, sir, or you would hardly miss
The fallacy that vitates comparisons like this.'
'Well, I shall always miss it,' said the Colonel, 'while I live.
I may not bribe these men, my lord, with what's my own to give,
While those confounded Gladstones, as far as I can see,
May bribe them, every mother's son, with what belongs to
me.'"

THE EMPEROR'S VISIT TO COUNT OYAMA.

The Emperor's projected visit to the suburban villa of H.E. Count Oyama, Minister of State for War, in Sendagaya-mura, which had to be postponed on account of His Majesty's indisposition, is to take place on the 15th instant. The announcement is made in the *Official Gazette*, and it is added that His Majesty will leave the Palace at 1 o'clock in the afternoon.

DEATH OF AN OLD RESIDENT.

MANY of our readers who knew and respected the Rev. Mr. Syle and Mrs. Syle during their residence in Japan many years ago, will learn with regret that news has been received of the death of Mrs. Syle. We have no particulars, but Mrs. Syle's age must have been sufficiently ripe to prepare her friends for the loss which they have now sustained.

FATAL RAILWAY ACCIDENT.

A TELEGRAM from Okayama, dated the 12th inst., in the *Tokyo Koron* states that a serious railway accident took place on the 9th inst. on the Sanyo Railway, a train being derailed near Nashikawara, with the result that eight persons were killed and sixteen injured.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

As a young girl regards her approaching marriage with mixed feelings of gladness and anxiety, so—we are told by the vernacular press—the Japanese nation, though extremely glad that the long desired establishment of a constitutional Government is to become an accomplished fact within less than a fortnight, is at the same time perplexed and not a little uneasy at the sense of the immense responsibility about to fall on its shoulders. The growing anxiety of the public more and more finds an echo in the columns of the Tokyo newspapers. In a series of articles entitled the dissolution of the Diet, the *Choya Shimbu* endeavours to persuade the Representatives of the people to make good the pledges which they gave to their constituents at the time of the general election. What will be the results of the first session of the Diet, the *Choya* does not pretend to say certainly; but, so far as the relation between the Government and the various parties arrayed against it is concerned, the Tokyo journal thinks that one of three things will happen: either the Government may be too strong for the antagonistic parties, or the Opposition may be powerful enough to compel the present Cabinet to hand over the administration, or again the power and influence of the Cabinet and the Opposition may be so evenly balanced as to bring about the formation of a coalition Government. The *Choya* would not be satisfied with the last mentioned result. "Our desire," it says, "is to concentrate the energies of all the parties out of power and to attack the abuses of the existing Government in such a manner that the latter will have no alternative but to adopt the suggestions of the Opposition." Our contemporary then goes on to condemn those who are said to hope for nothing better than the formation of a coalition Cabinet. If the members of the Diet be not fully resolved to do their duty earnestly and fearlessly, they will, we are told, no longer represent the nation, and the Diet ought then to be instantly dissolved. At any rate the people are entitled to memorialize the Emperor for the dissolution of a Diet which they think does not truly represent their sentiments.

The *Mainichi Shimbu* takes a similar, but more moderate, view of the situation. It is afraid that the present Cabinet may be too ready to resort to the Bismarckian method of intimidating the Diet into submission by threatening to dissolve it. "There may indeed be occasions when the dissolution of the Diet would be of absolute necessity in order to take the sense of the country," Our contemporary advises the Members of the Diet not to be afraid of a dissolution, but to do their duty manfully, taking at the same time precautions not to supply the Government with pretexts for dissolution.

The *Nichi Nichi Shimbu* is afraid that the Government and the Opposition, each animated by a rooted prejudice against the other, may meet on the floor of the Diet in a sulky and uncompromising mood; the former may resort to dissolution as its last defence, while the latter may vote want of confidence in the former. Our contemporary hopes that both the Government and the Opposition will try to bury in oblivion all their past wrongs, and meet in the Diet in a frank and impartial temper.

The *Nippon* is outspoken in its denunciation of a certain class of statesmen out of power, whose sole aim and purpose is to dislodge the present Ministers from the Cabinet, and get themselves seated therein. All the political parties, our contemporary goes on, are in the manipulation of these statesmen, who do not scruple to employ the engines of constitutional government as mediums through which they hope to be avenged on their old competitors and enemies, their object being not so much to serve the country as to gratify their private grudges and selfish interests. The *Nippon* thinks it a deplorable circumstance that such persons should have the control of most

of the existing parties. The Tokyo journal is unable to see any difference between statesmen of this type, on the one hand, and those of another sort, on the other, who are determined to continue in possession of power even at the point of the bayonet.

It will be seen that the articles above quoted relate to the House of Representatives. The members of that House are generally believed to be mostly opposed to the Government, and if we may credit what the papers report about the members of the Upper House, they seem to be not much more friendly to the Cabinet. Whereas the Commons will be partly restrained by the fear of dissolution, the Peers will not be under any such apprehension. Moreover, the majority of the Imperial nominees, especially ex-Senators, are said to be decidedly antagonistic to the Ministers, while those representing the maximum tax-payers in the respective localities have, on the whole, more sympathy with their neighbours in the other House than with the Cabinet. Among the noble members, there are not a few who are at best very cold towards the Government. Altogether it is presumed, according to the papers, that the Upper House will be more stony than the Lower.

Talk about the new political party still continues to occupy a large portion of the news columns of the vernacular papers, though not to so great an extent as during the preceding week. The *Nichi Nichi Shimbu* advises the originators of the party not to mould the organization on the hard and fast patterns of other parties, but to found it on the strength of similarity of views in respect of practical questions of the day, without any declaration of principles or the framing of any rules. The same view seems to be held by most of the principal spirits of the movement, and the formal organization of the party will not, according to rumour, take place before some months shall have passed. The general meeting originally announced for the 20th has been postponed.

As noticed in our last weekly review of the vernacular press, discussions on the subject of Treaty Revision have entered a new phase in respect of the nature of the topics to which public attention is now chiefly directed. Commercial and economical affairs form the principal topics of discussion. Mr. Tomita, formerly President of the Bank of Japan, lately delivered a lecture on the subject of the coasting trade, at the *Gakuri Gikwai*. His lecture is not fully reported by the papers, but his views have been made known through the columns of the *Nichi Nichi Shimbu* in the form of an interview which some one had with him. Mr. Tomita, after noticing in general terms the importance of excluding foreign ships from the coasting trade of the country, and alluding to the practice of Western nations in this respect, proceeded to tell his interviewer that, in his opinion, Japan ought, for the sake of her navigation, her shipbuilding, and the regulation of her Customs, to keep vigilant watch against the encroachment of foreign vessels on the privileges which only ships flying her flag should be entitled to enjoy. The shipbuilding industry being yet in its infancy in Japan, Mr. Tomita remarked that she could not, like the United States, prohibit the use of foreign-built vessels in the coasting trade of the country, but he held that she should still make some difference in the treatment of vessels built at home and of those constructed abroad, as, for instance, in the case of tonnage dues, such difference being always in favour of the home-built vessels. Further he thought it of vital importance for Japan not to allow her people to charter foreign vessels for the purpose of engaging in the coasting trade.

The *Keizai Zasshi* is also publishing a series of articles on this subject. They are not yet concluded. Attention is drawn in them to the extraordinary enterprise and energy possessed by the Anglo-Saxon race, and the Japanese nation is warned against the danger of admitting

Anglo-Saxons into free competition with its own people in the carrying trade between the various ports of the country.

The *soshi*, despite the disgust and loathing with which they are universally regarded by all people outside a limited circle of professional politicians, still continue to prosper and multiply in the capital. The *Fiji Shimpo* writes strongly against the whole fraternity and especially against their patrons. Our contemporary heads its article: "Enemies of Liberty." After alluding to the conspicuous and disgraceful part lately played by the *soshi* in connection with the amalgamation of progressive parties and the formation of the Constitutional Liberal party, the *Fiji* goes on to remark that these simple-minded youth are less to blame than the politicians who employ them as instruments in the prosecution of infamous intrigues.

The *Yomiuri Shimbu* draws attention to the extraordinary power wielded by the *soshi* in Japanese politics. They are used, it is true, by politicians, but the latter are in turn influenced by them. The *Yomiuri* refers to the part taken by them at the elections of July last. Most of the representatives elected were to a great extent indebted to the exertions of the *soshi*. These representatives are now, according to the *Yomiuri*, in an embarrassing situation; for the *soshi* who assisted them in their election campaign think themselves entitled to interfere whenever they regard as objectionable any conduct or utterance of such members on public occasions. From these facts our contemporary apprehends that the conduct of the members on the floor of the Diet may be influenced by the opinions of the *soshi*, who are ever ready to employ force in the prosecution of their purposes.

The *Hochi Shimbu* probably has the *soshi* in view when it recommends young men to emigrate to Hokkaido and enlist in the colonial militia. If practicable, this is the best method yet suggested for disposing of these undesirable members of the community.

The question that has occupied by far the largest space in the vernacular press for the week, is that relating to the reported proposal for the development of the navy, which the Cabinet is believed to have decided to lay before the Diet. It is rumoured that the scheme of the Government is to raise a loan amounting to about 13 million yen, which will be used chiefly for the construction of war vessels. The reporters are exceptionally busy in interviewing Ministers of State, Generals, and Admirals. The most interesting of those interviews is that with Viscount Kabayama, Minister of the Navy, which is now appearing in the *Fuyu Shimbu*. As yet we cannot give a general view of the opinions entertained on this subject by the vernacular press, for most of the leading papers refrain from expressing themselves until they have made a thorough study of the whole question in its diverse bearings. The discussion of the Government's proposal will inevitably involve the vital question of the relative importance of the army and the navy, and the Tokyo papers predict animated debates on this subject when the Diet meets.

The *Yomiuri Shimbu* and the *Koku Shimbu* have discussed at some length the celebrated 69th Article of the Constitution. The *Hochi Shimbu* devotes some articles to the consideration of the various methods of reducing the land tax; the unfavourable condition of Japan's foreign trade forms the subject of a few leading articles, especially in the *Fiji Shimpo*, the *Hochi Shimbu*, the *Nichi Nichi Shimbu*, and the *Choya Shimbu*. The *Fuyu Shimbu* writes copiously on the distinction between the theory of individual liberty and that of State liberty. *Nippon* is still engaged in reviewing the recent history of national finance. The contention now going on between the Merchant Party and the Land Party in Yokohama as to the proprietorship of the Gas Works, is also discussed by some of the metropolitan papers.

THE KANGA-KAI'S EXHIBITION.

THE sixth Exhibition of the *Kanga-kai*, or Society for promoting Pictorial Art, is now open in the Art Museum, Uyeno Park. Criticisms of this Society's doings appeared more than once in our columns in past years. Nevertheless it will perhaps be necessary to remind our readers that the chief object of the Association is to promote the cause of pure Japanese Art, as distinguished in the first place from the Art of the West, which now finds many votaries in Japan, and in the second from the combination of Japanese and Western art which is likely to be the ultimate outcome of the Art School in Uyeno. In short the *Kanga-kai* folks are essentially conservative. They profess reverent attachment to the canons of old times, and base their judgment of a painter's excellence on qualities appreciable only by the initiated. Conservatism, however, is not possible in the present age. Of art, no less than of everything else, it is indisputably true that to be in touch with the time is the first essential of vitality. This fact has forced itself more and more painfully on the attention of visitors attending the periodical exhibitions held quarterly or yearly in Tokyo. On each occasion the pictures displayed seemed even less in keeping with the tastes and tendencies of the era than their predecessors were, and the impression conveyed by this gradual widening of the chasm between the painter's work and the sources of his inspiration is fatal to public interest and sympathy. The same fault was conspicuous in the pictures shown at the recent National Exhibition. Rare indeed were examples suggesting anything better than conventionalism divorced utterly from inspiration and reduced to a mere trick of training or dexterity. The conservatives themselves were conscious of this, but they attributed it to some accidental inferiority of the works exhibited rather than to any moribund condition of their School. The best artists, they said, had refrained from contributing. This was certainly true. Many names well known to the public were absent from the list of exhibitors, although the occasion seemed sufficiently important to invite general effort. Want of confidence in the judges was assigned in several quarters as a reason for such marked abstention. Artists of note declined to submit their productions to the verdict of men in whose critical competence they had no faith. Whether or no this distrust was justified, we do not pretend to say, but it must be confessed that little discrimination could be detected in the awards distributed wholesale to exhibitors whose pictures seemed unworthy of any such honour. However, inasmuch as the general public, knowing nothing of the reasons that had induced some of the best masters

of the day to hold aloof, drew inferences very unfavourable to the condition and prospects of the country's ancient art in the hands of its modern representatives, the conservatives saw themselves more or less discredited, and accordingly announced that steps would be taken to organise another exhibition of such a character as to vindicate the doctrines of their School. This exhibition is the one now in progress at Uyeno, and under the circumstances special interest of course attaches to it. The result is wretchedly disappointing. The whole display is marked by a dead level of inferiority. So entirely has the spirit of the old School perished that the productions of its students are uniformly inanimate and mechanical. There are still many objects which the Japanese artist can paint admirably without, on the one hand, departing from the traditions of his art, or, on the other, losing touch of contemporary feeling. Birds, foliage, and flowers stand at the head of this category. Painters like WATANABE SHOTEI—who, we notice, contributes nothing to the present exhibition—fully deserve the favour they enjoy. Nothing more admirable was shown at the recent National Exhibition than WATANABE'S group of ducks, just flushed, struggling out of a cane-brake. Composition and execution were equally good in this picture. So, too, BAISON, an artist of Kanagawa Prefecture, has contributed to the present exhibition of the *Kanga-kai* a grand painting of an eagle in the act of alighting upon a bough in the teeth of a gale of wind. Such a work appeals to all time, but hanging in the Uyeno Exhibition it only helps to accentuate the wretchedness of its surroundings. Of these it is scarcely too much to say that they chiefly resemble designs for the decoration of flat surfaces. The visitor has constantly to remind himself that he is not inspecting specimens of wall paper. Everything is flat, lifeless, and conventional. Naturally, there are a few pictures which deserve to be excepted from this general condemnation. Two landscapes by NOMURA BUNKYO, a representation of waves by TAKI KATEI, and a carp by SEKISEN are not unworthy of praise. But these are almost lost in a multitude of wholly meritless daubs. It must be noted that the leading men of the *Kanga-kai* are themselves disappointed with the exhibition. So far does it fall short of their expectations that they talk of awarding no prizes at all. On the other hand, they have not yet learned the lesson plainly taught by recent experience, namely, that their school is doomed. In a limited sense there is a field still open to the pure Japanese artist: the kingdom of birds, flowers, and insects offers subjects which he can treat in a manner not inferior, and often distinctly superior, to the corresponding work of his Occidental colleagues. But his figures, his landscapes, his animals, his sea-scapes—all these

scarcely rise above the level of ridicule. The past, indeed, produced painters who bequeathed to posterity charming little bits of scenery, glimpses of summer mists, winter snows, or island-dotted coasts. The mantle of these masters is still worn by a few, but their efforts to sustain the reputation of their school are almost lost in the mass of worthlessness that comes from the brushes of their imitators. Painting in the genuine Japanese style survives only in so far as its outcome has not fallen hopelessly behind the sympathies of the day. This fate might have been predicted long before such exhibitions as that now open at Uyeno furnished convincing evidence.

LAND AND SEA.

AT a recent meeting of the Asiatic Society of Japan, Admiral BELKNAP, U.S.N., drew attention to the very remarkable depths that exist off the East Coast of Japan—depths which he had the honour of first sounding. This deep-sea sounding is a comparatively new feature in terrestrial surveys, made imperative when telegraphic cables had to be laid along the ocean bottom. Till then, careful surveys near coasts or in the vicinity of shoals were found sufficient for the practical needs of man; but now, partly because of commercial necessities, partly because of scientific curiosity, we are not content with such border knowledge. Irrespective altogether of the direct value of a discovery, man has a growingly insatiable desire to know all about it. And although, outside the telegraphic question, it is difficult to see what practical benefit the careful contouring of the ocean depths can have, nevertheless the work goes on steadily in the hands of our Naval officers, and the general interest in it grows as steadily. We propose to notice a few of the broad results recently established as regards the comparative areas and the comparative heights and depths of land and sea.

The most elaborate of recent calculations on these lines is that by Dr. JOHN MURRAY (of the *Challenger*) who finds the dry land area to be to the sea area in the ratio of 13 to 33. The land area being much the smaller, it is to be expected that its average height will be distinctly less than the average depth of the sea. The ratio in this case is indeed as 10 to 54. To get a clearer idea of the full significance of the comparison, let us suppose all the dry land to be reduced to one uniform height with sheer vertical walls facing the sea, and the sea to be reduced to one uniform depth like a canal with perpendicular banks; then the height of this table-land above the sea level would be 2,231 feet, and the depth of the ocean ditch would be 11,975 feet, or very nearly 2,000 fathoms.

Thus a comparatively slight sinking of the world-ridges which form our dry land would suffice to bring about a uni-

versal deluge. If we were to slice off all the matter that protrudes above the ocean surface and tumble it into the ocean depths, the mean depth of the original ocean part would be reduced by only 140 fathoms. If again, we were to level down all the rocky irregularities of the solid earth until the world should be covered with an ocean of uniform depth, this depth would be as much as 1,700 fathoms. It is small wonder, then, that the denizens of the deep are the oldest inhabitants of earth. In the evolution of the higher animals the first necessary step was the evolution of the dry land, which geologists tell us was much less extensive in former eras than now. In Palæozoic times Europe was chiefly a small Scandinavian patch and Asia a narrow island stretching from Turkestan to Manchuria. Japan was not; North America did not extend below the Great Lakes; and all over the present continental area dry land existed in isolated patches. The prolonged hypogenic action that gradually through the ages pushed up the world-ridges above the ocean waves was therefore the *sine quâ non* to an evolved humanity. We do not yet understand the nature of this tremendous force which has lifted the highest summits eleven miles above the deepest hollows. Its action still goes on in the tilting of continents and the quivers of earthquakes; its effects exist in all the land survivals of to-day. But when we do understand it we shall recognise in it as potent a factor in the development of mankind as the very life-germ itself.

It is probable that once life, like a limpet, attached itself to the emerging land, it would begin to evolve with accelerated rapidity. The greater variety of environment would lead to quicker changes in habit of life and structure of body. How much richer must the frog's experiences be than the tadpole's! Even on things inanimate the atmosphere has the touch as of a magician's wand. For the sub-oceanic hills and dales altogether lack the picturesque forms which weather, the master sculptor, has wrought out all around us. Fairy-like grottoes and caves "full many a fathom deep" are as rare as their mythical dwellers, the mermaids. Taken all in all, a soul of high ambition should rejoice that he is of the land and not of the sea; and should be eternally grateful to the volcanic agencies which in spite of gravitation prepared his place for him.

Gravitation, however, has its own important functions. Under its influence the ocean waters are highly compressed in their lowest depths. In the recently published *Challenger* Report on the physical properties of water, Professor TAIT has calculated that, if the action of gravity were to cease, the level of the ocean in the deepest parts of the Pacific away to the east of Japan would rise more than 600 feet. A huge wave would come rolling in upon us, and Foreign Concessions and Consular Courts would be totally submerged.

CHARACTERISTICS OF SOME AMERICAN CITIES.

ONE of the most striking features of American life at the present day is the crowding of the native American population into the cities, and the phenomenal growth of these cities. Wealth in the great centres is so easily secured by intelligence and astuteness, that the "smart" American of the rural counties is allured from the dull labour of ploughing and reaping, and leaves his rude farmstead for the more comfortable and luxurious surroundings of the city. It is a remarkable fact that districts which, when the present generation was young, were peopled by a rural population bearing Anglo-Saxon names, are now wholly and entirely German or Scandinavian. The hard-working, less mercurial Teuton or Scandinavian comes into the possessions relinquished by his more ambitious predecessor, and the cities gain what is lost to the counties. The cities themselves, moreover, are constantly receiving increments of pure German and Scandinavian stock, who conduct most of the retail business; while the Irish, Polish, and Italian immigrants act for the most part as "hewers of wood and drawers of water." It is astonishing, in passing through great centres like Kansas City and St. Louis, to observe the almost unbroken succession of guttural names in the shop-signs, and the frequent recurrence, among ecclesiastical edifices, of Lutheran and Evangelical churches, built for the accommodation of these immigrants from the North Sea. Most of the population of Iceland, starved out of that inhospitable climate, is making its way westward, *vid* Leith in Scotland, to find more favourable conditions for life and labour in the New World. In a few years Iceland may be virtually uninhabited. This population, however, will engage either in fishing or in agriculture.

There is rivalry among the great American cities, rivalry which found a vent for expression in the recent competition for the accommodation of the so-called World's Fair. The four serious candidates were New York, Washington, Chicago, and St. Louis. Philadelphia was ruled out, seeing that she had already enjoyed the great honour of entertaining the world at the Centennial Exhibition of 1876. The claims of the other four were duly considered and discussed with considerable heat in the columns of newspapers and amongst the public generally. The chances were considered to lie between New York and Chicago. Finally the great emporium of the North proved the winner, and the American world as a whole acquiesced in the justice of the award.

And yet Chicago is in some respects less of a centre to the Commonwealth than is St. Louis. Of late years, no doubt, the northern city has outstripped the Queen

of the Mississippi in enterprise and growth, and has left her far in the rear. But still St. Louis remains the railroad and commercial centre for a number of the Southern states; and the radius of the circle which may be drawn, with St. Louis as a centre, so as to cover United States' soil, is far greater than if, on the same map, one were to use Chicago as the centre for such a circle. St. Louis is the metropolis of the Mississippi, the hinge of the "Mississippi Valley System," which embraces about 15,000 miles of railroad. It leads not only the Republic, but the world in about a dozen industries. The river frontage of the city extends over nearly twenty miles, and the city limits include an area of sixty-one square miles; its population numbers over half-a-million. Sixth in respect to population, it stands fourth in the matter of commerce. Its natural situation on a bend of the Mississippi river, just beyond the point where the Missouri adds its own mighty quota of waters, is both commanding and picturesque.

It must, however, be confessed that the traveller who visits St. Louis suffers a certain disappointment, observing that no more use has been made of so fine a site. The broad waters of the Mississippi, "Father of Waters," flow round the city, and she turns her back to them. The famous levee, far less crowded with steamboats than in days when the great bridge had not yet brought in railway competition, is a mere shelving bank paved with cobblestones. There is no esplanade, no river street frontage worthy of the name. The fine buildings of the city, its banks, insurance offices, hotels and business houses, face each other in narrow streets, where the passer-by has to crane his neck to get a tolerable view of them. Of the numerous parks, none slope down to the river; they are all situated within the city or inland, and lose the inestimable advantage of a river prospect. In the matter of railway depôt accommodation, St. Louis is notoriously deficient. Her central station, known as the Union Depôt, would disgrace a city of far meaner pretensions. It is dirty, cramped, and altogether wretchedly defective; a mere temporary structure that threatens, notwithstanding constant complaints, to remain permanent. When compared with the fine railway depôts of Chicago, it appears altogether disgraceful. The site for a new depôt, however, has at last been chosen, and the ground is actually cleared for building operations.

By good luck or good guidance, and partly, no doubt, as a result of second thoughts to which the great fire would allow free play, Chicago has made few of the mistakes that one regrets in the case of St. Louis. The fine frontage on the lake has been made good use of, several of the chief hotels commanding a prospect of Lake Michigan; while the glorious Lincoln Park owes much of its beauty to the skilful use that has been made of its

vicinity to the lake. The streets of Chicago are wider and far better suited to the lofty buildings that are so characteristic of modern American city architecture. And, finally, the buildings themselves are costlier and more effective. The splendid Auditorium Building, covering about one and a half acres, and having a street frontage, on three sides, of 710 feet, is perhaps the finest block in the world. It comprises a music hall, a recital hall, a tower observatory, and an hotel with 400 guest rooms, besides an extensive business portion. The building rises to the great height of 145 feet, in ten separate stories; and above the whole looms the high tower, 270 feet in height, where, in the seventeenth, eighteenth, and nineteenth stories, are situated the rooms of the U. S. Signal Service station. The other city buildings are in keeping; the fine sculpture and painting galleries, the city chambers, the hotels, and several railway depôts. Chicago impresses a stranger perhaps more than any city in America; its vastness and orderliness, without the sense of emptiness which Washington is apt to convey, make it superior in general impressiveness to the over-crowded empire city on the Hudson. The choice of Chicago as the site for the World's Fair in 1892 will, we think, be fully justified by results.

Kansas City is fast becoming a rival of the older communities lying to the east. Suddenly casting aside its insignificance as a wild western settlement on the edge of the buffalo plains of Kansas, it has now a population of two hundred thousand, and, from its unrivalled position as a railway centre, its future growth is certain. Here again one meets with those lofty tower-like buildings which the necessities of New York first brought into vogue. But, as the busiest parts of the city lie in a hollow, and as the most crowded thoroughfares are narrow, few of these structures are shown to advantage. The residential portion of the city occupies the long range of bluffs rising abruptly at the back of the original river settlement. An unequalled system of cable, electric, steam and horse tram-cars binds the city together and unites it with the suburb across the Kaw river. No limits can with certainty be placed by prognosticators to the future growth of Kansas City. It is a growing centre, throbbing with life, and full of assertiveness, its population recruited in great measure from Wisconsin and others of the Northern States.

The position of St. Louis and Kansas City, each on the edge of the State of Missouri, and each touching prohibitionist States, has led to curious conditions. A long range of beer saloons marks the street into which the traveller passes when he crosses the State line dividing East and West Kansas City, while St. Louis gamblers find across the river, in the Illinois St. Louis, freer opportunities for the practice of their pastime. It is a difficult

matter to secure for the administration of laws touching on social life as gambling and liquor laws do, more than a certain amount of efficiency. Society refuses to bear more than a modicum of strain in this direction, and measures that are meant to be curative are apt to develop new evils.

DOROTHEA LYNDE DIX.

“**H**ERE is a woman who, as the founder of vast and enduring institutions of mercy in America and in Europe, has simply no peer in the annals of Protestantism. To find her parallel in this respect, it is necessary to go back to the lives of such memorable Roman Catholic women as ST. THERESA of Spain or SANTA CHIARI of Assisi, and to the amazing work they did in founding throughout European Christendom great conventual establishments. Why, then, do the majority of the present generation know little or nothing of so remarkable a story?”

These are among the opening words of the preface to the “Life of Dorothea Lynde Dix,” by FRANCIS TIFFANY, of Boston, U.S.A., a recently published book, well worth reading by mankind the world around. Mr. TIFFANY answers his question by informing us that the story has hitherto been untold, simply because Miss DIX’S “own positive refusal to permit anything to be written of her” compelled silence during her life-time. Shortly before her death, however, which took place about three years ago, Miss DIX, yielding to the persistent solicitations of friends, gave her consent to the preparation of a memoir of her life. The world may now know of her wonderful career of beneficence.

Miss DIX was born just after the present century opened; she spent her childhood chiefly in and near Boston, in the State of Massachusetts, of the United States. At that time Boston was “already giving signs of an intellectual ferment in theology, philanthropy, philosophy, and literature, which was to inaugurate a new epoch in the spiritual history of New England.” “None entered more earnestly into certain phases of this spiritual re-birth than did Miss DIX.” Probably the strongest prompting in the nature of this sensitive girl was “pitiful compassion for the ignorant, degraded, and suffering.” Her spiritual development was then, and for many years afterwards by intimate contact, under the wise influence of Dr. WILLIAM ELLERY CHANNING, so well known throughout the world now, for religious fervour and Christian humanitarianism. Even in girlhood the genius of the woman led Miss DIX to do deeds of mercy. She established in her grandmother’s barn a school for outcast children, which became the nucleus of a great afterwork of beneficence to the children of degraded poor. For several years, during early womanhood, Miss DIX

was in a very precarious state of health (it was often believed that she would live but a short time), and the direct effect of her disease was to “raise to a perilous intensity the self-sacrificing impulses and the moral and religious ardour of her temperament;” to see suffering or degradation anywhere aroused in her an unconquerable longing to relieve it. But a long, though often critically invalid, life was before her.

Miss DIX was nearly thirty years old when the events occurred which directed her energies into the special work by which she became distinguished among the world’s benefactors. For some time the modern theory of insanity and the treatment of the insane, advocated by such men as the French PINEL and the English TUKE, had been slowly making way among Western nations, and there were, in both Europe and America, noble minds enlisted in their service, but “none the less one indispensable spiritual power was lacking. It was that of a fervid apostle of the new creed.” In Miss DIX that apostle was to be found.

Fifty years ago, when coming out of Church one Sunday, she overheard some gentlemen speaking of horrible treatment to which prisoners and lunatics were subjected in a jail near Boston. She was so moved by what was said that she determined to go to the prison and see for herself. The result of that visit was more than a confirmation of what she had heard. Then, a suspicion that this terrible condition of affairs was not confined to this one prison started her on an investigation of all the jails and almshouses of the State. For two years she followed her self-imposed task, “steadily accumulating statistics of outrage and misery,” until she had gathered a mass of testimony appalling in extent and detail. With these potent facts she memorialized the Legislature of Massachusetts. There is not space here to repeat Mr. TIFFANY’S eloquent story of how Miss DIX’S memorial startled and shocked the commonwealth, nor of how, at length, a Bill of Relief was triumphantly carried through the legislature, making at last the horrors afflicting the pauper insane, which had for so long disgraced the community, only a miserable memory.

With this triumphant struggle, however, Miss DIX’S mental and moral powers found an adequate field of action, and started her on that marvellous mission of mercy, by which, having conquered the law-makers of her own State, she gained the support of the legislatures of more than twenty great States of the American Union, again and again secured the co-operation of both Chambers of the Federal Congress at Washington, and, in Europe when others had notably failed, prevailed upon the British Parliament to pass laws which actually revolutionized the lunacy legislation of Scotland. The story of these splendid achievements covering nearly twenty years of intense devotion to the

one purpose of justice and mercy to the helpless suffering, has been told with rare effectiveness. Mr. TIFFANY'S enthusiastic chapters are a masterly tribute to the heroic life they make known to the world. It is impossible to give even a synopsis of the thrilling recitals. We are shown in them, not simply a good and merciful woman—she was truly that—but a woman, also, in whom flashed “the splendours and audacities of moral genius,” “a woman with the grasp of intellect, the fertility of resource, and the indomitable force of will that go to the make-up of a great statesman or a great military commander.” It must stir the most indifferent to read Mr. TIFFANY'S graphic record of this faithful patience, this unwearying, unswerving impulse of purpose, this keenly intelligent use of opportunities to accomplish the one end, this persistent self-obliteration in the service of others, this devout humility even in moments of magnificent success after the hardest struggles, and this courage always abounding where strong men often faltered and gave way. What could seem more presumptuous, for example, than for a woman and a foreigner to attempt a legislative revolution among a people like that of the British empire, yet, “gentle lady and terrible reformer,” as she has been named, Miss DIX knew no national or race lines when the destruction of injustice to helpless humanity was necessary, and did presume to call upon the British nation to destroy its long permitted wrongs. Her appeal was heard and, in the end, in spite of all the obstacles placed in her way, gratefully, nobly heeded. In Scotland and in the Channel Islands a new and cheering day for the insane dawned. Hardly less presumptuous would it seem that a woman, a foreigner, a Protestant, and yet more, a Unitarian, should seek an audience of the Supreme Pontiff of the great Roman Catholic Church to inform him that “in the light of modern knowledge and humanity, the insane asylum of the Holy City was a disgrace and scandal,” yet, obedient to a law higher than that of Rome, Miss DIX did meet Pope PIUS IX. who listened to her with sympathetic attention, who afterwards went unannounced to the accused asylum and made a personal inspection of its wards, and who in a second interview warmly thanked her for bringing to his knowledge the condition of these “cruelly entreated members of his flock.” Not long afterwards the Pope erected a new asylum in Rome, on the most approved plan, in all probability prompted to do so by the efforts of Miss DIX.

But space prevents our following this Crusader for mercy's sake in her long journeys. Alone she travelled through Greece, Turkey, Russia, Sweden, Norway, Denmark, Belgium, and part of Germany, day by day exploring prisons, asylums, poor-houses, and leaving inestimable blessings in her way.

Returning to America not long before the outbreak of the great civil war, Miss DIX became the constant adviser and helper of the many asylums for the insane which had been originated or improved by her efforts before she went to Europe. Her biographer says that during these four years she obtained “larger appropriations of money for purely benevolent purposes, than, probably, it was ever given to any other mortal in the old world or the new to raise.” Among the “millionaires of charity” she easily heads the list.

While engaged in this onerous work the crisis in the history of the American Union came. The war between North and South broke out. For the succeeding four years Miss DIX was burdened with a new and engrossing labour, that of “Superintendent of the Women Nurses” of the military hospitals of the United States. Although sixty years of age at the outbreak of the war, she assumed and bore to the end of the fearful conflict the extraordinary burden. How much suffering was relieved, and how many valuable lives were saved under her wise management can never be known. She never gave herself a day's furlough through the long years. “Untiringly she remained at her post, organizing bands of nurses, forwarding supplies, inspecting hospitals,” correcting abuses, and opening new ways of beneficent service. “A very retiring, sensitive woman, yet brave and bold as a lion to do battle for the right and for justice,” wrote a physician of her at that time. All the public recognition of her invaluable services she would accept from the national authorities was, the “Flags of my Country.” These now hang in the Harvard College Memorial Hall. After the close of the war Miss DIX, ever untiring, collected money and built a monument in one of the largest national cemeteries, “In Memory of Union Soldiers who Died to maintain the Laws,” her tribute to the patriotic dead, and in myriad ways assisted soldiers and nurses who had become permanent invalids during the national strife. Then, at the age of sixty-five, she took up her old work in behalf of the insane, and continued it for fifteen years, a self-appointed but universally recognized “lunacy commission” of one, to visit the asylums scattered all over the country, the offspring of her unsurpassed devotion through a half century. The last five years of her life, Miss DIX spent, gratefully cared for, in the apartments tendered her in the New Jersey Asylum, which she had playfully named her “firstborn child.” There, after a long and painful illness, this queen among philanthropists passed away in 1887, truthfully characterized as “the most useful and distinguished woman America has yet produced.”

What special appropriateness has this glimpse at the story of Miss DIX'S career for the people of the empire of Japan?

Much, as a memorial of what has been done by one person for the alleviation of human misery and the advancement of the world's higher civilization. It is especially fitting, however, that Miss DIX'S memory should be honoured here, because to Miss DIX is owing much of whatever care is now given to the insane of this nation. When MORI ARINORI was sent to America as *chargé d'affaires* of the Japanese Government, Miss DIX “sought his acquaintance and held long and earnest interviews with him on the subject that lay nearest her heart.” In 1875 Mr. MORI wrote from Tokyo to her, “Do not think I have been idle about the matter in which you take so deep an interest. I have given the subject much of my time and attention, and have successfully established an asylum for the insane at Kyoto, and another in this city is being built, and will soon be ready for its work of good. Other asylums will follow, too, and I ardently hope they will be the means of alleviating much misery.” To Miss DIX evidently the field was the world, and to the world her memory belongs.

Not for the insane only was her life a perpetual offering; poverty, ignorance, and degradation of all kinds among her fellow beings, and suffering in the brute world, had her unreserved service. We cannot follow in these columns the inspiring record of her work in its fullness. Mr. TIFFANY has given it with the pen of a master, and we commend his memoir to the reader.

CLAY MACCAULEY.

FLOWER POTS.

NO nation ever carried the manufacture of flower pots to such a height of artistic skill as the Japanese. Their habit of dwarfing shrubs, and their rule that in the furniture of a verandah or a *naka-niwa* movable yet growing plants were a necessity, led the keramist to employ all the resources of his art in producing porcelain or faience pots fit to figure among any surroundings. In almost every variety of ware we find flower-pots so perfectly finished both technically and decoratively, that the great care bestowed on them is evident even to a tyro. They are of all shapes, from the portly round vase of plain earthenware in which the true lover of peonies nurtures the glowing plants, to the wide flat dish of blue-and-white or still more highly decorated porcelain, sometimes of great size, which, with its deftly arranged contents of miniature rockery, bright hued gravel and rare grasses, constitutes the much-affected *sekisho* of aristocratic alcoves. The delicate *sous-couverte* blues and fine-grained pastes of the Nabe-shima and Hirado factories were always valued in this branch of keramics, but perhaps the most highly prized colour of former days was *ruri*, or mazarin blue. Every lover of Chinese monochromes knows what mar-

vellously soft rich tints were produced by the old-time potters of Ching-tê-chêng in mazarin blue. There is great, almost incredible, room for exercise of skill in this colour. The gulf is enormous between the glowing, restful blue of the seventeenth and eighteenth centuries, with its microscopic dappling too minute to be perceptible without very close inspection, yet greatly enhancing the beauty of the surface by a subtle play of light, and the heavy, lifeless, impure colour obtained from modern smalt. The softest velvet does not differ from the coarsest cotton more than these two differ from one another, not in the quality alone of the colour but also in its texture, a point which every careful student of Chinese monochromes will at once appreciate. The *ruri* of Japan never quite attained the highest standard of its Chinese model, but it was a rich, restful, and beautiful colour for all that. Its successful production was a matter of the greatest difficulty. The pigment employed was of two kinds, the one technically called *suna-ye* and the other *ye-gusuri*. *Suna-ye*, literally translated, signifies "sand picture;" that is to say, colouring matter obtained from sand or gravel. The appellation had its origin in the fact that this particular kind of cobalt was found in pebbly masses which had to be crushed, washed, and subjected to various troublesome processes before they consented to yield up the fraction of pigment embedded in them. The *ye-gusuri* (literally, colour for painting) also existed in a very inaccessible form, and both this and the *suna-ye* were scarce and difficult to find. Indeed, the expense of searching for and preparing the colours was virtually deterrent, and could only be borne when no limit of price hampered the keramist. The mineral does not appear to have been found anywhere but in the provinces of Owari and Mino, and when these formed part of the powerful fief called after the name of the former province, no question of cost had to be considered in manufacturing *ruri* pots for use in the castle alcoves and gardens. In those lordly times fifty labourers would be unhesitatingly set to dig for *suna-ye* and *ye-gusuri*, and if three or four days' search only produced one or two ounces of the precious pigment, nobody was censured or embarrassed: the work simply proceeded. It used to be calculated that colouring matter sufficient for a medium-sized flower-pot cost about ten *yen*, and as a matter of course ordinary folks had not much concern with such expensive articles. A coat of *ye-gusuri* was first applied, and its surface was then covered with *suna-ye*, this double layer, with the thin translucent glaze ultimately run over the whole, forming a thickness of nearly a quarter of an inch. Indeed, the thickness of the blue covering constituted a distinguishing feature of old *ruri* monochromes as compared with the crude, garish smalt of modern days, which

is never applied in a layer of more than about three-hundredths of an inch. The ash of the *kiri* (*Paulownia imperialis*) was mixed with the colouring material, and modern potters say that experts of former times possessed special skill derived solely from experience and essential to the successful production of this grand colour. Things are changed now-a-days. From 1875 the choice *suna-ye* and *ye-gusuri* were replaced by imported smalt, which alone is used at present, with results hopelessly inferior. The *ruri-no-uyekibachi* (*ruri* flower-pot) was not a simply monochromatic piece. It was generally decorated with finely moulded white designs in high relief, as a scroll of peonies and *shishi*, an arabesque of vine tendrils, a combination of bamboo leaves and stems, or the conventional emblems of happiness, fortune, and longevity. It is strange how little care seems to have been taken of these beautiful pots. Twenty years ago numbers of them were to be found in the conservatories of Tokyo gardeners, exposed to all the perils that beset fragile pots under such circumstances. To-day with difficulty can one be discovered here and there, and generally its chipped and cracked condition testifies the hardships it has endured. Yet the supply will never be renewed unless chemists can furnish some easy substitute for the colouring matter of former days. No one dreams now of going out to look for *suna-ye* or *ye-gusuri* in the hills of Owari and Mino. The minerals rest undisturbed, and the beautiful part they were once with pain and patience persuaded to play is miserably performed by cheap and nasty smalt, which never deceives the mediocre workman nor ever enables him to come within measurable distance of the achievements of his predecessors in the production of *ruri* monochrome.

BASEBALL.

The game of Baseball played on Saturday, Club v. U.S.S. Omaha, resulted in a win for the Club. We append scores:—

CORRESPONDENCE.

THE TOKYO POLICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me space to express our high appreciation of the efficiency of the police in this capital city. During the time of the fire last evening (7th inst.), in this suburb of Tsuno-hazu-mura, which threatened at one time to destroy both our Joshi Dokuritsu Gakko and residence, the police rendered most valuable services. The officers, from the chief of the district to the lowest subordinate, were promptly on hand. Most courteous and affable were they, maintaining self composure amid all the excitement surrounding them. They took special pains to guard the school and our home near by, having two policemen patrol our premises the whole night.

I have met with no such efficiency in all my travels, and I doubt whether any civilization, Occidental or Oriental, can claim a superior and

better qualified police force than that found in Tokyo. Last night's experience only increased my high esteem of the officials in this department of municipal government. Whenever previously I have called upon them for any service whatever I have found them most worthy of their position. To the officers in Tsuno-hazu-mura and Shinjuku districts I desire, in behalf of the school and my family, to render this expression of our deep gratitude and sincere appreciation.

FREDERICK J. STANLEY.

Tokyo, November 8th, 1890.

MEMBERS OF THE DIET.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a list of the members of the Lower House of the Diet, given in your issue of August 1st, I find information respecting the occupations of only about 175 of the number.

Will you kindly let me know where data are available concerning the rest, or are so many as 125 of the members men who have no "occupation?" I shall be greatly obliged for any information to this end that you may be able to give me.

Yours respectfully,

A. B.

November 6th, 1890.

(We are sorry to say that no information of the nature desired by our correspondent has yet been published.—Ed. J.M.)

THE PERUVIAN MINING SCHEME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the mail edition of your important paper dated 21st June, you publish extracts from the Japanese press in reference to the Japanese Mining negotiations in Peru, and, guided by your honorable feelings and strict impartiality, you express your reserve to admit the vile imputations put forward against me.

I beg you, sir, to accept the expression of my gratitude for your generous proceeding.

You will understand that neither the great distance at which I find myself from Japan, nor the level to which the attacks against me have been lowered, nor the language in which they are written, allows me to enter into discussion on this painful matter.

Under given circumstances I have resolved to address Mr. Takahashi as per my letter of 12th inst., of which I beg to enclose a copy, subjoining, at same time, for your guidance, copies of some other letters and documents, as per separate list, to which I allude in my said lines. With these data at hand and with the volume "Amazon Provinces of Peru," by Guillaume, which I remit by book-post, you may, if you kindly take the trouble of looking these papers over, form a clearer judgment about myself and with regard to this painful affair.

I would feel obliged to you if you would publish or extract from these papers what you may deem convenient to general interest and fair towards me.

I remain, Sir, yours faithfully,

O. HEEREN.

Lima, September 12th, 1890.

Lima, September 12th, 1890.

K. TAKAHASHI, Esq., Tokyo.

SIR,—By the last mails I received from Yokohama the *Japan Mail* dated 21st June and the *Herald* dated 3rd July, in which extracts are published from the Japanese newspapers in reference to the Japanese mining negotiations in Peru, which have come to so fatal and disastrous a close, involving not only serious material losses, but also the sacrifice of higher and sacred personal and general interests.

Although it is not strange that in the state of over-excitement which the breaking down of the enterprise has caused—an enterprise to which so many reasonable hopes of success could be attached—violent and extravagant opinions and judgments should be put forward by some of the interested, in order to explain such a painful event, losing sight of the fact that but too often in life very simple and insignificant causes produce transcendental effects, and that it is not necessary in order to explain a war disaster, to attribute the same to the acts of a traitor, still on this occasion the limits are passed, and the attacks lowered to a level to which I disdain to descend for a reply.

I doubt not that once the excitement has calmed down, and confiding in the qualities which distinguish the Japanese character, those who so vilely have attacked me will regret their rash and unpardonable proceeding, and the more so, as the wounds I have received will not easily heal, for the injustice done to me will not be repairable.

From what I can gather from the publications in the *Herald* and *Japan Mail* it would

seem that I have deceived you, the Japanese engineer, and in fact every one, and that the mines, which by undisputedly competent authorities in the matter are declared to be of the most important existing in the world, which fact is so evident that with eyes, a certain amount of intelligence, and good faith, it cannot but be confirmed by any one—those mines are considered by the "Japanese mining engineer, Mr. Koike" as of little or no value, and thus a scandalous fraud! If the case were not so serious, it would simply be ridiculous, knowing, as you and I know, who and what Koike is! That such a man should have decided on the fate of such a negotiation, and of our names and interests, is nearly incredible, and still a fact; and no wonder that I have been able to "salt" or "fill up" and "disguise" the mines, (extending over 1,200 metres in length and being open to inspection to anyone, as they have in fact been extensively worked) or that I have bought them at infinitesimal cost, and resold at an enormous advantage; no wonder, I say, that all these, and many other vile, false, or absurd assertions, put forward from different parts or in ignorance of facts, or in bad faith, should have found acceptance, if Koike's opinion on mining matters of such importance, is admitted and of weight!

All those assertions are as false and vile and absurd, as those which from the beginning were launched against this enterprise, when, as I understand, it was even declared that the Carahuacra mines did not exist at all, and when their existence was no longer deniable, they were placed in regions where human beings could scarcely live!

On the other part, it is forgotten, or rather not mentioned, that I was to receive my interest in this negotiation, to which I had agreed to hand over, not only other costly mines belonging to me, but also a valuable property in Lima, and eventually my agricultural estate, the cost of which exceeds £25,000, receiving in exchange only shares, which if the negotiation turned out well, would be of value, or if the mines were bad cause me most terrible loss. It is forgotten to mention, that, as you know, I continually insisted on Mr. Kawano coming out here, in order to direct work at the mines, and how pleased I was when I heard that Mr. Kawano not being able to come, Mr. Yamada was on his way to Peru. It is forgotten to say how much I have written, requesting that efforts be made in Japan, in order to get an Imperial official representative named for Peru, who might inform all about this country, which is also so infamously depicted by some of your native press, and who might protect Japanese interests, and report on the progress of our negotiation, and eventually on many future ones. I have always felt convinced, and feel so still now, that few countries in the world, if any, might become of such advantage to Japan as Peru.

In fact you, Mr. Takahashi, have had opportunity to treat and study me, in the intimate intercourse which we have entertained during several months, and I know you cannot but be convinced that I am incapable of any proceedings similar to those which are so vilely imputed to me.

In fact it would have been more than madness to involve myself in a negotiation in which all depended on the results, if I had not been, as I am, absolutely sure of the value and importance of the mines; it would have been more than madness to expose myself to utter ruin and to the consequences which would have fallen on me, and with a large Japanese colony on the spot.

Common sense, and any impartial judgment, in view of the preceding facts which in every respect are exact, cannot but declare absurd the vile assertions put forward against me, and seek for an explanation in reasonable causes, which are easily to be found, in the course of this unfortunate affair, for which perhaps Mr. Tashima was not quite the most suited, as you yourself have had occasion to appreciate. I will try in a few words to recall to your mind the following true facts. In the middle of March last, and when we had agreed on all clauses of our mutual contract, and on my expressing to you my satisfaction about the arrangement, and the advantages we had a right to expect from the negotiation, you, for the first time, informed me of the extravagant hopes which in Japan were attached to it, and offered to give me a translation of the calculations made there, by which more than a million yen net profit was to be derived per year.

Considering that it would be more than serious, not to rectify such unjustifiable expectations, I proposed to you immediately to write to Capt. Guyer, the representative of Messrs. Fraser & Chalmers in Peru, requesting him, who knows the Carahuacra mines and ores thoroughly, as he has made a serious study of the matter, and is a man of high respectability and exceptional competency and prudence, to submit for your guidance his authorized opinion on so important a matter; and

Mr. Guyer handed us on the 13th March his letter, report, and calculations, in which, treating only of the low grade ores of Carahuacra (and not taking in consideration the richer ores from those mines, which were and have been up to now always shipped to Europe to be dealt with there) he shows a profit of £30,000 net per year, if duly treated on the spot. Mr. Guyer, in order to be sure, calculates on 30 oz. ores (equal to some 11 marks per cajon) and of such low grade, nearly unlimited amounts are at hand. Mr. Guyer, like all competent men, recognises the immense importance and value of the Carahuacra lode to consist in the fabulous amount of low grade ores of which it principally consists, leaving the rich ores and large pockets as extra advantages out of his prudent calculation, and still giving £30,000, or 20 per cent. on £150,000, our projected mutual capital.

Unfortunately this reasonable and minimum result is too insignificant compared with the calculations formed in Japan, and of which on the 13th of March you handed me the surprising data. By those calculations with some £43,000 invested in machinery (a 40-stamp mill, exactly as Mr. Guyer projected and calculated) and some £15,000 working capital, and with about 250 Japanese miners, a yearly net profit of over one million yen, was shown.

I, for my part, have certainly, not by word, nor by writing, given any data authorising such extravagant expectations, nor have I had any idea thereof until the time I mention, say the middle of March.

Carahuacra is evidently a most important and valuable mine, but in order to give such results, a very large capital would have to be invested, under thoroughly competent and economical management with very powerful machinery, &c.

In the difference between Mr. Guyer's calculation based on the lowest and soundest items, and the Japanese calculation, established on extreme expectations, the real reasonable principal cause of the breaking down of the negotiations may be found, and in fact since that time you and I understood that the projected negotiation could not offer satisfaction to either of us.

The result was our abandoning the execution of the mutual contract we had agreed upon, and your proposing me to grant an option for the whole of my properties in Carahuacra, in order to establish a purely Japanese negotiation.

This is to my sincere understanding the real truth, abstaining from entering into details in matters of a more secondary character, although still of very great importance, as e.g. the cost and doubtful convenience of Japanese miners, &c. On the 10th of April you left Peru for Japan.

Having resolved not to discuss nor to reply to those who have attacked me and the negotiations in the most unfair way, and who now with apparent perfect reason, have a right to enjoy the ruins of the enterprise, I have decided to address you these lines, as the only and final step I can take under given circumstances, and in order to place matters on their real basis.

You must allow me now to formulate a reproach against you, which you cannot but declare just; and it is your not having acted with the frankness I had a right to expect and you had a right to show, and the more so as it cannot have escaped your attention that on certain occasions I made you certain indications with regard to Mr. Tashima, and gave you to understand my want of esteem for him. You have preferred not to ask for an explanation, and you may have had your reasons for so acting, but I expect that many evils we have now to lament could have been avoided if you had acted otherwise and some matters had been cleared up there and then. I, for my part, have to regret my having condescended to submit to certain pretensions which, if not acceded to, would have continually caused opposition or difficulties in the way of any projected negotiation. Unfortunately, in many business matters where elements of different kinds have to interfere, it happens that in order to come to a solution concessions have to be granted, which, although not affecting the real importance of the negotiation, still affect its tendencies.

I desist from entering into further details, repeating my last assertion that there are certainly few more important mines in the world than the Carahuacra mines, and that the negotiations that have come to so painful a close, would have not only procured great material advantage, but honour and satisfaction of superior value to all interested. The future will, without doubt, prove that my assertions were exact. I may resolve to send a copy of this to the editors of the *Japan Mail* and the *Japan Herald* in order that, if those gentlemen deem it fit, and fair towards me, they may publish the same or extract part thereof.

I remain, Sir, yours faithfully,

(Signed) O. HEEREN.

Lima, 30th June, 1890.

SHIRO FUJIMURA, Esq., Tokyo.

DEAR SIR,—I confirm my lines dated 26th inst. and beg to acknowledge receipt of your telegram dated 28th inst. reading:—

"patulal" = The panic still continues.
 "procurer" = I have nothing to propose.
 "actingly" = Act promptly.
 "accumbency" = According to arrangement.
 "Takahashi" = Takahashi.
 "robuck" = As I will not use the option to purchase your properties and rights stipulated in our contract, I beg you to inform Mr. Yamaguchi of the fact at once and kindly attend to the departure of the Japanese for Japan. Telegraph me the day of their departure.

"deregle" = Telegraph day of departure.

This telegram thus confirms the fact of the negotiation having broken down, and, as it seems, on account of the financial panic still existing in Japan.

I am satisfied of having done, on my part, all I could to save you and your friends the financial loss you are suffering, and was, as my telegram of 21st inst. expressed, desirous of facilitating any reasonable combination, even if prejudicial to me, but in order to save our names.

I have done my duty, and submit to what could not be avoided!—No words can express my painful feelings. I rely that you and your friends will act as your convenience may order you, when, as I but too well understand, this disastrous result will be declared to be my fault.

Unfortunately, success is all in life. The worst proceedings, and crimes committed, if in their result they are crowned with success, are not only soon forgotten but even transformed into merits in many cases; and the most honourable acts, the most important and beneficial plans, and the noblest intentions, if in their execution success is not the result, are soon exposed to blame, and depreciation of the vilest kind.

Such will be the case with regard to me, and to this negotiation.

Time, I rely, will do me justice; and I doubt whether ever any foreigner has during so many years so constantly kept as sincere and friendly feelings towards Japan and the Japanese, as I have done, although neither in Japan, nor in later times, nor now, have I derived any advantage thereof, but on the contrary suffered losses and annoyances thereby.

It is a useless, and would be a very unsatisfactory task for me, to expose to you many facts, and complications that have taken place in the course of this negotiation, and the great trouble the miners and some of the Japanese employes have caused, but I think it my duty to declare that Mr. Yamaguchi, and Mr. Yas merit high esteem.

The miners will give you data about the Carahuacra mines, and time will show that no more valuable property exists in Peru than those mines which I wished to see in Japanese hands.

Mr. Takahashi has fulfilled his difficult task in the most honourable way, and I cannot but express my high esteem for him, and for the members of the Company, which was established with so many reasonable hopes of success, and falls to the ground causing ruin and disgrace, separating Peru and Japan for many years to come, although these two countries are of the greatest importance for one another!

Your orders for the prompt re-embarking of all the Japanese to Japan will be duly executed. Mr. Yamaguchi has been informed that the negotiation has terminated, and will arrive from Carahuacra, in a few days with the miners. Matsumoto also returns for Japan.

I remain, dear Sir, yours truly,

(Signed) O. HEEREN.

"CARAHUACRA." 40 STAMP MILL.

ESTIMATE FOR WORKING 45 TONS OF 30 OZ. SILVER ORE PER DAY BY ROASTING AND ANALAGATION.

45 tons ore @ 30 oz. Silver	1,350.00
Less 20% loss in working	270.00
Leaves	1,080.00
Proceeds—1,080 oz. Silver @ \$1.11	\$1,198.80
Mining and transporting 45 tons ore @ \$2.00	\$90.00
10 tons coal @ \$8.00	80.00
42 tons salt @ \$32.00	1,440.00
50 lb Quicksilver	50.00
Labour and general expenses	100.00
Management, &c.	34.80
	494.80

Equal @ \$7 to \$1, to \$100 per day of 300 working days

\$700.00

\$30,000
 (Note this estimate was made for London parties who expected to form a syndicate on Carahuacra.—Guyer.)

Lima, September 12th.

Extract from the Estimates made in Japan, as handed to me by Mr. Takahashi on 15th March, 1890:—

Page 2.	THE ESTIMATES.	£
Price of services, grounds, &c.	31,000.00	
Machines and Buildings	43,000.00	
Passage Money, &c., for Japanese labourers.	7,400.00	
Passage Money, &c., for employes	305.00	
Advances	3,749.00	
Reserve fund	14,840.00	

Capital of society	150,000.00
--------------------	------------

Page 5.	EXPENSES.	Yen.
Salaries (\$24,000 in mine 21 employes, \$14,940 in mill, 13 employes)	38,940.00	
Office expenses	5,000.00	
Food for 43 employes	9,417.00	
Wages for 230 miners	65,584.00	
Wages for 20 head miners	10,857.60	
Wages for 65 coolies	14,190.00	
Wages for 50 women	5,400.00	
Gunpowder	14,352.00	
Timbers, columns, &c.	14,400.00	
Expense for transport of minerals	15,000.00	
Miscellaneous expenses	20,000.00	
Wages for 70 mechanics	20,208.00	
Wages for 16 coolies	4,992.00	
Wages for 20 women	5,184.00	
Coal salts, chemicals	90,000.00	
Miscellaneous expenses	10,000.00	
Price for mendicabals minerals	23,523.59	
	359,714.19	

PROFIT AND LOSS.	Yen.
Profits one year	1,370,214.144
Expenses one year	359,714.190
Gain	1,000,499.954
of which:—	

Page 6.	
Yen 100,000.	Reserve.
Yen 50,025	Gratifications.
Yen 30,000	Expense of head office.
Yen 180,025	
Balance Yen 320,474.954	Dividend, $\frac{1}{3}$ of which will be
Yen 410,237.477	for Japanese partners.

DETAILS OF PROFIT AND LOSS: INCOME.

Yen 1,370,214.144.—Price of Silver bullion. One miner is counted to take out $\frac{1}{4}$ of a ton of minerals, the average grade of the minerals estimated at 2.76 of one thousandth or about 27 marks per cajan, and worked by 200 miners 27 days per month.

Price of silver 13 cents. per mommé (1 mommé equals little more than $\frac{1}{8}$ of an ounce).

According to the above calculation the income per month will be yen 114,184.512.

Conform to original, O. HEEREN.

JUDICIAL TITLES.

IMPERIAL ORDINANCE No. 254.

We hereby give our sanction to the present Regulations relating to the Official Titles of Judges, Public Procurators and Clerks of Court, and to the retirement from office of Judges, and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 18th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count YAMADA AKIYOSHI,
Minister of State for Justice.

Article 1.—Judges, public procurators and clerks of Courts of Law who may be in office when the Law of the Constitution of Courts of Law, comes into effect, shall be styled judges (*hanji*), public procurators (*kenji*), and clerks of Law Courts (*saibansho shoki*).

Article 2.—Judges who may be in office when the Law of the Constitution of Courts of Law comes into effect, but who may not be re-appointed to another office, shall be deemed to be in retirement (*kyushoku*).

Article 3.—Should any judge who has been in office above 15 years become unable to attend to his duties owing to illness or some other cause, after the carrying into practice of the Law of the Constitution of the Courts of Law, and apply for retirement from office, the Minister of State for Justice may sanction such retirement. In the case of judges who have been transferred to that office from the rank of public procurator, their years of service as public procurator shall be reckoned.

Article 4.—The salary during retirement shall be one-third of the ordinary salary.

Article 5.—The basis observed in granting salaries to judges in retirement shall be similar to that of general officials on the *hishoku* list.

LOCAL EDUCATION.

We hereby give our sanction to the present general regulations relating to Local Education, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated October 2nd, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
YOSHIKAWA AKIMASA,
Minister of State for Education.

Art. 1.—Towns and villages shall organize town and village school unions for educational purposes, in conformity with the rules laid down in Imperial Ordinances.

To a town or village school union thus organized, Art. 117 of the Law for the Organization of Cities, Towns, and Villages shall apply.

Art. 2.—For the purposes of elementary school education, a city, town, or village, or a town and village school union shall be divided into several districts in conformity with the rules laid down in Imperial Ordinances.

In the case provided for in the above paragraph, and in the absence of a district assembly or a district general assembly, the provisions of Art. 113 of the Law for the Organization of Cities, and of Art. 114 of the Law for the Organization of Towns and Villages shall apply.

The expenses of establishing and maintaining elementary schools specially provided for one or more districts, shall be borne by those that are residents of, or are sojourning in, such district, or that own lands or houses, or that carry on trade therein (excepting pedlers and hawkers).

In the case of property owned by the district, the income derived therefrom shall be applied first to the defraying of such expenses.

The *Kucho* or his deputy under Art. 60 of the Law for the Organization of Cities, and Art. 64 of the Law for the Organization of Towns and Villages, shall, in accordance with ordinances, assist in the transaction of educational affairs of the State relating to the district.

Art. 3.—For educational purposes, the provisions of the Law relating to Cities, or to Towns, and Villages may be applied to districts within cities, towns, and villages or to town and village school unions, or to districts within such unions.

Art. 4.—Towns or villages or Town and Village School Unions or districts therein shall, in

accordance with the directions of the *Guncho*, accept the care of the education of children of other towns and villages, or of other town and village school unions or of districts within them.

Art. 5.—In case of the abolition of a town and village school union, or in case of any of the towns and villages forming a town and village school union taking charge of the establishment and maintenance of one or more of the elementary schools, or in case of any of the towns and villages forming a town and village school union accepting the care of the educational affairs of children of other towns or villages, should the towns and villages interested be unable to arrive at an agreement as regards the disposal of their property, the *Gun Council* shall decide.

In case the towns and villages interested are unable to arrive at an agreement as to whether remuneration for the education of children shall or shall not be allowed, and as to its amount and other important matters, the provisions in the above paragraph shall apply.

Art. 6.—Each *fu*, *ken*, *gun*, city, town or village, and each town and village school union shall, for educational purposes, appoint a school committee in conformity with Imperial Ordinances.

For the purposes of elementary school education, a district within a city, town, or village, or a town and village school union, may appoint a school committee in conformity with Imperial Ordinances.

Art. 7.—The educational affairs of the State to be transacted by the directors and other officials of a city, town, or village school, by a school committee, or by the *Kencho* and his deputy, etc., shall not come under the 2nd paragraph, Art. 31 of the Law for the Organization of Cities, or under the 2nd paragraph, Art. 33 of the Law for the Organization of Towns and Villages.

Art. 8.—The regulations for disciplinary penalties to be inflicted on officials of *fu*, *ken*, *gun*, cities, towns, and villages in connection with the transaction of educational affairs of the State shall be prescribed by Imperial Ordinances.

Art. 9.—Each *fu*, *ken*, *gun*, city, town, or village, town and village school union, or district within a city, town or village or within a town and village school union, may provide the property forming the stock of a school.

Such school property may be provided severally for each particular school or jointly for more than one school.

In case such school property be dispensed with or provided, or expended, sold, exchanged, alienated, or mortgaged or hypothecated, permission to that effect from the respective superintending Authority shall be obtained.

For diverting the income derived from a school property to other than educational purposes, permission to that effect from the respective superintending Authority shall be obtained.

Art. 10.—In each *fu*, *ken*, *gun*, city, town or village, town and village school union, or district within a city, town and village, or within a town and village school union, educational donations whether in money or otherwise, shall be reserved as school property, except in cases where the items of appropriation are designated by the donors.

Initiation fees, entrance examination fees, fees for the use of books and apparatus, etc., may be reserved as school property.

Fu, *ken*, and *gun* may reserve the surplus of the annual expenditure or a portion of the annual income, specially increased for that purpose, as school stock property.

Art. 11.—Money and other funds hitherto reserved for school purposes, which have been added to the property of cities, towns, and villages in accordance with Art. 81 of the Law for the Organization of Cities, or Art. 81 of the Law for the Organization of Towns and Villages, may, on the approval of the Council of the *fu*, *ken*, or *gun*, be separated and reserved as school property for a period of two years after the date on which this law comes into force.

Art. 12.—The official duties and relations of the Minister of State for the Interior provided in the Law for the Organization of *Fu*, *Ken*, or *Gun*, of Cities, and of Towns and Villages, shall for educational purposes, devolve upon both the Ministers of State for the Interior and for Education.

Art. 13.—This law shall come into force in *fu* and *ken* where the Law for the Organization of Cities, Towns, and Villages are practically carried out. The date on which this law is to come into force shall be fixed by the Minister of State for Education on the representation of the *chiji* of *fu* or *ken*.

IMPERIAL MODEL YACHT CLUB
REGATTA.

The members of the Imperial Model Yacht Club held their Autumn Sports on the afternoon of the 3rd inst., His Imperial Majesty's Birthday, on the Club pond adjoining the Naval Academy grounds. The Commodore, H.E. the Marquis Nabeshima, was unable to attend, and many other Japanese members were unavoidably prevented from being present. Spectators were few, no guests having been invited, but a few of the more earnest sports the "elder boys" of the Club were there in sufficient force for carrying out the programme. The wind blew strong and steady from the north-west, and covered the whole length of the pond without flaws or eddy-winds of any kind. The course was across the pond at an oblique angle, which made the distance about 200 yards, and the boats were to sail close-hauled on starboard tack. At 2.30 p.m. the competing boats for the first race were in line ready for the start. The following were the entries (A Section, First Class, 36 in. water line, "the heavies," displacement from 25 to 32 lbs.):—

NAME.	RIG.	OWNER.	SAILED BY.
<i>Volunteer</i>	Chinese	Mr. J. M. James	Mr. Hammond.
<i>Wild Wave</i>	Sloop	Mr. J. Saigo	Mr. James.
<i>Constance</i>	Cutter	Capt. Squire, R.N.	Mr. Owston.
<i>Irex</i>	Sloop	Mr. J. M. James	Mr. Beart.

The boats got away well together, but the *Volunteer* soon went ahead and won with ease; *Wild Wave* second, with *Constance* and *Irex* close at her heels. The *Constance* had her topmast struck and carried lower sails only, the others carried whole sail. A second heat was made on the same course, when *Constance*, getting well away from her opponents, crossed the line first. *Volunteer* rammed the *Wild Wave* just after starting and turned her round on her heel, but, notwithstanding this accident, the latter boat came in a good second, with *Irex* third. *Volunteer* caught a flaw which carried her away to windward of the winning line altogether, and consequently was not in the race at all. The following were the entries for the second race (B section, first class, 33-35 in. water line).

NAME.	RIG.	OWNER.	SAILED BY.
<i>Ume</i>	Sloop	Mr. I. House	Mr. James.
<i>Cousins</i>	Sloop	Mr. J. M. James	Mr. Hammond.
<i>Karasaki</i>	Sloop	Mr. C. Nabeshima	Mr. Beart.
<i>Dai-ichi Tsuru</i>	Cutter	Prof. West	Prof. West.

This was a very exciting race, as the boats were well matched and had much about the same sail power. The *Ume* won the race easily, making a straight course from start to finish, followed closely by the *Dai-ichi Tsuru*, under lower sails only, second; *Karasaki*, third, but to leeward. The *Cousins* was pinched too much in the wind from the start and did not cross the winning line. A second heat was sailed in which the *Ume* again took first place, with *Karasaki* second. *Dai-ichi Tsuru* crossed the winning line third, jumping it and running into the wall beyond, carrying away her head gear. The following were the entries for the third race (Second class boats, 26 in. water line):—

NAME.	RIG.	OWNER.	SAILED BY.
<i>Albatross</i>	Schooner	Mr. J. M. James	Mr. James.
<i>Coronant</i>	Schooner	Lieut. Yoshi, I.J.N.	Mr. Beart.
<i>Blakie</i>	Cutter	Professor West	Mr. Glover.
<i>Keppels</i>	Cutter	Professor West	Mr. Hammond.

Professor West's *Blakie*, "booming along" from start to finish under all flying kites, crossed the winning line first; *Albatross*, a good second, *Coronant* third. The wind was now falling light and the races for the third-class boats did not take place. During the second race some ladies, relatives of some of the members, were present and seemed to take a lively interest in the movements of the little craft. The sports, although on a small scale, were a great success, and the thanks of the members are due to their Yokohama friends who so ably assisted them in carrying out the programme, both seniors and juniors. Professor West acted as umpire in the first race, and Mr. Alan Owston in the others, and Mr. Asada as starter. No prizes were given nor times taken. As on previous occasions, the superiority of the Chinese rig for speed and weatherly qualities was very apparent, and leaves no doubt that, with models of equally fine lines, the Chinese rigged boat will in nearly all cases outsail and weather any other fore and aft rig.

FOR SICK HEADACHE USE HORSFORD'S ACID
PHOSPHATE.

Dr. JNO. LAMBE, M.R.C.S., West Villa, Shur-dington, Cheltenham, says:—"It produced good results in sick headache and brain prostration, tranquillizing the irritation, giving comfortable sleep. Also in a case of dyspepsia, with great distension after meals, and flatulency."

LETTER FROM SHIMANE.

(FROM OUR CORRESPONDENT.)

Matsue, November 3rd.

The very agreeable monotony of life in this populous and prosperous city of Matsue, is varied only by the public holidays, and by incidents connected with public educational matters, or the local government. Such incidents, however, usually create a good deal of commendable interest.

The most notable educational event during the month of October was the celebration of the students' annual gymnastic festival at Ninomaru, in the spacious grounds of the ancient castle of Matsue, on the 25th ultimo. The entertainment was given and managed by the members of the Educational Association, and had been generously provided for. Galleries had been erected for the spectators; and race-courses and an arena had been staked off and placed in the best possible condition. About twenty schools were represented at the contests; and no less than six thousand boys and girls took part in the games.

His Excellency Governor Kotoda presided at the contests; and the management of the games, according to programme, was superintended by Mr. Saito, Director of the Middle and Normal Schools; by Mr. Oka, who takes charge of educational affairs in the Kencho; by Mr. Tsuboi, Chief instructor of the Normal School, and by most of the teachers of the *Chin-gakko* and *Shihan gakko*.

The contests comprised foot-races, jumping, fencing, the "tag-of-war," and a large number of Japanese athletic games, very amusing, and very spiritedly played. Several hundred prizes were given; the winners receiving their awards from the hands of the Governor. The part taken by the girl-students in the sports was among the most interesting spectacles of the day. There was a girls' race, for example, in which the contestants had to pick up while running three balls of different colours out of a number scattered on the turf.

Manual gymnastic exercises also formed a very charming feature of the festival. The most perfect performance of this sort was probably that of the Normal School,—the young men of this school being disciplined like soldiers. But what was even more pleasing and remarkable was the dumb-bell exercise of the Koto-Shogakko,—five hundred boys performing the movements simultaneously with faultless precision, under the teaching of Mr. Uno. The girls and the younger boys of local schools also gave some very entertaining exhibitions of manual exercises, under the guidance of Mr. Yeto, gymnastic teacher of the Normal School, Mr. Mioshi, gymnastic teacher of the *Chin-gakko*; and Mr. Funo. At 6 p.m. the festival was concluded by the singing of the National Hymn of Japan, and three cheers for His Majesty the Emperor. The singing by six thousand voices was impressive.

These games, called *Tai-ku-kwai*, are usually celebrated once a year; but last year there were none,—perhaps owing to the depression of trade consequent upon the failure of the rice-harvest. This year the festival was, I am told, the most entertaining yet held here, and the attendance the largest. The prizes given were chiefly books, and various articles of educational value.

The week previous, Mr. K. Mizobe, first secretary of the Kencho, having been appointed *Sanji-kwan* of Shiga-Ken, took his departure for Otsu. Mr. Mizobe had formerly been Superintendent of the Schools; and the teachers and pupils of the principal schools of Matsue escorted him to the steamer.

To-day, the birthday of His Majesty the Emperor, is celebrated in Matsue after quite a special manner,—which reminds me very much of a Carnival day in France or Italy. There are jolly masquerades; the whole population sings, plays, dances; and the city is as merry as possible, with that kindly courteous merriment peculiar to this people.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, October 21st.

Two weeks from to-day, the fall elections take place, and the canvas is in full progress. In most of the states, state Governors, and a full set of State officials are to be chosen; in nearly all, members of Congress, and of legislatures to fill vacancies in the Senate. No particular issues are involved in the contest. The Republicans will claim that Republican success implies a popular en-

dorsement of the McKinley tariff, as the Democrats will claim that the success of their party will mean the reverse. But it is yet too soon for the effects of that measure to be felt. Manufacturers and wholesale dealers have raised the prices of their goods; but the following advertisement appears in the papers of most large cities:—"Notwithstanding the tariff, the old reliable house of Snooks & Co. will continue to supply their customers at the old prices; apply early if you don't want to pay more."

As usual in off years, there are no indications how the elections will go, and the talkers of both parties are both confident of triumph. In the East, it seems to be assumed as a foregone conclusion that the Democrats will secure a majority of the next Congress; I must admit that the reasoning on which this expectation is based is not altogether convincing to me. There is a great deal of discontent among the Republicans, but there is also considerable indifference among the Democrats, and unless a change takes place in the next fortnight, the vote on both sides will be light.

More important perhaps than the result of the elections is the evolution of the labour conflict in the new phase in which it has entered. On October 16th, the International Brotherhood of Locomotive Engineers, which is the most highly respected if not the most numerous labour body in the country, held its annual meeting, and was addressed by Chauncey Depew, President of the New York Central Railroad. The significance of Depew's speech arose from the recent circular of the Central Company to its employees, warning them against joining the Knights of Labour. He said:—

The effort to absorb the individual, to divide the people into employing companies and employees and to destroy competition will inevitably end in disaster. Hostile legislation and the laws of trade will leave only the legitimate enterprise surviving. In the same way, and from the same causes, there have been several ambitious attempts to form gigantic labour trusts which should combine under one central and autocratic authority every occupation of trades and occupations, having nothing in common, certain qualities of audacity, fluency of speech, and capacity for men who know little of the great interests conceded to their grounds. The committee which calls upon the employer or railroad officer must know its own business as well as he does, comes exercise of brute force, and violence fails to secure intelligent presentation.

Mr. Depew went on to say that his hands have never had any misunderstandings with the company when they had brought their grievances to the company's office, and laid them before persons who understood the railroad business; that the only disputes which had occurred had been caused by the interference of outsiders who were unacquainted with the business of transportation. On one occasion, he said, a number of his hands had struck under orders from a walking delegate, who was a shoemaker, and controlled the assembly to which the hands belonged. He did not say in so many words that the company would not employ Knights of Labour hereafter; but he observed that the railroad thought it was entitled to the undivided allegiance of its employees, and this amounts to the same thing.

The truculent assumptions of the agitators who are endeavouring to establish labour trusts, to coerce employers and to deprive workmen who are not members of Unions of the means of earning or living, are creating disgust everywhere. In this city, each labour union sends delegates to a body which calls itself the council of the Federated Trades. The object of the organization was to enable the Unions to co-operate effectively for a common object. But the leaders of the council have discovered that by a dexterous use of the "boycott," an honest penny may be turned at elections. Candidates who were credited with timidity have been approached, and invited to define their position. It is to be inferred that some of them declined the invitation, for at the last meeting of the Council, boycott decrees were issued against the Republican candidate for Mayor, and two other candidates for municipal office. It was proposed to boycott alike the Democratic and the Republican candidates for Governor, nor was it discovered that one boycott would neutralize the other until an outsider pointed out the fact. If the labour organizations should succeed in establishing the empire they aim at, this country would be ruled by the worst of all possible despotisms, the despotism of a mob. Happily, workmen must live, and to live they must get work; thus, if the worst comes, employers will have a remedy in their own hands.

The views of a sensible workman were lately expressed by Chief Locomotive Engineer Arthur, who has controlled the Brotherhood for years. He said:—

It is by honourable action we have achieved success as a labour organization, not by might—not by loud, boastful assertions of what, owing to our number, we might compel corporations to do. No, that has never been our policy. We ask but fair, just dues, nothing more, if there be those who would

array labour against capital, I am not one of them or with them. If there be those who regard the interests of labour and capital as naturally or properly antagonistic, I do not agree with them. The interests of labour and capital are identical, or, to be more accurate, reciprocal. Any argument respecting labour topics which does not distinctly recognize and concede the truth of this proposition must needs be fallacious.

Justice Miller of the U.S. Supreme Court, is dead. He was the Senior Judge on the Bench, having been appointed by President Lincoln twenty-eight years ago. He was not a showy judge, but a sound solid jurist, who knew the principles of law, and applied them honestly, so long as they did not conflict with the doctrines of the political party to which he belonged. He was chosen to write the opinions affirming the constitutionality of the last amendments to the federal constitution, and he led the majority which voted Rutherford Hayes into the Presidency to which Samuel J. Tilden had been elected. *Du resiste*, he was a gentleman and a scholar; urbane to the bar, gracious to visitors, and setting an example of high bred courtesy in his intercourse with all. It is said that he is to be succeeded by Attorney General Miller, of Indiana, an utterly unknown man, but a former partner of President Harrison.

About these days, says Nestradamus, expect disasters by flood and fire. Five days ago, the Leland Hotel in Syracuse, the largest house of public entertainment in Western New York, was destroyed by fire in the small hours of the morning. Some twenty lives are said to have been lost; the killed having either been burned to death, or having been dashed to pieces on the pavement after leaping from the upper windows. The building was six stories high, and almost all the inmates were in bed. Those who escaped did so in their night clothes which in several cases were torn from their bodies in the frantic struggle, so that the streets surrounding the hotel were for some time full of men and women absolutely naked. The usual heart-rending incidents are reported. A husband and wife were seen clasped in each others' arms at a window. The woman was evidently urging the man to jump, and he was holding her back. At last she tore herself from his clutch, and mounted the window sill; but at that moment, a gust of flame rushed through the window, and the unfortunate pair fell back into the cauldron inside. Another woman with a baby in her arms was seen at a window on a back ground of fire. Her cries for help were pitiful. Shouts of jump! jump! were uttered by men below who held nets to receive her. But she hesitated too long, and fell back to be seen no more. Some women did jump, and, missing the nets, were smashed out of all recognition on the stone pavement.

A companion piece to this though happily less destructive of life—is the log of the ship *City of Philadelphia* which arrived here last week—216 days out from New York. She sailed on March 15th, and two months afterward, was disabled by a storm which twisted her rudder. The captain managed to rig a jury rudder with which he brought her into Rio, whence, after being repaired, she resumed her voyage on June 17th. When off Cape Horn, she encountered a series of storms, which the captain describes as the most severe he ever felt. For forty-one consecutive days it blew a gale, with snow, hail, and sleet; during which period the ship worked her way from 50 degrees in the Atlantic to 50 degrees in the Pacific. She was a wreck when the gale abated; but happily in all her troubles, she only lost one man.

A recent incident in North Carolina may be preserved as an illustration of manners and customs in the ex-slave states. A young farmer named Dixon suspected that his wife, who was only a girl, was more intimate with a neighbour named Halsey than the law allowed. He followed her one evening when she went out for a walk in some woods near by, saw her meet Halsey, and likewise saw that which left no doubt of their mutual relations. As often happens to gentlemen on such still hunts, Dixon had taken his rifle with him. Choosing a moment, when Halsey was perfectly still, he took careful aim and shot him dead with a bullet through his brain. Word of the murder reaching Halsey's brother, he sallied forth with a revolver in quest of vengeance. He met Dixon, and was for opening fire then and there, but the bystanders insisted on a regular duel in the form prescribed by the code. The combatants were set at ten paces distance, facing each other, each with a revolver in his hand. At the word, both opened fire, and kept it up till the five chambers of each pistol were emptied. Both men stood erect, for a moment; then Halsey began to totter, and presently fell on his face, stone dead. Dixon mounted a horse and defied the sheriff and his posse. Riding into the wood, he cried, or would have cried if he had known the line—"They'll have swift steeds that follow," quoth young Lochinvar.

LETTER FROM DENVER.

(FROM OUR CORRESPONDENT.)

Denver, Colo., Oct. 13th.

A strange story reaches us from Clay county in the State of Missouri, carrying one's thoughts back to the old days of Californian excitement and to the wild scenes of early border life in the Far West.

It seems that just twenty years ago, near Excelsior Springs in the district above named, twenty-four complete skeletons were discovered by a farmer who was excavating for a well. With these bones were a few old-fashioned guns, bits of clothing, and rotten rope and a piece of oaken board. The last mentioned article gave a clue to the mystery; for on careful examination it revealed the word, "Atlantic to the Pacific. Five waggons and twenty-nine souls, 1850." On the back of the board a rough artist had cut rude figures of twenty-nine prostrate persons and stained each carving with some sort of dye. Above the head of each, a tomahawk was cut in relief. According to the board there should have been twenty-nine bodies, but search for the missing five proved fruitless, until by accident a negro came upon a skull the other day while digging a cellar. An old man named Quinton Brown heard of the discovery of this skull and led the way in laying bare the five lost skeletons. The explanation of the board with its carving is that in the early "fifties" a band of lawless scoundrels, calling themselves "The Injuns" infested the western border, preying on defenceless gold seekers, and led by a wretch named Jim Burroughs. To carry out the elegant conceit of their lineage they abjured alphabetical writing, returning to the pictorial methods of their ancestors. It was but fitting that, as they had morally reverted to their original type of savagery, their art of writing should display the fact. Jim Burroughs was hanged by the crew of a steamboat near the mouth of the Grand River. His methods were adopted by the "James boys" and other such freaks of taste, called Bald Knobbers, White Caps, and so on. It is to be hoped, however, that none of these pleasant people ever joked so gorily as those "Injuns" did. Twenty-nine low mounds, five newly made, now mark the sod in a little cemetery, and twenty-nine unknown men lie beneath, silent witnesses of what ferocious instincts lie dormant in the bosom of our civilization.

Here in the broad West there is elbow room for ferocity to swing its war club, and a keen, dry, electric atmosphere that tends to waken men and beasts. I suppose it is only reasonable to trace to this physical cause the freaks of cowboys and "shootists" generally. Every morning the paper contains some new instance, sometimes funny, often tragical and terrible—of the exhilaration produced by residence here.

To call a few instances. A wild west show is *en route* to St. Louis, Mo. The humorous proprietor finds time pass heavily in the railroad cars, so goes out on the rear platform and takes flying shots at whatever strikes his fancy. A harmless railroad operative is walking along the track, and is so unfortunate as to attract wild West attention and falls with a shattered knee, so good is the funny man's aim. Another incident of the railroad occurred in Kansas a week or two ago. Two cowboys were returning from the delivery of some cattle and had to travel beside the track. A freight train overtook them. Anxious to know the time of day, they calmly desired the engineer to stop and tell them. The train, however, kept moving, much to their disgust, and one of them was suddenly seized with an idea. Out went his lariat like a flash, noosing the engine-stack, and the stout bronco prepared for the novel steer to lunge. Greatly to the bronco's surprise he was hauled rapidly along in strange gyrations and his rider was in imminent risk of a broken neck. His companion, however, lassoed the captive bronco, and the first lariat broke close to the engine-stack. It is not long since one section of the coming aristocracy celebrated a "Hod Carriers' Ball." Doubtless the hod carrying profession is as pure as any other; but the ball was held in a saloon and there seems to have been no attempt at scrutinizing new-comers. This accounts for the fact that a man not a hod carrier, accompanied by two female persons, drove up to the door, walked in, drew his revolver, and began to shoot before anyone could interfere. The lights were at once put out, and everyone scurried for the safety of self and mate. When the shooting ceased a dying man was on the floor and the murderer was gone. Nobody seems to inquire where this "shootist" is. The brand of Cain is not on his brow, neither does the conscience of Lamoch make him sore, but he is ready to grace some other festive occasion with his fair comrades and his

"gun." The murdered man was laid in the morgue and was visited by crowds. Late one evening a negro hod carrier requested to see the corpse. He slowly approached the spot and was about to raise the sheet from the face when a current of air caught it and gave it a truly lifelike motion. Sambo started back in terror, shrieked "Foul de Lawd!" and fled through the nearest doorway. Nor could he be persuaded to return.

The Royal Yedo Japanese Troupe are visiting this town. One wonders why it is not an Imperial Troupe. Last Sunday a wrestling match between a Japanese and two or three American artists was one of the attractions for the pleasure-seeking crowds.

Mr. Michael Davitt has laid hold of the popular imagination and the popular sympathy in the States by his new paper. Of course the *Labour World* will probably make a more profound impression in England than here, where already the omnipotence of Labour is recognised by politicians. But even here the paper is bought up and its contents are deeply pondered by all sorts of thoughtful workers.

A question that troubles Colorado is why should "The Dollar of our Dads" be still so far from its ideal worth? Silver at first rushed up to more than \$1.17 per ounce. It has since been down to \$1.09. It now hangs about the figures \$1.103. Nobody seems to know why this natural result should have followed recent legislation. There are ominous Democratic whispers of treason, corruption, wholesale swindling. Others profess to find in the Silver law a deliberate sacrifice of the country's interests for that of the railroads. These say that it must lead to an increase in the export of gold and a consequent further relative depreciation in the value of silver. To an onlooker, however, these noisy combatants seem like men fighting blindfold. Even the bankers cannot give a clear reason for their faith that the country ought to carry all the silver mines upon its back. Indeed, an onlooker cannot help noticing how fast there is growing a deadly type of patriotism. Its true name is patriotic pauperism. Every man loves his country—for what he can get out of her. So legislators must pension every man who fought in the war; tariffs must be imposed for the benefit of workmen; important offices of State must be made the goal of unprincipled avarice. If we go on at this rate we must make the title of mandarin, in its modern celestial meaning, the highest decoration of public men. Thoughtful persons throughout the whole country must regard this pauper spirit with extreme apprehension. And yet it is but a natural outcome of a policy which has permitted the influx of foreign paupers, chiefly Irish, in limitless numbers, and has endowed them all with legislative functions. Their patriotism is peculiar, whether in the Emerald Isle or in the new world. Politics in this State are becoming lively. There is a split in the Republican ranks. Vituperation is the mildest term applicable to the attacks made by the two sections on each other through their respective papers. Neither does the Democratic organ come behind in this gift of political dirt. Its language towards the Republican Mayor and his subordinates is scurrilous and libellous. If true, Denver should be bracketed with New York city as the most striking instance of municipal corruption in all the Occident. That there is neglect in the Health Department, leading to a terrible visitation of typhoid fever, no one denies. Neither does the police force claim immunity from criticism. It is humiliating to find detectives in the pay of gambling dives and brothels.

Everyone, irrespective of parties, now groans over the advance in prices consequent on the McKinley law. Stuffs that no American manufacturer can produce nevertheless fall under the ban of this tyrannical measure. And as a necessary result of the whole blunder the homes of the working man, in whose interest tariffs are supposed to be levied, are bare and comfortless, or else carpeted and cushioned with vile materials. The working man's wife must now pay \$2.25 a yard for imported goods that were formerly dear at \$1.75. A few more McKinleys will surely kill the cause of protection in America; even if the farmers do not resolutely take the bull by the horns before that patriotic genius can propagate itself.

One is amused to learn that the present head of the Mormon fraternity has received a special revelation, forbidding polygamy. Considering that each believer now practising polygamy is liable to a hundred dollar fine, one can but admire the peculiarly opportune arrival of the heavenly mandate. The Church assembly has ratified President Woodruff's order, and Mormonism has prepared the way for its admission to the catalogue of respectable churches. Mahomed himself could hardly have made his prophetic gift more wholly subservient to his wishes than this same President Woodruff does.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—THURSDAY,
November 13th, 1890.

LARCENY.

James Adolphus Davis was brought up for trial, charged with having stolen \$106 on the 26th Oct., the property of John Dobbie McAlpine.

Messrs. Donald Fraser, G. J. B. Adet, W. N. Watt, James Esdale, and B. Gillett were sworn as a jury.

The accused pleaded not guilty to the charge.

Mr. Litchfield prosecuted and in opening the case for the Crown said, the prisoner was charged with the crime of larceny. He would explain to them shortly the circumstances under which the crime was committed. J. D. McAlpine came out to Japan as an engineer on one of the Nippon Yusen Kaisha's steamers and was paid his money for the outward passage on Saturday, October 15th, on that day he received \$200 as his wages. On the following Sunday he left his house, with the money he had received in his pocket, and under the auspices of a jinrikisha man proceeded to review the town of Yokohama. After going about, he went into a public house in Motomachi and there he made the acquaintance of two sailors, one of whom was the accused. They had some refreshment together and the accused becoming pushing in his attentions; Mr. McAlpine left as soon as possible. After leaving the house he was accosted by the man again and got out of his jinrikisha, and as he was getting out the money which he had previously put in his pocket fell to the ground. The prisoner took it up and walked away with it. He was followed by the jinrikisha man and went towards China-town where he was lost sight of. The next place in which they heard of him was in a seaman's boarding-house kept by a man named Ortiz in China-town. He appeared to have been there in the evening and certain circumstances took place there from which there would be no doubt that the prisoner passed into the house, let in a friend, and that something did take place in that house kept by Ortiz. That was the chain of circumstances which led to the committal of the prisoner. It was for the jury to decide whether the money was stolen and whether it was stolen by the prisoner or not. If a man took up money in the street knowing who the owner was, and with such knowledge appropriated the money for his own use, he would be committing the crime of larceny.

John Dobbie McAlpine, examined by Mr. Litchfield, deposed that he was a marine engineer. He reached Japan on he thought the 22nd October. He was paid his wages the day before he got on shore, the 25th October. He left his house on Sunday, 26th October, in a jinrikisha, having \$200 on his person. He was staying at No. 184, Bluff. He first went to the Club Hotel, and not finding the people he wanted to see there, went out and told the jinrikisha man to take him around the town and go back again. It was, as far as he could remember, about four o'clock, but it might be a little after. He stopped at a public-house to get some refreshment, and was not long in the house before he met the prisoner and a sailor who was on the ship he (witness) came out from England in. Witness did not know the sailor's name, but would know him again if he saw him. The prisoner wanted witness to give him more drink, which witness refused to do. He took his money from his inside pocket from a bundle of which he had two all in \$1 notes and in two bundles of \$100 each. He did not remember receiving any change for the money he paid for the drink with. He did not exactly remember what he did with the remainder. He remembered taking out \$2. He had at first \$200 in his pocket. He remembered leaving the house. He had a struggle to get out, and after running a short distance he put his hand in his pocket and found his money was gone.

By the accused—I remember seeing you on the 26th October in the public house. We had a quarrel because you wanted more drink. I don't remember you running out with me. I had a struggle to get out of the house, and after going a little way found that my money was gone, and went to the Police Station at once and reported it. I did not go in a jinrikisha. I don't know whether I lost the money in the street or in the public house. I did not see you take my money. The jinrikisha man gave in evidence that he saw you take it. I go by his evidence. I was not sober at the time.

Chino Ichihai, a jinrikisha man, deposed that he remembered taking the last witness in his jinrikisha on October 26th. He took him first to the Club Hotel and then to a restaurant in Sakai-cho. When he left the restaurant he was some-

what drunk. The drinking place was below, not upstairs, and the door was open. A coloured man afterwards went in to where the last witness was and entered into conversation with him. He afterwards met him again. The coloured man witness referred to was the prisoner. There was another coloured man in the saloon. He was not so dark as the prisoner. They stopped there about one hour talking and drinking. The last witness then parted from the coloured man and went away in witness' jinrikisha to a saloon in Motomachi, Sancho-me, where he had more drink. The door of the saloon was open at first but was shut after he went in. He did not stop in the house long, but came out just as it was getting dark. Leaving the house he went in the direction of the Public Gardens, and had gone about 50 or 60 yards when he met the prisoner. They went some distance together, talking in a foreign language which witness did not understand. They went on to the Public Gardens where witness' fare said he wanted to get out and witness put the jinrikisha down. He got out without any help at all, but as he was getting out of the jinrikisha witness saw him drop something which he recognized as money. It was in bundles. Witness could not tell the denomination or value of the notes. They were the same colour as Japanese notes, but whether they were \$5 or \$1 notes witness could not say. The prisoner took the notes up and ran away with them. Witness followed him to China-town. Witness arrived at Yokohama about two months before. He missed the accused at the cross roads. Witness went to the house where the complainant was staying and reported the loss of the money. The complainant took on another jinrikisha man to push behind from the English Hatoba.

By the accused—I saw you on October 26th in a public house. There was no quarrel between you and my fare. You did not go with my master when he left the house but stayed behind. When my master came out of the first house he went in a jinrikisha. When he went into the second house you were not with him. My master dropped the money near the Public Gardens just as he was going to turn the corner. I did not see you take any money from his pocket, but I saw you take it from the ground when it fell. I was the only one who ran after you. The other man stayed behind. My master of course was under the influence of liquor and was drunk at the time. I took my jinrikisha along with me and left it at a jinrikisha station. Some of the jinrikisha men there saw you run past.

Yakamura Mototaro, a jinrikishaman, deposed, that he remembered October 26th. He was taken from the English Hatoba. He understood very little English. His fare went to the Oriental House and got out of the jinrikisha and went in the house. Witness saw the prisoner there. He had seen him about three before. Witness' fare stopped at the house and then went to the Grand House near Aoi-cho. He stopped about an hour there where he saw the prisoner. Witness' fare left, first leaving the other behind. He then went to a house in Motomachi and stopped there for about 20 minutes or half an hour. He then went in the direction of the Settlement. When near the Public Gardens he saw the coloured man. The complainant said he wished to go to the Club Hotel, but the prisoner told witness not to take him there but to take him to the Yoshiwara. They did not go to the Yoshiwara. The went to the corner of Tokiocho, where his fare got out of the jinrikisha and as he was getting out he let fall some money in two bundles one done up tightly and the other loose. The prisoner took them up and said to witness something about, "to-morrow, consul, and 2 piece carriage man" and went towards China-town. Witness went to the Police Station and reported the matter. At about eight o'clock his fare came and also reported it. The other jinrikisha man went after the prisoner.

By the accused—There was no quarrel between my master and you. I did not see you take any money from my master's pocket. I ran after you for about 100 yards. You were going slowly at first, but ran afterwards. No one was in the road to see you but a shampooer.

Charles Lopez, formerly steward of the *Swatara*, deposed that on the 26th October he went upstairs at Ortiz's house, and saw the prisoner and Ortiz and another coloured man known as Bill. They were counting some notes just like the one he then saw. They did not say anything to witness, but Ortiz turned and faced him to prevent him seeing what was going on at the table.

By the accused—I did not see you take any money in the house on Sunday, October 26th. I saw you counting money upstairs. I did not report it. I did not know of the loss till afterwards, and even then it was not my business to report it.

I did not know whether you stole it; you got it somehow. I reported it at the Court on Tuesday.

William McNeill deposed that he was an American citizen, and was living at Ortiz's house. He went in the house on Sunday, October 26th, about nine o'clock. Davis was not in then, but went in about 10 minutes afterwards and went upstairs. The prisoner spoke to witness and then Ortiz went upstairs. The prisoner said he had found some money. Witness said it was \$50, but he said it was not so much. Witness told him he had better take it to the Consul. Witness saw him take it from his vest pocket. Witness handled and counted it and gave it back to Davis. Witness made a statement to Mr. Hodges about it after Davis was committed for trial.

By the accused—I did not see you take any money into the house. I did not see you give Ortiz any money to keep. I saw you with the money that night. I did not report the matter. I did not hear about the loss till later, when Valentine told me. I did not report it then. It was not my business to do so, as I am not a reporter.

By a juror—I counted \$60. I did not count the other roll.

William Nicol Wright deposed that he served a summons on the prisoner on the 27th October. After he was committed for trial witness accompanied the turnkey to the jail where he searched prisoner's clothes and found three \$1 notes (given in). Witness made pencil marks on the back.

John Ortiz deposed that the prisoner was at his house on October 26th. When witness sung out for coffee in the morning the prisoner did not appear, and told witness he would have to send his breakfast upstairs. He did so and also sent his dinner and supper upstairs. He saw the prisoner at 12 o'clock and at five o'clock. Witness went to bed at seven o'clock. Witness did not see him take any money into the house. He had only seen him with \$7 which was paid to him (witness) for boarding.

By Mr. Litchfield—I went out at five o'clock and came back at 6.30 o'clock. The coloured men boarding at my house are McNeill, Davis, and Lopez. When I came home I got my supper and turned in. I saw the prisoner at nine o'clock, but I don't know what became of him between five and nine.

Philip Thomas deposed that he saw the prisoner on Sunday, October 26th, during the day but did not see him in the night as he slept out that night.

Noguchi Yoshitaro, cook at Ortiz's house, deposed that on October 26th he took Davis' coffee upstairs in the morning and also took his tiffin and dinner up. Beyond that he did not remember anything as he was busy. He had been in the house all day and in fact for several days previous and after. Witness did not see him take any money into the house. About six o'clock he was in bed.

The accused made a long defence, the gist of which was that on Sunday morning he woke up very sick with headache and pains elsewhere. He told his boarding-master he was sick, and that his breakfast would have to be sent upstairs. He was in his bed all day. After he had been in Yokohama for some time he went up north on a Swedish schooner and received his wages from the agent, \$30. He had spent all this but \$3, and that he had hid for the time when he should go away. McNeill and he had had some trouble before and McNeill had made a false report about him. If McNeill had seen him counting the money and had heard of the loss, was not it his duty to go and report it? The complainant did not see him (prisoner) take the money, but took the word of jinrikishamen who said they would tell what they knew if he would give them something. The complainant believed the jinrikishaman when he said he (deponent) had taken the money. He would evidently believe him if he had said it had sunk into the ground or flown away on the wind. The \$3 he (deponent) had was what was left of some money received for a sealing expedition to St. John's Island. If he had found the money he would have been very careful not to let anyone else see it, and certainly would not give it to anyone else to count.

His Honour, in summing up the case, said the evidence was before the jury, and the course Mr. Litchfield had taken in not addressing them was because the prisoner was not defended by counsel, and Mr. Litchfield thought it would not be fair to address them and to bring out the points to them as he would be able to do. There was one thing, however, that his Honour thought it only fair to the prisoner that he should speak about. It was the finding of the \$3 in the prisoner's boot. It was, his Honour thought, very likely that the accused put the money there as a kind of nest egg for such time as when he should be going away, for if it got known that he had the money he would have had to pay it down to the boarding-master. With regard to the evidence, the jury would not be able to make much of the prosecutor's evidence, as he

was not quite sober when he lost the money; but there was the evidence of the two jinrikishamen. There was also the evidence of the two coloured witnesses, both of whom gave testimony to the effect that the prisoner had money. The two jinrikishamen said the prisoner was the man, and if the jury believed them they would find the prisoner guilty. Against that they had what Ortiz said, which was that the prisoner was in the house at six o'clock and at nine o'clock. They had the evidence of the two jinrikishamen, also the cook at Ortiz's house, who said he saw him at six o'clock. If a man had picked up any money with the intention of taking it to the proper owner or to the Consul it was not larceny; but if he took the money and said he would take it to the Court, and afterwards said he had not taken it that would be larceny, and if the prisoner was the man who took up the money he was guilty of larceny. It was for the jury to find out whether the prisoner took the money or not, and if he did so he was guilty.

The jury after retiring for a few minutes, returned a verdict of guilty, and his Honour sentenced the prisoner to six months' imprisonment with hard labour.

THE FRENCH LAND TRADE WITH SOUTHERN CHINA.

On June 1, 1889, the towns of Lung-chow in the province of Kwangsi and Mengtzu in Yunnan were opened to French trade through Tonquin, in pursuance of the terms of the treaty of peace between France and China after the Tonquin war, and of an additional convention signed at Peking in June, 1887. By the end of May last year Chinese Customs stations had been established in both towns, and the reports of the Commissioners to Sir Robert Hart on the trade up to the close of the year have recently been issued. They are both important documents, for we obtain from them for the first time an authentic and unimpassioned account, from experienced and independent officials, of the actual and possible trade between France and China through Tonquin, and of the commercial methods and potentialities of the interior of Southern China. This is a topic of great interest in more ways than one. Efforts to tap this trade, whatever its value may ultimately prove to be, have been frequently made. The plan of opening the upper waters of the Canton river to foreign trade has been mooted more than once. The port of Pakhoi was opened by the Szechuan Convention with this aim; and from the side of Burmah we have various railway projects, all with this as the main object. During the Franco-Chinese war French statesmen constantly referred to this trade as a sufficient reward for all the sacrifices entailed by the struggle. In addition to the two reports already referred to, the British Consul at Pakhoi, in his last report, discusses the subject from another point of view. He is naturally concerned for the prosperity of British trade through his own port, and views the opening of the two towns to French trade in this aspect.

The Commissioner at Lung-chow, Mr. Carl, reports that for the seven months under review the trade has been very insignificant indeed, and he thinks there is little chance of improvement for several years to come. The cost of transport in Tonquin is so heavy that Kwangsi merchants find it cheaper to get foreign goods from Hongkong by way of Pakhoi, and thence overland. For 133 1/2 lb. of goods through the port of Haiphong and Tonquin the charges are \$7; through Pakhoi they amount only to \$3, although the distance is a third longer. Carriers in China work for half the wages of the same class in Tonquin, on account of the military demand for them in the latter. If the French wish to derive benefit from the opening of Lung-chow and to get the trade of Kwangsi, the Commissioner says it is absolutely necessary to construct a railway to some point within water communication of that town. A line is projected within Tonquin between Phu-liang-thuong and Lung-sou, a distance of 75 miles, the latter town being still 50 miles from Lung-chow. But even if this line were completed it would only improve trade into Kwangsi to a limited extent, if at all. If the line were continued 20 miles further to a town called Na-sham, whence there is water communication with Lung-chow, and if the cost of transport through Tonquin were reasonable, it might, coupled with the reduction of three-tenths of the import duty secured by the treaty, lead to many towns in Kwangsi drawing their supplies through Tonquin, and sending their own produce by the same route, to the detriment of the trade of Pakhoi. But Mr. Carl reminds us that, in truth, the Canton or West river, with its numerous feeders branching out in every direction, is the natural trade route for nearly the whole

of the province, and if the Chinese Government ever decides to abolish *likin* stations on the river, no railway in Tonquin could possibly compete with the river route in the matter of cheapness. This view, it may be added, is that of every one who has studied the subject, and it is to this we owe the suggestion of the late Sir Harry Parkes, which has more than once been discussed in *The Times*, that the opening of a port on the Canton River, such as Nan-ning or Po-sè (Mr. Colquhoun's Pê-sè), by which the *likin* stations would *ipso facto* disappear, would absolutely neutralize for purposes of commercial competition any advantage the French may have by their situation in Tonquin, however they may improve it by the construction of railways and roads. If these *likin* barriers disappeared, says Mr. Carl, "all the big towns along the river would draw their supplies from, and ship their produce to, Canton." He describes Kwangsi province as very hilly, sparsely inhabited, and only cultivated to a small extent. It is probably rich in minerals. One of the best paying silver mines is in the province, and the country round Po-sè is a vast bed of coal. But there is little produce for exportation, and almost none in Lung-chow district. Under very favourable circumstances there might be a trade in aniseed oil, cassia, ground-nut oil, indigo, Yunnan opium, and tin, though great inducements must be offered to make the trade change from the established route by Pakhoi to that through Tonquin; but with cheap and quick transport in the latter, and the four-tenths reduction in export duty, this change might be brought about. In the seven months over which the report extends the total imports were about £2,500, consisting chiefly of dye-stuff and hard-wood timber. Both come from the hilly districts of Tonquin, and are sent on to Canton. No single item in the list of exports reached the value of £120, and only five exceeded £25. The total value was only £420, and the total customs dues collected only £150.

Mr. Happer, the Commissioner at Mengtzu, in Yunnan, has a good deal more to say about his station, its situation, surroundings, and trade. Mengtzu is in a cultivated plateau 20 miles long by 12 wide, 4,500 feet above the sea, perfectly level, and encircled by mountains. The Commissioner, indeed, waxed eloquent and enthusiastic over the beauty of the situation, the clear atmosphere, and the exquisite effects of the almost perpetual sunshine on the surrounding heights. But he contends also that the town is well situated for a trade emporium, and "for the distribution of merchandise throughout a province destined to become rich and populous because of its great mineral resources." He then discusses the various trade routes into the province, of which there are six. The route from Bhamo to Taliu is not sufficiently known yet; by Hankow, on the Yangtze, and the Tung ting Lake, merchandise must make a journey of 40 days overland, the greater part on the backs of animals, and besides the cost of transport there are the heavy dues payable at the custom-houses of the different provinces traversed. Another route leaves the Yangtze higher up and gives water communication with Quinning, in South-Eastern Szechuen. This requires 19 days water transport, and more than 20 by a tedious road across mountains, where transport is on the backs of mules. A third Yangtze route, and that most used, involves a land journey of 22 days. Any of these three routes involves a circuitous and tedious journey from the coast to Yunnan-fu, with loss of time, heavy cost of transport, and numerous transit dues. The route across Southern China from Pakhoi has a large trade; it takes 54 days, of which 20 are occupied in water transport. Opium and tin go down to the coast from Yunnan and Kweichow, while yarns and piece-goods, cotton and woollen, are imported. The value of the import into Pakhoi alone for transit to Yunnan is given at about £350,000, and the quantity of cotton yarn at 100,000 bales, while it is said that, independently of merchandise, about £250,000 in silver annually passes Po-sè to pay for the Yunnan opium. This means an enormous trade altogether, when the extent of land transport is considered, and the Po-sè merchants fear loss if Mengtzu succeeds as a distributing centre. As to the route by the Red River of Tonquin, which it is Mr. Happer's special duty to watch over, he points out that it is not a new highway for trade. Manhao is the head of the navigation, and there is a well worn paved road between it and Mengtzu bespeaking a great traffic in other years, "and the value of that trade was certainly great which could support the expenditure entailed by the laying of such a road over a very mountainous country." It is evident that before the Mahomedan rebellion the town was the seat of an important trade, owing to its proximity to the tin-mines and to the river at

Manhao. From the sea at Haiphong to the latter (by junk from Hanoi) is given at 28 days; from Manhao to Mengtzu is three days by pack animals, and thence nine days onward to Yunnan-fu, or 40 days in all, in addition to which there is the gain in a decreased import duty, and the privileges of the transit pass system, which frees merchandise throughout the province from the *likin* duties. So much in favour of the Red River route; but Mr. Happer admits that up to the present there have been causes which have retarded the movement of cargo destined for Yunnan. One of these is piracy on the Red River, in consequence of which boats dare not ascend the river alone. Besides the time lost in waiting for a convoy, each boat added to a fleet cuts down the rate of speed, because the whole must wait until each individual boat is dragged over the rapids. Thus it has come about that the time occupied in ascending from the sea has been over 60 days; but as the French Colonial Government is taking great interest in facilitating trans-frontier trade, these causes of delay will doubtless disappear, "so that the Red River route will prove in practice, as well as in measurement of miles, the shortest and cheapest approach to the rich province of Yunnan." From Hongkong by Haiphong and Red River to Mengtzu a box of 80 lb. weight pays for transport about 11s., while if going by Pakhoi or Canton it pays that amount for mule-hire alone from Po-sè. There has been no difficulty about transport down stream. Driven by a rapid current, each boat makes the best time it can, and the journey from Hanoi is usually performed in from 12 to 15 days. To aid the trade, the French authorities have exempted all merchandise crossing the Chinese frontier from import and transit duties, thus practically giving free trade to Chinese produce shipped overland.

Owing to various delays, the figures for the trade of Mengtzu really represent only 90 days; in that time the total value was about £36,600, of which the value of exports was £17,600, and more than 78 per cent. of the total imports and exports was the share of Hongkong. The main import was Indian cotton yarn, which is largely used by the aboriginal tribes to weave a cloth which they prefer to foreign piece-goods. A curious item of import is coffin-wood from Tonquin. It is said to be the preserved remains of old forest trees partially buried in the soil, and to be impervious to moisture, so that it is regarded as specially valuable for coffins. In three months the import amounted to £1,800. Another is narcissus bulbs, which start from the province of Fukkien on the coast, and bear the transport, not only to Mengtzu, but 19 days further on pack-animals to Taliu. Mr. Happer says that this shows the strong hold that the narcissus has in the æsthetic taste of the Chinese. The chief export is tin in slabs, of which the value was £14,500. The mines are only 20 miles from Mengtzu. The musk collected in the province is considerable. Musk-producing deer are found on the hills not far from Mengtzu, but they are caught chiefly in Western Yunnan and on the border of Tibet. A trial shipment to Shanghai of slabs of Taliu marble for furniture was made, but the result was not known when the report was written. The famous Pu-eh tea was exported to Tonquin chiefly for local consumption. Under the head of "Shipping," Mr. Happer says that muleteers are the real ships and pilots of Mengtzu trade, "and a large fleet they are, which distinctive characteristics of their own." The mules and ponies are small, but hardy creatures. Bearing burdens of about 160 lb., which often look disproportionately large on their diminutive bodies, they make a daily stage of 18 to 25 miles. "When decorated with rosettes of Turkey red and sleigh-bells, the leader flying the colours of his owner from short sticks projecting from the head gear, every five animals commanded by a turbaned driver, and keeping pace to the tap of a gong, they make a fine display. Their keep is very economical. On the road, the drivers seek a green spot, with water near by, to give them their noonday meal on nature's provender, supplemented with a few beans or Indian corn, and at night, bedded on equally favoured ground, their supper is the same, with the sod for their stall." The number of animals reported at the Mengtzu Customs, with imports, exports and transit goods, for the last five months of last year was 12,647, of which 4,201 were engaged in the transit trade, "and it is the position of Mengtzu, on the southern plateau of the province, near the central meridian, in easy distance of the Red River, and with good roads leading to all the principal marts of this province, that enables her to make good use of the large fleet."

The population of Mengtzu is variously estimated at from 10,000 to 20,000. It is composed mainly of Chinese, descendants of emigrants from the central provinces who went there after the conquest. Aborigines belonging to the Lolo

tribes are the principal inhabitants of the small hamlets in the plain and in the valleys of the surrounding mountains. Much land in the plain lies fallow; the crops raised on the other parts are rice, wheat, buckwheat, Indian corn, millet, beans, sweet potatoes, and tobacco. Amongst the fruits are pomegranates, peaches, persimmons, and plums. Pomegranates grow to perfection. The climate is one of perpetual sunshine; a strong wind blows steadily from the south throughout the year, even in the coldest weather, so that the temperature is moderate. But in spite of all these climatic advantages, Mengtzi, in common with other parts of Yunnan, has suffered annually for years from the plague, a kind of malignant fever, which is fatal in a few days, and has carried off a number of the inhabitants of Yunnan. One of the symptoms is a hard swelling on the neck, in the armpits, or in the groin. The presence of so much fallow land near the town is attributed to the decimation of the population by the pest. On the approach of the epidemic the first victims are rats, which rush madly out of their holes, and after capering round the room fall dead on the floor. The next to suffer are cattle, amongst which the effect is almost as fatal. In the presence of these warnings, the inhabitants of the hamlets often desert their homes *en masse* to seek safety on the mountain side, for one of the many curious incidents of this plague is that it never descends to places under 1,200 feet above the sea, and it rarely rises above 7,200 feet. Moreover, it rarely attacks person from other provinces sojourning in Yunnan, its victims being the aborigines and Chinese born in the province. Native practitioners are quite helpless in dealing with it. Mr. Happer concludes his report by saying that on a tablet in the chief temple of Mengtzi is a prediction by a distinguished resident of the place, who had travelled far and held high office, written 156 years ago, to the effect that when a certain mountain stream, which then flowed through the fields south of the town, should change its bed and find a new course on the north side, the citizens would enjoy three great blessings—"supreme civic honours, untold wealth, and length of days." The stream recently changed its bed, owing to the silting up of the old channel; the citizens have lately enjoyed an unusual share of literary honours they have had a centenarian amongst them, and now they hope the foreign customs will bring them the untold wealth.

It thus appears that while Lung-chow is unsatisfactory and unpromising, in Mengtzi the prospect is excellent in the eyes of the Commissioner of Customs there. Mr. Allen, the British Consul at Pakhoi, as has been said, regards the subject from his own point of view. In his last report he inquires how far Pakhoi has realized the hope with which it was opened, of tapping the trade of South-Western China. Prior to 1885, when the French established their position in Tonquin, the trade of the port rose gradually, with some fluctuations, until in that year it reached £657,000; since 1885 it has risen almost by bounds until now it is £1,094,000, the growth being practically that of the import trade. The conclusion is that before the imposition of the French duties in Tonquin trade to the value of £500,000 with South-Western China went through the latter, and then was diverted to Pakhoi. The problem is how best to get goods from the coast to the inland waterways of Kwangsi, which give access to the whole region. When the Tonquin railway to Lang-sou, referred to by Mr. Carl, is constructed, these waterways will be nearly reached; but Pakhoi is only 75 miles (the Lang-sou railway will be 80) from the nearest point of the west or Canton river. When the Tonquin rivers are connected by the railway with those of Kwangsi, Mr. Allen thinks Tonquin will reappropriate from Pakhoi all it has lately lost to the latter, and his remedy for this is a railway from Pakhoi to Nan-ning. Without it he fears the former must resign its hopes of commercial importance. The Lang-sou railway is progressing; according to the latest information from Tonquin, 12 miles of it were to be opened for traffic during the present year. The French in Tonquin are therefore making a bold and energetic bid for the trade of Southern China. The opinion of competent and disinterested officials on the spot is that they are going the best way to work to secure this trade. It will be observed, however, that the routes by Burmah into South-Western China are not taken into consideration here. What a railway, such as that now projected, and apparently received with official favour, from Mandalay through the Shan States to the Chinese frontier, may do remains to be seen. Certainly some definite policy on this subject seems urgent, as also does some step towards opening to foreign trade a port on the Canton river, so that British goods may be placed in Kwangsi and Eastern Yunnan on terms not less favourable than those accorded to French goods through Tonquin.—*Times*.

TIME TABLES AND STEAMERS.

TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05* 6.40, 8.35, 9.30*, 10.25 and 11.45 a.m., and 1.25, 2.30, 3.55, 4.45, 5.50, 6.50, 8.30, 9.55, and 11.15 p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15, 10.22, and 11.30 a.m., and 12.45, 2.30, 3.45, 5.30, 6.35, 7.50, 9.10, 10.05, and 11.05 p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40 and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, Tsurumi, and Kanagawa Stations. Those marked (†) run through without stopping at Omori, Kawasaki, and Tsurumi Stations.

TORAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9.10, 10.20, 11.25 a.m., and 12.40, 3.25, 4.55, 5.35, and 7.45 p.m.; and Kozu (up) at 6.35, 8.40, 9.40, and 11.07 a.m., and 1.17, 2.45, 4.58, 7.25, and 9.46 p.m.

FARES—To Hodegaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

Down trains at 6.50 a.m. run no further than Kyoto arriving there at 11.30 p.m.; at 10.30 a.m. no further than Nagoya, arriving at 10.10 p.m.; at 12.40 p.m. no further than Shizuoka, arriving there at 6.50 p.m.; at 3.25 p.m. no further than Shizuoka, arriving at 8.40 p.m.; and the train at 5.55 p.m. runs to Kobe, arriving at 12.45 p.m. next day.

A tramway runs between Kozu and YUNOTO (distance 4 ri). Jinrikisha may be hired between YUNOTO and MIYANOKITA (distance 14 ri).

OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.30 and 9.40 a.m., and 12.05, 1.30, 4.03, 6.14, and 8.30 p.m.; KAMAKURA (down) at 7.41 and 9.51 a.m., and 12.16, 1.41, 4.14, 6.25, and 8.41 p.m.; and ZUSHIMURA (down) at 7.50 and 10 a.m., and 12.25, 1.50, 4.23, 6.34, and 8.50 p.m.; YOKOSUKA (up) at 6.45, 8.55, and 11.20 a.m., and 12.50, 3.50, and 7.45 p.m.; ZUSHIMURA (up) at 7.01, 9.12, and 11.36 a.m., and 1.06, 3.16, 5.26, and 8.01 p.m.; and KAMAKURA (up) at 7.11, 9.22, and 11.46 a.m., and 1.15, 3.26, 5.36 and 8.10 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

TOKYO-SHIOGAMA RAILWAY.

TRAINS LEAVE URNO (down) at 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; UTSUNOMIYA (down) at 10 a.m. and 3.03 and 5.59 p.m.; SHIRAKAWA (down) at 8 a.m. and 12.35 and 5.41 p.m.; KORIYAMA (down) at 9.25 a.m. and 1.54 and 6.58 p.m.; FUKUSHIMA (down) at 7.35 and 11.33 a.m. and 3.45 p.m.; SENDAI (down) at 6.15, 10.25, and 10.40 a.m. and 2.30, 6.35, and 6.50 p.m.

TRAINS LEAVE ICHINOSEKI (up) at 6.40 a.m., and 2.50 p.m.; SHIOMIYAMA (up) at 7 and 11.05 a.m., and 3.10 and 7.15 p.m.; SENDAI (up) at 7.35 and 11.40 a.m., and 3.45 p.m.; FUKUSHIMA (up) at 6.40 and 10.26 a.m. and 2.36 p.m.; KORIYAMA (up) at 8.29 a.m., and 12.22 and 4.28 p.m.; SHIRAKAWA (up) at 6.35 and 9.47 a.m., and 1.40 p.m.; UTSUNOMIYA (up) at 6.20 and 9.05 a.m., and 12.18, 4.14, and 6.33 p.m.

FARES—Ueno to Utsunomiya, first-class *yen* 2, second-class *yen* 1.32, third-class *yen* 66; to Koriyama *yen* 4.10, *yen* 2.74, *yen* 1.37; to Fukushima *yen* 5, *yen* 3.32, *yen* 1.66; to Sendai *yen* 6.45, *yen* 4.30, *yen* 2.15; to Shingonia *yen* 6.75, *yen* 4.50, *yen* 2.25.

TOKYO-MAEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) (down) at 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; and MAEBASHI (up) at 6.55, and 11.50 a.m., and 2.50 and 5.55 p.m.

SHINJIKU-HACHIOJI RAILWAY.

TRAINS LEAVE SHINJIKU, TOKYO, (down) at 6.55 and 9.55 a.m. and 12.52, 4, and 7 p.m.; and HACHIOJI (up) at 5.25, 8.25, and 11.25 a.m. and 2.20 and 5.30 p.m.

FARES—First-class *sen* 90; second-class *sen* 60; third-class *sen* 30.

TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI (down) at 6.30 and 9.25 a.m., and 12.20 and 3.15 p.m.; and YOKOKAWA (up) at 8 and 11 a.m., and 1.50 and 4.55 p.m.

FARES—First-class, *sen* 75; second-class, *sen* 45 third-class, *sen* 25.

OYAMA-MAEBASHI RAILWAY.

TRAINS LEAVE OYAMA (down) at 7.15 and 9.45 a.m., and 2.15 and 5.20 p.m.; KIRIU (down) at 5.9.11, and 11.40 a.m., and 4.10 p.m.; MAEBASHI (up) at 6.12 and 10.35 a.m., and 1.55 and 6.35 p.m.; and KIRIU (up) at 5.10, 7.13, and 11.37 a.m., and 2.57 p.m.

FARES—Oyama to Kiriu, first-class *sen* 97, second-class *sen* 66, third-class *sen* 33; to Maebashi, first-class *yen* 1.51, second-class *yen* 1.2, third-class *sen* 51.

UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 5.25 and 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 and 4.55* p.m.

* Through Trains to and from Utsuno.

YOKOSUKA STEAMERS.

STEAMERS LEAVE THE NIPPON HATOKA daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—*Fare, sen* 20.

PASSENGERS.

ARRIVED.

Per British steamer *Verona*, from Hongkong via ports:—Miss Webb, Mr. R. Silber, Mr. F. Dirberly, Captain and Mrs. Clayton, Mr. Pow Chun, and Mr. Sankosha in cabin.

Per British steamer *Gaelic*, from Hongkong:—Dr. and Mrs. Thomson and Mr. Drummond Anderson in cabin. For San Francisco: Mr. Lyman J. Maury and Mr. Yui Sin Ching in cabin.

Per British steamer *Belgie*, from San Francisco:—Messrs. W. F. D. Smith, V. K. Lee, J. Crabtree, Miss R. Loring, Mr. W. H. Morse, Mrs. O. M. Locke, Rev. T. M. Sanford, Mr. S. Rosenfeld, Mr. Geo. E. Scott, Miss Louise Fleigant, Dr. Edward Hallier, Messrs. L. A. Lewis, C. H. St. John Honby, Wm. Bean, Mrs. C. P. Low, Mrs. E. Bieber, Miss S. M. Spooner, Mr. Geo. Einhorn, Rev. T. H. Stacey, Mrs. Saml. C. Thompson, Mr. Ferris Thompson, Mr. Joseph Iteu, Miss J. Lee, and Miss J. Walker in cabin. For Hongkong: Rev. E. Z. and Mrs. Simmons, Miss Lulu Whilden, and Rev. R. W. Pitcher in cabin. For Shanghai: Mrs. L. A. Davault and children, Rev. James M. and Mrs. Rollins and children, and Mr. H. C. and Mrs. Whittlesey in cabin. For Tientsin: Messrs. Charles Myrick, Thomas Sandy, J. F. Evans, James O'Toole, and Gilda in cabin.

Per Japanese steamer *Nagato Maru*, from Hakodate:—Mrs. Abe, Messrs. Arai, Yonemoto, R. Yonemoto, and Kubo in cabin; 47 passengers in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Admiral Akamatsu, Messrs. Kato, Shibuya, Toyama, Hosoi, Lungtuck, General Nakamura, Bishop Williams, Mr. Nakagawa, and Mr. C. Gibbins in cabin; Mr. Asakura and Mr. Koga in second class, and 38 passengers in steerage. For San Francisco: Mrs. G. Wakefield in cabin.

Per French steamer *Melbourne*, from Hongkong via ports:—Mr. and Mrs. Mitchell, infant, and 1 servant, Miss Rouch, Messrs. W. Kanai, Bernard Bernardi, Paquier, Andri Colcombet, Ahmed Hallaba, and Darbier in cabin.

DEPARTED.

Per French steamer *Oxus*, for Shanghai via Kobe:—Messrs. H. L. Bagallay, J. B. Andrews, E. Clement, Mr. and Mrs. W. Farnam, Dr. J. J. C. Watson, Mr. and Mrs. Ziegler and 2 children, Messrs. Kamura Yoichi, Kanenari Hamaguchi, Matsudaira Matsuro, Miss Marguerite James, Messrs. Kuroda Sadaharu, Hayaoka Gisaburo, Otsuka Bunrin, Ando Shigehiro, Louis Motter, Frans H. Schluter, Ismail Saiboo, J. Woldstin, Lee Pak Bun, Shiou Kay, and Keng Kwang in cabin.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Count and Countess Ioonye, Count Mori, Mrs. T. H. Davault and child, Rev. J. M. and Mrs. Robbins and child, Miss A. B. Cue, Miss Oyama, Mrs. Lo Chia Tsch and infant, Dr. and Mrs. Perkin and 2 children, Mrs. Chisaka, Mrs. C. Bieber, Miss J. Lee, Miss J. Walker, Messrs. J. W. Kingsmill, W. H. Drummond, V. K. Lee, and Koshiro in cabin; Mrs. Smils, Messrs. Mayeda, A. B. Bowie, Tajima, Master Kodama, Messrs. Uyeno, Tanaka, and Nabeshima in second class, and 65 passengers in steerage.

Per German steamer *General Werder*, for Hongkong via Kobe:—Mr. and Mrs. Pokotilow, Messrs. J. Winckler, F. Dankwerts, Hugo Orth, Stegmüller, Colonel Penperton, Mr. and Mrs. Metz and 2 children, Captain Ruhe, Messrs. T. Schindorff, Becken, Mrs. Blank and daughter, Mr. C. Huybrecht, 3 Chinese ladies and children, Messrs. Tai Kan Hing, Loo Ching Yow, Loo Sue Yen, Fum Too Seng, and Onee Seng Chai in cabin; and 20 Chinese and 3 German sailors in steerage.

Per British steamer *Belgie*, for Hongkong:—Dr. Geo. R. Brush, U.S.N., Mr. R. T. Wright, Dr. Sanderson, Mr. and Mrs. Hermann and two children, Mrs. Ah Cheung, Rev. H. R. Waterman, Miss L. Barret, Mr. C. E. Begmore, Mr. and Mrs. Vita, five children, and two native servants, Mr. C. Vivian Ladds, and Mr. and Mrs. J. H. Bray in cabin.

Per British steamer *Gaelic*, for San Francisco:—Mr. Lyman I. Mowry, Miss Louise Phillips, Messrs. H. L. Meaulle, A. A. Thomas, Chester Holcombe, Colonel and Mrs. Stockley, Mr. Robert Johnstone, Miss Alice Johnstone, Mr. Geo. A. Newman, Miss Newman, Mr. Ito Hikoshichi, Mr. M. Bagallay, and Mr. and Mrs. T. L. Boag and infant in cabin.

Per Japanese steamer *Omi Maru*, for Kobe:—Messrs. R. Legros, Call, O'Toole, Gilda, M. Evans, Sandy, R. Hara, and H. Ada in cabin; Mr. S. Iinuma and 1 passenger in second class, and 42 passengers in steerage.

Per British steamer *Verona*, for Hongkong via ports:—Mr. and Mrs. Kinney, Misses Tilden, Misses Storm and maid, Mr. and Mrs. Wells, Mrs. and Miss Delafield and maid, Major and Mrs. Hannay, Captain and Mrs. Clayton, Miss

Brownlow, Miss M. Brownlow, Messrs. E. Stonor, R. G. Brownlow, Wong Shin Ho, Tilden, Dmyea, J. Gomez, Kwon Yue Poon, Tsung Woon Kung, Ah Mann, and Sankosha in cabin; 1 European and 8 Chinese in steerage.

CARGOES.

Per French steamer *Oxus*, for Shanghai via Kobe:—Silk for France 145 bales; Waste silk for France 420 bales; Treasure for Singapore \$100,200.

Per British steamer *Gaelic*, for San Francisco:—

Per British steamer *Verona*, for Hongkong via ports:—Silk for France 82 bales.

REPORTS.

The British steamer *Gaelic*, Captain Pearne, reports:—Left Hongkong the 1st November at 2.20 p.m.; had moderate monsoon, and fine weather to Yokohama; thence to port fresh northerly winds, and fine weather. Arrived at Yokohama the 8th November at 3.43 p.m. Time, 4 days, 23 hours, 41 minutes.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 8th November at noon; had very high barometer and light northerly winds and fine clear weather up to Oshima; afterwards dull cloudy weather, with heavy rain and N.E. winds with nasty head sea, up to arrival at Yokohama the 9th November at midnight.

The British steamer *Belgie*, Captain Pearne, reports:—Left San Francisco the 21st October at 2 p.m.; had strong head winds and seas throughout the passage; stopped off Noshima light the 9th November at 8 p.m. in easterly gale and thick weather. Arrived at Yokohama the 10th November at 1.14 p.m. Time, 19 days, 6 hours, 4 mins.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 8th November at 2 p.m.; had fresh N.W. breeze and fine clear weather which continued until arrival at Ogiuohama the 9th at 1 p.m. and left the 10th at 5 a.m.; had fresh northerly winds and cloudy weather until 4 p.m., when weather clearing and getting fine. Arrived at Yokohama the 11th November at 6.15 a.m.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Kobe the 12th November at 4 p.m.; had thick weather with heavy rain; reached Wada Point the 13th at 2 a.m., where the weather cleared; passed Hino-saki at 6.15 a.m., fresh N.W. breeze and clear; at 6.15 p.m., moderate gale from N.W.; reached Rock Island the 14th at 2 a.m., strong gale and high sea from N.E.; passed Sagami at 6.35 a.m. Arrived at Yokohama at 8.30 a.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 8th November at 7.30 a.m.; had fresh to moderate winds and cloudy sky till 8 a.m. on the 9th; thence to port strong easterly gale with very heavy sea. Arrived at Nagasaki the 10th at 5 a.m. and left at 5 p.m.; cloudy with moderate winds. Arrived at Shimonoeki the 11th at 5.30 a.m. and left at 7 a.m.; dull cloudy weather till 4 a.m., then came on very thick with rain and mist; came to anchor at 6 p.m. and left the 12th at 3.45 a.m.; had light easterly winds and rain throughout the passage. Arrived at Kobe at 1 p.m. all well and left the 13th at noon; had weather fine and clear with moderate N.W. winds; passed Oshima the 14th at 6 a.m. when wind hauled to E.N.E. fresh breeze; passed Rock Island at 10 a.m. Arrived at Yokohama at 3.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

The Import Market still remains in a stagnant condition, but the nominal position of the buyer and seller has changed in favour of the latter. The few sales reported show an improvement on former quotations, and still higher rates have been offered and refused as they are far below importers' present ideas, and before any business can be done prices must advance considerably. Sales for the week amount to 125 bales English Yarns, 125 bales Bombays and 5,000 pieces Shirtings.

COTTON PICK GOODS

Grey Shirtings—8½ lb, 38½ yds, 39 inches	\$1.35	to	1.90

METALS.

In sympathy with other imports, this market is dull and depressed. Prices nominally unchanged but weak all round. Apparently there is no demand, and present stock ample for prospective requirements some distance ahead.

Flat Bars, 4 inch	\$2.05	to	2.75
Flat Bars, 3 inch	2.75	to	2.85
Round and square up to 3 inch	2.65	to	2.85
Nailrod, assorted	Nom.		Nom.
Nailrod, small size	Nom.		Nom.
Iron Plates, assorted	2.80	to	3.00
Sheet Iron	3.20	to	3.40
Galvanized iron sheets	5.80	to	6.00
Wire Nails, assorted	4.40	to	4.60
Pin Plates, per box	4.60	to	4.80
Pig Iron, No. 3	1.25	to	1.27½

KEROSENE.

Market very dull. The last two vessels from New York brought 130,000 cases Chester and Comet. The present stock is therefore over 900,000 cases, and buyers have things all in their favour. The low exchange has apparently not helped holders at all, and prices are weak at quotations.

QUOTATIONS.

Chester	\$1.65	to	1.67½
Comet	1.62½	to	1.65
Devon	1.60	to	1.62½
Russian	1.53	to	1.57½

SUGAR.

The Sugar trade is dull, and there is scarcely business enough to make quotations.

White Refined	\$5.50	to	7.90
Manila	3.60	to	4.30
Taiwanfu	—		—
Pentana	2.75	to	3.00
Namida	2.80	to	3.00
Cake	3.70	to	3.80
Brown Takao	4.75	to	4.20

EXPORTS.

RAW SILK.

Our last circular was dated the 7th inst.; since then settlements on this Market amount to 720 piculs divided thus:—Hanks, 27; Filatures, 313; Re-reels, 150; Kakeda, 200; Oshu 30. In addition to these purchases by Foreigners, direct shipments have been 95 bales, making the total business of the week equal to 820 piculs.

The chief business was done before the departure of the *Gaelic*, shippers hurrying up to get their purchases on board that vessel. Before the steamer left port, cables from the States reported heavy failures in New York with consequent demoralization in the Market there. This has had the effect of making our market very quiet for the last two or three days, buyers being afraid to operate until the troubles over the water are straightened out. Exchange has again been fairly steady, with only slight fluctuations.

Our price lists at foot show a further decline in price, but holders are not unanimous in their ideas.

Some of them are anxious to sell, and are meeting buyers to some extent, while others are strong and declare their intention of doing nothing at present.

The business done has once more been chiefly for the States, purchases for Europe being small and of little importance. Intelligence from the Lyons market is by no means cheerful, for, although they do not seem to be involved in panic and disaster, yet the trade there is very dull and the market depressed.

There have been two shipping opportunities since we last wrote. The French steamer *Oxus*, which left port on the 9th, carried 254 bales for Lyons, St. Etienne and Marseilles. The *Gaelic*, which sailed on the 12th, had 528 bales for the New York Market. These departures bring the present export figures to 7,981 piculs, against 20,544 last year and 15,643 in 1888.

Hanks.—There has been some enquiry for these; *Hachoji* being done early in the week at \$325. Since then a parcel of good *Yoshu* has been in treaty at \$540. Stock in this department is small, and holders are able to keep their prices pretty firm.

Filatures.—These are in very large supply and stock heavy; at the same time the largest holders, wealthy men who are not in need of money, refuse to sell at any price. They apparently believe that things cannot always go on getting worse, and profess themselves able and willing to wait for better times. Previous to the departure of the steamer, *Kameisha* and similar qualities were done at \$635; to-day they might be bought at \$620. *Koshu Filature Yafima* has been done at the latter price, and some good fine sized *Filatures* for Europe marked \$650.

Re-reels.—These also show a decline, but at the same time are somewhat irregular; proprietors of the largest factories being able to hold pretty strongly. At closing *Tortoise Clasp* has been done at \$595, with *Ichimurasha* at \$585.

Kakeda.—This has been in strong demand, and the stock being small, prices have been maintained better in this class than in *Filatures* and *Re-reels*. Among the latest purchases are *Flower Girl*, \$590; *Gold Tiger*, \$590; *Stork*, \$585; *Red Flag*, \$585; *Gold Fish*, \$560.

Oshu.—Two parcels good quality *Hamatsuki* have passed the scales at \$560. This class has apparently not yet felt the decline to any appreciable extent.

WASTE SILK.

There has been rather more doing in this branch, and settlements for the week amount to 1,100 piculs distributed thus:—Cocoons, 90; *Noshi*, 700; *Kibiso*, 275; *Boseki*, 35.

The trade seems to have revived a bit, the purchases being more than during the previous week. Prices are nominally without change, varying a dollar here and there according to quality. Holders sell currently and meet the good demand freely.

The French mail steamer *Oxus* took 423 bales of *Cocoons* and *Waste*, three bales being for Shanghai, the rest for Europe. The German steamer *General Werder*, 12th inst., took 60 bales of *Noshi* for Italian ports.

These departures make the present export figures 8,772 piculs, against 8,569 last year and 8,857 in 1888.

Pierced Cocoons.—Another parcel has been weighed up of *Koshu*, somewhat light in yield, at \$107½, while 65 bales of *Najiko* were taken at \$50. Trade in *Cocoons* moves very slowly this year; consumers state that they can obtain cheaper material from Italy and China.

Noshi.—The better kinds of *Noshi* have been again in strong demand, \$140 being paid for some lots of prime *Bushu*, No. 2 quality being taken at \$130. A large parcel of *Oshu* was done at \$145, with a long line of *Shinshu* at \$115; *Mino* also realizing the last-named price.

Kibiso.—Purchases here have fallen off in volume; the price paid been has good: *Oshu* \$103 and \$97; *Common Hachoji* \$32. *Filatures* have been neglected.

Sundries.—The only trade in this class was a settlement of *Bosekiwata* at \$32.

QUOTATIONS.—(NEW WASTE.)

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in France, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:

DARTMOUTH, SOUTH DEVON (ENGLAND).

LONDON OFFICE:

181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." ty. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, and a most agreeable method of administering the only certain remedy for **INTENSIVE or THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout. World. May 1st, 1890.

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, NOV. 22, 1890.

SUMMARY OF NEWS.

THE Okayama Meteorological Observatory was opened on the 15th instant.

THE *Hiyei* and *Kongo Kan* arrived safely at Colombo on the 16th instant.

VISCOUNT DATE TSURUWAKA was raised to fifth class second grade on the 12th instant.

HER IMPERIAL HIGHNESS PRINCESS KITASHIRAKAWA left the capital on the 15th instant for Kamakura.

PRINCE TOKUGAWA KEIKI, ex-shogun, who had been in Tokyo for some time, left on the 18th instant for Shizuoka.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU left the capital on the 14th instant for Gumma and Saitama Prefectures.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TAKEHITO left Tokyo on the 17th instant, and proceeded to Yokosuka.

PROFESSOR YOSHIDA, of the College of Science in the Imperial University, was placed on the *hishoku* (retired) list on the 15th instant.

THE steamer *Genkai Maru*, ordered by the Nippon Yusen Kaisha from a firm in Glasgow, will arrive in Japan in February next year.

THE line of the Sanyo Railway Company between Une and Mitsuishi will be opened for traffic about the end of the present month.

THE repairing of the Okitsu railway bridge on the Tokaido Railway, damaged by the recent floods, will be completed on the 25th instant.

HIS MAJESTY THE EMPEROR paid a visit to the second annual exhibition of the Meiji Fine Arts

Association in the former building of the Nobles' Club, Uyeno, on the 19th instant, leaving the Palace at 1.30 p.m.

VIC-ADMIRAL ITO, Vice-Minister for the Navy, proceeded to the Imperial Palace on the 11th instant, and had an interview with the Emperor.

MESSRS. MATSUI KOICHI and Tanaka Nobutoshi, of the Foreign Department, were appointed secretaries of the Japanese Legation at Peking on the 17th instant.

THE construction of the Segawa, Arakawa, and Iwai railway bridges, on the line of the Osaka Railway Company, will be completed during the present month.

MR. KAWAKITA, formerly Consul at San Francisco, was appointed Secretary of the Japanese Legation at Seoul on the 15th instant, and raised to second class *sonin* rank.

AN action was raised in the Kyoto District Court on the 14th inst. by Count Itagaki against Mr. Fukami Hikosayemon, a wealthy merchant of Fushimi, Kyoto, damages *yen* 10,000.

SEVERAL of the merchants of Hiroshima Prefecture have applied to the Minister of State for Agriculture and Commerce, for permission to establish a Chamber of Commerce at Hiroshima.

THE number of visitors to the bazaar held on the 13th and 14th instant at the Rokumeikan in aid of the Tokyo Charity Hospital was about 800, by whom articles valued at about *yen* 4,200 were purchased.

MR. ENBU HIDEYUKI has been permitted by the Tokyo City Government to form a company under the name of the Japan Ironworks Company with a capital of *yen* 200,000, which will be raised from the public in shares.

FIRE broke out early in the morning of the 7th instant, in a house at Madenokoji-mura, Yamakado-gun, Fukuoka Prefecture, and one police station and sixteen dwellings were entirely destroyed before the flames could be subdued.

AN outbreak of fire took place on the morning of the 10th instant in a house at Futayemura, Amakusa-gun, Kumamoto Prefecture, and about sixty dwellings were entirely destroyed before the flames could be got under control.

THE Sanitary Bureau in the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic up to the 18th instant, was 44,348, resulting in 30,874 deaths.

A MEETING of the Privy Council was held on the 14th instant and was attended by Counts Oki, Terajima, Sasaki and Soyejima, Viscounts Sano, Yoshida, and Fukuoka, and Messrs. Kono, Osaki and Motoda, the proceedings closing at 3 p.m.

THE Japanese Consul at San Francisco reports that the total value of the trade between Japan and San Francisco during the month of July last was \$787,607, of which \$75,460 represented exports from San Francisco to Japan, and \$712,147 imports.

THE ordinary Cabinet meeting was held on the 18th instant. The proceedings were opened at ten in the forenoon, when there were present Counts Yamagata, Yamada, Saigo, and Matsukata, Viscount Kabayama and Messrs. Mutsu

and Yoshikawa, and closed at four in the afternoon.

AN ordinary Cabinet meeting was held on the 14th instant, at which there were present Counts Yamagata, Matsukata and Goto, Viscounts Aoki and Kabayama and Mr. Yoshikawa. The proceedings lasted from ten in the forenoon till three in the afternoon.

THE total receipts of the Kyushu Railway Company on the section between Kurume and Akamagasaki during October last were *yen* 12,018.10, which shows a daily average of *yen* 387.681. During the same period 58,416 passengers were carried on the section.

A FAREWELL entertainment was given on the evening of the 18th instant, at the Imperial Hotel, by Mr. Kaneko Kentaro, Chief Secretary of the House of Peers, and other leading gentlemen, to the Rev. Mr. Knapp of the Unitarian Mission, who will leave Japan shortly for home.

HER MAJESTY THE EMPRESS, accompanied by Viscount Kagawa, Dr. Katsura, an Imperial physician, and several ladies of the Court, proceeded to the Aoyama Detached Palace on the afternoon of the 18th instant, where Her Majesty witnessed a performance of *No*.

AN extraordinary meeting of the Cabinet was held on the 17th instant, at which there were present Counts Yamagata, Saigo, Yamada, Matsukata, Oyama, and Goto, Viscounts Aoki and Kabayama, and Messrs. Mutsu and Yoshikawa. The proceedings lasted from ten in the forenoon till three in the afternoon.

THE opening ceremony of the Osaka Mercantile Exhibition took place on the 15th instant, at which Mr. Ishida, Vice-Minister for Agriculture and Commerce, Mr. Nishimura, Governor of Osaka, and leading merchants to the number of about five hundred and sixty attended. Addresses were delivered by Messrs. Ishida and Nishimura.

ACCORDING to returns compiled by the Customs Bureau in the Finance Department, the exports from Japan during the month of October last amounted to *yen* 5,213,876.340, and the imports, to *yen* 5,943,531.620, the latter exceeding the exports by *yen* 729,655.280. The following are the amounts of Customs duties collected at various ports during the month:—Yokohama, *yen* 238,509.585; Kobe, *yen* 126,120.099; Osaka, *yen* 8,247.680; Nagasaki, *yen* 18,726.810; Hakodate, *yen* 10,237.876; various other ports, *yen* 2,360.913.

No improvement in the Import trade. A few small sales of Yarn were effected, when another drop in exchange landed buyers and sellers in the same place they were before. Cotton Piece-goods and Woollens are lifeless, and the trade generally without a spark of animation. Metals nominal and weak, and practically no business doing. Kerosene in much the same condition, with a very heavy stock. Sugar dull, and not enough business to make quotations trustworthy. Financial disturbances both sides of the world continue to cramp the Silk trade, and sellers here complain of heavy losses on what transactions have been put through during the week. The difference in exchange now and a year ago is only about 2 per cent., but the quality of Silk sold this week fetched 25 per cent. more at same date last year. There has been a fair amount of Waste Silk purchased. Tea is nearly finished. Exchange continues up and down, though the tendency is generally in the latter direction, and rates are unstable.

EDITORIAL NOTES.

COUNT ITO ON THE REDUCTION OF THE LAND TAX.

AN interview with Count Ito, which has much of the ring of truth, is reported in the columns of the *Jiyu Shinbun*, Count Itagaki's new organ. We mentioned some time ago that a great improvement has been effected in the supply of political and social news to the vernacular press owing to the establishment of a news agency under the control of competent and responsible persons. Count Ito is reported to have spoken as follows:—"The reduction of the land tax is a problem that occupies a large share of public attention and doubtless the Diet will discuss it. But for my part I do not think that reduction can possibly be accomplished. The land tax is the principal source of revenue in Japan. The national income depends largely on it. If it be reduced, some other suitable source of taxation must be found. Is there such a source? As to effecting economies in administrative expenditure, I have only to say that if it were possible to effect economies sufficient to warrant a sensible reduction of the land tax, the Government would be greatly to blame for not undertaking the task long ago. Take my own experience. In 1885, after consultation with my colleagues in the Cabinet, I introduced exceptional reforms with a view to reducing administrative expenses, and at the same time devised various new sources of revenue with the hope of being able to lighten the land tax. Night and day did my colleagues and myself labour at this problem. But the national dignity demands that certain sums shall be expended for administrative purposes. In addition to ordinary domestic expenditure there was the special question of Treaty Revision to be dealt with. Year by year the demands on the national purse increased, and we found it impossible to achieve our purpose. I left my post at the head of the Cabinet, and was succeeded by Count Kuroda. The Count shared my views. The present Premier, Count Yamagata, does not think differently from either of us in respect of this question. Among the people there are some who attack the Government, saying that it is a clan Government, or a personal Government, or that it spends too much money on protecting industries and so forth. Granting it to be a clan Government, is that reason why its administration should be bad? Yamagata, Yamada, Inoue, and myself are all Choshu men. Our methods of procedure may differ from those of other persons, but it does not by any means follow that we are of one mind as to administrative affairs. I have had many a hot argument with all of them about governmental business. Why should we make little of the greater interests of our country because we happen to be of the same clan? As for the question of money used for protective purposes, it is beyond doubt that if the development of the empire's material resources be desired, agriculture, industry, and commerce must be encouraged. The Government, therefore, must assist the nation in these respects. At this very day, enterprises of national importance, as posts, telegraphs, and railways, are largely assisted by Governments in the West. In a country like Japan, where so much has still to be achieved, such measures are of great importance. For these reasons it is plain that any sensible reduction of the land tax is out of the question, unless, indeed, some suitable substitute for it can be found. Some people talk of abolishing the Department of Education, abolishing the Department of Agriculture and Commerce, abolishing the Department of Communications. Such proposals astound me. If you abolish the *Mombusho*, what is to be done about education? If you abolish the *Noshomusho*, what do you propose to do about agriculture, industry, and trade? If you abolish the *Teishinsho*, how are you to control the postal, telegraphic, and shipping systems? No controversialists are sufficiently unreasonable, I presume, to propose doing away with education, industries, and communications. The most radical proposals do not extend beyond combining the business

of these Departments with that of some other branch of the administration. How much economy could be achieved in that way? Abolishing Departments and checking the progress of education, industry and communication merely for the sake of effecting a paltry saving—surely such a proceeding would display little power of estimating the balance of advantage and disadvantage. The Diet, soon about to meet, is an affair of unprecedented magnitude and importance in Japan. It is to be sincerely hoped that the representatives of the people will investigate everything thoroughly and refrain from making extravagant propositions, and that the Government, on its side, will do everything in its power to conduct things quietly and with moderation."

* * *
The *Jiji Shimpō*, writing on the same subject, gives the following clear account of the state of political opinion:—"The contention that the burdens of the agricultural classes should be lightened by reducing the land tax, was advanced several years ago and has constantly gained ground. Special measures were adopted by the Government to revise the assessment of lands, but people are not content with this, and it is widely argued that a further large reduction should be made. The members of the Diet, having been, for the most part, elected by land-owners, are sure to advance propositions urging the necessity of reform in this branch of taxation. The positions taken by political parties towards the problem are three. The first is that the rate of taxation should be reduced; the second, that the imposts upon lands most heavily taxed should be lessened, and all inequalities of assessment corrected; the third, that in addition to correcting inequalities of assessment the rate of taxation should be lowered. The second proposal finds few supporters, its advantages not being considered equal to its disadvantages. The third is most widely approved, but inasmuch as great labour and expense would be entailed in carrying it out, and considerable time would be needed, some politicians contend that definite steps should be postponed until all the necessary investigations have been made. The first proposal is the only one that could be put into immediate operation. The Constitutional Liberals and their fellow-thinkers, arguing that the first Diet could not possibly obtain data for correcting inequalities of assessment, are in favour of simply reducing the general rate of taxation from $2\frac{1}{2}$ to 2 per cent. of the value of the land; a reduction which would cause a diminution of eight million *yen* in the national revenue. To meet this deficit, the idea is that administrative expenses should be economised, and if the economy cannot be carried far enough, the income tax and the tax on pleasure grounds must be increased, and the taxes on industries and houses should be included in the national taxes. The tax on industries levied in the various Cities and Prefectures amounts at present to three million *yen* annually, but the method of assessment varies considerably. Thus, while the Head Office of the Bank of Japan in Tokyo pays only 70 *yen*, the branch office in Osaka pays 500 *yen* yearly. Again, the largest haberdasher's shop in Japan, Echigoya of Tokyo, pays an industrial tax of 100 *yen*, whereas in Gumma Prefecture there is a haberdashery which pays 300 *yen*. If the impost were converted into a national tax, all these inequalities might be removed and the tax would be collected by a single bureau. Again, with reference to income tax, the English and American method of taxing people according to their own statement of their incomes is not suited to Japan. The French plan should be adopted, by which a man's house and manner of living are taken as a basis for determining the tax. A very considerable increase in the total amount of the tax would thus be obtained. Finally, if the tax on pleasure grounds, that is to say, ground not used for agricultural, commercial or industrial purposes, were augmented, an appreciable addition would, it is asserted, be made to the revenue."

* * *
It is interesting to observe how the progress

of this discussion brings the agitators nearer and nearer to the situation which the Government had to face at the commencement of the *Meiji* era. It was imperatively necessary at that time that a general survey of the country should be made with all speed in order to provide a source of revenue for carrying on the administration. The celerity and economy with which the task was accomplished have never, we think, been sufficiently appreciated. Perfect uniformity of assessment was out of the question under the circumstances, but when politicians now-a-days begin to talk of correcting inequalities and equalizing the tax in every district, they find that the preliminaries to such an undertaking would involve serious expenditure of time and money. Another national survey would have to be undertaken on a scale of greatly increased accuracy and at correspondingly heavy cost. The only alternative, therefore, is a rough reduction of one-half per cent. all round. Such a reduction signifies a serious diminution of the Treasury's receipts, but does it signify a proportionate relief to tax-payers? We greatly doubt it. Take the case of a farmer holding two *cho* of land, or five acres approximately, and suppose that his land is assessed at seventy-five *sen* per *tan*, or three hundred *yen* an acre, for purposes of taxation. Then the total value of his holding being fifteen hundred *yen*, his total land tax amounts to 3.75 *yen* annually, and if the proposed reduction of one half per cent. were made, the relief afforded to him would be seventy-five *sen* per year. Of course, if we double or treble the size of the holding, the effect of a reduction of one half per cent. becomes more palpable, but on the other hand, a farmer's ability to pay taxes under normal circumstances increases rapidly with the area of his farm. A diminution of yearly tax to the extent of 1.50 *yen* means much less to a man growing ten acres of rice than a reduction of 75 *sen* means to a man growing five. It is hard to believe that any really sensible relief would be afforded by the measure proposed. Moreover, the scheme includes transferring to the national exchequer funds hitherto devoted to local purposes—the tax on trades, for example, which produces three million *yen* annually. If this sum be taken from local revenue, some substitute will have to be found, and thus, while the farmers are relieved in one direction they will be additionally burdened in another.

CURRENT TOPICS.

LATELY much activity has been shown by the brewers of *sake* in the Provinces of the *Kwan-tō* in connection with the reform of taxation on that article, and with the revision of the Treaties. The tax on *sake* is at present exceedingly high—4 *yen* per *koku*—and naturally the brewers suffer very much, but they complain even more about the mode of collection than about the rate of the tax. The very minute and troublesome regulations now in force subject the *sake* manufacturers to so much inconvenience and so much loss of time, that they are reported to be willing to pay even a higher impost, if the process of collection be made simpler and more practical. Another grievance which they propose to bring to the notice of the Authorities is that they are placed at a great disadvantage by some foreign merchants in the settlements who secretly manufacture *sake* or liquor very much like *sake*, without paying anything in the shape of tax. What evidence they have as to the existence of this illegal practice on the part of foreign merchants, we do not certainly know, but we are informed by an apparently trustworthy authority that the Japanese brewers are in possession of some samples of the commodity in question. For the purpose of laying these grievances before the Government they recently sent up to the capital a number of delegates. The latter interviewed some Ministers of State and other high officials, and in particular the functionaries of the Foreign Office, to whom they explained the actual state of things, requesting that proper precautions be taken in the treaties under negotiation against the possibility of any injury being done to them by the foreign manufacture or importation of

sake. The delegates of the *Kwan-to* brewers also invited their *confidres* in the Provinces of the *Kwan-sai* to cooperate with them, and a report from Osaka informs us that the invitation has been gladly accepted, and that the western brewers are to hold a meeting there very soon.

Marquis Asano, formerly chief of the Hiroshima clan, is regarded as one of the most intelligent of the *ex-daimyo*. He is the leader of a political association called the *Seiyu-kai* in his native Province, and occupies a foremost place among the statesmen in the Conservative camp. Like Viscount Torio, he has hitherto been considered one of the opposition to the present Government, but, it is now rumoured, though with how much truth we do not know, that he is about to be appointed a Privy Councillor. A similar report is circulated about Count Yanagisawa, who is also one of the reputed anti-Government politicians.

The question of public prostitution, about which so much noise was made some time ago, seems to be still agitating a certain section of the nation. It is reported from Kyoto—if we may believe the *Jiyu Shimbun*—that a number of Christians there propose to petition the Diet for the abolition of licensed prostitution.

It is a remarkable circumstance that whenever any new movement occurs in the political or even commercial world, the public invariably thinks or pretends to think that Count Inouye is in one way or another connected with it. He cannot, therefore, expect to fare otherwise in the case of the contemplated organization of the National Liberal party. He is thought to be one of the principal promoters of the scheme. A reporter belonging to the Reporting Agency (*Jiji Tsushinsha*) interviewed him a few days ago, to ascertain the truth of the rumour generally circulated about him. The interviewer found him in his residence at Torizaka, surrounded by a quantity of old books and documents. The Count told his guest that, far from meddling in politics, he was entirely devoted to the perusal of treatises on military tactics or poetical works, and that, as he could no longer bear being constantly made the subject of false rumours, he had resolved to retire for some time to his native province with his family.

All the towns, in common with all the rural communes throughout the country, now enjoy the right of complete self-government. Tokyo, Osaka, and Kyoto, however, are under a special system of self-government; the principal points of difference being, first, that whereas in every other town a special Mayor (*Shi-cho*) is appointed, that office is in the case of the three cities mentioned above combined in the person of the Governor; and secondly, in some respects a higher standard is fixed in these cities for the qualifications of members of the Municipal Council than in the other towns. From the outset this system did not find favour with the inhabitants of the three great cities, and recently the members of the Tokyo Municipal Council took up the question, and resolved to memorialize the Government for the abolition of the system now in force. According to the *Hochi Shimbun's* information, the members of the Council are determined to do their utmost to attain their object. Should the Government fail to bring the matter before the Diet, the members of the Council will petition the latter directly on the subject. Kyoto is reported to be of the same mind. Nagoya, however, which is under the general Municipal system, has repeatedly been unfortunate in the election of its mayor; and its citizens are even said to be desirous of having the special system applied in their case.

THE ARMY AND NAVY IN THE DIET.

The *Mainichi Shimbun* publishes the following from one of its correspondents:—"In the first session of the Diet, a bill will be introduced for increasing military preparations. Judging

from the present constitution of the Diet, it is almost sure that, in the discussion thus raised, the interests of the army will be given preference over those of the Navy. Consider the respective numbers of Army and Navy officers in the House of Nobles:—

ARMY.

Prince Arisugawa (Commander-in-Chief of the Army).
Prince Komatsu (Commander of the Imperial Guards).
Prince Kitashirakawa (Major General).
Prince Fushimi (Colonel).
Prince Kanin (Lieutenant).
Lieutenant-General Torio.
Lieutenant-General Ozawa.
Lieutenant-General Miura.
Major-General Fukushima.
Major-General Harada.
Major-General Kunishi.
Major-General Yamakawa.
Major-General Murata.
Major-General Horiye.
Major-General Tani.
Surgeon-General Matsumoto.
Surgeon-General Hashimoto.
Captain Takatsukasa—18 in all.

NAVY.

Prince Takehito (Fushimi), Captain.
Vice Admiral Ito.
Rear-Admiral Yanagi—3 in all.

Eighteen to three is a glaring difference which cannot but tell on the result of the debate. Yet if it be asked whether there are not men of capacity in the Navy, we find such officers as Vice-Admiral Akamatsu, well known to be highly experienced; Vice-Admiral Nakamura, who has been an Admiral for over twenty years; Vice-Admiral Nirei, admitted to be the most influential officer in the Navy, and Admirals Hayashi, Ito, and others of note. If these persons were present in the House and took part in the discussions, the question would be fairly and properly argued. But a controversy in which three have to face eighteen is too unequal. If, therefore, the House of Peers decides in favour of developing the Army rather than the Navy, it will not be possible to say that the question has been fairly decided on its merits."

THE FOREIGN EMPLOYÉS OF THE JAPANESE GOVERNMENT.

Under the heading "Destiny of the Government's Foreign Employés," the *Hochi Shimbun* writes thus:—"A considerable number of foreigners are employed by the Japanese Government in the capacity of advisers or teachers, and their monthly salaries aggregate a pretty large sum. Henceforward, however, questions relating to their re-engagement can scarcely be settled without the concurrence of the Diet, and we learn that even among employés whose engagements have been renewed frequently, a good many will not be required again when their present periods of service expire. Mr. Knipping, a German gentleman who has for a long time been attached to the Meteorological Bureau of the Home Department, and Mr. Chiossone, an Italian gentleman in the service of the Department of Finance, whose agreements terminate next March and January respectively, will return home then, we understand."

This comment doubtless expresses the sentiment of the time. It has long been the ambition of the Japanese to become independent of foreign aid in every respect, and they will not rest until they have accomplished their purpose. To condemn such a sentiment would be extravagant. It is natural, and all thinking persons must have foreseen its growth. In not a few cases, however, the agitation against foreign employés has been prompted and fostered by youthful officials whose chief motive has been jealousy that the foreigner should occupy a position for which they think themselves qualified. This, too, is very human. The rising generation has its own interests and prospects to consider, and if it does everything in its power to secure for itself the plums now plucked by outsiders, who will venture to assert that his own conduct would be different under similar circumstances? At the same time, it is decidedly painful that men like Messrs. Knipping

and Chiossone should be quoted as examples of those against whom this self-asserting mood is exercised. The work done by such experts in Japan is of permanent value to the country, and we should sorry to think that though their departure is thus cursorily alluded to by the *Hochi Shimbun*, their services will be unappreciated or forgotten in the Departments where they have discharged such useful functions for so many years. It is something to know, by way of set-off to this bad news—supposing it to be trustworthy—that a very different course has been pursued in the case of the majority of the foreign Professors in the University. Their agreements have been renewed for considerable periods, and the disposition of the Japanese Authorities has been all in the direction of retaining their services.

YOKOHAMA DOCKS.

THE *Chiusi Nippo*, referring to the Yokohama Dock Company, says:—"The projected works of the Yokohama Dock Company are an undertaking of large magnitude to be ranked side by side with the Yokohama Harbour improvement scheme. The promoters of the Company are the principal merchants of Yokohama, and an application for a charter on the basis of a capital of three million yen, according to estimates made by General Palmer, was presented to the Department of Home Affairs in the beginning of last year. Meanwhile, the effects produced by the establishment of numerous new companies have told on the financial state of the country and caused something like a panic owing to scarcity of circulating capital. The Government has consequently hesitated to grant the application, and the company, for the same reason, has not been eager in soliciting a charter. We are now informed that the examination of the specifications and estimates has been concluded and that, so soon as the sanction of the Cabinet has been obtained, a charter will be given to the Company. This event will probably occur in the latter part of the present month. The promoters will hold a meeting as soon as the charter is received and discuss whether the money shall be called in and the works begun or not, as it would be a serious question to withdraw so much capital from circulation in the present circumstances of the money market. The position of president of the Company is coveted by some of the promoters but the Government will have a voice in the appointment, and as the person likely to be named by the Government is an official on the *hishoku* (half pay), list, the promoters are said not to be pleased with the choice. The question is therefore at present left unsettled."

JAPAN'S FOREIGN TRADE.

"JAPAN's foreign trade," we read in the *Jiji Shimbun*, "has made extraordinary strides. Her exports and imports now amount to a hundred and twenty or thirty million yen, and their growth is a subject of general admiration. But if we look closely, we find that the Japanese merchants resemble cripples in respect of the part they play in this trade. They do not take voyages to distant countries for the purpose of selling Japanese commodities, neither do they import foreign commodities for sale in Japan. They simply wait at home for foreigners to come and sell to them or buy from them. They have stood still while trade has advanced. There are various reasons for this, doubtless. Although our intercourse with foreign States has greatly increased of late years, we remain almost as ignorant as ever, commercially speaking, of the conditions existing abroad, and the idea of investing capital in enterprises to compete with foreigners on their own ground never seems to occur to our people. We believe that want of acquaintance with Western languages is the chief cause of such an unsatisfactory state of affairs. There are, indeed, many Japanese who can speak English or French, but they are not connected with trade. Very few and far between are the Japanese merchants who know a foreign language or understand foreign trade conditions. It is imperatively necessary that our young merchants should become

acquainted with Occidental tongues. The Government, also, should exercise great care in selecting Consuls. The reports hitherto compiled by Japanese Consuls give no evidence of any care for the vital interests of future trade. They confine themselves to discussing questions and compiling statistics with reference to Japan's still small foreign commerce. Not regarding the possibility of Japanese merchants going abroad to carry on trade, the Consuls give no description of the commercial conditions existing in the countries where they are stationed, nor any data by means of which our merchants may arrive at comparative conclusions. Besides, it too often happens that before a Consul becomes thoroughly acquainted with the country of his service, he is removed to some other post. Better rank should be given to Consuls, greater care exercised in selecting them, and their periods of service should be lengthened, so as to enable them to become thoroughly conversant with commercial affairs in each place where they go. On the one hand, then, we have the advisability of greater attention and care in respect of Consuls, and on the other, the need of closer attention to linguistic studies, an end which the Government might assist by selecting the best graduates of commercial and other similar schools, and sending them abroad as commissioners to conduct inquiries. This seems to us the soundest method of developing Japan's foreign trade."

MR. TAGUCHI'S LETTER.

MR. TAGUCHI, as has been more than once noted in these columns, left the port of Shinagawa in the beginning of last summer on a voyage to the South Sea Islands, with the object of finding new markets for Japanese goods and of searching for places suitable for the emigration of Japanese. His first letter was reproduced some time ago. His last letter from Ponape, dated September 25th, has just reached Japan. He arrived there on the 10th of that month. Learning from a chart that Kichima (?) is the best port in the whole island, he had steered to it, but on entering it his party was informed that the seat of the Spanish Government being at the port of San Jago, all vessels coming from abroad must first enter that port. The wind being adverse, his vessel had to lay at anchor at Kichima for six days, without doing any business whatever. But while there he became acquainted with several natives and Americans, whose friendship was of great advantage to him in the prosecution of his researches. He was also agreeably surprised to meet a Japanese emigrant. His name is Minckishi Shigetaro, a native of Mito. He is a Protestant believer, and is said to enjoy the respect of the natives. On the 20th of the same month Mr. Taguchi entered the principal port, where the Government of the island is situated. He found that place a scene of great excitement on account of the insurrection of some hundreds of natives. The immediate cause of the revolt is ascribed to the cruel treatment to which the natives had been subjected by some engineering officers; but it seems that a long standing grudge had been entertained by the natives against their Spanish rulers, who had tried to force them to renounce their Protestant faith in favour of the Catholic religion. On the 10th of September, three Spanish men-of-war and two transports, with a battalion of soldiers on board, arrived at the port of San Jago. The fighting commenced on the 13th, and on the 21st the troops returned to the port. The rebellion had not, however, been completely suppressed at the date of the letter from which we are quoting. All the arms and ammunition on board the Japanese ship were seized by the Spanish authorities and carried to their men-of-war to be kept there during the continuance of the rebellion. Further, Mr. Taguchi's ship was prohibited from going to any other port in the island. He has much to say, he tells us, against this measure, but certain reasons induce him to keep silence in the present letter. The island of Ponapé, though small in extent, is

fertile, and Mr. Taguchi thinks that it will be very well adapted as a station for the Japanese race in the South Sea. He also speaks of the wreck of Captain Dewar's yacht. He entrusted his letter to a certain Japanese in the employ of that gentleman. Mr. Taguchi thinks that not before the end of the year or the beginning of January next, will he and his party be back in Japan.

H.M.S. "WASP."

We take the following from *The Times*.—"An interesting ceremony took place in the Royal Dockyard Church, Sheerness, on Saturday, the occasion being the dedication of two handsome memorial brasses to the officers and men of the ill-fated gunboat *Wasp* (6) 755 tons, 1,200-horse power, Lieutenant-Commander Bryan J. H. Adamson, which was lost with all hands on a voyage from Singapore to Hongkong in October, 1887. The proposal to raise a memorial originated with the Rev. H. W. Millett, chaplain of Sheerness Dockyard, and with the consent of the Lords of the Admiralty appeals were made by him to the naval service and the public generally for contributions, with most successful results. The brasses are of large dimensions, elaborately engraved, and mounted on a backing of solid rosewood. They are the production of Messrs. Cox, Sons, Buckley, and Co., and have been set up one on either side of the chancel. The brass on the left is surmounted by a beautifully-executed engraving in white metal of the *Wasp*, and the wording beneath recounts the history of her building, her dimensions, and the record of her fatal voyage as far as Singapore. The brass on the right bears the names in full of the 80 men who perished in her, and above the names, in a label supported by two lions, is an anchor with cable attached, and its palm embedded in the earth. Over it are the words, "Because I live, ye shall live also," and below it, "Which hope we have as an anchor of the soul, both sure and steadfast." The dedication service was performed by the Chaplain of the Fleet, in the presence of Admiral Curme, Commander-in-Chief at the Nore, and the principal naval officers of the port, the crews of the *Northampton*, *Basilisk*, *Wildfire*, *Trent*, and the men stationed at Sheerness Naval Barracks. The names of the officers who perished in the *Wasp* are as follow:—Lieutenant-Commander Bryan J. H. Adamson, Sub-Lieutenants Alexander W. Atkinson, the Hon. W. G. D. Fortescue, and Thomas Kerr; Surgeon Thomas Nunan, M.D., Assistant Paymaster N. H. Greenwood, Engineer Henry Attwood, and Gunner F. Hodges.

REGULATIONS OF THE DIET.

In the draft regulations of the Diet, there is an article which provides that "members who desire to speak on the questions noted in the *Giji Nitte* (daily list of subjects to be submitted for deliberation) shall intimate to the secretary before the meeting is opened their names and their intention to speak for or against the bills in question." Several vernacular papers report that a section of the members of the House of Peers is strongly opposed to this regulation, on the ground that it practically means the imposition of restraint on speech and is besides quite unnecessary in the Upper House, the members of which will not be animated by party feelings. This opinion prevails among members who had seats in the late Genro-in (Senate) and who form a large and influential section. The question is causing some anxiety in the minds of those who framed the draft, for they point out that, without some regulation of the kind complained of, the duties of the President are likely to be exceedingly arduous. It will be very difficult to regulate the debate if members are allowed to speak when they please.

THE SPECIE BANK.

A CORRESPONDENT of the *Nichi Nichi Shimbun* writes from Yokohama:—"A rumour was recently circulated that the Yokohama Specie Bank, having made large advances against silk, was greatly embarrassed, and that the principal officials of the Bank were daily engaged dis-

cussing the best means of solving the difficulty. This is a false report originating in the imagination of some one ignorant of the true state of the Bank's affairs. The silk taken by the Bank as security up to the present amounts to 12,000 bales. In making advances against it, an average market value of \$620 per picul was taken and 80 per cent. of the value was advanced; that is to say, for one bale of 55 *kin* net, valued at \$341, the sum of \$272 was advanced; and, for *Zaguri* silk, an average value of \$570 per picul was taken, and against one bale, of the estimated value of \$313.50, the sum of 250 *yen* was advanced. Further, these advances were not made by the Bank direct to the sericulturists, but to silk merchants or bankers in Yokohama who mortgaged to the Bank bales of silk received by them from the owners as security. Consequently, before the Specie Bank sustains a loss through these transactions, the sericulturists in the first place, and the Yokohama merchants or bankers in the second, must become bankrupt. There is thus no fear of the Specie Bank being involved in loss, so long as rates anything like those quoted at present are sustained. Of course if the price of *Kitai* falls to \$490 and that of *Zaguri* to \$454, the prospect would be gloomy enough.

RIVERS IN JAPAN.

In recent numbers of the *Keisai Zasshi*, we find a series of interesting articles on the rivers of this empire. Japan being traversed throughout its entire length by a chain of high mountains, the rivers draining these, though numerous, are generally small and short. Still the damage wrought yearly by inundations is far from inconsiderable. From the statistics prepared by the Authorities, our contemporary quotes the following figures representing the comparative amount of damage by inundations for the six years from 1882 to 1887 inclusive:—

Year.	Damage by Large Rivers.		Damage by small Streams and Sea Water.		Totals.
	Yen.	Yen.	Yen.
1882	3,390,352	—	3,390,352
1883	1,444,750	622,906	1,867,656
1884	19,692,538	1,510,916	21,203,454
1885	25,678,819	611,851	26,290,700
1886	7,751,407	1,228,502	8,979,909
1887	2,208,037	587,975	2,796,012

It is seen from this table that the year 1885 stands foremost in the record of damage by inundations. To mention some of the rivers most destructive in that year: the Yodogawa was responsible for losses amounting to *yen* 7,552,196; the Tonegawa for *yen* 2,513,460; the Kiso-gawa for *yen* 2,094,459; the Arakawa for *yen* 1,651,480; the Yoshinogawa for *yen* 793,094; and the Tenryugawa for *yen* 743,468. The figures thus far quoted only represent direct damage caused by inundations, and do not include indirect losses incurred owing to interruption of routes of transportation and communication, disturbance of the markets, and loss of human life. In the opinion of our contemporary, disastrous inundations seem to have become more numerous and frequent in recent years. Possibly the opinion may not prove correct, but it is nevertheless shared by many people. The Tokyo journal refers the supposed increase of destructive floods to two primary causes. One is that the development of industries and railways has led to the deforestation of mountains; the other, that proper steps are not taken for keeping in good order the courses and embankments of rivers. Nevertheless the amount of money yearly spent upon the maintenance and repair of river-banks and channels throughout the country is quite considerable. The following table shows the sums thus spent during the five years from 1882 to 1886 inclusive:—

Year.	Defrayed by the Treasury.		Defrayed by Local Charges.		Total.
	Yen.	Yen.	Yen.
1882	395,345	3,274,591	3,669,936
1883	330,300	2,566,010	3,126,310
1884	571,744	2,648,259	3,219,003
1885	917,176	3,323,749	4,240,925
1886	633,323	2,890,444	3,523,767

The above figures represent only the sums required for repairing and improving the courses and embankments of the rivers. If we take

into consideration all other indirect expenses such as those connected with the repairs of bridges and roads damaged by floods, the total amount will be very large. Notwithstanding that such an amount is annually devoted to the maintenance of rivers, cases of injurious inundations are yearly increasing, because, says our contemporary, the works undertaken are merely temporary in nature, and not sufficiently thoroughgoing. Still, the country is not spending such enormous sums for nothing. Japanese rivers being generally shallow and rapid, their value as means of transportation is not great, but their importance is inestimable from an agricultural point of view, as without the water supplied by them it would be impossible to cultivate the most valuable crop in the country, rice. Our contemporary urges the larger employment of river water for industrial purposes, and observes that the rivers in Japan being generally rapid, it would be extremely easy and economical to employ them in that manner. At present manufactories using water power are rare. There is no reason why water power should not be as extensively used here as in Switzerland, the United States and some other countries, especially since its use would be in most instances more economical than that of steam. As to the method of using water power, our contemporary promises to speak in a future issue.

THE NEW CITY IN HOKKAIDO.

THE *Kokumin Shinbun* and other papers write in the following strain with reference to the new city projected in Hokkaido:—When the order to prepare plans for an Imperial pleasure house (Rikyu) at Kamikawa in the province of Ishikari was given last December, great excitement was caused among the inhabitants of Hokkaido and applications to the Authorities for permission to contribute towards the funds for the undertaking were received in great numbers. The ground survey has now been completed, and the divisions and allotments to be made in the city as well as the site of the palace and other details have been settled. Houses to be used as family residences, to the number of over four hundred, are to be erected there during next year, and are now in course of rapid construction. Kamikawa is a plain about 7 or 8 *ri* from east to west and 13 *ri* from north to south, surrounded by hills on all sides. It is traversed by rivers in various directions and will have great facilities for water transportation. The soil, except twenty to thirty per cent. of the whole area, is generally very fertile, and for several years to come crops might be grown without the use of fertilizers. The Ishikarigawa, which runs right across the district, is the longest and largest river in the whole of Hokkaido. It has a length of over 200 miles (English), and up to a point about 140 miles from its mouth and some 15 to 30 miles distant from Kamikawa, it is already navigated by steamers. Engineers consider that no difficulty will be found in improving the river so as to render it navigable right up to Kamikawa. The Sorachi Railway of the *Tunko Kwaisha* (Colliery Company) has already been carried to a point some 25 miles from Kamikawa and in 1892 or 1893 it will be extended to the site of the future city. The Kitami Road leading to Kamikawa is now in course of construction, and is expected to be finished during next year. When this road is completed the whole extent of Hokkaido can be traversed in a straight line from east to west. Other roads, such as those to Teshiwo, Nemuro, Kushiro, &c., will all be open in a few years. Kamikawa will then be situated at the central point from which the whole region of Hokkaido can be most conveniently governed. With the commencement of the projected works for the establishment of the Imperial City in the North, it is expected that the people will develop fresh activity, and that all enterprises as well as immigration will receive a strong impetus.

The vernacular press also reports with reference to the scheme of making the harbour of Muroran into a naval station, that there seem to be different opinions among the officers of the navy,

Hokkaido is almost destitute of good harbours other than that of Hakodate, and there is no really good anchorage in the north-eastern district of Japan. Consequently, Admiral Nirei, *faute de mieux*, fixed his eyes on Muroran. But Admirals Ito and Kabayama both disapprove of the idea, and their opinions are said to be supported by Admiral Yenomoto, who recently visited the place. The harbour is, however, good enough as a trading port, and will doubtless prosper as such. Its defects are want of capacity and the very limited quantity of land available around it, the ground rising in most places abruptly from the water's edge. Even to obtain room for the town excavations will have to be made, and stores, workshops, &c., for naval purposes could not be constructed except at heavy cost. Such being the case, the choice of this place as a naval station would cause great inconvenience to the people, as not only would the ships of war inconveniently crowd the harbour, but the admiralty buildings would occupy a considerable space on land. The decision of the Naval Authorities is anxiously awaited.

A SOCIETY OF LAW GRADUATES.

THERE is in Tokyo a Society of Law Graduates called the *Tokyo Hogaku-in Inyu-Kai*. Several members of this Society recently held a meeting for the purpose of discussing the new Commercial Code, the result of the discussion being that a memorial should be presented urging postponement of the date for putting the Code into execution. Considering that the date is now only six weeks distant, it seems ill-considered and unfortunate that such a memorial should be prepared. We have never been able to discover by what motives the opponents of the Code are really actuated, and since they advance no tangible reasons for their attitude of obstruction, they cannot expect to obtain public sympathy. There is very little probability, we imagine, that the Authorities, yielding at this eleventh hour, will consent to defer the operation of a Code embodying laws universally admitted to be essential, and subjecting merchants to no embarrassments at all commensurate with the benefits conferred.

* * *

The same Society on the same occasion resolved to petition the Authorities of the Law Institution (*Hogaku-in*), formerly known as the English Law School, to remove the name of Mr. H.C. Litchfield, a well-known barrister of Yokohama, from the list of honorary members of the Institution. The reason for this singular proceeding is not given by the vernacular newspaper reporting the affair, but there can be very little doubt that Mr. Litchfield's connection with the Yokohama Anti-revision Meeting of last September prompted the step taken by the Society. In the records of that Meeting Mr. Litchfield played a very simple part. He confined himself to seconding the main proposition, moved by Mr. Lowder, and he did so in the briefest possible manner. Nevertheless his name has since then been constantly mentioned in the columns of the vernacular press as one of the leaders of the movement, and he has then acquired a degree of notoriety quite disproportionate, we think, to the part really taken by him. But under any circumstances the action of the Society of Graduates must be pronounced extravagant and undignified. Mr. Litchfield is perfectly entitled to hold any opinion he pleases on the subject of Treaty Revision, and if he possesses the courage of his opinion sufficiently to formulate it in public, that is certainly no reason why the members of a legal society should desire to have his connection severed with their *alma mater*. Of course the Society of Graduates has a right to choose its own associates, and if it thought that open relations with any of the nominal leaders of the Yokohama agitation would involve unpopularity, it might have voted a general resolution in that sense. But the course actually pursued is petty in the extreme. It betrays a most unfortunate failure on the part of the graduates to appreciate the true dignity of their parent institution. As for the Law

Institution, to the Faculty of which the memorial of the Society of Graduates will be presented, we have no difficulty in predicting that it will be particularly careful not to adopt the suggestion of the memorialists. The Society of Graduates has nothing whatever to do with the control or management of the Law Institution, and the Authorities of the latter are much too level-headed men to allow such a question to be entertained. It is very regrettable that these incidents should occur to disturb the relations between foreigners and Japanese, but public opinion has run high since the Yokohama meeting, and this access of umbrage coming to cap long years of growing discontent, confirms our often expressed conviction that until the Treaty Revision problem is removed from the path, friction and ill-feeling are inevitable.

HOLLAND AND JAPAN.

AMONG curious statements in reference to Treaty Revision, one made by the *Nichi Nichi Shinbun* is specially worthy of notice. It is to the effect that whereas England and France used to be the Powers most difficult to deal with, Holland now ranks with them in this respect. The reason assigned is decidedly bizarre. In Holland's Oriental possessions, Java, Sumatra and so forth, cases both civil and criminal, in which natives of the country are concerned are tried by native tribunals. "Supposing," says the *Nichi Nichi*, "that the Treaty between Holland and Japan were revised, then, under existing circumstances, Japanese residing in the Dutch East Indian territories would be judicable by these native tribunals. The Japanese, however, not being like the Chinese, Koreans and Indians who, for the sake of gain, disregard their national dignity, would not submit to appear before such tribunals. Consequently, before revising her Treaty with Japan, Holland will be obliged to make some new arrangement in respect of her judicial organization in the places referred to." It might have occurred to the writer of this criticism that if Western States have not found themselves embarrassed by Holland's judicial system in her East Indian territories, Japan need not be much disturbed about it either. At all events, we believe that the writer in the *Nichi Nichi Shinbun* enjoys a monopoly of the difficulty he raises, for so far as we know, it has never been discussed in diplomatic circles, probably for the simple reason that since the judicial system applied to Western subjects or citizens who visit or reside in Sumatra and Java would, under the revised treaties, be extended to Japanese also, under similar circumstances, there does not appear to be any special reason why Holland should revise the system on Japan's account if she has not revised it hitherto on account of England, France, the United States and so forth.

SOUTH AFRICAN GOLD PRODUCTION.

REFERRING to the production of gold in South Africa, concerning which we lately reproduced some interesting facts and figures, the *Economist* writes as follows:—"According to the telegraphic information received this week, the total production of gold from the Witwatersrand district of the Transvaal amounted last month to 42,861 oz., showing an increase of more than 3,000 oz. over the preceding month's figures, which until then were the best recorded. It is evident from this that the industry is making substantial progress, for the output for the past eight months has been nearly 307,000 oz., contrasting with under 380,000 oz. for the whole of last year. It is also to be observed that the augmentation is not due to a few mines having made better returns—two of them, indeed, though still heading the list, have shown a considerable decrease—but to the gradual increase in the number of properties which have been brought into the yielding stage. If the rate of production obtained in the past three months is continued for the rest of the year, the aggregate for the twelve months will not be far short of a million and three-quarters sterling, compared with about £1,300,000 in the preceding year. For some time past rumours have been circulated to the effect that the companies have suffered considerable loss owing to the

systematic purloining of gold during the process of extraction, and it is alleged that quite a large business has been done in the metal thus illicitly obtained. The Johannesburg Chamber of Mines has taken the subject in hand, and it is hoped that a better state of things may result from this tardy intervention. Of course, assays do not count for very much; but there is such a very wide margin between the assays and the yields from most of the mines, that the rumours of continuous thieving appear to be only too well founded. In the other districts improving progress is being made. In the De Kaap district, the Oriental and Sheba Valley mine has re-commenced crushing, and expects shortly to have at work the largest battery of stamps in South Africa. Development in the Lydenburg and Murchison Range districts also appear to be making headway at last; but the production of gold from these districts will not very much affect the current year's aggregate."

THE BRITISH NAVAL MANŒUVRES.

THE manœuvring of the British fleets this year has attracted considerable attention abroad. The general verdict of foreign journals agrees on the whole with that of the English press, and the regret that the hostile fleets have not met is almost universal. Captain Stenzel, a German naval authority and contributor to the *Military Weekly*, finds much interest in the proceedings of the torpedo flotilla, and, after a long and detailed review of the various manœuvres effected, goes on to say that a great variety of very instructive cases have occurred showing the weakness and the strength of torpedo warfare, and that it was chiefly due to the enterprise and daring of the leaders of the hostile flotilla that such valuable results were obtained for the use of naval experts. "Much," he says, "that was unreal, more than was desirable, occurred during this sham fighting, but it has now been demonstrated beyond a doubt that in somewhat protected waters and with anything but favourable weather, torpedo-boats can make voyages of very considerable length and can easily select their points of attack, while it is, especially at night, very difficult to recognize them in time to make their approach impossible or their attack harmless. It has also been shown that the torpedo net is so far the only safe means of protection. A few years ago Admiral Aube and others extolled the torpedo-boat as destined to supersede the heavy battle ships of the present. A natural reaction against this exaggeration gradually arose, and finally acquired such strength that in England, especially after the manœuvres of the last few years, the value of torpedo warfare was in many quarters held to be very doubtful. This year's experience, however, goes to show that no port of England's southern coast is really safe from an unexpected attack of torpedo boats from the other side of the channel, during the first night after the declaration of war. In fact better means of securing against such contingencies the commercial and naval ports most exposed are already under consideration. The more sheltered the waters concerned are from heavy seas the more complicated and difficult their navigation; and the more numerous the recesses and retreats offered by the coast, as in the Greek Archipelago and the Baltic Sea, the better and more promising is the prospect of success offered to these light, swift, and terrible vessels of war provided always that they are handled by men daring and devoted, yet also cautious and cool."

EXHIBITION OF OIL AND WATER COLOURS.

ON Sunday there was opened in the former building of the Nobles' Club (*Kiu-Kasoku-Kaikan*) in Ueno Park, the second annual Exhibition of the Meiji Bijutsu-kai (Meiji Fine Arts Association). The first exhibition took place last year, under circumstances of considerable difficulty, in the grand stand of the Ueno Race Club, a place ill suited by its associations for such a purpose. Many pictures of considerable merit were shown, but it was clearly understood that, the affair having been organised at very short notice, the painters of Tokyo had not been able

to put forth their strength. This year greater deliberation has been possible, and the display is correspondingly improved. The pictures promised have not all been sent in; but a large number are already in their places, and the whole will be hung, we learn, by the 20th instant. This exhibition probably offers the best opportunity yet afforded of estimating the progress made by Japanese painters of the Western School. People interested—and who is not?—in the vital struggle now going on between conservatism and liberalism in the world of Japanese art, will not fail to visit Ueno during the period of the Exhibition, namely, from the 15th of November to the 4th of December, inclusive.

VISCOUNT TORIO'S ESSAY.

VISCOUNT Torio's essay in the opening number of the new conservative organ is a noteworthy production. Excellently written from a literary point of view, as was to have been expected, the Viscount being a man of considerable scholastic attainments, the thesis is specially interesting as an exposition of the views held by the Conservative School of Japanese whom Viscount Torio represents. It is not, we imagine, a large school, but its ideas cannot be disregarded, not alone because of the position occupied by its leaders, but because its creed may be regarded as the extreme of the reactionary notions that began to find favour in Japan some three years ago. We therefore translate the concluding portion of the Viscount's essay, that our readers may form their own estimate of its merits—it will be remembered that the first part was translated in our columns some days ago:—"Order or disorder in a nation does not depend on something that falls from the sky or rises from the earth. It is determined by the disposition of the people. The pivot on which the public disposition turns towards order or disorder is the point where public and private motives separate. If people are influenced chiefly by public considerations, order is assured; if by private, disorder is inevitable. Public considerations are those that prompt the due observance of duties. Their prevalence signifies peace and prosperity in the case alike of families, communities, and nations. Private considerations are those suggested by selfish motives. When they prevail disturbance and disorder are unavoidable. As members of a family our duty is to look after the welfare of that family; as units of a nation, we have to work for the good of the nation. To regard our family affairs with all the interest due to our family, and our national affairs with all the interest due to the nation, is to discharge our duty fully and to be guided by public considerations. On the other hand, to regard the affairs of the nation as though they were our own family affairs, is to be influenced by private motives and to stray from the path of duty. What shall be said of persons who venture to treat the affairs of the nation as though they were affairs of their own family? The disorder that has overtaken many a State is the outcome of such an error. Since the Restoration, the society of this country has become strangely infected with a tendency to substitute private considerations for public. With regret do we perceive that men who originally rose to distinction by loyalty to their Sovereign and patriotism to their country, are growing self-willed and disposed to abuse their power by treating national affairs according to their own caprice. The odour of the West begins to pervade political circles. Each studies to promote his selfish purpose, those in the Government assuming the grand fashion of Occidental statesmen, and those in opposition imitating the bold spirit displayed by Occidental champions of the people's rights. Morality is trampled in the mud; oppression is regarded as administrative art; suspicion and jealousy prompt the organization of parties for purposes of mutual attack. We are reminded of a scene in some political drama. The people of the West are obstinate and self-willed. From the oldest times they have not ceased to advance theories and fight over them. Monarchs went to the limit of their rights and powers in ruling

their subjects. The nobility, yielding not an inch to either monarch or commoner, indulged in insult and oppression. The people, stubborn and unbending, were easily moved to rebellion, and, in cases too numerous to cite, either banished or slew their rulers. Moreover, from mediæval times the royal families and great nobles of different States gradually became connected by marriage, and thus, constituting one large family despite differences of nationality, assisted each other in times of emergency. The nations being governed by this big family of autocrats, were long compelled to bow before oppression and insult. But at length the long pent-up sense of injury burst forth, and found expression in the formula "popular liberty and right," now so universally echoed. Briefly, if we examine the history of Western nations we find it to be as a piece of cloth woven out of fights between rulers and ruled. Do the disciples of Western fashions intend to assert that such a state of things should be introduced, at this eleventh hour, into our country, disturbing the peace it enjoys? Such a notion is extravagant. Very painful is it to see men so blinded by private motives that they fail to perceive the trouble towards which they are drifting. After the Restoration they first affected France, then England, and then Germany. Their likes and dislikes are directed by caprice. Some think of modelling our Imperial House on German lines, recasting our *kazoku* in the mould of English peers, and re-organizing the administration after a constitutional pattern. Others are equally keen for change, but would adopt types obtained from a different quarter. When men are the creatures of selfish motives, their views, being the result of the position and circumstances of each, must necessarily be divergent. Yet they profess to think only of the welfare of the same country. In point of fact, their idea of what is meant by 'country' is distorted by selfish instincts. What is the history of the German Royal House? How are the relations between it, the nobles and the people controlled and maintained? We would propound these questions first to a certain political party. Further, the future of the Royal House of Germany is subject to changes resulting not only from its own past history but also from its peculiar relations with the nobles and the people. The same is true, *mutatis mutandis*, of the English nobility. We would, therefore, ask radical politicians:—"Do you wish to see similar changes introduced into this country also?" They would be perplexed, we imagine, to answer this question. But if they say that they do not aim at change, then why imitate England and Germany, which are evidently in a state of transition peculiar to themselves? It is impossible to cut a slice from one running stream and insert it in another, and this is equally true of the current of customs and events. The hopes of the radical politicians are as futile as their vision is blinded by selfish motives. Unawed by the august power of the Emperor and callous to the sufferings of the people, casting aside morality and disregarding uprightness, they make pretence of acting for the welfare of the country while in reality they obey the dictates of their own selfish aims. In a word, the Japan of to-day may almost be said to be a nation governed by private motives, and the age may be described as one in which those who are most self-willed have the best chance of obtaining political power. In the presence of such a general tendency even those who retain some degree of public spirit are in danger of eventually losing what little disinterestedness remains to them, and the result cannot fail to be the unchecked lapse of society into a state of disorder. What should be the thoughts of men inspired by loyalty and a sense of duty, under such circumstances, and how should they act? The histories of nations record facts that fill us with sadness. Is it for us to remain unconcerned while our country drifts towards a similar experience? What has become of philanthropy and what of the righteous sense of duty? The things which we enjoy now we owe to the deeds of our forefathers through three thousand years of effort; an obligation higher than the mountains

and deeper than the seas, which we are bound to recognise by our conduct. Among tendencies some are the outcome of men's natures; some the result of their conduct. The evil tendency now swaying Japan belongs to the latter category. For what do we see about us? Not alone the intellectual studies of our youth and the laws that govern our adults are fashioned after Occidental models: even the ideas and sentiments of the people have felt the foreign influence. The views held by our politicians towards their nation, towards their Sovereign and towards their fellow-subjects, are almost a replica of the views entertained by Western politicians. Loyalty and duty have ceased to be active factors in their conduct. They are guided solely by the dictates of their ability. The political world threatens to become nothing more than a field where talent and astuteness struggle for supremacy. The nature of the Japanese people is not responsible for this. Circumstances are responsible. Evils caused by human action should be remedied by a similar agency and not left to be healed by time alone. If the men in the Government honestly endeavour to assist His Majesty in the management of national affairs and to make his virtue felt by the people, and if the men outside the Government think solely of serving the Emperor loyally, social order will be assured and civilization promoted. But if, on the contrary, those in the Government abuse their powers and oppress the people, while those out of the Government express dissatisfaction and discontent, and, in obedience to their own selfish impulses and ambitions, organise political parties for purposes of personal aggrandisement, the state of the nation will be as that of a sick man to whom poison is administered in lieu of medicine. Selfishness is born with every man: to indulge it freely is to become a beast. Therefore it is that sages preach the principles of duty and propriety, justice and morality, providing restraints for private aims and encouragements for public spirit. Unfortunately in this era, those who are in a position to set noble examples to the mass of the people for their wise guidance, disregard duty and right, and, toying with national affairs, seek only to accomplish their private purposes, thus instigating men not possessed of similar ability and opportunity to act in such a violent and perfidious manner that general disorder is inevitable. Such methods and fashions are not indigenous in Japan. They are the creation of men who profess to obey the principles of Western civilization, and and by their conduct plunge the nation into a lamentable condition. What we know of Western civilization is that it struggled on through long centuries in a confused condition, finally attaining a state of some order, but that even this order, not being based on such principles as those of the natural and immutable distinctions between sovereign and subject, parent and child, with all their corresponding rights and duties, is liable to constant change according to the growth of human ambitions and human aims. Admirably suited to persons whose actions are controlled by selfish ambition, the adoption of this system in Japan is naturally sought by a certain class of politicians. Further, from a superficial point of view the Occidental form of society is very attractive, inasmuch as, being the outcome of a free development of human desires from ancient times, it represents the very extreme of luxury and extravagance in matters of food, dress and house equipment. Briefly speaking, the state of things obtaining in the West is based on the play of human selfishness and can only be reached by giving full sway to that quality. Social disturbances are little heeded in the Occident, though in truth they are at once evidences and factors of the present evil state of affairs. Do Japanese enamoured of Western ways purpose to have their nation's history written in similar terms, and do they seriously contemplate turning their country into a field for new experiments in Western civilization? I desire to ask them these questions plainly and directly. If they entertain no such intention, but, simply charmed by the superficial aspects of what they

see before them, seek to gratify their desires and achieve their ambitions without caring what befalls their posterity and without thinking what the people must suffer, then I cannot choose but call them a group of essentially heartless, unfeeling creatures."

"Apart from the question of national organization and the natural relation of subject to Sovereign, it must be confessed that if to bring about such conditions as those described above be the aim of civilization, then nothing can be more baleful to human society than this so-called civilization. Nature ordains, and the law of personal right permits, that each man may seek to achieve his own ambition so long as by thus doing he does not trespass on the domain of another's rights. From the moment that he trespasses he becomes a plunderer. A man occupying a position of power, who oversteps the due limit of his personal rights, can only be described as one who robs his inferiors. To achieve his dishonest purpose he uses the weapons of his natural talents and shrewdness and takes advantage of those not similarly endowed. That those entrusted with the control of a nation's political affairs and responsible for its welfare, should become students and promoters of a civilization so harmful to society, and should endeavour to introduce such a civilization into their country, is contrary to all reason. In the Orient from ancient times national government has been based on benevolence, and directed to securing the welfare and happiness of the people. No political creed has ever held that intellectual strength should be cultivated for the purpose of exploiting inferiority and ignorance. When the reins of power are held by creatures of selfishness, the peace of society is replaced by disorder. Under the pretence of acting for the nation, these men abuse the power entrusted to them and inflict injuries on the people. The inhabitants of this empire live for the most part by manual labour. Let them be never so industrious, they hardly earn enough to supply their daily wants. Repairing early to their place of occupation and returning home late; toiling with their whole families in all weathers, regardless of heat or cold, they just manage to procure the necessities of life. These sellers of the work of their hands earn on the average about 20 sen daily. There is no question with them of aspiring to wear fine clothes and inhabit handsome houses. Neither can they look to reach positions of fame and honour. What offence have these poor people committed that they too should not share the benefits of Western civilization? Why should they not only be shut out from seeking the pleasures attendant on that civilization, but also be sometimes regarded as semi-savage aborigines? By some indeed their condition is explained on the hypothesis that their desires do not prompt them to better themselves. There is no truth in such a supposition. They have desires, but nature has limited their capacity to satisfy them; their duty as men limits it, and the amount of labour physically possible to a human being limits it. They achieve as much as their opportunities permit. The best and finest products of their labour they offer for the enjoyment of the wealthy; the worst and roughest they reserve for their own use. Yet there is nothing in human society that does not owe its existence to labour. To satisfy the desires of one luxurious man, the toil of a thousand is needed. Surely it is monstrous that those who owe to labour the pleasures suggested by their civilization, should forget what they owe to the labourer, and treat him as though he were not a fellow-being. Civilization, according to the Occidental interpretation, serves only to satisfy men of large desires. It is of no benefit to the masses, but is simply a system under which ambition competes to accomplish its aim. Statesmen entrusted with the control of a nation's affairs should shrink from adopting such a civilization. Modern politicians, ignoring the fundamental proposition that the Emperor is the source of all rule and power in Japan, regard Imperialism much as Royalty is regarded

in the West. Distinguishing between the Sovereign and the Government, they seek to bring about administrative independence, asserting that not otherwise can political disturbances, involving even Imperialism itself, be avoided.

"They also separate religion and morality from politics, because the wisdom of such separation is recognised in the West, where men view morality simply as a social problem to be solved by philosophers. They seem to regard the Imperial Government as a fitting *corpus vile* whereon to experiment in the theories of Western politicians. In a word, their apparent purpose is to set up in this country a big administrative machine of Western manufacture, and to work it after Western methods. But in Japan the administrative power belongs to the Emperor. So long as loyalty retains its place in the hearts of the people, the Imperial House will stand above all the storms of politics, rage they never so fiercely. There have, indeed, been examples of disputes occurring within the Imperial Court about questions of State policy, but we have yet to learn that the Imperial prestige was lowered by them. Only when disloyal and undutiful subjects obtain influence in the Court, and over the people, do grave results ensue, as may be seen by studying the history of the empire since the days of Hogen. People who, without reflecting on all this, attempt to carry into practice selfish theories based upon Occidental principles, are not playing the part of faithful subjects. In respect of religion and morality a similar criticism may be expressed. Under the instruction and guidance of Shintoism, Buddhism, and Confucianism, the Japanese elaborated their systems of ceremony and etiquette, learned their duties and responsibilities, and evolved their manners and customs. Guided by these principles, established and universally recognised, they distinguish right from wrong, justice from injustice. If it be granted that the aim of efficient administration is to maintain public peace and good order, how can laws and regulations conducive to that aim be enacted, and how can the customs of the people be regulated and the system of education improved without due regard to religion and morality. Look around to-day, and it will be seen that the ancestral shrines of our beloved Sovereign are in danger of losing the respect and worship which is their due, and the nationality of Japan is threatened with extinction. This lamentable and evil state of affairs has been brought about by too eager devotion to Occidental methods of thought."

"That the Occidental system is gravely disturbing to the order and peace of a country is seen by men who have eyes, and heard by men who have ears. The future of Japan under such a system fills us with anxiety. A system based on the principle that ethics and religion are made to subserve human ambition, naturally accords with the wishes of individuals, and such theories as those embodied in the modern formula of 'liberty and equality' annihilate the established relations of society and outrage propriety and decorum with the intensity and rapidity of a fire raging among dry reeds. Absolute equality and absolute liberty being unattainable, the limits prescribed by right and duty are supposed to be taken, but inasmuch as each person seeks to have as much right and be burdened with as little duty as possible, the result is endless disputes and legal contentions. The principles of liberty and equality may succeed in changing the organization of nations, in overthrowing the lawful distinctions of social rank, and in reducing men to one nominal level, but they can never accomplish the equal distribution of wealth and property. Consider America. Her citizens boast of their country as the land of the highest types of liberty and equality, but so far from establishing the equal division of property, they accept degrees of wealth as standards of social position, and are governed by the vulgar creed that money constitutes right. Yet it is plain that if the mutual rights of men and their status are made to depend on degrees of wealth, the majority of the people, being without wealth, must fail to es-

establish their rights, whereas the minority, who are wealthy, will assert their rights, and under the ægis of society's sanction will exact oppressive duties from the poor, neglecting the dictates of humanity and benevolence. The adoption of these principles of liberty and equality in Japan would vitiate the good and peaceful customs of our country, render the general disposition of the people harsh and unfeeling, and finally prove a source of calamity to the masses. The progress of this change would be marked by demonstrations, strikes, and disturbances of every kind; and after repeated conflicts with alternating success and failure, it would be realized that the consequences of the system were interminably evil to all concerned, and that its inevitable tendency was to render men's dispositions dangerous and wicked and to fill their hearts with suspicion and jealousy. Thus, though at first sight Occidental civilization presents an attractive appearance, adapted as it is to the gratification of selfish desires, yet since its basis is the hypothesis that men's wishes constitute natural laws, it must ultimately end in disappointment and demoralization."

"There is no effect without a cause. The conditions of the various nations of the Occident are the result of certain causes, and may be traced to irresistible natural tendencies neither artificial nor accidental. These tendencies may be compared to a force which establishes its mastery over the object on which it is exercised. Unless duly checked by morality, its continued operation must lead to serious disturbance. Men controlled by selfish motives and personal aims, whose chief object is to enlarge the sphere of their individual rights, become obstinate and unyielding. In the fierce struggle for supremacy they forget the interests of their nation and of society, may even cease to care much for their own lives. It must be so, for their so-called 'rights' are in fact wealth and power, the desire for which grows with indulgence. Occidental nations have become what they are after passing through all these conflicts and vicissitudes, and it is their fate to continue the struggle. Just now their motive elements are in partial equilibrium, and their social condition is more or less ordered. But if this tender equilibrium happens to be disturbed, they will once more be thrown into a state of confusion and change, until, after a period of renewed struggle and suffering, temporary stability is once more attained. The poor and powerless of the present may become the wealthy and strong of the future, and *vice versa*. Perpetual disturbance is their doom. Peaceful equality can never be attained until it is built up among the ruins of annihilated Western States and amid the ashes of extinct Western people."

"To introduce such a state of affairs into this country, the natural distinctions of human relations as well as the ethics and creeds revered by the people must be discredited. Full sway must be given to selfish motives, and men must be taught to strive only for the attainment of their own desires. The distinctions of human relations, the ethics and the creeds hitherto observed in this country, taught the people to subserve private aims to public duties, to refrain from striving for power, and to take benevolence and sincerity as guides. All this, being in direct opposition to the Western system, must be swept away to make room for the latter's importation. It results, therefore, that those now possessing influence in the national and political affairs of the State, are trampling upon the ethics and creeds of Old Japan in their eagerness to substitute an Occidental novelty. In the future which they are preparing for their country, the powerful will be respected however worthy of contempt, and the powerless will be despised whatever their nobility. The transition may be slow and gradual, but it will not be the less inevitable."

SILK.

WHAT to do with the vast quantity of silk now lying unsold at Yokohama, is a topic which

engages the attention of not only business men but financiers in general. The quantity of silk thus detained is put at nearly 30 thousand bales. Should things continue in their present state, and should there be no large influx of specie, the *Keizai Zasshi* apprehends that a panic will overtake the Japanese commercial world at the end of the year. Our contemporary questions the wisdom of the course pursued by the Bank of Japan, which has advanced money at a low rate of interest to silk merchants in order to enable them to wait for an improvement in the market. Had not this step been taken by the *Nippon Ginko*, the silk merchants, says the Tokyo journal, might have been compelled to sell their goods at very low prices, but there would not now be such a vast quantity still on hand. Further, the foreign merchants, who were reluctant to purchase Japanese silk on account of the violent fluctuations of exchange, had no resource but to fall back on Italian silk, in view of the uncompromising attitude of Japanese holders. From these circumstances, our contemporary is doubtful whether the facility given to the silk merchants by the Bank of Japan has been beneficial either to the dealers themselves or to the financial world in general. As to the cardinal question whether this silk had better be sold within the year even at a low price, or whether it should be held over until next spring, the *Keizai Zasshi* is decidedly in favour of the former course. If there were any certainty of a rise of price next spring, it would be advisable to wait until then. But when there is no such certainty, it seems far wiser to sell now than to run the risk of losing a large sum of interest during the interval. How to sell without bringing down the price to a disastrous figure is left to the discretion of the merchants concerned.

The *Fiji Shimpō* is of the same opinion. It agrees with the *Keizai Zasshi* in thinking it extremely impolitic to hold on until next spring. The Japanese silk merchants are advised to sell by all means within the year. But in selling they ought to preserve their combination in such a manner that competition among them may not reduce the price to a ruinous point. There seem to be some persons who even propose that the Bank of Japan should raise the rate of interest on the money advanced to the silk merchants, so as to force them to sell their goods. But our contemporary regards such a proposal as rash and calculated to involve serious trouble.

The *Koku-Hon* and the *Hochi Shimbun*, writing on the prospects of foreign trade in general, seem to take a similar view of the situation, for they base their calculations on the supposition that the silk now remaining unsold will be disposed of within the year. Indeed the former journal explicitly advises a speedy disposal of the store now lying in Yokohama.

THE JAPANESE SEAMEN'S AID SOCIETY.

THE *Nippon Kai-in Ekisei Kai* (the Japanese Seamen's Aid Society) was formed in Tokyo in 1880 by benevolent persons who were desirous of benefiting both masters and sailors by assisting the latter to live more respectably when on shore, and also to render assistance to those who met with accidents or were sick. In June of the following year when the Russian man-of-war *Nakimoff*, one of the Siberian Squadron, was at Yokohama, Vice-Admiral Nazimoff, hearing of this society, took great interest in it and collected from his officers and contributed himself the sum of yen 1,000 in all, which he presented to the society through Viscount Enomoto, Vice-Admiral in the Imperial Japanese Navy. Since that time the position of the society has been gradually improving, the subscribers have from time to time become more numerous, and the funds have considerably increased. In 1882, as the first step, a Sailors' Home, was built at Shinagawa, and in due course opened, and occupied according to the objects contemplated. The result proved highly satisfactory, and branches of the society and homes were opened

in the ports of Yokohama, Kobe, Hakodate, Nagasaki, and Osaka, which have proved of great benefit to masters and sailors alike. This happy result was brought about by the liberal support received from the public, and especially the kind assistance of foreigners, which the Japanese promoters declare that they appreciate very highly. They promise, too, always to remember with great gratitude the kindly action of the officers of the *Nakimoff*.

ENTERTAINMENT OF A FOREIGN GUEST.

At the Koyo Kwan, Tokyo, a banquet was given the other evening by the Medical Society of Tokyo to Professor Benjamin Howard, M.D., of London. In giving the toast of the evening, Dr. Takaki, F.R.C.S., said that since the lecture of Dr. Howard before the Society a few months since, he had been fortunate enough to prove on more than one occasion the value of Dr. Howard's recent discovery as then explained to them. He was sure that it was a permanent addition to our means of saving human life, and they were there to express their appreciation and gratitude in having had the privilege of receiving an account of it from Dr. Howard's own lips. Amongst the guests who filled the large Hall were various nationalities, including the Surgeons-in-Chief of the Army and Navy, the Charity and County Hospitals, Dr. Whitney, of the United States Legation, and all the Japanese physicians in Tokyo having English or American degrees. A dramatic entertainment in the best style, for which this Club is so famous, closed a reunion of a most cordial and enthusiastic character.

THE IMPERIAL VISIT TO COUNT OYAMA'S RESIDENCE.

ON Saturday last His Majesty the Emperor paid a visit to the residence of Count Oyama, which is situated at Aoyama, close to the grounds of the old Kaitakushi. The house is a handsome brick building in modern castellated style, its tower being quite a feature in the landscape when approached from the north or west. The grounds, which are laid out in formal European fashion, were bright with chrysanthemums. An entertainment was prepared for His Majesty and the Empress in the shape of the *No* drama, a fine special stage being set up in the grounds for the occasion. On Monday, as already stated, the Countess invited a number of the European residents of the Capital to an At Home, when the performance was repeated. Needless to say, the dresses of the actors were magnificent, and, as many even of the older residents had hitherto had no opportunity of seeing the *No* in all its glory, the Countess's hospitality was highly appreciated.

THE CEREMONIAL OPENING OF THE DIET.

THERE seems to be very little doubt that the ceremonial opening of the Diet will take place on the 28th instant. No official announcement to that effect has been made, but the best informed among the vernacular newspapers speak of the date as virtually fixed. The Diet will of course meet on the 25th as ordered by Imperial Rescript, but until the President and Vice-President of the Lower House have been elected by the members and nominated by the Emperor, the various arrangements for his Majesty's reception cannot be made. The choice of three candidates for each of these posts will probably be concluded on the 25th, and from among the three the Emperor will make his selection and announce it in the *Official Gazette* of the 26th, or perhaps in an extra issue of the 25th. The 26th and 27th would then be devoted to making preparations for the opening ceremony. We are not yet definitely informed whether the day will be a general holiday, but public expectation is that it will, and that Tokyo will don a gala garb even more sumptuous than that assumed by it on the celebrated 11th of February, 1889. As yet, however, indications of wide rejoicing have not become apparent, and there is just a possibility that in consideration of the distress in the money market the Authorities may discountenance any expensive display. The programme

of the opening ceremony is given as follows in the *Official Gazette* though, as we have said, the date is not named:—

At 10 o'clock in the forenoon the members will assemble in both Houses. There will also be present the Princes of the Blood, personages holding Grand Orders of Merit, the Minister President of State, the President of the Privy Council, the Ministers of State, Officials entitled to be treated as Ministers of State, the Lord Chamberlain, the Vice-President of the Privy Council, the Privy Councillors, the Commander of the Imperial Guards and the Members of the Imperial Suite.

At half past ten the Emperor will leave the Palace and proceed to the Diet. His Majesty will be accompanied by the above named *Sauretsu in* (i.e. the persons named in the preceding section with the exception of the Members of the Diet).

The road will be lined with troops.

The Presidents, Vice-Presidents, Chief Secretaries, and members of the two Houses will be marshalled inside the gates to receive his Majesty.

The President of the House of Peers will lead the Emperor to the Waiting Room.

After his Majesty has entered the Waiting Room, the members of the two Houses will take their places according to instructions from their respective Presidents.

The Lord Chamberlain will inform his Majesty when all is ready, and the Emperor, led by the Lord Chamberlain and accompanied by the bearers of the Imperial Insignia, by the Princes of the Blood, and by the Officials in Waiting, will proceed to the Upper Chamber.

When his Majesty reaches the Dais a general salutation will be made.

His Majesty, standing, will receive the Imperial Message from the Minister President of State.

His Majesty will read the Imperial Message. A national salute will be fired.

At the conclusion of the Message, the Presidents and members of the Houses will make an obeisance. The President of the House of Peers will approach His Majesty, receive the Imperial Message and return to his place. Led by the Lord Chamberlain, and accompanied by the Princes of the Blood, and the Officials in Waiting, his Majesty will retire.

The Emperor will leave the Diet. The Presidents, Vice Presidents, Chief Secretaries and Secretaries of both Houses will bow his Majesty out. The Band will play the National Anthem.

The following will be entitled to be present at the opening ceremony:

The Foreign Representatives and staffs of Foreign Legations. All persons of *shinin* and *chokunin* rank in the capital, and all wearers of First Class Orders.

Local Governors and Prefects.

Commanders of Garrisons. Commanders of Districts. Chiefs of Admiralty Offices. Military and Naval Commanding Officers. Judges of High Courts. Procurators of High Courts. Lords in Waiting of the *Fako-no ma* and *Kinkei-no ma*, who are present in Tokyo. Foreign employes ranking with *chokunin*. Japanese and Foreigners having Third Class or Higher Decorations. A certain number of *soinin* officials of Third Class and upwards.

It will be seen that the details of this ceremony, though officially published now for the first time, were foretold very accurately by the vernacular press several days ago. From the numbers of persons included on the list of those who will have the privilege of being present, it is evident that the capacity of the House of Peers, where the ceremonial is to take place, will be pretty well tested, and that outsiders can have very little hope of witnessing this memorable event in Japanese history.

DEATH OF TSÊNG KUO-CHUAN.

THE following sketch of the services of Tsêng Kuo-chuan, telegraphic intelligence of whose death we published last week, appears in the *N. C. Daily News* of the 14th inst.:—"News was received by telegraph from Nanking yesterday of the death there at 2 p.m. of His Excellency Tsêng Kuo-chuan, Viceroy at Nanking, brother of the late Tsêng Kuo-fan, and uncle of the late Marquis Tsêng Chi-tsê. Tsêng Kuo-chuan was a Hunan man, and has had a most successful career. He was given the title of the third degree of nobility for successes against the Taiping rebels. He was appointed Judicial Commissioner in Chêkiang in February, 1862, and Governor of the province in 1863, Governor of Shansi in 1865, of Hupeh in 1867, and of Shansi again

in 1876. He was made Director-General of the Yellow River in March, 1875, and Viceroy of Shensi and Kansuh in February, 1881, retiring in ill health in October of the same year. In May, 1882, he was appointed Acting Viceroy of the Two Kuang, and in February, 1884, to the post in which he has died of Viceroy of the Two Kiang. In him China has lost one of the most prominent of her high officials, a mandarin of unblemished honour and integrity and sterling worth. He was about seventy years of age."

COUNT INOUE.

REFERRING to Count Inouye, the *Nippon* says:—"The Count has lived a quiet retired life since his resignation, but Society does not lose sight of him, and now annoyed by rumours of his privately taking part in the organization of a new political party, he thinks of going back to his province, where he will be able to pass his hours in undisturbed retirement. We learn that in a recent conversation with some person he remarked in his usual joking tone:—"I am going to live far out of the bustle of the world. Looking back on any career, I find that I am carrying all the failures of the Meiji Government put together on my shoulders. It is I who failed in the revision of the treaties; it is I who failed in the management of the financial affairs; it is I who introduced the principle of Westernizing; it is I who began the task of codifying the laws, and besides I am credited with many other failures made by other persons. At any rate, whatever failures the Meiji Government sustained I have been always connected with them. But it is one consolation to me as a man that I have all the nation's failures of a grave nature on my back." In truth Count Inouye is a man among men."

THE CABINET'S SECRET SERVICE FUND.

THE *Choya Shimbun* has a curious and very incredible note about the secret service fund of the Cabinet. It asserts that this money being entirely beyond the purview of the Board of Audit, the amount appropriated has often proved too large, so that sums have been left over from year to year until they now aggregate about three hundred thousand yen. Concerning the disposal of this surplus the Cabinet is perplexed. Some Ministers are in favour of employing it to defray party expenses, but others object to that course. Such is the *Choya's* story, but to us it sounds quite unworthy of credence. The idea of a surplus remaining year after year is in itself highly improbable, and the story that certain Ministers advocate applying the fund to party purposes would be less difficult to believe if there was any Government party to have its expenses paid.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 5th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100) Silver Yen.	Pound Sterling (Per £1) Silver Yen.
10th	121.500	A.M. 5.9813 P.M. 5.9813
11th	121.000	A.M. 5.9627 P.M. 5.9627
12th	120.800	A.M. 5.9627 P.M. 5.9627
13th	120.800	A.M. 5.9627 P.M. 5.9627
14th	120.800	A.M. 6.0000 P.M. 6.0000
15th	120.800	A.M. 6.0000 P.M. 6.0000
Averages	121.000	5.9758

The above averages show for gold coin an increase in value of yen 2.140 per cent., and for the pound sterling an increase in value of yen 0.0825 as compared with the previous week.

THEN AND NOW.

HERE is a suggestive editorial from the *Nippon*:—"The editors of foreign newspapers know very little about the state of affairs in Japan. The *North China Herald*, in a recent issue,

said that the Japanese are very keen about imitating foreign fashions, deeming that the customs of foreigners and foreigners themselves are superior to Japanese customs and Japanese people. What sort of falsehood is this? It may have had some truth several years ago when Western ways were in vogue, but no Japanese now-a-days regards foreigners as men of high grade (*yuso naru jimbutsu*). The Shanghai paper further says:—"As long as this is the case—i.e. as long as the Japanese considers the foreigner a superior being—it is unreasonable to imagine that he feels really insulted by extraterritoriality, or will be really aggrieved if he does not get the treaties with foreign Powers revised on the basis of equal rights. It seems certain that the demand for the abolition of extraterritoriality is not a popular demand; it may be very reasonably doubted whether the people, as a whole, want to have the country thrown open to foreigners; even if with that concession, they buy the withdrawal of consular jurisdiction." This is a great mistake. We do not know how it may be with people like those of India, Egypt and so forth, but there is no self-respecting nation in this nineteenth century that does not feel the disgrace of its country and resent wrong done to it by foreigners. Nothing could be falser than to say that the whole of the people of Japan does not desire to have the Treaties revised on a footing of equality. Even the Progressionists (*Kaishin-to*), who claimed that an equal treaty could not be achieved, are only too anxious to obtain such a treaty." Finally, the *North Chinese Herald* writes:—"The Diet meets in a month, and then perhaps we shall get at what the real feeling of the country is; we say, perhaps, because the people generally did not take much interest in the election of members of the Diet, and their members may not, at first, represent them accurately. But the Diet will be a splendid means of political education, and it will not be long before the electors do take an interest in their parliament, and then we shall know what their real wishes as to treaty revision are." On what grounds does the Shanghai journal assert that the Japanese did not take much interest in the elections? For our part, we believe that the first Diet will be thoroughly competent to express the desire of the nation in respect of Treaty Revision, and we trust that foreigners will attend to and respect its verdict. What reason exists for awaiting the decision of a future Diet?"

CHESS IN YOKOHAMA.

IT is a pleasant surprise to learn that the Yokohama Chess Club, just organised, numbers as many as thirty members. That there are many people in the Settlement who entertain more or less affection for the noble game was never doubtful, but we scarcely hoped that so strong a muster would be made at the outset. Mr. Griffin, with whom, we believe, the idea originated, and who certainly took the most active part in arranging the preliminaries and securing co-operation, is to be thanked and congratulated. The Club is fortunate in having had a room placed at its disposal at 179, Bluff, by Mr. Hinton, himself a devoted chess player. Mr. Taylor's chess library, too, is a donation of no small value, comprising, as it does, pretty nearly all the volumes of any service or note that have been devoted to the development of the game. Mr. Taylor used for many years to furnish the chess problems which appeared in the *Japan Mail*. His knowledge of the game must be large. We trust that many parties worthy of public record will be played at the Club, and we shall be glad to give place in this journal either to the moves actually made or to diagrams of interesting positions.

We learn that in a few days nearly 50 members have been enrolled, and that the committee, after consulting the convenience of members, have decided that the meetings of the Club shall be held alternately in the Settlement and on the Bluff. All residents wishing to become members would do well to communicate at once with the Secretary, Mr. Balk—either

at his office, No. 256, Settlement, or at the Club Hotel, any evening between the hours of 5 and 11. We prophesy a long and flourishing career for the Club; it has the honour of being the first institution of the kind in Japan among foreigners, although societies for the study and practice of *shogi* have, we believe, been in vogue among our Japanese friends from time immemorial.

POPULATION STATISTICS.

THE *Tokyo Koron* gives extracts from statistical tables compiled by the Department of Home Affairs. We quote the following principal figures:—

TO THE 31ST DAY OF DECEMBER, 1889.

Number of dwelling houses in Japan...	7,840,872
Population—20,246,336 males	
19,825,684 females	40,072,020
Nobles (Heads of families, 593)	3,825
Shizoku (Heads of families 430,411)	1,993,637
Commons (Heads of families 7,736,764)	38,074,558
N.B.—Increase of houses over 1888	3,846
Increase of population over 1888	464,780
Married couples	7,445,119
Unmarried males	12,801,217
Unmarried females	12,383,565
Births, males	617,863
Births, females	592,047
Deaths, males	413,926
Deaths, females	394,753
Still born births	85,251
Marriages	340,445
Divorces	107,478
Population of Tokyo	1,138,546
Living abroad	15,711

The *Koron* remarks that, according to these figures, the number of females at the end of 1889 was less than the number of males by 420,650, and referring to their respective ages it is found that from 1 to 56 years males outnumber females; from 57 to 59 years females outnumber males; at 60 years males are in the majority, and from 61 to 109 females again outnumber males. Finally, above 87 years, females are more than double the males in number.

ENEMIES OF THE CABINET IN THE UPPER HOUSE.

It is hinted by the *Hochi Shimbun* that certain members of the House of Peers intend to agitate for a change of Cabinet with the intention of themselves obtaining portfolios in the new Ministry. Our contemporary does not find this strange, seeing that several members of the Upper House have records qualifying them to occupy seats in the Cabinet. Neither does the *Hochi* doubt that even in the Lower House there may be men entertaining similar projects, but it expresses a strong opinion against anything of the kind. The proper business of the Diet at first, we are told, is to place the Legislature on a sound footing, leaving to outsiders the task of attacking the Executive in newspapers, speeches and petitions. To seek to overturn the Cabinet merely for the sake of wresting the executive power from it, would be to forget the true functions of the Diet and to convert the Legislature into a weapon for destroying instead of assisting the Executive—a proceeding very inconsistent with the programme of bringing about government by party.

THE CONSTITUTIONAL LIBERALS.

THE Committee of the Constitutional Liberals (*Rikken Jiyu-to*) has held an extraordinary meeting and formulated a very extensive programme of political procedure, the details of which are given in the *Jiyu Shimbun*. Adopting the classification of our contemporary, which we presume, is that of the party itself, we translate the programme as follows:—

TREATY REVISION.

1. To urge the abolition of extraterritorial jurisdiction.
2. To determine by provisions of law the limits within which mixed residence, cabotage, the ownership of land, mines or railways, and trade undertakings should be allowed, and similarly to regulate all privileges and abdications connected with foreigners.
3. To urge the recovery of tariff autonomy.
4. To move that all treaties relating to trade shall be concluded with the concurrence of the Diet.

REFORM OF TAXATION.

1. Reduction of the Land Tax; namely, to amend the

first article of the Land Tax Regulations so that a general reduction of one half per cent. shall be made in the tax.

2. Reform of the Income Tax Law; namely to change the present system of determining incomes by profits (*riyest-ho*) to the system of determining them by manner of living (*shini-ho*), all objections raised against the manner of assessment to be decided in the Courts of Law.
3. To make the Income Tax a class tax; namely, to divide tax-payers into a large number of classes, the liability of which shall be differently assessed.

REFORM OF THE ADMINISTRATIVE SYSTEM.

1. To reform the Administrative system with the view of increasing the business facilities of Departments and Bureaux.
2. To change the system of salaries by classes into salaries by offices.
3. To abolish the Retired List.

REFORM OF THE EDUCATIONAL SYSTEM.

1. To place the Imperial University and all the Government Schools on an independent footing.
2. To abolish the Upper Middle Schools, and add Upper Sections to the Ordinary Middle Schools.
3. To abolish the system of granting subsidies to Private Schools.

REFORM OF THE ORGANIZATION OF THE LAW COURTS.

1. To abandon the collegiate courts provided by the Law of the Constitution of the Courts of Justice, promulgated in the 23rd year of Meiji, and to substitute Courts presided over by one Judge.
2. To reduce the number of Judges provided by the same Law for Collegiate Courts of Appeal and the Collegiate Supreme Court.

REFORM OF ALL THE REGULATIONS RELATING TO PUBLIC MEETING, NEWSPAPERS, AND PUBLICATIONS.

1. To reform the Public Meeting and Political Party Regulations; namely, to make the Regulations inapplicable to all meetings or associations of a non-political character.
2. To relax the provisions relating to promoters and members of parties.
3. To permit open air meetings.
4. To reform Article 11 of the Present Regulations and rescind Article 28.
5. To reform the Newspaper Regulations; namely, to permit the editor and publisher to be represented by one individual.
6. To abolish security money.
7. To make the provisions of Art. 11 of the present Regulations less stringent, in the sense of permitting the publication of official documents and memorials not made public in the ordinary course.
8. To do away with interdiction or suspension of publication and with confiscation of printed matter.
9. To rescind Article 17 of the present Regulations.
10. To amend the Publication Regulations; namely, while still enforcing the Regulations in the case of books and pictures printed for public sale, to repeal them in respect of documents printed for private circulation.
11. To grant freedom in respect of the publication of official documents and memorials not made public in the ordinary course.
12. To rescind Article 20 of the present Regulations.
13. To abolish all personal penalties for violations of the Public Meeting and Publication Regulations.
14. To abolish the Peace Preservation Regulations.

REFORM OF THE LAW OF ELECTIONS.

1. To make each City and Prefecture an electoral district, as far as possible.
2. To give to every hundred and twenty thousand of the population the right to return one member.
3. To make the qualifications of an elector that he should be at least twenty years of age, and that he should pay direct national taxes to the amount of five yen annually.
4. To reduce the eligible age of candidates for election to 25.
5. To forbid officials, other than members of the Cabinet, to hold office simultaneously with being members of Parliament.
6. To rescind clauses 4, 5, and 6 of the 14th Article of the Law of Elections.

REFORM OF THE LAW OF THE HOUSES.

1. To reform the Law of the Houses so as to strengthen the prerogatives of members.

LOCAL ADMINISTRATION.

1. To postpone the date of operation of the Local Government system for Cities, Prefectures, and Districts, with the object of amending it.

CONTROL OF GOVERNMENT PROPERTY.

1. To place the control of Government Property on a firmer footing.

REFORM OF THE SYSTEM OF OFFICIAL PROTECTION.

1. To correct the evil custom of granting subsidies to private enterprises.

Appended to this very comprehensive programme is a statement that the various items were decided by an extraordinary meeting of the Committee of the Party, and that they will be embodied in measures to be submitted to the Diet. It is also explained that the programme is couched in very general terms, but that fuller particulars will be given when it is proposed to bring up the various subjects for parliamentary deliberation. It seems to us that several of the contemplated changes have a very infinitesimal chance of obtaining general support in the Diet. At all events to discuss them now would be labour lost. Some of them, too, are very perplexing; for example, the proposal that official documents and memorials not of a public character should nevertheless be allowed to receive publication. We confess that we do not know exactly what this means, unless, indeed, the Committee of the Constitu-

tional Liberals intend to lay down the strange doctrine that there shall be no such thing as privacy in respect of official documents, and that even though they are not published by the office concerned, any journalist may insert them in his columns if only he can succeed in getting access to them.

A NEW JOURNAL.

ANOTHER journal has been added to the number of the Tokyo dailies. In some respects it promises to be a paper of great importance, being under the patronage and direction of men who occupy high positions in society, and are deservedly respected for their ability and integrity. Mr. Kawabata Sanebumi, younger brother of Prince Sanjo, and an ex-Senator, and Mr. Kô Kodô are said to have taken a leading part in starting the journal, and the public understands it to be the representative of a not inconsiderable section of the House of Peers who are well disposed to the present Cabinet. The name chosen for the paper is *Kokka Shimbun* (National Flower); a pretty title enough and appropriate in respect of the journal's noble (*Kasoku*) supporters, but inasmuch as the term *Kokka* has already been appropriated by the *Art Magazine* we doubt whether a more distinctive appellation would not have been wiser. The chief editor is Mr. Tatsumi, formerly connected with the *Nippon-jin*, and one of the leading spirits in the politico-religious association called by the sonorous name of *Son-nô Hô-butsu Daido-dan* (grand association of sovereign-reverencing Buddhism-preserving politicians). We should not have imagined that Mr. Tatsumi is eminently qualified for the post of editor-in-chief, but it appears that he is to have the assistance of Mr. Miyake, also connected with the *Nippon-jin*, a writer of very considerable capacity. There are rumours, however, that the latter gentleman has already experienced some friction in his relations with the promoters of the journal, and that his tenure of the post of assistant editor is not likely to be of long duration. Among the promoters the names of Mr. Kaneko, Chief Secretary of the House of Peers, and of Viscount Tanaka, Superintendent of the Metropolitan Police, are generally mentioned. It is also stated that Mr. Fukuchi, the well-known *littérateur*, is likely to assist in the editorial department. The first number of the paper appeared on the 17th inst. Its opening article, or declaration of policy, runs as follows:— "From ancient times until to-day a hundred and twenty-one dynasties of Sovereigns have sat upon the Throne of the Japanese Empire, and two thousand five hundred and fifty years have elapsed. The cause of such long stability is to be sought in the benevolent relations that have existed between rulers and ruled; in the fact that their relative stations have been duly fixed, and in the prevalence of truth and justice. It has not been so in the West. There the genealogies of sovereign and subject have been kept distinct, and in extreme cases the distinction has been accentuated by differences of race. The consequence has been unceasing wars and vicissitudes. There has been no long succession of dynasties; no unbroken lapse of accumulated centuries. The advantage is all with Japan by comparison. But the tendency now-a-days in our country is to copy everything Occidental, and to despise Japanese character. Should this disposition become general, the closely allied rulers and ruled will come to regard one another with eyes of hostility as is the case in the West. The safety of the State is closely concerned in this forgetfulness of one's own country and attachment to alien systems. The present month of the present year will see the establishment of constitutional government in Japan. According to the Constitution the executive power rests with the Emperor; the legislative power he shares with the Diet, which thus becomes partaker in the responsibilities of government. If the two Houses of the Diet, the House of Peers and the House of Representatives, discharge their duties and fulfil their functions, national peace and good order will result. Nothing is more to be desired than harmony

between these three factors, the Government, the Peers, and the Representatives. In Constitutional States of modern times, Governments fear diminution of their authority while the governed desire increase of their power. Rulers and ruled struggle for power, and it is the function of the nobility to stand between them and harmonise their relations, even at the risk of suffering in times of trouble. The Government should treat politicians outside its circle with the utmost liberality, and these politicians, in their turn, should seek to exert a guiding and pacific influence on the bulk of the people, whose experience of administrative affairs is small. Thus will national tranquillity be assured. The purpose of the *Kokka Shimbun* is to discuss and criticise affairs of the day in such a manner as to instruct the nation at large. Its policy is to promote respect for the Imperial House, to foster good feeling between officials and non-officials, and to labour for the perpetuity of the Empire. We trust that the public will approve our motive and read our columns."

LAND HELD BY FOREIGNERS IN THE SETTLEMENTS.

As the tenure of land by foreigners in the settlements has become a question of public discussion, the following editorial utterance of the *Yokyo Koron* will be read with interest:—"The fact that land within the Settlements has been leased to foreigners in perpetuity is perfectly plain according to the treaties. But the leases were not granted in the name of a Minister or a Consul. They bore the name of the foreigner to whom the land was assigned in perpetuity, and when other foreigners, coming subsequently, desired to obtain land for building purposes, they purchased from the original holders, so that transactions in land go on among foreigners in the Settlements just as among Japanese outside the Settlements. But of late disputes having arisen among foreigners with respect to the tenure of land, they applied to the Prefect—of Hyogo, doubtless—to have the title deeds altered. The Prefect, however, would not consent, and the dispute is still unsettled. On one side it is claimed that the intention of the Treaties is that land should be leased to foreigners in general, without distinction of persons. On the other it is replied that though the leasing of land is undoubtedly provided for in the Treaties, it is leased to the original lessees and all subsequent transactions connected with it must be managed by them, their heirs or their assignees."

Probably some of our readers will be puzzled by this over-terse statement. The fact, as we understand it, is very simple. The Japanese Government, having granted one lease of a piece of land, in perpetuity, to a particular foreigner, declines to reissue the lease in the name of another foreigner, for the obvious reason that by doing so it would take upon itself the responsibility of guaranteeing the correctness of all previous transactions in respect of the land. If Jones, having become lessee in perpetuity of a lot, subsequently transfers it to Brown, Brown to Robinson, and Robinson to Atkins, then if the Government issued a new lease in Atkins' name, it would at once become answerable for the legality of the transfers by Jones to Brown, by Brown to Robinson and by Robinson to Atkins. Such a proceeding on the part of the Japanese Authorities would be decidedly confiding. The absurdity of expecting it must be evident to the most superficial thinker.

WHISKY.

VERY interesting to whiskey drinkers is the following summary of a report recently compiled by a Select Committee of the House of Commons, appointed last July to consider whether, "on grounds of public health, it is desirable that certain classes of spirits, British and foreign, should be kept in bond for a definite period before they are allowed to pass into consumption, and to inquire into the system of blending British and foreign spirits in or

out of bond, and into the propriety of applying the Sale of Foods and Drugs Act and the Merchandise Marks Act to the case of British and foreign spirits, and mixtures of British and foreign spirits, and also into the sale of either as an intoxicant":—

There are three kinds of spirits manufactured in Great Britain which are called after the stills in which they are made. There is, first of all, "pot-still" which is invariably made from malt or from a mixture of malt and grain. Genuine Scotch or Irish whisky is "pot-still" spirit which has been allowed to mellow. Next, there is what is known as patent still spirit. The patent still is so perfect a piece of apparatus that it will extract spirit from almost any substance which contains sugar—from molasses, rice, and potatoes, for example. The distillate when purified is a simple plain spirit—in other words, a mixture of alcohol and water. This spirit, when passed through the rectifier's still, becomes "rectified spirit"—the third kind of spirit manufactured in this country. It consists very largely of pure alcohol, and is used for the making of perfumes, gins, liqueurs, and British brandy. The quantity of spirits manufactured in the United Kingdom during the year ending 31st March, 1890, amounts to no less than forty-one million gallons. Of this, sixteen million gallons were made in pot stills, and twenty-five gallons in patent stills. Something like a million quarters of malt and unmalted grain respectively are used in the course of a year; together with varying quantities of sugar, molasses, rice, and jawaree. In a hundred distilleries malt alone is used; forty-two use malt and mixed grain; five use sugar and molasses; while four use sugar, molasses, and rice. It would seem that the larger proportion of British-made spirit comes from malt and grain; though, in the result, patent-still spirit preponderates.

The forty-one million gallons of spirit made in the United Kingdom last year was for the most part used in this country. Nearly three-fourths of it (namely, 28,000,000 gallons) were drunk as a beverage; six million gallons were put into bond; a million and a half were used for purposes of methylation; two million and a half are accounted for by natural waste, mainly from evaporation; while something like three million gallons were exported. It will be observed that while only sixteen million gallons of pot-still spirit (that is, genuine whisky) were made, the consumption of spirits during the year amounted to twenty-eight million. It may be taken for granted that at least six million gallons of patent-still spirit—a mixture of plain alcohol and water—were either blended with pot-still spirit and sold as whisky, or were sold in the original state as such. Another six million gallons were sent to the rectifiers, and after further distillation were made into gin and British brandy. Thus is the total consumption—28,000,000 gallons—made up.

It is clear, therefore, that much of the liquid sold as whisky has practically no claim to the title. Such liquid is unmaturing and deficient in mellowness, and, so far from being obtained from fermented grain, it may be—and often is—prepared from molasses. It is clear that one-third at least of the total quantity of whisky sold is plain spirit. How far the ordinary whisky of the public-house conforms to the definition of the United States Pharmacopoeia may be seen in the following extract from the evidence of Dr. Bell:—

"Have you made any attempt to obtain public-house spirits from fairs and other places where people congregate together? We have not obtained any from fairs or races, because we did not know where to send for them; but we obtained samples from various towns, from the lowest part of those towns, where the lowest class of the working people would obtain their supplies."

"From England, Ireland, and Scotland?—From England, Ireland, and Scotland. Altogether we obtained fifty-one samples, and we subjected them to the usual qualitative test, and the results, so far as the purity of the spirit was concerned, were very satisfactory."

"Did you drink any of it?—I tasted it. From our examination of the samples we came to the conclusion that of the fifty-one six consisted of pot-still spirit only; thirty-eight mostly patent, and seven a mixture of nearly equal proportions of pot and patent still spirit. The strengths were various, but with two exceptions the great bulk of the samples lay between 15 and 25 under proof."

Were you surprised to find that the spirits sold in low public-houses were so pure?—I was not aware that highly-rectified spirit was so generally used for whisky."

But you are quite certain of it now?—Certain. I think one of the most important features of the result of the examination of these samples is that it affords evidence that an economic process is going on by which patent-still spirit is gradually replacing the pot-still."

The word "pure," it must be remembered, is used in its scientific sense. Absolute alcohol is perfectly pure from the point of view of the chemist; but it by no means follows that absolute alcohol would as a beverage make a wholesome substitute for a two-year-old Scotch whisky.

THE LAND TAX.

We detailed, in a preceding issue, the nature of the three propositions said to be generally entertained among politicians outside the Go-

vernment with reference to the land tax. The *Yoku Shimbun*, Count Itagaki's organ, states the case somewhat differently and with more precision. The first proposal, it says, is to leave the assessment as it is, and to reduce the tax all round from 2½ per cent. to 2 per cent. The second proposal is to undertake re-assessment on a minute scale with the object of reducing the taxable value of highly rated lands to the level of the low rated. The third scheme also depends upon accurate re-assessment, but differs from the second in advocating that low rating should be raised and high rating lowered so as to strike a general average. According to the same journal, putting the third scheme into operation would mean an increase of taxation for the Prefectures of Yamaguchi, Fukuoka, Oita, Miyagi, Iwate, Aomori, Akita, Yamagata, Fukushima, Niigata, Toyama, and Nagano, and for the city of Kyoto. Among these, Yamaguchi would suffer most, its increase of land tax being estimated at three hundred thousand yen. Miyagi, Yamagata, and Akita would each have to pay about two hundred thousand yen more than they do now. The total addition to the revenue from these thirteen Prefectures and one City would be two million yen approximately. Nothing is said, however, with regard to the loss that would ensue from reducing the tax in the remaining twenty-nine Prefectures and three cities. We do not suppose for a moment that the Diet would be content with the first proposal, inasmuch as one of the chief grounds for discontent at present is the unequal incidence of the land tax. Moreover, it is plain that if the revenue is to be cut down to the extent of eight million yen, as would be the case were the general rate reduced from 2½ to 2 per cent., a large portion of the deficiency would have to be met from other sources, and the Diet is not at all likely to contemplate that prospect contentedly. Re-assessment seems, therefore, to be inevitable, and if the Government has hitherto shrunk from the expense and delay involved in such a proceeding, Parliament will probably be equally reluctant.

SECRET SERVICE FUNDS.

ONE of the subjects into which people admitted for the first time to a share in the Government are naturally prone to enquire, is the manner of expending the funds appropriated for the secret service of the various Departments. It is evident, however, that curiosity on this point cannot be satisfied. In all countries the necessity of such funds is recognised, and if Parliament insisted on being informed of the manner of their employment, the Government would have no course but to resign. Thoughtful Japanese evidently appreciate this, for though some politicians more prone to criticism than reflection, show a disposition to be inquisitive, the leading newspapers do not countenance it in any way. The latest utterance on the subject is to be found in the *Hochi Shimbun*. "According to the estimates for the 22nd fiscal year," says our contemporary, "the Secret Service Fund amounted in all to 290,900 yen. The largest share, 150,000 yen, was taken by the Home Department, the Cabinet coming next with 74,000. The remaining 66,900 yen was divided between the other Departments in proportions varying from 40,000 to 1,500 yen. The estimates for the next fiscal year showed a reduction in this appropriation from 290,900 to 250,000 yen, the share of the Home Office falling to 130,000 yen, that of the Cabinet to 60,000 yen, and those of the remaining Departments being more or less diminished. As to the manner of expending this money we are not, of course, able to speak, but it may be conjectured that a portion was required in connection with popular agitation about Treaty Revision on the Japanese side and opposition on that of foreigners. Other purposes, also, involving all the Departments doubtless exist. It is plain that the amount of money expended for secret purposes must depend greatly on the peaceful and orderly condition of the country. Of late years, therefore, the aggregate outlay on this account has diminished, but since it is nevertheless necessary to be prepared for emer-

gencies, sufficient appropriations have to be made. Recently, when there was talk of a general combination of political parties to oppose the Government, the Authorities were obliged to spend considerable sums for the purpose of enquiring into the conditions of the movement. That crisis having been staved off, however, the use of a secret-service fund is now pretty well confined to the police, and it is probable that, as rumour states, a surplus remains from the appropriation made on account of secret service in the current year's estimates. If this be added to surpluses from previous years, the total would doubtless represent a considerable sum. No decision has been taken, we understand, with regard to the disposal of this surplus."

PRINCE SANJO ON POLITICAL PARTIES.

PRINCE SANJO, according to the *Daido Shimbun*, has expressed a very strong opinion about the political parties now growing mushroom-like in Japan. The Conservatives, who, contrary to expectation, have succeeded in organising themselves into something like a compact body with a journal of their own, are said to have been very desirous of inducing Prince Sanjo to accept the leadership of their party. Could they have attained this object, the event would have been one of the most important and significant in recent years. But Prince Sanjo's reply, as quoted, be it observed, by a bitterly anti-Conservative journal, was characteristic. He said that, in his opinion, political organizations are designed to correct abuses rather than to promote national prosperity. If a new political party is formed, its founders are bound to indicate some abuse as the *raison d'être* of their association. In a word, political parties are medicine to remedy some social malady. If such parties are numerous, it must be concluded either that they have no solid basis or that a correspondingly large number of abuses exists, either of which conclusions is equally unwelcome. "Since times earlier than the Restoration," the Prince is represented as having said, "I have had the cause of my country at heart, but I have not learned to be so foolish as to rashly set about applying remedies where no malady exists. The present condition of political parties suggests the idea that half a dozen doctors are disputing about the treatment of one disease, each advancing some peculiar system of his own but none succeeding in curing the malady. One good physician, if there be such, is quite sufficient. Why should my assistance be invoked in the matter?" Prince Sanjo seems to have spoken severely, but in truth, from the point of view of an old statesman like himself, all this political dust raised by men who rush along roads leading they do not distinctly know whither, must appear very frivolous and impalpable. The time has not come for political parties to be really solid and responsible. It is, however, very close at hand.

JAPAN'S AND KOREA.

THE *Yiji Shimpō* writes of Japan and Korea as follows:—"Among the diplomatic affairs of this country at present the difficult question of the revision of treaties is the most pressing, and next to it in importance may perhaps be placed the policy we should adopt towards Korea. In dealing with Eastern Pacific questions nowadays, the eyes of all nations are turned towards Korea, not merely because it constitutes the heart of such questions, but also because its condition shows signs of internal disquietude. Should anything happen in that country, the foreign Powers might easily find themselves involved in the matter, and a serious disturbance might result. As we are so intimately connected with Korea, all the circumstances of that country possess deep concern for us, and our Korean policy should receive our best attention. Our Government seem to have realized this for many years. It was rumoured some years ago that the sudden trip then made by Count Ito and Count Saigo to Vladivostok, via the Korean Coast, had much to do with the Korean question. Since Count Aoki accepted the portfolio of Foreign Affairs, he has been busily engaged

in investigating the question of Treaty Revision, and has probably taken no step with regard to Korean affairs. But now the sudden despatch of Mr. Kawakami, Commissioner of the Bureau of Commerce of the Department of Foreign Affairs, to Korea may be regarded as indicating the attention paid by the Government to our trade with Korea. It is rumoured that, according to the report of Mr. Kawakami, some diplomatic step may be taken in respect of our relations with Korea." The same paper reports that during the three months from April to June of the present year, trade in Korea showed an exceedingly favourable aspect. The customs duties collected in the three ports of Jinsen, Fusan, and Gensan amounted to three times that collected during the same period last year, as is shown in the following table:—

	APRIL, MAY, AND JUNE, 1890.	APRIL, MAY, AND JUNE, 1889.
Jinsen	\$80,932.64	30,792.78
Fusan	51,870.70	9,617.99
Gensan	32,107.19	14,249.72
	154,910.52	54,660.48

"QUIDNUNC."

WE note with pleasure from the last number of the *North China Herald* that "Quidnunc" has acceded to the wish informally expressed by several of his readers, and resumed his extremely interesting notes. His contribution on this occasion is mainly devoted to the memory of one of Her Majesty's Colonial officials, who died a short while since just as the steamer on which he was a passenger was entering Yokohama harbour. Few will need to be told that we refer to Mr. Alfred Lister, the gentleman who, in his capacity of Postmaster-General in the Hongkong Government, was the object of so much wild criticism and abuse whenever an error of judgment on the part of the Hongkong Post Office or some untoward circumstance delayed the outward mails a day or two. The remembrance of the prevailing tenor of the references to him in certain journals here will certainly not detract from the pleasure of reading the following graceful tribute from the pen of one who knew him well. We quote the passage in its entirety, as by so doing a little may be done to gain local support for the laudable object touched upon in the concluding paragraph. The burden of life pressed heavily on Alfred Lister; "too heavily for his shattered health and enfeebled frame, and though he bore it bravely, with never a murmur, his friends knew how overweighed he was. He served, I think, in every post open to him in Hongkong, with the exception of the administrators, during the five and twenty years he was there. He was most successful, perhaps, at the magistracy, where his moderation and common-sense won for him a reputation in striking contrast to the failures which have commonly attended the elevations to the Bench in Hongkong. In other posts he left the impress of his earnest and conscientious endeavour, but in none of them can he be said to have been distinguished. He lacked, indeed, the force of character which marks a man out from his fellows. His were not the qualities which tell in life's feverish struggle. I prefer to remember him in his too brief hours of leisure, when on some happy holiday we climbed together the ridge that hides the valley of the Pat Henng to spend a long day among its bosky recesses. He could maintain an easy mellifluous flow of conversation, picking his words delicately and almost pedantically, and his views, if not broad, were generally just. He talked best, I think, of books, for he had read widely in the English classics, and there was real literary insight in his criticisms. In his younger days he used to contribute to the *China Review*, and his articles, if slight, were distinguished by a style at once pure and polished. His essay on Chinese Tones is a good example of the superiority of his manner to his matter. He occasionally wrote poetry, which seldom rose above the level of mere versification, but was invariably graceful and correct. To everything he undertook he brought illimitable patience and carefulness to bear, and so far as these could command success he achieved it. But it was in the

qualities of heart rather than of head that he excelled. Like his old friend Mr. Stewart, he was naturally of a retiring disposition, and he was compelled by circumstances to a life of self-denying seclusion. It is no wonder that his friends were few, but it is difficult to understand the bitter hostility which in spite of his upright and unassuming character he undoubtedly aroused. For indeed his was a beautiful nature; sympathetic, almost feminine in its tenderness, resolute and even stern where a principle was involved, he led constantly the 'gentle life.' His death only serves to throw into brighter and clearer relief how bravely he lived. A certain hostile critic was used to style him "saintly" in contempt. He sees now the term was misapplied. May I add here that this heroic soul died as he lived in poverty. His entire estate realised about £500, and he leaves several invalid relatives who have looked to him for support during these many years, but who are now practically destitute. In a memorandum appended to his will he asks in simple faith that these should be cared for by his friends. *In te speravi, Domine, nec me confundas in æternum.* A fund has been opened and subscriptions may be sent to the Hongkong and Shanghai Bank for the benefit of his children and dependents. The opportunity will not be lost by any who prize the memory of the just man, or who not willingly allow death to frustrate the intentions of the good."

COUNT ITO.

A SOJOURNER at the Imperial Hotel in Tokyo, whose identity is carefully concealed, has had an interesting interview with Count Ito. The *Nichi Nichi Shimbun* reports it, and we are inclined to think that the story may be accepted as true. Referring to his appointment as President of the House of Peers, Count Ito explained that he had consented to take the post in deference to repeated expressions of the Imperial wish, but that he did not intend to occupy it for a period longer than the first session of the Diet. It appears that his Excellency is desirous of going to China. During his visit to Peking and Tientsin in 1885, he made the acquaintance of many leading Chinese officials, especially of Viceroy Li, with whom he contracted a very close friendship. Ever since then the Viceroy and the Count have been constant correspondents, and Count Ito is anxious to renew an intercourse which, apart from its pleasurable aspects, may not be without useful results for the best interests of the Orient. At the conclusion of the Diet's first session the Count contemplates accepting the position of *Zenken-Daijin*, a term for which no correspondingly terse English equivalent exists, but which may be translated Plenipotentiary-in-Chief. There is certainly ample scope for the exercise of Count Ito's great abilities in the field indicated. The relations between Japan and China are of the first importance to the Orient, and their proper conduct demands more than ordinary tact and wisdom. Nothing is more essential in a Plenipotentiary visiting China than that the Chinese should be assured of his influence at home. Count Ito's qualifications from this point of view would be unique.

CURING CRIMINALS.

ONE of the most remarkable conceptions of the time is that which suggested the method now practised in parts of the United States for reforming criminals. Instead of attempting to appeal directly to the moral instincts of the subject, the system depends upon influencing his muscles. The experiment is tried with men who have received "indeterminate sentences;" that is to say, sentences fixing a maximum term of imprisonment, but not forbidding release within that term provided that an apparent cure has been effected. The scientific basis of the treatment adopted is thus described in a home journal:—"The grand moral characteristic of the criminal is his callous insensibility. Body and spirit are intimately related, and it is found by thousands of observations that a callous insensibility is his grand physical characteristic too. The massage and Turkish baths, which play so large a part in the treatment adopted in

the Elmira Reformatory of New York, are intended to give health to the tissues, stimulate the cutaneous system, and develop the nervous organization. And the mind partakes of the effect of these processes. They will not make a man virtuous, but they will help to make him sensitive to the claims and attractions of virtue. And that is just what the ordinary criminal is not—by nature or by habit he is sensitive only to the attractions of self-indulgence. But let us see the theory at work. In 1886 Dr. Wey, of Elmira, selected for an experiment eleven criminals between the ages of nineteen and twenty-nine. In various degrees they were dull of intellect—in physiognomy they showed the well-marked traits indicative of criminal tendencies. Their offences were assault, burglary, larceny, rape. For a period of one to two years they had been in prison and had made no improvement. Now Dr. Wey took them in hand, and treated them with baths, massage, shampooing, and drill—the ordinary schoolwork being continued. That a remarkable physical improvement soon showed itself is not surprising; the flabby muscles grew hard, the shuffling gait became manly and elastic, the dull eye brightened. But with this improvement came a mental awakening, a cerebral activity never before manifested in their prison life. The purely animal man, with his ox-like characteristics, seemed to recede before the intellectual. The improvement was marked in every sphere, moral, intellectual, and physical; and in eighteen months from the beginning of the experiment all but two had been released on parole, and were living by honest industry."

CHINESE MEDICAL PRACTICE.

A MOST interesting idea of Chinese medical practice is given in the following article which we take from the *North China Daily News*:

Many Chinese doctors will remember the cholera of 1860 and 1862. They keep account of both these years as times when this fell disease was most destructive of human life in their country. A leading article in one of the Shanghai daily newspapers in Chinese, written by a well-informed native physician, gives the view of his class on the treatment that should be regarded as most suitable. He starts with saying that men who die from cholera owe their death not so much to the disease itself as to the incompetency of the native doctors in attendance. They do not attend to the real nature of the disease, and they treat only its outer manifestation. Then, he says, in persons attacked there is a lack of healthy strength and a liability to fatigue. They get hot by day by exposure, and sleep in draughts by night unprotected. Such persons if they take food at irregular intervals and sometimes go with empty stomachs, are predisposed for cholera, which may enter with the breath through the lungs and the stomach, thus passing into the intestines. The way he puts it is peculiar. The lungs control the skin and hair. The violent perspiration shows that the lungs are affected, as the vomiting shows that the stomach is disordered. The spasms indicate that the liver is affected, because the muscles are under the control of that organ. If a good doctor is not called soon the liver will be reached and spasms will begin. Should wise treatment still be delayed the heart and spleen will be affected and then the tongue will curl up and death will ensue. Sometimes the process is quicker and death occurs after from two to four hours. This is because the evil influence entering from without strikes directly into the seat of the "cold principle" in the lower intestines.

This physician then proceeds to describe his own, as he says, very successful mode of treating cholera. He notices seven symptoms—vomiting, diarrhoea, low pulse, cold limbs, perspiration, spasms, and exhaustion. He at once orders from the druggist a prepared dose to be heated at the patient's house and taken warm to the extent of a good sized tea-cupful. In this dose the main things are ginger, ginseng, Chinese cardamom, and a sort of caraway seed. After this the patient receives *atractylodes alba*, called *peshu* by the apothecaries, a medicine of which the Chinese think a great deal as an aromatic tonic and stimulant. They use it in cases of profuse sweating and apoplexy, chronic dysentery, and rheumatism. It belongs to the *cyrtaracae* among the species of which are found many plants known in Europe as furnishing useful stomachic and febrifuge medicines. If the disease progresses still into the spasmodic state with numbness of the limbs this physician would use *paonia albilora*, the *pecho* of the native apothecaries, with *boyenia rutacarpa*, and a pepperwort which they call *echuhyu*. Our druggists know it by the name *zanthoxylum piperitum*. It is one of the commoner aromatic stimulants in China and in Japan. To this he adds cinnamon bark.

In 1861-1862, he remarks, when the cholera reached Shanghai, it was at a time when the people were crowded indiscriminately in an insufficient number of dwellings. Refugees had arrived in thousands, escaped from the daily scenes of baning and fighting which were witnessed over all the adjoining country at that time. He notices that the sanitary conditions were such that the people were specially liable to be attacked by cholera. It was then that this physician tried his methods and experience. As he does not mention any preparation of opium or of mercury he is probably a cautious doctor and would avoid strong remedies. We should expect opium to be applied to soothe the extraordinary derangement of the system when under the dominion of cholera. Instead of this he gives pig's liver mix-

ed with brick dust from the inside of a furnace, a mixture honoured with the title *Fu-lung-kun*, "liver of the hiding dragon." To this are added one or two ounces of ginger. This remedy of his has had great popularity with many persons and been very successful. He has had, he tells us, a large practice during the summer of this year, and the effect on patients of his remedies has been such as to give him great satisfaction. He could not secure this popularity without favouring the popular beliefs.

He then tells what other doctors say about the treatment and origin of cholera. Its not being mentioned, that is, under the name *sha*, in early books has excited much remark. It first occurs in a book which recommends in treating it the use of paper from which silk-worms have retired, *ts'an t'ui chih*. The book is probably of the Ming dynasty, for he proceeds to say that the cholera came in the middle of the 17th century with the dynasty from Manchuria spreading from the north southward. He notices the use of the name "Manchurian sickness" and of "the foreign cholera." If this is so it is a curious fact in the history of the disease, and the "Manchurian sickness" needs to be inquired into. It seems more likely that Europe is right in supposing that cholera originated in the hot jungles of southern Asia, and at a more recent date than this account states. The same word *sha* is applied to diphtheria and scarlet fever, which became epidemic in China in the severest form in 1733, and belong to the winter and spring. The word *sha* is applied to some five or six diseases, in part summer and autumn epidemics, like cholera, and in part prevailing in the winter and spring. All have appeared in China in the 17th, 18th, or 19th centuries for the first time. The term *ho lan*, also applied to different kinds of cholera, is an ancient name, descriptive of it in the old times when it was not yet epidemic. The reader will judge for himself as to the drugs the names of which have been mentioned above. They are really not very different from what are found in western practice. Chinese doctors appear from what is here said to be fond of using mild remedies, while they avoid those which are very powerful in their operation; as to the nature of the medicines, they are on the whole much the same as our own.

* Hot remedies must be used. The fire god of whom the "hiding dragon" is one of the titles, is supposed to have put his influence into the furnace brickwork.

MR. KAWAKAMI'S MISSION TO KOREA.

"THE despatch to Korea of Mr. Kawakami, Chief of the Commercial Bureau in the Foreign Office," says the *Nichi Nichi Shimbun*, "was supposed by us to have been ordered by the Minister for Foreign Affairs, but we are now told that he was sent by direct order of the *Naikaku* (Cabinet). Our Government's request, formally conveyed to the Korean Government, to have a place called Heijo in the Heiando district of Korea opened for trade purposes, has been granted, and Mr. Kawakami is now sent to make a careful inspection of the place, and to investigate what trade advantages it offers. He has besides to confer with Mr. Kondo, Japanese Representative in the Korean capital, on matters connected with the new treaty."

HOKKAIDO.

THE marine products of Hokkaido, says the *Mainichi Shimbun*, amount annually to over 6,000,000 yen, of which some 4,000,000 yen worth consist of herrings. The annual amount of cod fish caught is 10,000 *koku* or thereabouts, valued at sixty or seventy yen, per *koku*. This quantity is caught during a short period of the year by the fishermen of Akita, Sado and Yechigo localities, who come to the fishing ground in wretched boats, the people of Hokkaido rarely attempting this kind of fishing. But the indifference of the local folks is not owing to any scarcity of the fish in the seas off Hokkaido, for competent reports on the subject as well as the actual results of fishing by foreigners and Japanese engaged in the enterprise, show that cod fish abound in the waters near the coast of Hokkaido. Indeed so plentiful are they that there seem to be ample grounds for the prediction that cod fishing will hereafter rank with whale fishing among Japanese marine enterprises. In Europe and America, wherever industries in marine products are well developed cod fish almost invariably occupy the leading position. Especially is this true of America, where coast fishing has attained wonderful development. There the fishermen are now beginning to follow the schools of fish into the Atlantic in addition to searching for them in clusters in the bays and reaches of the Pacific. As an example of this we may mention the case of a party of enterprising Americans who recently captured, in a small space near the Kurile Islands, over ten thousand *koku* of codfish, an amount exceeding the whole annual take of these fish in Hokkaido. Japan makes a good deal of noise

about the seal and otter-hunting clandestinely carried on by foreigners in her northern seas, but such poaching is of small importance compared to cod-fishing on the scale we have just mentioned. If foreigners establish themselves in the possession of this large and profitable business, it will be too late for the Japanese to lament. No remedy will be forthcoming, for international law provides no restrictions in waters three miles distant from the coast. Cod-fishing gives large returns and involves a comparatively small outlay. It is little to Japan's credit that such an important enterprise, promising material additions to the national wealth, should vainly offer itself within sight of her shores, her own people looking on supinely while foreigners come thousands of miles to exploit the resources provided for her by nature

IMPROPER TREATMENT OF JAPANESE FEMALE PASSENGERS IN RAILWAY CARRIAGES BY FOREIGNERS.

A VERY scandalous affair has been brought to our notice. It appears that two foreigners who act as runners for the hotels of this Settlement, are in the habit of visiting the Yokohama station when the up mail train from Kobe arrives, and that, their business being known, the railway officials allow them to go on the platform without tickets. One of these men was convicted in Her Britannic Majesty's Consular Court, some time ago, of creating a disturbance at Totsuka station, and was punished by a fine of 50 yen. The other has now committed a still more serious offence. It seems that on Saturday, the 15th instant, he entered a second class carriage of the 12.45 train for Tokyo, not having provided himself with a ticket. Taking his seat beside a Japanese lady who had evidently attracted his attention, he addressed several remarks to her, but received no reply. Unchecked by her manifest desire to be left alone, he persisted in speaking to her. Presently a railway official came to look at the tickets, and, in answer to his enquiry, the hotel man said that he was going to Shimabashi, and would pay his fare there. This remark seems to have shown the lady that she had entered the wrong carriage, her real destination being Hiratsuka. She therefore alighted, and finding that her train had just started, decided, after consultation with a railway official, to remain in the ladies' waiting room until the departure of the next train for the Tokaido road. The hotel runner alighted also, giving up his Shimabashi trip, and following the lady to the waiting room, began to annoy her again. His attentions are said to have been of the most offensive character, amounting to actual solicitation, with offers of money, and a proposal to travel with her as far as Totsuka in a first class carriage. Fortunately a clerk in the railway office happened to pass. Observing a man in the ladies' waiting room, his suspicions were aroused, and the obvious distress of the lady induced him to interfere. He ordered the hotel runner to leave the room, and the order was obeyed slowly. By and by, however, the same clerk, passing again, saw that the man had resumed his previous importunities. He again requested him to leave, but this time the man refused, alleging that he was waiting for the arrival of some ladies. The station master was called, but even his request was disregarded, and the railway clerk was obliged to remain in the room until the departure of the 3.25 p.m. for Hiratsuka, in order to save the lady from further insult. We learn that these facts were officially reported to the managers of the hotel concerned—we refrain at present from mentioning the name—but that they refused to dismiss the man, who is still in their service. The Railway Authorities inform us that complaints have been several times preferred of Japanese ladies being insulted by foreigners at the stations, and we sincerely hope that an example will be made of the blackguard who committed the offence on the 15th instant. Rudeness to a lady travelling by railway is a thing absolutely unknown among the Japanese themselves, and, apart from the indignation which every decent person must feel against the ruffianism of this hotel runner, there is the additional regret that the good name of

foreigners should be dragged through the dirt by such scandalous conduct. It is too bad that the sense of absolute security felt by Japanese ladies in railway travelling should be destroyed by the unbridled license of vulgar foreigners, and we must confess unbounded astonishment that the offender in this case was suffered to remain for an hour in the employment of a respectable hotel. Of course if a foreigner, misbehaving himself in this manner, received personal chastisement at the hands of a Japanese, we should immediately have an outcry about anti-foreign feeling and Japanese savagery. Nevertheless, we earnestly hope that one of these prurient prowlers will have the lash laid about his ears if such practices are persisted in.

THE FUTURE OF THE PORT OF MOGI.

THE *Daido Shimbun* remarks that the works of the Mogi harbour will be completed by March next year, and that the opening of the port is expected by many to exercise a marked influence on the commercial status of Osaka. The reason assigned is that the chief staples of export, such as rice, coal, &c., are principally produced in Kiushiu, and up to the present these products have been first brought to Kobe and thence shipped for exportation. But when the port of Mogi is opened, it will give great facilities for shipping goods, on one hand, while the Kiushiu Railway on the other will provide good communication with the port. Under these circumstances, some of the rice merchants and coal dealers of Osaka and Kobe have already commenced to take steps for opening branches at Mogi, and some, for instance the Osaka Shosen-kaisha, having bought land for building their offices, the natural result has been a rise in the price of land at Mogi and in its neighbourhood. There are not wanting men who predict that Kiushiu will soon possess in Mogi a second Osaka.

COTTON SPINNING IN JAPAN.

THE *London Economist* has the following:—

In his report on the trade of the Japanese ports of Hyogo and Osaka during 1889, Mr. J. H. Longford, the Acting-Consul, shows that an aggregate decline of £480,000 in most articles of import was nearly counterbalanced by what was the most marked feature of the import trade of the year, the large increase in the import of raw cotton, amounting to £411,000. Mr. Longford says:—"This import was necessitated for the purpose of supplying the various spinning mills in Osaka and elsewhere, and the amount of cotton grown in Japan itself being entirely inadequate to meet the requirements of these mills, it is probable that this import will at least maintain its present value. Hitherto the whole supply has been obtained from China, and, as its import is entirely in the hands of Chinese or Japanese merchants, it is a source of little profit to British trade, beyond that it is, to a large extent, carried here in British ships. The cotton crop in China was last year a short one, and in September prices of Chinese cotton advanced from £2 12s. 6d. (£17) to £3 8s. 1d. (£22) per picul (133 lbs). With the raw material at the last-mentioned price, it was quite impossible for the output of the native mills to compete with Bombay yarn, and as this experience taught spinners that they could not absolutely rely on the Chinese supply of raw cotton in the future, inquiry had to be made as to another source from which their requirements could be satisfied. A commission of experts, including officials of the Department of Agriculture and Commerce, was therefore sent to India, with the object of investigating the cotton supply there and its adaptability to Japanese spinning, and as a result of it large importations of raw cotton have during the current year been obtained thence. Small experimental importations of American cotton have also been made, but as yet attempts on the part of the spinning companies to turn out a yarn from the American cotton that can compete with the English imported yarn have only resulted in failure. These companies still entertain the hope that they may ultimately be able to completely oust Bombay yarns from the Japanese market, but it is difficult to see any just grounds for the realisation of these hopes, if, as will probably be the case, India has to be looked to for the supply of the necessary raw material. Many of the spinning companies, for some years, gave every promise of continued success, and rewarded their shareholders with large dividends. But the aspect has lately changed, the market prices of the shares having greatly depreciated, several of the mills being either idle or working half-time, and the question is suggested whether it would not be more to the advantage, both of the people at large and of individual capitalists, for the Japanese to devote both their money and energies to the increased production of staples which are natural to the country and familiar

to the people, rather than to the endeavour to reach a position which will enable them to supply themselves with articles that can probably be always obtained better and cheaper from abroad."

In connection with this subject attention should be drawn to the remarkable statistical tables appended to Mr. Consul Ensley's Trade Report for Yokohama, for 1889. These tables are the most exhaustive and elaborate of their kind hitherto printed; they do great credit to the industry and research of their compiler, and are a valuable addition to our knowledge of trade matters. The statistics relating to the cotton industry are worth re-producing in the context of Mr. Longford's remarks:—

STATISTICS FOR THE MONTH OF DECEMBER, 1889.

Factories.	Number of Spindles.	Running Time, per month.	Days per month.	Hours per day.	Numbers of yarn turned out.
Osaka Spin'g Co.	39,760	21,310	32	24	16
Temma	4,608	10,528	26	24	10
Miye	4,428	11,800	24	24	15
Kanegafuchi	25,000	—	27	10	16
Tamashima	7,030	4,000	27	24	13
Naniwa	10,700	1,800	24	24	10
Tokyo	6,224	1,800	19	24	13
Dojima	8,408	3,400	23	24	10
Nagoya	1,000	8,000	23	24	16
Hiroshima	3,000	4,000	25	21	14
Wakayama	341	5,100	20	24	13
Hirane	4,092	—	23	23	16
Okayama	6,724	—	20	24	14

THE OPENING OF THE DIET.

SEVERAL enquiries have been addressed to us with regard to the possibility of obtaining orders to witness the opening of the Diet. It is to be feared that this will be a matter of great difficulty. The Authorities are understood to be desirous of granting every possible facility to the public, but the space available is limited, and the programme published in the *Official*

Gazette shows that the number of persons having a right to be present is sufficiently large to occupy the greater part of the strangers' gallery. Considerable discrimination will have to be exercised, and our own information goes to show that invitations will be issued only to those in whose behalf some special plea can be urged. A good deal of disappointment will result, but that is inevitable.

The day for the ceremony has not yet been officially announced, and some surprise is expressed at the delay, but there is no question, we believe, that the 28th will be chosen. The members will take their places for the first time on the 25th, and will at once proceed to the duty of electing a President and Vice-President. This seems at first sight a simple proceeding, but it will be in truth a long and tedious affair. The balloting for each official must take place separately, and a careful estimate shows that to collect, record, and group the votes of three hundred members will occupy a space of four hours. Eight hours will consequently be required to perform this operation in respect of the President and Vice-President, and if, as is not improbable, considering the novelty of the situation, any error occurs in the balloting, so that the votes have to be taken a second time, then the total period will extend to twelve hours. In the latter contingency, supposing that the Diet meets at 10 a.m., it will have to remain in session until 10 p.m., and the President and Vice-President cannot be nominated until the following morning. It is also anticipated that no candidate will obtain a sufficient majority to clearly indicate him as the House's choice. The *Taisei-kai* (Independents), the *Rikken Jiyu-to* (Constitutional Liberals), and the *Kaishin-to* all propose to put forward and vote for their own candidates. Thus nine names will probably be submitted for each post, and it will rest with the Emperor to choose the most suitable person from among the number.

THE AMERICAN BOARD MISSION COLLEGE IN KYOTO.

The college of the American Board Mission in Kyoto, known as the Doshisha, has now become one of the most important educational institutions in the empire. The Japanese people can scarcely fail to recognise the debt they owe to Americans who build, endow, and conduct such invaluable colleges for their use. We read in the *Kobe Herald* that a Science Hall has just been added to the already extensive buildings of the Doshisha. It is a handsome edifice of brick and stone, measuring 113ft. x 58ft., and containing eleven rooms for purposes of recitation, lecturing, apparatus, laboratories, and professional use. Mr. T. N. Harris, of New London, has contributed the munificent sum of a hundred thousand dollars towards the building and endowment of this Hall. It is not improbable that Sir Edwin Arnold may be among the first to lecture in the new building, for we learn that he has consented to deliver a course of lectures at the College during his approaching stay in Kyoto.

THE REV. MR. SYLE.

SCARCELY a week has passed since the receipt of a letter announcing the death of Mrs. Syle, and we now learn that she has already been followed to the grave by her husband. Almost immediately after her funeral, Mr. Syle was struck down by paralysis and passed away quietly. Mr. Syle was widely respected and liked during his residence in Japan. He was a man of large humanity, and his keen interest in everything connected with Japan enabled him to contribute materially to our knowledge of the country and people, and also inspired others to emulate his studiousness.

THE "JAPAN ECHO."

THE second issue of the *Japan Echo* confirms the highly favoured impression conveyed by the first. It is decidedly good reading, but purveyors of literary feasts had better serve it with the cheese. The illustrations are immensely im-

proved. The zincograph process "has not been found in a sufficiently advanced stage in Japan" for the uses of journalism, and the *Echo* has "fallen back upon old fashioned lithography." The results are good. Especially commendable is a chromo-lithograph of one of those Japanese curiosities so admirably described in "Our Neighbourhood" as "a child tied to a baby," or, in the vocabulary of a certain ventilator of facette, "a tot knotted to a totter." We must confess that a decidedly pleased sensation is produced by the novelty of a fresh and by no means shallow thinker discussing Japanese subjects with straightforward vigour and without any shadow of malice. Indeed, the good-humour of the editor of the *Echo* is conspicuous, though how it survives the terrible tussles he is evidently condemned to engage in with his type-setters, we are at a loss to conceive. From certain indications conveyed in his columns we suspect that he is "spoiling" for a fight with the *Japan Mail*, not from perversity, nor yet because he greatly disagrees with our views, but out of sheer youthful love of a "breeze." A little weary of the arena, however, we are disposed to take all that the *Echo* can give us "lying down." At present it gives us only pleasure, and we should be glad to think that some better reward is in store for it than anything discernible on our narrow local horizon. It is true that no one possessing such qualifications as the editor has hitherto tried the experiment of piping in the empty market places of the few exiles who devote themselves to the pursuit of the *yen* in Japan. But the best must fail where success is impossible. Tis sad, but true. We observe that the editor of the *Echo* is slightly ruffled by an allusion of ours to "Don Juan's Grandson in Japan." Well, he ought not to write such things. He can do infinitely better in other lines, and we commend to his notice Fenelon's immortal dictum, "*ne forçons pas nos talents, nous ne ferons rien avec grâce.*"

THE "HOGAKU IN INYU KAI."

We are charged, we observe, with mistranslating the term *Hogaku-in Inyu-kai*, but inasmuch as we have not attempted to translate it, the accusation lacks point. For the information of our readers we spoke of the *Hogaku-in Inyu-kai* as a Society of Graduates, a description quite sufficiently accurate for the purposes of our reference. Literally rendered the ideographs make a clumsy formula, "Society of Friends of the Institution of the Law Institution. The Society consists for the most part, we believe, of graduates of the Institution, and for that reason we adopted the simple explanation, a Society of Graduates; but our critics must suppose our knowledge of Japanese to be exceedingly rudimentary if they imagine that our formula was intended to be a literal rendering of the words *Hogaku-in Inyu-kai*.

STEAMER ON SHORE.

We have to record another shipping casualty, the steamer *Harima Maru* being reported on shore at Inuboye. No details have been received as to the actual position of the ship, but assistance has been sent to her, and it will soon be known whether she is to be a total loss or otherwise. The vessel left here on the 7th inst. for Nemuro, in charge of Captain Kobayashi, and was probably returning to this port when she went ashore in a heavy storm. Although a comparatively small vessel, she is nearly new and of a strong, serviceable type.

It has since been stated that grounds exist for believing that the *Harima Maru* will be got off safely. She is ashore on a sandy beach, and should the weather prove favourable, operations for floating her will in all probability be successful. No definite news, however, has yet been received.

DEATH AT SEA.

An enquiry was held in H.B.M.'s Consulate on Tuesday morning into the cause of the death of John McNair, a seaman of the *Pythomene*,

who died after being two weeks at sea on the voyage from New York to this port. Thomas Dexter, the captain, said deceased took ill on the 21st of June, and died on the 22nd. He was seized with fits, and on the 21st June said he was suffering from chronic rheumatism. Everything was done for him that was possible. He took fits at noon on the 21st, and was not conscious afterwards. The captain thought the deceased was all right when he shipped. Walter Smith corroborated the captain's statement, and said he had known the deceased before, and that he had been ill before he went on the last voyage. Two other witnesses gave similar evidence, and Mr. Troup found that the deceased died from natural causes, apparently epileptic fits.

TEMPLES AND PRIESTS.

In the columns of the *Fumiuri Shimbu* we find certain statistics about Buddhist temples and priests in Japan. They are as follow:—

SECT.	TEMPLES.	SECT.	TEMPLES.
Tendatsu	4,785	Ji	525
Shingon	12,928	Ohaku	577
Sodo	14,334	Shin	19,210
Jodo	8,304	Yuzu Nembutsu ..	267
Rinsai	6,517		
		Total	67,447

The total number of priests attached to these temples is 57,700. It will be observed that the Hokke Sect is omitted from the list. This is doubtless an error, and to it we may attribute the fact that although the temples actually enumerated only aggregate 67,447, the total given by the *Fumiuri* is 84,924. The difference, namely, 17,487, probably represents the temples of the Hokke Sect.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 15th instant were as follows:—

CONVERTIBLE NOTES.	RESERVES AND SECURITIES.
YEN.	YEN.
Notes (round)	Gold coin and bullion
100,103,468	24,995,710
	Silver coin and bullion
	20,150,000
	Public Loan Bonds
	13,470,450
	Treasury Bills
	29,000,000
	Government Bills
	4,724,000
	Other securities
	14,750,721
100,103,468	100,103,468

Of the above total issue of notes, the sum of yen 4,948,145 is in the treasury of the Bank. 22,000,000 has been transferred on loan to the Government, and yen 73,155,323 is in actual circulation, the latter showing an increase of yen 455,258 as compared with yen 72,700,065 at the end of the previous week.

MR. SPENCER'S PARACHUTE DESCENT IN TOKYO. We learn from the *Mainichi Shimbu* that the Emperor has presented a sum of yen 1,500 to Mr. Percival Spencer, who made a parachute descent in Tokyo the other day in presence of His Imperial Majesty. Mr. Spencer announces a performance for the 24th instant in Uyen Park.

NEEDLESS CORRECTIONS.

THE *Jiyu Shimbu* is at some pains to correct a statement which it professes to have found in the columns of the *Japan Gazette*, to the effect that the Representatives of Great Britain and America have received instructions from their Governments not to proceed with the negotiations for Treaty Revision. Sometimes it seems as though assertions of this class were invented purely for the purpose of making paragraphs. Their originators are the victims either of remarkable ignorance or of an inconveniently lively imagination.

ORGAN RECITAL.

We draw special attention to the second and last Organ Recital which Mr. Griffin has promised to the Union Church, and which will be given as per advertisement on Tuesday evening, the 25th inst. The programme will be published on Monday, and will include a fine selection of vocal music, both solo and choral. We learn that the chorus-work will again be a feature of

the concert, and that when this performance is over the revived Choral Society will at once commence their weekly meetings for practice.

THE celebrated aeronauts, the Brothers Baldwin, arrived here yesterday from San Francisco, and will give one of their sensational double ascents before going south, if sufficient inducement offers. These balloonists are the same who made so many successful descents by the parachute at the Crystal Palace and other places in England.

THE annual harvest thanks-giving Service will be held in S. Andrew's Church, Shiba, on Sunday, November 23rd, at 11 a.m. The sermon will be preached by the Rev. L. B. Cholmondeley, and the offertory will be given to the S. Hilda's Hospital Fund.

DR. MEACHAM will preach to-morrow morning in the Union Church, when his theme will be "God's wonderful love to man."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The miscellaneous news columns of the vernacular press for the current week have been occupied by reports of the meetings of the members of the Diet, by rumours as to the probable President and Vice-President of the Lower House, by information as to the scheme of reform proposed by the various political bodies, and above all by accounts of interviews with distinguished statesmen and officers on the question of the proposed augmentation of the Navy. There are not yet sufficient materials for a prediction as to the direction which public opinion will take about the last problem. The accounts of the different interviews serve to show that men connected with the Army are in favour of increasing the land forces, while those connected with the Navy lay stress on the importance of improving the means of maritime defence. Equally difficult is it to foretell who will be the successful candidates for the Presidency and Vice-Presidency of the House of Representatives. The principal persons thus far named in connection with the former post are Messrs. Nakashima Nobuyuki, Tsuda Shindo, Kusumoto Masataka, Kôno Hironaka, Kawashima Jun, and Oye Taku; and for the latter post Messrs. Yoshino Seikei, Shimada Saburo, and others are indicated.

The question which has occupied, during this week, the larger part of the attention of the members of the Diet, is that relating to the revision of the provisional Regulations of the Houses. Many of the members of the Upper House have agreed to strike out the article prohibiting the admission of women to the audience gallery. On the 19th instant some delegates from the *Yayoi Club*, the *Taisei-kai*, and the *Gi-in Shukai-sho*, began a series of meetings for the purpose of comparing the opinions held by their respective clubs or associations about the provisions of the Regulations, and, if possible, of elaborating a common scheme of revision. The first conference was productive of eminently good results, as the delegates found that many of their opinions coincided. There is now no longer any doubt that the members of the Lower House representing the Constitutional Liberal party, the *Kaishin-to*, and the *Taisei-kai* (Independents), will form an alliance on certain questions. For the *Yayoi Club* is composed of popular representatives of the *Rikken Jiyu-to*, while the *Gi-in Shukai-sho* is chiefly composed of men belonging to the *Kaishin-to*. A parliamentary alliance of these three parties would determine the political situation, for they would command a majority of at least fifty or sixty in a House of three hundred members.

The opening of the Diet drawing near, the Tokyo papers vie with one another in giving

advice to the members of the Diet and to their electors. The *Fuyu Shimbun* recommends the Peers and the Commons to work peaceably together, and, if the occasion demands it, to present a united front to the Cabinet. The members of the two Houses, our contemporary apprehends, may be inclined to regard each other as if they were hereditary antagonists. The Peers may seem in the eyes of the Commons to be mere instruments of the Executive. Count Itagaki's organ hopes, however, that the members of the two branches of the Legislature will meet in a frank and straightforward spirit, and endeavour to come to an understanding.

The *Nichi Nichi Shimbun* regrets that there is want of harmony among the members of the Upper House, which is divided into as many small factions as there are orders of nobility, and different classes of other kinds. Our contemporary fears that the Peers may, by their internal dissensions, be betrayed into serious neglect of their proper duties as a branch of the Legislature. What are their proper duties? The *Nichi Nichi* says that they are expected to check the extreme opinions of the Commons, if the interests of the country seem to call for such a course, and to defend the prerogatives of the Emperor. In order to properly discharge these important functions, they must be prepared at any time to bring their whole power and influence to bear in opposition to extravagant tendencies on the part of the popular branch of the Legislature. They are, therefore, advised to forget the difference of their social ranks, and to cultivate friendship and unanimity.

The *Nippon* follows a similar line of argument. It observes that the first condition of the success of any new institution, political or otherwise, is that its originators should rightly understand the nature of their responsibility. The question of popular representation having been long before the public, it is not necessary to remind the members of the Lower House of the nature of the duties required of them. But in the case of the Peers, the case is different, because the importance of their existence as a separate branch of the Legislature has not been hitherto adequately discussed. Their duty is, on the one hand, to restrain the violence of public opinion, and, on the other, to check any arbitrary tendency of the Executive. In a word, they have to maintain a strictly neutral and independent attitude in the body politic. They ought, therefore, neither to court popularity with the people nor to flatter those in power.

The *Daido Shimbun* is afraid that the elected members of the Diet may prove to be too eager to distinguish themselves, either at the cost of the expeditious transaction of business, or to the detriment of the interests of their parties. The electors will peruse the journal of the House of Representatives with keen interest, expecting to see their members cut a figure in the Diet. The Representatives know this very well; and in their inexperience, they may cause much trouble and loss of time by zeal to speak. Our contemporary, therefore, reminds them of the practice prevailing in the Parliaments of England and other constitutional countries as to the mode of conducting debates, and recommends them to act like a well disciplined army of modern times.

The relation between the Representatives and the electors forms the subject of a few articles. The *Daido Shimbun* writes at some length about the necessity that support should be given to the members of the Diet by the people at large. At present the powers of the Diet are very limited, and it will be necessary to have frequent recourse to the privilege, guaranteed by Art. XL of the Constitution, of making representations to the Government. But the weight which such representations will have with those in authority, depends upon the degree of harmony existing between the views of the members of the Diet and those of the nation. Our con-

temporary, therefore, urges upon the electors the importance of keeping a vigilant watch over the doings of their representatives, in order to see that the views of the constituencies are rightly interpreted. The *Yomiuri Shimbun* goes a step further. It advises the provincial electors to repair to the capital as soon as possible, so that they may be the better able to supervise the conduct of their representatives. The *Yomiuri* is not sure that there may not be some members faithless enough to deceive their constituents by renouncing the opinions they expressed at the time of their election. A moral obligation rests with the electors to see that their representatives are not guilty of such perfidy. Our contemporary has another object also in view in advising the provincial electors to make haste to Tokyo. Much good was expected to result from the infusion of the robust and simple spirit of the country members into metropolitan society, but the *Yomiuri* declares itself disappointed to find that instead of influencing the city folks the members have been influenced by the latter and have fallen into the effeminate and over-refined ways of the city. The presence of a large number of provincial electors might restore the erring members to their pristine condition.

We may easily imagine Mr. Fukuzawa's satisfaction when he was invited to dinner on the 17th instant by more than thirty of the members of the Diet, all of them his former pupils at the *Keio Gijuku*. The more prominent among them were Messrs. Obata Tokujiro, Fujita Mokichi, Ozaki Yukio, Inukai Ki, Minoura Masaru, and Tanimoto Michiyuki. In a speech which he delivered on that occasion, Mr. Fukuzawa, after expressing his thanks to his hosts, dwelt at some length on the enduring bond which school life engenders among fellow students. The circumstance that they were formerly students at the same school would not, he said, prevent his hearers, from having differences of opinion on important questions of State. But amid all political excitement and party strife, the sweet recollection of their school life should suffice to preserve the friendly relations now existing among them. "For myself," continued Mr. Fukuzawa, "as you all know, I take no part in politics, and at my advanced age, it could be of little benefit to me to win friends and of less to make foes by engaging in politics. Had I, indeed, devoted myself to practical politics, it would doubtless have been my lot to ally myself closely with you rather than with your opponents, who would naturally be my antagonists also. Nothing could be farther from my wish than such an unpleasant state of affairs." He said in conclusion that his only desire was to see his former pupils intimate and friendly in private, whatever differences might separate them in politics.

The island of Kyushu seems to be the hot-bed of every political and social movement in Japan. At the town of Miyazaki there was formed, some time ago, an organization called the *Miyazaki Fichi-kaï*. It was known to include several members imbued with socialist notions. It is now reported that having been thought dangerous to public peace and order, the association has been commanded to dissolve by the local public Authorities. It appears that the society was originally established for the purpose of opposing the municipal council, which was reported to have in contemplation the levying of a kind of house tax. Thus at first it consisted of house-holders, and everything went on in an orderly manner, but when the original object had been attained, these sober members left the association and their places were filled by carpenters, wall plasterers, and so forth. These, under the management of a few socialist leaders, soon became unruly and began to attack the municipal authorities and the wealthier portion of the inhabitants. The latter, on their side, were compelled, in self-defence, to form an association called the *Seigi kaï*. Thus the whole place was divided into two parties, and so-

cial intercourse, as well as business transactions, ceased between them. The socialist party secretly collected clubs and sword-sticks to attack the members of the *Seigi-kaï*, and the Authorities were forced to interfere. The *Nichi Nichi Shimbun*, commenting on this event, calls the attention of the Government and the members of the Diet to the importance of devising some measures for checking the spread of the contagion engendered at Miyazaki. In former times, the comparatively equal distribution of wealth prevented the rise of a socialist party, but signs are now becoming apparent that the poor are growing poorer and the wealthy wealthier.

The *Rikken Fuyu-to's* programme of questions to be brought before the Diet, has evoked various comments. The *Hochi Shimbun* observes that the members of the party have hitherto been distinguished by their proneness to push reforms at a high rate of speed. It approves in theory the programme referred to, but in carrying out the proposed reforms the Constitutional Liberals are advised to proceed deliberately and to entertain no sanguine expectations, for they are more likely to be disappointed than satisfied.

The *Fuyu Shimbun*, the Constitutional Liberal organ, takes a very different tone. It advises the members of its party never to be content with patch-work reform, but to push their views thoroughly and courageously. The *Fiji Shimpō* cautions not only the Constitutional Liberals but every other party to be moderate in advancing schemes of reform, particularly such as relate to financial matters. Some persons advocate the abolition of a few Departments of State and a reduction of the number and salaries of officials, but our contemporary observes that reforms in these directions are exceedingly difficult to carry out with success. The *Fiji* draws the attention of politicians to other changes which they can advocate with better success. For example, they ought to prevail on the Government to reduce the rate (7½ per cent.) of interest on the money (*yen* 10,000,000) due by the Treasury to the Bank of Japan. Cutting the rate down to 5 per cent. would benefit the Treasury to the extent of 250,000 *yen* annually.

The *Mainichi Shimbun*, the *Nichi Nichi Shimbun*, the *Tokyo Shimpō*, and others unite in demanding a speedy statement of the Budget. The House of Peers has to complete all the necessary investigations on the Budget within 15 days after it has been received from the Government. It will be impossible, says the *Nichi Nichi*, to deal thoroughly with such a subject in 15 days, and it would therefore be desirable to have the Budget distributed among the members some days before it is formally submitted to the Diet.

The *Nippon* is still engaged in its interminable essay on the history of finance. The *Tokyo Shimpō* discusses at some length various problems of practical politics, the reduction of taxes among others. The *Hochi Shimbun* has dealt with the questions of national education and the special system of municipal government. The *Fiji Shimpō*, writing on the subject of the coal industry in Japan, refers to the circumstance that the Mitsu Bishi Company has begun to engage in retail sales of coal obtained from mines in its own possession, and predicts that by and by the whole business, wholesale and retail, will be monopolized by that company, while all the coal fields will also fall into its hands. The *Yomiuri Shimbun* and the *Choya Shimbun* have devoted much space to the discussion of constitutional questions. The *Mainichi Shimbun*, in a series of two articles, suggests the formation of a large company for enabling poor people to emigrate to foreign countries. The same paper also advises Count Yamagata to steadfastly pursue his policy of keeping aloof from party strife. The *Fuyu Shimbun* writes on the qualifications requisite for statesmen.

THE TEMPORARY HOUSES OF PARLIAMENT IN TOKYO.

NOT long after the date for granting Japan a constitution was fixed by His Majesty the EMPEROR, the question of a building to accommodate the first national assembly began to be mooted. At the outset, somewhat extensive plans were projected, but the Government prudently determined to be content at first with a temporary building, and to defer the construction of a permanent one until full experience of the needs of the Diet had been acquired. The work of designing and superintending was entrusted to a German architect, Mr. STEGMUELLER, and the whole had to be finished within two years. An excellent site was chosen in Uchi-sawai-cho, in the immediate vicinity of the Foreign Office, and of the district now regarded as the official quarter of the capital. It is true that in such a neighbourhood a temporary wooden building must suffer considerably by contrast, for not only do many handsome edifices in brick and stone already stand in close proximity, but right opposite the Diet's comparatively humble tenement there will soon rise the big, imposing edifices now in course of construction for the Supreme Court of Justice, the Home Office, and the Admiralty. A sum of only eighty thousand *yen* was appropriated for the erection and equipment of the House of Parliament, and in view of its necessarily capacious dimensions, it was very evident that the architect must limit himself to a wooden building of the plainest character. This at once explains the somewhat flimsy and absolutely inornate appearance of the edifice; features which have been strongly criticised in some quarters, but which simply show that the architect's hands were tied, and that he had the good sense to enter thoroughly into the Government's prudent determination not to expend an unnecessary dollar on external decoration. The public further remarked that as the work progressed it assumed a somewhat conglomerate shape, annexes, additions, and supplementary structures cropping up with peculiar pertinacity, until it seemed quite hopeless to look for anything like architectural harmony. For this, too, the gradually developed needs of the Authorities themselves must be held responsible. Mr. STEGMUELLER's original plans, as sanctioned by the Cabinet, took in, we believe, a space of some 2,110 square metres. But from the early stages of the work until shortly before its completion, the Government gave directions that extensive additions should be made for purposes either not originally contemplated, or intended to have been fulfilled by separated buildings in the vicinity. Among such additions we may mention official residences for the two Chief Secretaries of the Upper and Lower House; fire-proof warehouses for archives; boiler-houses for heating

purposes; a large kitchen, together with extensive stables and coach-houses. As the site did not lend itself to an underground storey, no alternative remained but to extend the ground plan by 340 square metres. This involved a corresponding enlargement of the surrounding park, for in obedience to genuine Japanese canons it was decreed that however unpretending and uncomely the building itself, it should not be without a beautiful environment of fine trees, graceful parterres, and limpid ponds. Thus the original plan grew until the original appropriation of eighty thousand *yen* had to be trebled, and it is greatly to the credit of the architect that, though condemned to carry on such piece-meal work, he has nevertheless contrived to invest the whole with a sufficiently imposing and harmonious appearance.

The building faces south-east, the conventional aspect dictated by climatic considerations in Tokyo. In the centre of the façade, which is 121 metres long, and in front of the main entrance, a gently sloping terrace sweeps upwards in a fine curve, passing finally under a spacious balcony supported by columns. At both ends of the building jutties project sharply, imparting an air of vigorous finish. Entering by the main door, we find before us a broad vestibule, leading to a spacious octagonal hall, which occupies the centre of the edifice. Thence stretch away to the right the corridors of the Upper House and to the left those of the Lower. They are very commodious corridors, being 6½ metres broad and of quite formidable length, and the difficulty of lighting them has been dexterously overcome. Following the corridor to the left, we reach the Session Chamber of the House of Representatives. Its section is a parallelogram, 25 metres in length and 16 in breadth. It is a well ventilated and imposing chamber, 16 metres in height, obtaining its light laterally from an almost uninterrupted row of windows placed immediately below the ceiling. The light, penetrating on all four sides, is deadened on the East, South, and West by means of frosted panes, and its entrance at such a height obviates all dazzling effects. In the evening this chamber, in common with the whole building, is illumined by electricity. The decoration is in excellent taste. The pale terracotta colouring on the walls, the doors of dull Russian green, the green leather coverings of the rows of seats, and the light grey balustrades of the gallery, picked out in gold, harmonize admirably. In the centre of one side rises a lofty podium with the table of the President and Vice-Presidents. In front of this, and a little lower, stands the rostrum, from which small flights of steps lead down, right and left, to a semi-circular portion of the chamber, where are placed the seats for stenographers, and the table of the House. Round about this half-circle

rise, amphitheatre-like, 326 padded seats for the 326 representatives. Numerous passages intersect the concentric semi-circles of seats, and provide every member with convenient access to his place. Before each seat stands a little table. A balcony surrounds the chamber on three sides at the height of the first storey. It is divided into boxes in which 400 spectators can easily find room. With respect to size, arrangement and number of seats, the Chamber of the Upper House is exactly like that just described. Here, however, an ingenious provision has in addition been made for solemn State occasions. Behind the President's table and three steps higher than the highest level of the Chamber itself, a large alcove has been built into the wall containing the Imperial throne. The alcove is adorned by a richly decorated baldachin, and is so contrived as to be capable of being shut off by means of a portière draped under the baldachin. On special occasions, when HIS IMPERIAL MAJESTY appears in his Parliament, the curtain will be drawn back, and the removal of the presidential table, the rostrum, etc., which stand in front of the Imperial alcove, will leave an open space, bounded by a richly carved balustrade. By this device an imposing stage for significant acts of State, and a suitable space for the EMPEROR and his suite are provided. On such occasions the outermost semi-circles of the rows of seats will be removed so as to furnish the whole of the members of both Houses with an adequate amount of standing room. We need scarcely say that the boxes of the EMPRESS, of the Imperial Princes and of the Diplomatic Corps are particularly richly decorated. Indeed, there is only one object-calling for criticism, namely, the carpet covering the floor of the Imperial alcove, which is shockingly vulgar and incongruous. The acoustics are really admirable. There is absolute freedom from the jarring resonance so common in wooden buildings, and words spoken in an ordinary tone can be heard distinctly in every part of the Chamber. Both Chambers of Session are surrounded on all sides by corridors leading to the various bureaux, committee rooms, &c. In the outer wings of the building are situated the libraries and refreshment rooms. The total number of such side apartments in the building proper is 109. It can only have been possible to obtain so many rooms by most carefully utilizing every spare corner up to the very roof. Of these, rooms, also, a considerable number are spacious, and all appearance of bareness is removed by rich leather paper and ceiling paintings. Warmth is obtained by means of stoves or fire-places, and electric lights are provided everywhere. Very handsome, considering the nature of the building, are the reception room of the EMPEROR ranging over the entrance hall and the apartments which flank it. The former opens on to a bal-

cony from which a fine view is obtained, in the fore-ground of the tastefully laid out park with its two large ornamental basins, and in the back-ground of the southern and eastern portions of the city with the sea beyond. On the whole, we think that Mr. STEGMUELLER is to be congratulated on his work. No opportunity offered for architectural achievement in the external form of the building, but whatever was possible in the shape of clear contrivance and experienced arrangement has been accomplished in the interior. The building, in fact, while satisfying the first conditions of its temporary existence, cheapness and unpretentiousness, is admirably suited to its purpose, and its general appearance by no means lacks dignity and impressiveness.

BRITISH COLUMBIA.

THE rising importance of British Columbia, the largest in area of the confederated provinces of the Dominion of Canada, has a special interest for the inhabitants of these islands. Now that a fleet of fast mail steamers has been built for the trans-Pacific trade, the port of Vancouver will be within eleven days' sailing from Yokohama. Situated between the same parallels of latitude as the northern parts of Japan, British Columbia enjoys a singularly temperate climate. The genial influence of the warm ocean current from these shores, makes itself sensibly felt in the open and humid winters which the province enjoys. Its most northerly harbour, Port Simpson, never freezes, and the mean annual temperature of the coldest month is but 38° F. In this area, equal to the aggregate of France, Belgium, Holland, and Italy, a colony is destined to grow up which will in time rival the older settlements of the Atlantic. It is but four years since the Canadian Pacific line of railroad forced its way through the gorges of the Rocky Mountains and of the Selkirk range, and linked the St. Lawrence with the Columbia and Fraser rivers. The previous isolation of the province in a remote corner of the Pacific, is now a condition of the past. The tourist in his trip round the world finds Vancouver and the Glacier House convenient and attractive resting-places.

In the year 1858, when gold was first discovered in the province, there was a rush of miners to the new fields. Since then the yield from placer mining has steadily diminished, the maximum having been attained in 1863, when a total of nearly four millions of dollars was reached. It is not that the placer deposits are exhausted; but rather that the individual system of working, a system which confines its efforts to the deposits on the banks of large rivers like the Fraser, has ceased to be efficient. Capital is required

for the introduction of hydraulic machinery, which will well repay the cost of the original outlay. Besides the gold mines, there are rich silver mines in the Kootenay district, which lies between the Selkirk Range of mountains and the United States frontier. The branch lines which are in course of being opened by the Canadian Pacific Railway Company will greatly increase facilities of transport, British Columbia having hitherto suffered peculiarly from its disadvantages in this particular. The province has iron ore deposits, principally near the coast, and exports copper and lead, mostly obtained from ores worked originally for the silver they contain. At present it probably exports more platinum than any other district on the North American continent. The coal-mining industry of British Columbia has been steadily increasing for the past thirty years. Although coal-beds occur in various districts throughout the province, there are no coal mines outside the island of Vancouver. On the east side of this island are situated the collieries of Nanaimo, Wellington, and Comox, which yielded for the year 1889 a total output of nearly 600,000 tons. The coal lies at a depth of from 400 to 500 feet, with a dip seaward. Even now the mining is partly submarine, and in course of time it will be considerably more so.

In addition to the exportation of metals and coal, there are the valuable fisheries of the coast, now world-famous. On the Fraser River, there have been established sixteen salmon canneries, on the Skeena River six, on Rivers Inlet two, on the Naas River three, and on Mert Bay one cannery. These establishments showed an output, for the past year of twenty million pounds weight of fish, valued at two million and a half dollars. Sturgeon, halibut, herring, trout, smelt, rock-cod, oysters and other shell-fish abound. Inclusive of the sealskin yield, valued at \$335,000, the whole approximate yield is estimated at over six million and a half dollars. Not only is attention paid to the capture of the salmon, but, in addition, for the past six years, a salmon hatchery has been in operation at New Westminster, which during last year turned out eight million fry for distribution. Salmon are found in the Fraser River as far up as one thousand miles from the sea.

Next in importance to the mines and fisheries comes the timber industry. There are altogether thirty-four species of trees found in British Columbia, no less than eighteen, or more than one half, belonging to the Coniferæ or Pine family. Only seven out of the thirty-four extend eastward beyond the influence of the Rocky Mountains. King of all is the lordly Douglas fir, which often reaches a height of three hundred feet. In the Parliament grounds at Ottawa the section of one is shown, taken twenty feet from the ground, the diameter of which measures eight feet

and a half. Masts one hundred and thirty feet long have been made from these trees. The timber industry is still in its infancy, and has an enormous expansion before it. As facilities for transport increase, the trade, now limited to the San Francisco market, will extend its connections. Already, in the young town of Vancouver, large sawmills have been set up, and carry on a brisk trade. Agricultural development will follow slowly at the heels of these other industries. Much good land exists in the valleys and estuaries, both arable and pasture. Northward, to the East of the Rockies, there is extensive prairie rolling land in the Peace River district; but a long time must elapse before these isolated regions will find a population competent to develop their natural resources.

British Columbia has been described as a sea of mountains, and certainly the province is one of the most mountainous districts in the World. The traveller who approaches it from the east, finds, on emerging from the frightful gorges of the Rockies and the Selkirks, that he reaches, not a sloping plain or broadening valleys, but a series of plateaux or natural terraces which descend abruptly to the water's edge. It is only when he comes to the actual delta of the Fraser River that anything of the nature of plain or prairie appears, though such land, as has already been stated, does exist on the upper reaches of the great rivers. The productive capacity of this river delta is enormous, the ground being constantly enriched by the scouring of the soils of the high lands. Indeed, it would be impossible to find anywhere a more suitable locality for market gardening or for fruit-raising, industries at present wholly undeveloped. The bitter winter of Manitoba, whose merits, sung so loudly by the Marquis of LORNE and others a dozen years ago, attracted a host of settlers to its rich wheat lands, proves too severe for many of the immigrants. These are finding their way to British Columbia, and will help to develop it.

The history of British Columbia does not extend very far into the past. It is originally associated with the name of GEORGE VANCOUVER, one of Captain COOK's midshipmen, who went north in 1792 to receive certain possessions in Nootka Sound ceded by the Spaniards to the British Government. From him the large island, on which is situated the most populous town of the province, has received its name, and it was he who first explored the coast. The Hudson Bay Fur Trading Company came into possession for the next fifty years, receiving from the Government in 1849 a grant of the Island of Vancouver. The enormous influx, nine years later, of gold-diggers to the valley of the Fraser River necessitated the separation of the government of the mainland and of Vancouver Island. United again in 1866, British Columbia and Van-

couver Island became, in 1871, one of the Confederating Provinces of the Canadian Dominion.

The characteristics of the province have been well summed up by Mr. GOSWELL, Commissioner of the Provincial Exhibit Association. "An atmosphere humid with the vapourings of the ocean; a climate beautifully tempered by the sea currents; a vast extent of mountainous surface, intersected with numerous rivers and rich sheltered valleys; a vegetation necessarily rank under certain conditions, producing enormous forests and prolific crops; a remoteness from the rest of America, and until recently a commercial isolation; an undeveloped and almost inaccessible interior; a rugged exterior, rendering communication difficult; a country of long distances and divides; a mining province primarily inhabited by gold seekers. * * * By irrigation in the interior; by the dyking and draining of the overflowing lands of the Fraser and ocean tide flats; by the extension of good roads, the building of branch railways, improvements and increase in navigation, and the systematization of methods in handling produce, and the other benefits incident to internal expansion of industry, all of which are naturally gradual and the result of expenditure of capital and intelligent effort, the province has prospects, agriculturally speaking, equal to any part of the Dominion or even the famed California."

At the nose of a peninsula in the Fraser delta, on the south shore of Burrard Inlet, and some miles to the west of Port Moody, is situated the town of Vancouver, the western terminus of the Canadian Pacific Railroad system. In a few years its population has sprung from nothing to over twelve thousand, and it is now recognised as the rival of Victoria, on Vancouver Island, a city of twenty-five thousand inhabitants. In the Stanley Park lying to the west of the city of Vancouver, there is still to be found an Indian settlement; and across the bay rises the white spire of a Mission Church. The Indians prove useful aids in the fisheries and in the canning establishments, but in other industries the indispensable Chinaman comes as usual to the front, and is assisting materially in the development of the town of Vancouver. There are about a hundred Japanese in the province, many of them engaged in the saw-mills; but they do not enjoy much of a reputation as workmen. In the interior there are several colonies of Chinese miners; and gangs of Chinese navvies keep the great through railroad track in repair. A poll-tax of fifty dollars is laid on each Chinese immigrant, and it is doubtful whether legislation will not proceed further in repressing immigration. Seeing, however, that British Columbia, with its advantages of climate, is the natural habitat of the Anglo-Saxon settler, he has less to fear from the push-

ing Oriental, and may surely make use with safety of the latter's cheap and efficient labour.

Among the more recent items of interest in connection with Vancouver is the commencement, this autumn, of a direct steamship trade with England, the passage being reckoned at seventy-five days. A mine of mineral paint, said to be equal to the imported article from Sienna in Italy, has been discovered at Harrison Hot Springs in the neighbourhood. It is claimed also that a rich coal deposit has been discovered on the north shore of Burrard Inlet, and indeed, croppings in and around the city go to show that the town is actually built upon an immense coal-field. Some of the leading residents of Vancouver are moving in the matter of a provincial University, and a bill, already submitted to parliament, is being drafted in a new form. The city of Victoria has strong rival claims, and the locality of the future institution will not be settled without a keen struggle.

THE NEW STAR IN LITERATURE.

A YEAR ago very few people were acquainted with the name of RUDYARD KIPLING; now he is discussed wherever the English language is spoken. Every one is supposed to have read his "Plain Tales from the Hills," his "Soldiers Three," and his "Phantom Rickshaw;" and his "Departmental Ditties" would be better known were it not for the fact that the Indian edition is hard to get, and no London edition has as yet taken its place. In any case, however, his productions in rhyme would have appealed to a narrower circle than his wonderful prose sketches, which have fascinated readers by their keenness of observation, their irony, and their pathos. They literally brim over with an intellectual effervescence, insomuch that one is apt to entertain a certain feeling of regret that the writer has put so many good things in a form so little solid, so unmonumental. DICKENS and THACKERAY, of course, began in the same way, and so did GEORGE ELIOT; but "Plain Tales from the Hills" reaches a higher plane than "Sketches by Boz," or "The Snob Papers," in the striking variety and originality of the subject-matter, superadded to the masterliness of the treatment. A perfectly fresh vein has been struck; so much so, that these seemingly light, sketchy spatterings from the pen of a youthful writer of twenty-five, have been declared by an experienced old Indian to be "the best book ever written on India." In the United States, in Canada, and at Leipzig, edition after edition is coming out to supply the constant demand. If popularity can settle the question of an author's genius, never has a new writer enjoyed such popularity as this.

The sketches deal with many aspects of

Anglo-Indian life. "Tommy Atkins" in India has received full justice in the pages, which teem with the racy utterances of MULVANEY, who once "was a Corp'r'l—but was rejected afterwards," while other aspects of barrack and camp life are brought out in "Thrown Away" "The Man who Was," and elsewhere. Perhaps for convenience sake the tales may be divided into three classes, those concerned with barrack life, with native life, and with Anglo-Indian Society. A fourth, which we will not touch upon in this article, is his very successful treatment of the supernatural. We agree with Mr. ANDREW LANG that the society tales are the least pleasing; but this is a matter of taste, for they sparkle with the keenest of observation, and the most cutting of satire. To Easterns who are not Anglo-Indians the types are all familiar, the well meaning, clever busybody "Mrs. Hauksbee," to be endured, respected, and even admired; that hateful flirt, "Mrs. Reiver"; the much-worshipped Venus Annodomini; and poor, dear Mamma in her too tight riding-habit. The influences which are so apt to act unfavourably on Society women in the East, the exaggerated importance they enjoy, their lack of social curbs and serious interests, receive a due share of notice. We have "Wressley" of the Foreign Office, who made an idealized goddess of silly Miss "Venner," spent his days and nights in writing, for her sake, the great work of his life, "A gift fit for an Empress," and was utterly smashed by her idiotic reception of it; jealous "Mrs. Larkyns"; poor "Dicky Hatt," who left his wife behind him in London and made such a mess of his whole life. These and other stories, dealing with courtship and marriage, make us feel "the pity of it" in the man's case, where high ideals are broken up, and noble devotion is thrown away. Not that there are no male brutes depicted, with excellent, patient unselfish wives, for example "Brouckhurst," whom "Strickland" exposes and rescues from his own vileness. But we revert again to "Strickland's" own early love story, and the signal heroism he displayed in his courtship of "Miss Youghal." The women of the sketches, with the exception of "Mrs. Hauksbee," are far inferior in character to the men; but then it must be remembered that a life of complete inactivity and pettiness, such as an Anglo-Eastern lady's is apt to be, must fail to develop character; and that Mr. KIPLING is here, as elsewhere, true to life.

Some of the Society stories are particularly good. The crank "Mellish," in "A Germ Destroyer," who spells his name without a final "e," and gets invited, through a mistake, to tiffin with the Viceroy, while the "important Mellish," the real man, is left snorting on the Mall—could anything be better told than his post-prandial introduction of his patent anti-choleric mixture to the Viceroy? The room was filled with smoke from the powder, and the stench was

so pungent and disgusting that the Viceroy fled coughing downstairs. "Mellish" was finally "hauled into the hall." "The Viceroy was prostrate with laughter, and could only wobble his hands feebly at 'Mellish,' who was shaking a fresh bagful of powder at him." The italics are ours; such touches as these instance the marvellous graphic power of the writer. The rough-sketch of "Poor dear Wonder," the Viceroy's secretary, must be left for due appreciation to the reader of the story.

Turning to the tales dealing with native life, we have several intensely pathetic little dramas. It is difficult to read, without a tug at one's heart's strings, the "Story of Muhammad Din." It is a description of a servant's child which waited to say "*Talaam, tahib*" to the foreign master as he returned daily from office, "the little white shirt and the fat little hands rising from the shade of the creeper-covered trellis where they had been hid." A few months of friendship and of mud-palace building in the Sahib's garden, and the honest little fellow sickens and dies. There is another finely told story of the death of a child, entitled "Without Benefit of Clergy," which readers of this journal will no doubt remember. Here again the deadly autumn fever did its work, and little "Tota" went, only too prematurely, the way of all flesh.

But, perhaps, after all, Mr. KIPLING's chief forte lies in his racy descriptions of Indian barrack life. The famous trio, the big Yorkshireman, "Learoyd," the impulsive racy-tongued "Mulvaney," and "Ortheris," the little Londoner, are distinct new creations, revealing the life of "Tommy Atkins" as it has never been revealed before. "Hit a man an' help a woman, an' ye can't be far wrong anyways," a maxim of "Private Mulvaney's," heads the first and by no means the least racy of the stories which give the adventures of these three worthies. The counterplot by which "Mulvaney," in "The God from the Machine," rescues the Colonel's daughter from a runaway match with an ill-conditioned regimental Captain, is, in its conception and execution, a very masterpiece. "Mulvaney's" fine Celtic imagination blossoms forth luxuriantly throughout these sketches. His courtship of "Dinah Shadd" forms the subject of the latest tale in the series. The account he gives of his acceptance by "Dinah" is inimitable. "I kissed her on the tip av the nose an' under the eye, an' a girl that lets a kiss come tumbleways like that has never been kissed before. Take note av that, sorr. Thin we went, hand in hand, to ould Mother Shadd like two little childher, an' she said it was no bad thing; an' ould Shadd nodded behind his pipe, an' Dinah ran away to her own room. That day I throd on rollin' clouds. All earth was too small to hould me. Berlad, *I cud ha' picked the sun out av the sky for a live coal to my pipe*, so magnificent I was."

There are few faults to find with so excellent a literary banquet. Sometimes, however, Mr. KIPLING seems to us to be guilty of a certain flippancy in needlessly parodying the language of scripture, as where he speak of "moving in a barren land where washing was not." On the same page, lower down, occurs an unnecessarily strong phrase. When "MULVANEY" asks the narrator if he had ever fallen in love, there is surely superfluous emphasis in talking of his having preserved "the silence of the damned." Such blemishes are easily removed. We wait to see whether Mr. KIPLING can use his rich material in a less brusque and pungent fashion. His tales, opening abruptly and often allusively, are almost too brilliant; are surcharged with an electricity sufficient to vivify several volumes. Certainly we can feel no surprise at any development in a writer with such rare powers of observation and of description. Our author writes under no pseudonym, his father being Mr. KIPLING, principal of the school of Art at Lahore in India. Born at the very close of the year 1865, he was sent to school in Devonshire, and returned thereafter at an early age to India. Since then he has enjoyed a growing reputation as a magazine writer and journalist. As several of his stories indicate, for instance, "The Broken-Link Handicap," he is fond of horse-flesh; he is also fond of fishing. In the autumn of 1889, after spending a considerable time in America, Mr. KIPLING again visited England, where he enjoys the reputation of being a brilliant conversationalist. Such are a few personal facts regarding the author, facts which are always of interest to the enthusiastic reader:—

"For what's the author, if the man be naught?"

PENSIONS TO TEACHERS.

We hereby give our sanction to the Law concerning Pensions to Retired Teachers and to the Families of Deceased Teachers in City, Town, or Village Elementary Schools, and order the same to be duly promulgated.

[His Imperial Majesty's Sign-manual.]

[Privy Seal.]

Dated October 2nd, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

YOSHIKAWA AKIMASA,
Minister of State for Education.

Art. 1.—All regular teachers in city, town, or village elementary schools shall be entitled to receive pensions according to the provisions of this law.

Art. 2.—Teachers who have been in office over fifteen years shall receive life pensions, subject to the following conditions:—

- (1.) That they are ordered to retire after attaining sixty years of age.
- (2.) That they are ordered to retire owing to inability to discharge their duties on account of wounds or sickness.
- (3.) That they retire on account of the abolition of schools, or are ordered to retire in consequence of changes effected in the organization of schools.

Art. 3.—Teachers who come under any of the following conditions shall receive life pensions, and be granted additional pensions up to seven-

tenths of the minimum sum of such pensions, though their years of service may not amount to the term provided in the foregoing article:—

- (1.) That they are ordered to retire from office owing to inability to discharge their duties, having lost the use of one limb or more from injuries received in discharging their duties, or having sustained some other like misfortune.
- (2.) That they are ordered to retire from office owing to inability to discharge their duties in consequence of the loss of one limb or more, or of having sustained other like misfortune, on account of sickness caused in discharging their duties under circumstances injurious to health.

Art. 4.—Art. 5, pars. 1 and 4, and Arts. 6 and 11 of the Law relating to Pensions of Civil Officials shall apply to the pensions mentioned in this law.

The regulations for reckoning terms of service in regard to the granting of pensions, etc., shall be fixed by Imperial Ordinance.

Art. 5.—Persons coming under any of the following conditions shall be disqualified for the receipt of pensions:—

- (1.) If it is proved that they committed during their term of service acts calculated to cause forfeiture of such service.
- (2.) If they are subjected to imprisonment or any heavier punishment.
- (3.) If they lose status as Japanese subjects.
- (4.) If being in receipt of pensions under Art. 2, par. 2, Art. 3, or Art. 7, and again qualified to engage in the calling of teacher, they refuse to re-engage in schools assigned to them by the *Chiji* of *fu* or *ken*; or of those who are in receipt of pensions according to Art. 2 par. 3 refuse to re-engage in schools assigned to them by the *Chiji* of *fu* or *ken*, provided that the amount of salary be not less than that received at the time of their retirement from service, and their age be less than sixty.
- (5.) If they enter the public service without the permission of the *Chiji* of *fu* or *ken*.

If those who are in receipt of pensions come under any of the following conditions, their pensions shall be stopped during the period involved:—

- (1.) If they enter the public service and receive a salary not less than that received at the time of their retirement.
- (2.) If they have neglected to apply for payment of a pension for more than three years.
- (3.) If their public rights are suspended.

Art. 6.—Persons who have retired from the service for their own convenience, before attaining sixty years of age, or who have been dismissed or become liable to dismissal, shall be disqualified for the receipt of a pension.

Art. 7.—Temporary teachers in city, town, or village elementary schools shall, in case of wounds or sickness received or contracted in discharging their duties, and subject to Art. 3 of this Law, be granted life pensions equal to one-fourth of the salary received at the time of their retirement.

Art. 8.—Regular teachers in city, town, or village elementary schools shall be granted a sum equal to two months' salary at the time they retire, in case of retirement after service of more than five years and less than eleven years, and a sum equal to three months' salary in case of retirement after service of more than eleven years and less than fifteen years.

The above paragraph shall not apply to those who are in receipt of pensions under Arts. 2, 3, and 7, or to those who have retired from service for their own convenience, or to those who have been dismissed or become liable to dismissal, or to those who have neglected to claim the right to a pension mentioned in paragraph 1 of this article within three months after it has begun to operate. Should those who have for their own convenience not applied for payment of the bonus mentioned in paragraph 1 of this article, be afterwards re-appointed regular teachers in city, town, or village elementary schools, the period spent in the former service shall be included in reckoning the term of service for granting pensions, etc. But this shall not apply to those who fail to notify that they have not received the bonus within three months after the right to it has begun to operate.

Art. 9.—The granting of pensions and of the bonus mentioned in Art. 8 shall be decided by the *Chiji* of *fu* or *ken* on certificates by chiefs of cities, towns, and villages.

Arts. 16 and 18 of the Law relating to the Pensions of Civil Officials shall apply to pensions mentioned in this law.

Art. 10.—In case a regular teacher in a city, town, or village elementary school should come under any of the following conditions, his family shall have the right to receive "pensions granted to the families of deceased teachers" in accordance with the provisions of this law:—

- (1.) If a teacher die during service after a term of service of more than fifteen years.
- (2.) If a teacher die in discharging his duties after service of less than fifteen years.
- (3.) If a teacher die while in receipt of a pension.

Art. 11.—Art. 4, pars. 1 and 2, Arts. 5 to 10, and Arts. 12 to 16 of the Law relating to Pensions to the Families of Deceased Civil Officials, shall apply to pensions to the families of deceased teachers mentioned in this law.

Art. 11 of the Law relating to Pensions to the Families of Deceased Civil Officials, shall apply to the brothers and sisters legally belonging to the families of deceased teachers, in case there should be no widow, no orphan, no father, no mother, no grandfather and no grandmother of the deceased having the right to receive "pensions to the families of deceased teachers" as prescribed under this law; provided that the said brothers or sisters, being less than twenty years of age, or owing to physical disabilities, are unable to carry on a trade and have none to depend on for their support.

Art. 12.—In case a regular teacher in a city, town, or village elementary school should die otherwise than in the discharge of his duties after service of less than fifteen years, a bonus shall be granted to the family of such deceased teacher.

The amount of bonus in the case of those who die after service of less than three years shall be a sum equal to one month's salary as last received in school, to which a sum equal to two hundredths of the yearly salary shall be added for each full year over three years.

Art. 13.—The granting of pensions and bonuses to the families of deceased teachers and the pensions to be granted under Article 8 and Art. 11 par. 2 shall be decided by the *Chiji* of *fu* or *ken* on the representation of chiefs of cities, towns, and villages.

Art. 14.—Each *fu* and *ken* shall reserve a pension fund for teachers in elementary schools.

Each city, town, or village where a city, town, or village elementary school is established, shall annually pay to the *fu* or *ken* wherein it is situated, a sum equal to one-hundredth of the salaries of the regular teachers in such school.

Each regular teacher in a city, town, or village elementary school shall yearly pay to the *fu* or *ken* wherein he is employed a sum equal to one-hundredth of his salary.

The income derived under paragraphs 2 and 3 of this article shall be reserved by the *fu* or *ken* as a pension fund for teachers in elementary schools.

The interest accruing from such pension fund shall not be appropriated for any purpose other than as pensions to retired teachers, pensions and bonuses to the families of deceased teachers and grants under Art. 11 and Art. 12 par. 2.

A sum equal to one-fourth of the monies received by each *fu* or *ken* in accordance with paragraphs 2 and 3 of this article, shall be granted to each *fu* or *ken* out of the National Treasury in every second financial year from that in which the above appropriations are made.

The pensions to retired teachers, pensions and bonuses to the families of deceased teachers and the monies mentioned in Art. 8 and Art. 12 par. 2, shall be defrayed from the interest of the pension fund, grants from the National Treasury, and other sources of income. But the deficiency, if any, shall be supplied from the *fu* or *ken* expenditure.

Regulations for the management of a pension fund and for the granting of pensions to retired teachers, pensions and bonuses to the families of deceased teachers and the monies mentioned in Art. 8 and Art. 2 par. 2, shall be fixed by the Minister of State for Education.

All expenses relating to the management of a pension fund and to the granting of pensions to retired teachers, pensions and bonuses to the families of deceased teachers, and the monies mentioned in Art. 11 and Art. 22 par. 2, shall be borne by *fu* or *ken*.

Art. 15.—Articles 1 to 13 in this law shall come into force from and after the 26th fiscal year of Meiji, and Article 14 from the 25th fiscal year.

Art. 16.—In case exceptions to this law be deemed necessary in localities where the Laws for the Organization of *fu* and *ken*, of Cities, and of Towns, and Villages are not practically carried out, these shall be prescribed by Imperial Ordinance.

NORMAL AND MIDDLE SCHOOL SALARIES AND PENSIONS.

We hereby give our sanction to the Law concerning Salaries of the Directors of *fu* or *ken* Normal Schools, and Pensions to Retired Officials and to the Families of Deceased Officials, in Public Schools, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)

(Privy Seal.)

Dated October 2nd, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YOSHIKAWA AKIMASA,
Minister of State for Education.

Art. 1.—The salaries of directors of *fu* or *ken* normal schools shall be paid out of the National Treasury.

Art. 2.—The directors and regular teachers of *fu* or *ken* normal schools and of public middle schools, shall be entitled to receive pensions according to the provisions of this law.

Art. 3.—Directors and regular teachers who have been in office over fifteen years shall receive life pensions, subject to the following conditions:—

- (1.) That they are ordered to retire after attaining 60 years of age.
- (2.) That they are ordered to retire owing to inability to discharge their duties on account of wounds or sickness received or contracted.
- (3.) That they retire from office in consequence of the abolition of schools, or are ordered to retire from office in consequence of changes in the organization of schools.

Art. 4.—Those who come under any of the following conditions shall receive life pensions and be granted additional pensions up to seven-tenths of the minimum sum of such pensions, though their years of service may not amount to the term provided for in the foregoing article:—

- (1.) That they are ordered to retire from office owing to inability to discharge their duties, having lost the use of one limb, or more, from wounds received in discharging their duties, or having sustained some other like misfortune.
- (2.) That they are ordered to retire from office owing to inability to discharge their duties, in consequence of loss of the use of one limb, or more, or of having sustained some other like misfortune on account of sickness caused in discharging their duties under circumstances injurious to health.

Art. 5.—Art. 5, pars. 1, 4, and 5, and Arts. 6 and 11 of the Law relating to the Pensions of Civil Officials shall apply to the pensions mentioned in this law.

Art. 6.—As regards officials of Government or public schools, who are to be placed on an equal footing with directors and regular teachers in *fu* or *ken* normal schools, and who have been transferred as such to any of the latter schools, the years of service in their former schools shall be included in reckoning the term of service for granting pensions. The regulations for reckoning the years of service and the qualifications of officials of Government or public schools to be placed on an equal footing with directors and regular teachers in *fu* or *ken* normal schools, shall be fixed by Imperial Ordinance.

Art. 7.—In case those who are in receipt of pensions come under any of the following conditions, they shall be disqualified for the receipt of pensions:—

- (1.) If it is proved that they have committed during their service such acts as render them liable to dismissal.
- (2.) If they are subjected to imprisonment or any heavier punishment.
- (3.) If they lose status as Japanese subjects.
- (4.) If those who, are in receipt of pensions under Art. 3 par. 2, Art. 4 or Art. 9 and are again fit to engage in the calling of teachers or directors, refuse to re-engage in schools assigned to them by the Authorities, or if those who are in receipt of pensions under Art. 3, par. 3, refuse to re-engage in schools assigned to them by the Authorities, provided that the amount of salary be not less than that received at the time of their retirement from school, and their age be less than 60.
- (5.) If they enter the public service without the permission of the *Chiji* of *fu* or *ken*.

In case those who are in receipt of pensions

come under any of the following conditions, the pension shall be stopped during the period involved:—

- (1.) If they enter the public service and receive a salary not less than that received at the time of their retirement.
- (2.) If they have neglected to apply for pensions for more than three years.
- (3.) If their public rights are suspended.

Art. 8.—Those who have retired from office for their own convenience before attaining the age of sixty years, or who have been dismissed from service or have rendered themselves liable to dismissal, shall be disqualified for the receipt of pensions.

Art. 9.—Temporary teachers in *fu* or *ken* normal schools or in public middle schools shall, in case of wounds or sickness received or contracted in discharging their duties, and subject to Art. 4 of this Law, be granted life pensions equal to one-fourth of the salary received at the time they retire.

Art. 10.—Directors and regular teachers in *fu* or *ken* normal schools and in public middle schools shall be granted a sum equal to one month's salary received at the time they retire, in case of retirement after service of more than one year or less than five years, or a sum equal to two months' salary in case of retirement after service of more than five years or less than eleven years, or a sum equal to three months' salary in case of retirement after service of more than eleven years or less than fifteen years.

The above paragraph shall not apply to those who are qualified to receive pensions under Arts. 3, 4 and 9, or to those who have retired from office for their own convenience, or to those who have been dismissed from service or have rendered themselves liable to dismissal, or to those who have neglected to claim the right to a bonus referred to in the above paragraph within three months after it has begun to operate.

Should those who have for their own convenience neglected to apply for the bonus referred to paragraph 1 of this article be afterwards appointed directors or regular teachers in *fu* or *ken* normal schools or in public middle schools, the period spent in the former service shall be included in reckoning the term of service for granting pensions, etc. But this shall not apply to those who fail to notify that they have not received a bonus within three months after the right to it has begun to operate.

The sums to be granted under this article and the expenses relating thereto shall be borne by the *fu*, *ken*, *gun*, city, town, or village where the schools are established, to which the retired directors or teachers belong at the time of retirement.

Art. 11.—The granting of pensions shall be decided by the Minister of State for Education on certificates by the *Chiji* of *fu* or *ken*.

Arts. 16 and 18 of the Law relating to Pensions of Civil Officials shall apply to pensions under this law.

Art. 12.—In case directors and regular teachers in *fu* or *ken* normal schools or in public middle schools come under any of the following conditions, their families have the right to receive "pensions to the families of deceased directors and teachers" in accordance with the provisions of this law:—

- (1.) If they die during service after a term of service of more than fifteen years.
- (2.) If they die in discharging their duties after service of less than fifteen years.
- (3.) If they die while in receipt of pensions.

Art. 13.—Arts. 4 to 10 and Arts. 12 to 15 of the Law relating to Pensions to the Families of Deceased Civil Officials shall apply to pensions to the families of deceased directors and teachers prescribed under this law.

Art. 11 of the Law relating to Pensions to the Families of Deceased Civil Officials shall apply to the brothers and sisters legally belonging to the families of deceased directors and teachers, in case there should be no widow, no orphan, no father, no mother, no grand father, and no grand mother of the deceased, who have the right to receive the pension fixed in the present law, provided that the said brothers and sisters, being less than twenty years of age, or owing to physical disabilities, are unable to carry on a trade and have none to depend on for their support.

Art. 14.—In case directors and regular teachers in *fu* or *ken* normal schools or in public middle schools die otherwise than in the discharge of their duties after service of less than fifteen years, a bonus shall be granted to the families of such deceased directors and teachers.

Art. 17 par. 2 of the Law relating to the Pen-

HORSFORD'S ACID PHOSPHATE.
Makes an invigorating Drink with water and sugar only. Delicious.

sions of Civil Officials shall apply to the bonuses to families of deceased directors and teachers mentioned in the above paragraph.

Art. 15.—The granting of pensions and bonuses to the families of deceased directors and teachers and of pensions under Art. 13, par. 2, shall be decided by the Minister of State for Education on the representation of the *Chiji* of *fu* or *ken*.

Art. 16.—Directors and regular teachers in *fu* or *ken* normal schools or in public middle schools shall annually pay to the National Treasury one-hundredth of the salaries.

Each *fu*, *ken*, *gun*, city, town, or village where a *fu* or *ken* normal school or a public middle school is established shall annually pay to the National Treasury a sum equal to one hundredth of the salaries of directors and teachers in such schools.

Art. 17.—Pensions to retired directors and teachers, pensions and bonuses to the families of deceased directors and teachers, pensions to be granted under Art. 13, par. 2, and the expenses of defraying these monies shall be paid out of the National Treasury.

Regulations relating to the defraying of pensions to retired directors and teachers, and pensions and bonuses to the families of deceased directors and teachers, shall be fixed by the Minister of State for Education.

Art. 18.—In case of one and the same person being qualified to receive two or more classes of pensions from the National Treasury, one of these pensions shall be granted, according to the option of such person.

Art. 19.—Pensions and other monies to be granted to retired clerks of *fu* or *ken* normal schools or of public middle schools may be fixed by the *Chiji* of *fu* or *ken*, the *Guncho*, or the chiefs of cities, towns, or villages after consultation with the assemblies of such *fu*, *ken*, *gun*, cities, towns, or villages.

The above paragraph shall apply to the pensions and other monies to be granted to retired officials of public schools other than *fu* or *ken* normal schools, public middle schools, and city, town or village elementary schools.

Pensions and other monies to be granted to retired directors and teachers under this article, and the expense of granting these monies shall be borne by the respective *fu*, *ken*, *gun*, cities, towns and villages.

Art. 20.—Article 1 of this law shall come into force from and after the 25th financial year of Meiji, and Articles 2 to 19 from and after the 26th financial year.

Art. 21.—When exceptions are deemed necessary to the rules laid down in this law, in localities where the laws for the organization of *fu* and *ken*, *gun* or cities, towns and villages are not practically carried out, they shall be fixed by Imperial Ordinance.

CORRESPONDENCE.

"CHASTE AND MODERATE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—This cursed country! The *Japan Mail* has the temerity to take exception to the careless placing of certain wires and posts in connection with the electric lighting of the Settlement; whereupon its uniformly chaste and moderate contemporary, whose numberless attractions have recently exercised such a potent influence over some of our local capitalists, most sensibly and truly points out that "the telephone and electric light obstructions are only two more drops in a bucket already full to overflowing." Most truly, most truly, thou latter day prototype of that dear old fearless Spanish Knight immortalized by De Cervantes! "Why find fault with the unfortunate telephone posts to the exclusion of other offenders?" For no other reason assuredly, revered critic, than the admitted limitation of the *Japan Mail* editor's knowledge of local affairs. No one who is at all acquainted with the Settlement will for a moment question the justice of your powerful and eloquent arraignment of the Local Authorities. Every point cannot fail to approve itself to every unbiased reader; indeed many will consider you to be guilty, consciously or unintentionally, though without of course a suspicion of any trucking or loyalty to "Japanese authorities,"—no sane observer would pretend to question your absolute independence—many I say will consider you guilty of a needless curtailment of one of the most damning indictments ever formulated. The reproduction and reiteration of this well founded protest against the glaring and high-handed abuses we poor Yokohama folk are compelled to quietly submit to for

lack of due support of the exposures you unearth (reformers never are adequately appreciated during their lifetime), is an act so commendable in itself that neither explanation nor apology is needed. It is high time that some one protested "against the gas and water hydrants and cocks, which stick up all over the streets; the rotten wooden coverings which partially cover the openings to sewers and drains; the stone boundary marks placed just where a pedestrian will trip up against them; the post office receiving boxes erected where they can be most conveniently run up against; the lamp-posts in the middle of the paths; the well of foul water filling the walking space in Honcho-dori; the trees occupying a third of the road already too little for the traffic; with others planted plump across the corners of cross streets; the flooring of Yatozaka Bridge, which has been especially constructed to hold the water in one impartial puddle whenever there has been rain; the choked gutters, and the stinking urinals; and last, but not least, the crowds of jirikisha loafers who obstruct every street corner, and monopolize the walking space left by the other obstructions."

The italics are the only liberty I have taken with this deplorable picture of this unhappy, ill-managed town. How the Japanese who profess to be fixed with a warmth of patriotism rarely equalled, can day by day permit the uninterrupted continuance of such a state of things, much less hesitate or decline to set resolutely to work to remedy it, passes comprehension. If proof were wanted, surely here in unmistakable form we have proof of the deep-seated purpose of this unfriendly people to rid their soil of the hated foreigners. On what other hypothesis, I ask, can one account for this astounding indifference to crying abuses which can only ultimately result in the studied avoidance of such an ill-starred place by every alien. It is unspeakably disgraceful that post office boxes for instance should be "erected where they can be most conveniently run up against;" and that policemen are not stationed near every faulty curb stone and every "stone boundary mark," and in short at all the innumerable things "which stick up all over the streets," to warn pedestrians of a possible stumble. Equally flagrant, too, is the very unfeeling and heartless omission to provide goshoes or clogs for thin-skinned pedestrians at every good sized puddle, and particularly at "the flooring of Yatozaka Bridge, which has been especially constructed to hold the water in one impartial puddle whenever there has been rain." And not one whit less blameworthy is the past failure to erect sign posts on either side of "lamp-posts," "trees," etc., to warn the unwary passer-by that he is approaching a lamp post, or that some over zealous citizens have planted trees by the road side. Especially is some such sign-board or label needed in the case of trees "planted plump across the corners of cross streets." "And last, but not least, the crowds of jirikisha loafers who obstruct every street corner, and monopolize the walking space left by the other obstructions!" Well may it be asked in that grandiloquent strain one looks for in vain elsewhere than in the *Gazette*, "why not call attention to these when dealing with the subject?" An explanation of the practical universality of jirikisha-riding is at last reached! The good people of Yokohama do not walk simply because they can't; they haven't room. No wonder there is such objection to proposed Treaties which would speedily do away with existing Settlement limits! We are abused, crowded-out, ignored now: "choked gutters," foul odours, water hydrants, and any and every inequality in one's roadway, even an imperfectly drained bridge, bad and terribly hard to bear though they are, would be lost sight of entirely in comparison with the inflictions we should have to submit to and endure or flee from them. But enough; the evils we know are overwhelming, and one looks almost with envy at the *Gazette* and its little band of intrepid reformers awaiting with all the composure of men conscious of having acquitted themselves nobly and fearlessly "the coming of the huge wave to roll in and to sweep away these monstrosities." There is but one word more. The monstrosities should include some of the smart features of the *Gazette*, and especially the purblind critic who sees danger where none exists, lamp-posts several feet out of their true position, and obstruction, offence, and sources of peril where his fellows are happy in passing in comfort and perfect safety.

I am, Sir,
Yokohama, November 14th, 1890.

ALBION.

THE ASIATIC SOCIETY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the account of the proceedings of the recent meeting of the Asiatic Society, as given in the *Japan Gazette*, Professor Chamberlain is reported to have said that "he was sure that Mr. Denning's vast acquaintance with Japanese thought was quite unequalled; that his acquaintance with modern Japanese literature both in newspapers and text better fitted him probably than any man living to guide public opinion in estimating both Japanese character and Japanese current thought."

In the report of the Asiatic Society's meeting which appeared in the *Japan Mail* you omit entirely Professor Chamberlain's high encomium on Mr. Walter Denning.

As Professor Chamberlain is considered by the majority of foreigners in Japan to be about the best foreign authority on things Japanese, I shall be obliged if you ascertain whether he has been correctly reported by the *Japan Gazette* in that part of his speech in which he so highly commended Mr. Denning's abilities.

I am, Sir, yours truly,

WAKARIMASEN.

Yokohama, November 18th, 1890.

[Our report was furnished by the recording Secretary of the Asiatic Society. From our own knowledge of Mr. Chamberlain and Mr. Denning, we think it very probable that the former spoke in the sense noted by our correspondent.—ED. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—In reply to the query of your correspondent who signs himself "Wakarimase," I beg to state that the *Japan Gazette* reported quite correctly my reference to Mr. Denning. At the same time, there is no reason for surprise at the absence of that reference in the summary forwarded to you by the Recording Secretary. That gentleman's duties are already sufficiently arduous, and the Council of the Society does not expect him to give every sentence that is uttered, provided the general sense of each speaker's remarks be retained; and the Recording Secretary did give the gist—the main purport—of my remarks, which were chiefly occupied with an adverse criticism of Mr. Nose's views.

I am, Sir, your obedient Servant,

B. H. CHAMBERLAIN.

November 19th, 1890.

THE MUSIC OF THE JAPANESE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The influence exercised by that European culture which Japan is seeking to adopt entitles us to assume that this influence will extend also to the fine arts. The manner of its commencement, however, is hardly such as to give promise of good fruits in the future, for the Japanese throw themselves into the arms of European music only to forget their own.

In Japan the fact is forgotten that Europe laboured away at her civilization fully a thousand years before she arrived at such results as have been achieved to-day; that the fostering of the fine arts and of the sciences proceeded more or less hand in hand with the general social training, and that at the present day it is an impossibility for Japan to appropriate this perfected art without the requisite gradual progression which would in this country lead, after a considerable period, to the point at which European music has to-day arrived. The manner of thought and sentiment, the habits of life, the climate of Japan, are all far greater impediments than an outsider can possibly imagine. The music of Europe is even to-day incomprehensible to the Japanese, and will remain so to all eternity unless they are led from off the paths followed until now.

The endeavour to foster European music at the expense of Japanese has its origin in incapacity to make anything out of the latter which would be tolerable to European ears.

Wherein lies this incapacity? In the absolute lack of any underlying harmony. Japanese melody is like unto a bird that flutters to and fro in the air without finding any resting place. Such a resting place can only and may only be found in harmony. This alone has power to render Japanese melody worth listening to in Europe also. The proof that Japanese melody can only gain by a judicious harmonizing without in any way losing its melodious characteristic was shown at Terschak's Farewell Concert. Of much greater effect would it have been if the "Academy of Music" had rendered the Japanese choral music as harmonized by Terschak. It would most certainly have been an interesting experiment which the "Academy of

Music" should have attempted "if only from patriotism." There, where the composer thought to be received with open arms, he found only passiveness and jealousy. *Through Japanese music to European music, that would be the only and the right way*, they said. The first and most necessary thing to do is to get hold of a thorough expert to undertake the harmonizing of Japanese melody; this is one of the most difficult problems which can be submitted to the harmonizer. The lack of system with which the melodies are often constructed, the absence of rhythm, augment the difficulties to such an extent that one often grows quite disheartened. Among no people are the melodies so full of defects of this kind as are those of the Japanese, yea, one often imagines that it is the fingers of a little child wandering over the strings of the *koto* and plucking at them, and that somebody or other has set down these plucked tones on paper.

How should a people accustomed to melodies of such a kind comprehend European music, and how should the people take an interest in an "Academy of Music" that produces such a music for them?

The future harmonizer of Japan would be bound to undertake the following:—

JAPANESE MELODIES.

- I.—Part songs for female voices.
- II.—Part songs for male voices.
- III.—Part songs for mixed voices (male and female).
- IV.—An edition for one voice and piano accompaniment.
- V.—An edition for piano solo.
- VI.—An edition for violin and piano.

For the present the above would be the most necessary for the purpose of creating a literature which should be used at the public concerts of the Academy of Music. Prior to the formation of a well supplied library no scheme of the Academy of Music should include more than 50 per cent. of European music in its programme.

European sacred music (Crucifixus, Paulus, &c.), ought not to be rendered by the Academy of Music; an Imperial School of Music is not a missionary establishment and can make propaganda for no religious cult. The period of obligatory attendance at the school must be raised to 6 years. No student should be appointed assistant lecturer until he has attended the school for a period of 6 years.

The Academy of Music must be conducted in a strictly national sense and must, before everything, keep before its eyes the fostering of native music. The humbug which until now has been carried on of bringing the students before the public must be postponed until such time as they are in a position to accomplish something. Of what does the Academy of Music at this day consist? Of a few lady students of the violin, and lady singers. Where are the classes for piano, cello, flute, clarinet, bassoon, cornet, trumpet, horn, trombone? An Academy of Music must, like a university, include all the various branches in its programme. As the Academy at the present time exists it is nothing but an ordinary music school for violin and singing. It is desired to create teachers for the country—well and good. What are they to teach? That which they have learnt at the Tokyo school? What is that? Singing and violin. What do they play? Are they to teach that which they know? The Tokyo school has existed for 10 years,—where are the funds, what are the results? Unless the State wishes to throw away its money uselessly, there must be reorganization and musical material created so as to arrive at a result advantageous to the nation and redounding to the honour of the State abroad as well.

Your obedient servant, X.
November 19th, 1890.

THE ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society of Japan was held in the Society's Rooms, No. 17, Tsukiji, on Wednesday, November 12th, 1890, at 4 p.m., N. J. Hannen, Esq., President, in the chair.

The minutes of the last meeting, having been published in the *Japan Mail*, were taken as read.

The CORRESPONDING SECRETARY intimated the election of the following gentlemen as members of the Society:—Rev. M. C. Munzinger, Rev. W. B. Griffiths, Frank Deas, Esq., O. C. Flemmick, Esq., Rev. T. S. Tyng and Rev. J. M. Francis.

The PRESIDENT then called upon Mr. Dening to read his paper on the mental characteristics of the Japanese, entitled "A study in Japanese Psychology."

Mr. DENING said—The aggregate of circumstances combining to form the character of any fairly educated human being is so complex that anything

like a complete analysis of them is a work of great difficulty and delicacy, demanding intellectual powers of the highest order. Our greatest novelists undoubtedly owed their preeminence to mastery of the art of delineating subtle traits of character, of detecting connection and relation where ordinary observers would never have dreamed of looking for anything of the sort. We realise how difficult is this art when we bear in mind that there is hardly any living person concerning some essential part of whose character entire agreement exists even among his intimate acquaintances. Our observations and generalisations can only be carried on in a rough way. The whole subject of ethnology, or the science of character, is so intricate that even the most expert literary artist finds it necessary to confine his investigations to an extremely limited area. When from the study of the character of individuals we pass to that of nations, we perceive the variety of type to be so great that generalisation and classification become increasingly difficult. It is obvious that little more can be done than to indicate the most prominent and remarkable traits. This we purpose doing in the case of the Japanese; and our excuse, if, indeed, excuse be needed, for drawing the attention of this Society to the subject just at present is that, if we mistake not, these prominent mental characteristics will exercise no small influence in moulding the events of the next few years. Mental habits and prejudices that have taken ages to form are not to be rooted out in one or two generations. No amount of popular representation and parliamentary government will prevent the Japanese from acting as their national proclivities dictate. What the most pronounced of these are we now propose to inquire.

The first prominent mental characteristic inviting notice is the early precocity of Japanese youths. In discussing theories, in advocating political opinions, the Japanese boy of twelve or thirteen shows a proficiency altogether beyond his age. Doubtless various causes have combined to bring this about. The most potent seems to be the nature of the education imparted. The books which infant students have been first taught to read—the Japanese "Peep of Day" and "Line upon Line," so to speak,—have been the Confucian classics. Fancy one of our infants repeating after his teacher at his first lesson such sentences as the following:—"What the great learning teaches, is, to illustrate virtue, to renovate the people, and to rest in the highest excellence. The point where to rest being known, the object of pursuit is then determined; and that being determined, a calm imperturbability may be attained."* We in the West commence to teach our boys and girls simple little facts about cats, dogs, cows, and daisies. Not so the normal Japanese. He commences with abstract ideas. He puts into the young scholar's lips words whose full meaning some of us take more than half a lifetime to acquire, and not infrequently fail to master even then. "Great Learning," "illustrious virtue," "highest excellence," "the point where to rest"—why, these are subjects that occupy our subtlest metaphysicians. This early superficial acquaintance,—for it cannot be more,—with abstract questions and principles, with theories of life and morals, produces a certain kind of mental precocity. We have often been utterly astounded at the logic-chopping power of Japanese youths of twelve or thirteen years of age. But as an educational agency the early study of the sages of antiquity has done more harm than good. It has evolved a theory-loving, unpractical state of mind; a habit of endeavouring to reach abstract truth by other than the proper method—a careful study of the concrete. Forwardness is attained at the expense of thoroughness, which has a decided tendency to produce conceit. Indeed, in a very large number of cases, that proves to be the result. We have repeatedly conversed on this subject with Japanese interested in education, and they seem unanimous in thinking that such early precocity should be discouraged, and that the mental condition of Japanese youths should be brought into greater conformity with that of the Western boy.

The characteristic we are considering is the real source of a good deal of the wild journalism and hare-brained political oratory so conspicuous in this country during the last ten years. No land contains such troops of boy politicians as Japan. One is sometimes astounded on being introduced to individuals who have been figuring as journalists and stump-orators to find that they are of an age when if Englishmen they would hardly know whether they had any political opinions at all; or if they had such opinions, would deem it the essence of audacity and conceit to make them the subject of a public speech or a newspaper article. It is only in Japan that young men are to be found audacious enough to write a lecture to grey-haired statesmen in reference to their foreign policy, such

as the *Kokumin no tamo* contained some time ago. There are few countries where irresponsible flip-pant speech and writing are so much indulged in as in Japan; few countries where men having no practical knowledge of politics can so easily gain a reputation for profundity by the skill with which they theorise.

Allied to the characteristic we have noticed, and for the most part inseparable from it, is another conspicuous quality of Japanese minds—unpracticality. It has often been referred to by both Japanese and foreign writers. Mr. Fukuzawa is of opinion that this characteristic, like the last, is the result of the system of education followed until very recently. He maintains that the lack of interest in industry, agriculture, and commerce, so apparent among Japanese young men, is the outcome of the training they have received. The books that youths have hitherto been taught to hold in high esteem treat of subjects far removed from the every-day life of men of business. It is to be hoped that the educational system now pursued in Government schools will do much to remedy the evil. Certain it is that in the past, agriculture, commerce, and industry have been for the most part handed over to the tender mercies of men whom ignorance, prejudice, and superstition render alien to reform of all kinds. Until a more practical state of mind characterises the educated portion of the Japanese people, the accumulation of national wealth must necessarily be slow.

We pass on to notice a still more fundamental difference between Japanese and foreign minds; a difference the removal of which seems to us absolutely necessary if Japan is to compete successfully with Western nations. We refer to the distaste that men of education and refinement entertain for money-making pursuits. This is something distinct from the characteristics referred to above. To lack the qualifications for business is quite different from holding business in contempt. A man competent to win wealth may yet shrink with repugnance from the attempt. Such is the case with certain typical Japanese. The life of bread-earning appears to them to be a gloomy existence which men may be driven to pass, but would never voluntarily choose. They dream away their days amid dwarfed trees, miniature lakes, and imaginary *Fuji*. They are of opinion that Occidentals are nothing the better for their big machines and appliances; that, on the contrary, by perpetual toil, bustle, and worry they render themselves unfit to enjoy the pleasures which nature places within their reach. They deem it a mistake to suppose that the chief object of human life is toil.

This sentiment the Japanese have inherited from their ancestors; it is far too deeply inherited to admit of speedy eradication. From a philosophical point of view there is much to be said in its favour. Considering the brevity of human life, it does seem an anomaly that of most of us should live at high pressure during the greater part of our existence; that during the time when our senses and our minds are at their best, we should be obliged to spend most of our energy on mechanical work, should have to rush along at railway speed without time to reflect what this life is or is not capable of yielding. Viewed from a philosophical standpoint, the lives which we Westerners lead—have to lead indeed, for the keenness of competition leaves us no choice—will not bear comparison with the life of the Japanese man of taste and quiet pleasure. We grieve at our professions till either physical weakness or mental weariness incapacitates us for the enjoyment of hardly earned leisure. The faculties of enjoyment like all other faculties are apt to grow atrophied by disuse. And so it often happens that even the most successful among us having acquired much to retire upon, have nothing to retire to; our capacity to enjoy the exhaustless loveliness of nature has been irretrievably lost. The spirit of the age forces us to sacrifice life to living—the end to the means. Moderation is forbidden to those who would succeed. Only those who can bear the longest strain stand a chance of rising above mediocrity. Thus amid all our bustle, we are conscious that the Japanese view is right; that our habitual neglect to cultivate the faculty of enjoyment, though a result of events and circumstances over which we have no control, is calculated to transform us into mere machines, warranted capable of being worked so long, but condemned to be laid by at last as so much useless lumber. Every now and again one of our own philosophers reminds us that man is designed for higher enjoyment than he experiences. "That life was given us to be enjoyed," writes one of our modern idealists, "few men in their sober senses, not distracted by unendurable anguish or rendered morbid by a perverse theology, have ever seriously dreamed of doubting. The analogy of the lower animals confirms the consciousness. Human infancy holds the same language. The brutes that perish, but never speculate, and the young

* We quote from Dr. Legge's translation.

whose native instincts are not yet marred by thought, alike listen to nature, and alike are joyous. The earth is sown with pleasures, as the heavens are studded with stars—wherever the conditions of existence are unsophisticated. Scarcely a scene that is not redolent of beauty; scarcely a flower that does not breathe sweetness. Not one of our senses that, in its healthy state, is not an avenue to enjoyment, not one of our faculties that is not a delight to exercise. Provision is made for the happiness of every disposition and of every taste—the active, the contemplative, the sensuous, the ethereal. Provision is made for the happiness of every age, for dancing infancy, for glowing youth, for toiling manhood, for reposing age.¹

So have thought the Japanese from time immemorial, and so they might go on thinking were they content to remain isolated. It is the extreme complexity of our lives, our craving for conveniences and luxuries never missed because never known by the normal Japanese; in a word, the conventionality of our lives, that renders incessant toil an absolute necessity to us. And Japan will have to follow suit in this, as in so many other things. Once having entered the comity of Western nations, she will have to sacrifice her poetry and romance to the stern necessities of the new situation. It is no longer a question of choosing the more exalted, the more desirable kind of life. She has to determine what kind of life is best suited to successful competition with the nations that now control the destinies of the world. Hence the national characteristic on which we have been dwelling is undergoing a process of gradual but sure eradication. For that reason we think it worthy of a place among the archives of this Society.

Our analysis of the anti-sordid characteristic of the Japanese mind would not be complete without showing its connection with chivalry, and without pointing out how it affects the conduct of individuals and public bodies in modern days. Some of the mental characteristics of nations may be called primary, that is they have been prominent ever since the dawn of the history of those nations. "The French of the nineteenth century," Professor Ribot remarks, "are in fact the Gauls described by Cæsar. In the *Commentaries*, in Strabo, and in Diodorus Siculus we find all the essential traits of our national character: love of arms, taste for everything that glitters, extreme levity of mind, incurable vanity, address, great readiness of speech, and disposition to be carried away by phrases. There are in Cæsar some observations, which might have been written yesterday. 'The Gauls,' says he, 'have a love of revolution; they allow themselves to be led by false reports into acts they afterwards regret, and into decisions on the most important events; they are depressed by reverses; they are as ready to go to war without cause as they are weak and powerless in the hour of defeat.'² Unfortunately in the case of the Japanese we have not the advantage of being able to compare observations made by an intelligent foreigner more than eighteen hundred years ago with what we see to-day; but we may safely say that as far back as history carries us contempt for the business of mere money making was a prominent characteristic of the Japanese people. There is hardly an authentic tale of any length that does not furnish facts proving this. The merchant, the usurer, the middleman, were regarded as the pariahs of ancient Japanese Society, to the level of whose life the noble samurai would rather die than descend. An age of chivalry has always produced this feeling; but not in every country has the sentiment shown the same tenacity as in Japan. The prosperous days of chivalry may be said to have closed with the accession to supreme power of the first Tokugawa Shogun. Yet thenceforth, during 150 years, the old spirit lived on, despite a perpetual death of events calculated to preserve it. And to a large extent it has even withstood the influences in operation during the past twenty years.

Associated with this absence of sordidity are some noble traits: a keen sense of honour; great independence; extreme generosity and unselfishness; a taste for simplicity of living; love of espousing the cause of the weak and the oppressed—virtues to all of which in the case of the vast majority we fear we shall have to say *ave atque vale*. For as the spirit of commerce and the thirst for gain become more and more prevalent, such virtues inevitably grow more and more rare. Happily we still encounter instances where the display of these traits is conspicuous. The spirit of independence among a certain class of Japanese is as strong as ever. Numerous are the instances in which it leads men to throw up lucrative posts rather than further policies of which they disapprove. In fact we may go so far as to say that there is no

virtue more highly esteemed in Japan to-day than the absence of servility. A man may have serious defects and still be immensely popular if he will show himself independent. But like other virtuous traits, this characteristic is apt to develop into a vice. When carried to excess it becomes the source of endless dissension, and leads to the formation of innumerable cliques and cabals. The disintegration that Japanese political parties have undergone in late years owing to the undue prevalence of this spirit has been such as to render successful coöperation a task of almost insuperable difficulty.

It should not be forgotten that the contempt which the Japanese gentleman feels for mere money-making finds a parallel to some extent in the aversion with which our country and town gentry in England, to say nothing of our nobility, regard the tradesman who has retired on a fortune. But with us contempt is aroused not so much by the occupation by means of which money is made as by the vulgarity and pompous display too often accompanying its acquisition.

Let us pass now to notice another mental characteristic; which, though partly derived from the trait just considered, has other sources as well. We refer to the *levity* which the Japanese display on occasions when a foreigner would be grave and concerned. They bear great pecuniary losses and sore bereavements with an equanimity that is astounding. Where money is concerned the general feeling in reference to it, as described above, accounts for the unconcern with which its loss is borne. But since the Japanese are by no means lacking in domestic affection, how is it that to us foreigners they appear so stoical when the death of near relatives takes place? Various views on this subject have been held by students of Japanese psychology. Some maintain that such levity in the presence of bereavement is only apparent; that the Japanese feel quite as keenly as we do under reverses, but that they consider it a breach of good manners to be demonstrative on such occasions; in fact, that it is deemed a proof of great strength of mind and character to be able to suppress emotion and show a calm front at times when there is strong temptation to give way. Those who hold this view maintain that there is a marked difference in the manner in which men and women bear misfortune in Japan. Among the latter the display of feeling is quite as violent as that of their Western sisters when similarly circumstanced. But the men have inherited from their warrior ancestors power to control the strongest emotions. Such a power was not one of their original endowments, but was developed by centuries of training; and according to this view the stolidity of the Japanese savours more of the nature of etiquette than of actual lack of emotional feeling. Others there are who maintain that the levity and unconcern so noticeable in the Japanese is real and deep-seated; and that it is the result of the fatalism and scepticism which form so prominent a feature of Japanese thought. The *shikata-ga-nai* feeling, these critics affirm, permeates everything, and reconciles the Japanese to events that would cause Westerners the gravest concern. Moreover, say they, the Japanese, having no belief in a hereafter, look upon death with *sang froid*. Did they, in common with Christians believe death to be but the entrance to another existence, the close of life would be regarded by them in quite a different light.

These considerations, though doubtless they have something to do with the characteristic we are considering, do not seem to us to wholly account for it. The fact is that the tastes, education, and whole life of the Japanese tend to produce light-headedness, and conspire to prevent their taking to heart events which Westerners feel keenly. In the first place, they have cultivated a most intense enjoyment of nature. No people revel in a fine spring or autumn day more than the Japanese. Over many Western minds a gloomy theology and a philosophy that scrutinises closely the darker aspects of human existence have cast a deep shadow. To such influences the Japanese are as a nation entire strangers. The teaching of religionists about a future life possesses little interest for them; no fear of future retribution interferes with their festive mirth. Their speculation has never gone very deep. They have not reached the strata of stern facts on which our best poets and our best prose writers are wont to dwell. The groaning of creation, the disappointed hopes, the melancholy evanescence of all the best of things—these and similar sad features of human existence have not forced themselves imperatively on their attention. They are, in a word, in a state of happy unconsciousness as regards the gloomy aspects of life, and hence are able to enjoy to the full the world's sunshine. How long it is possible for them to retain this childlike simplicity amid the numerous

influences now working in their midst, we can not pretend to say. Being an extremely imitative people, it is not improbable that in a few centuries they will be as grave as we.

An alleged characteristic which calls for a short notice, is *fickleness*. The impression which the Japanese have left on a large number of observant foreigners is that they are fond of new things; that they love change for change's sake. An American observer remarked not long ago that there is nothing fixed in Japan but change. That this is a mental characteristic of the Japanese as we know them to-day we have no doubt; but the question is: how far is it the result of recent events, and how far is it an original trait of national character? We are inclined to think that this peculiarity is accidental, not inherent. For centuries prior to the revolution, the Japanese in all essential respects steadfastly adhered to one mode of life, to one way of thinking. There was no lack of permanency in their laws, institutions, and pursuits in the days of their isolation. They borrowed much from China, but they assimilated what they borrowed with great persistency of character. In modern times they have found themselves suddenly introduced to an entirely new world; it would be perhaps more correct to say, to several new worlds. Their attention has been attracted by such a multitude of things apparently far superior to any thing they already possess that they have found great difficulty in making a judicious selection. Thus the changes succeeding each other so rapidly and in so many directions in this country have not, in our opinion, been usually dictated by mere fickleness, but have resulted from the wish to prove all things with the view of eventually holding fast that which is good. Naturally great difficulty has been felt in adapting foreign systems and institutions to local conditions. Hence when success has not been attained by one method, another has been tried. In endeavouring to decide on what are and what are not national traits, it is hardly fair to take events that have transpired during a period of transition and under extraordinary circumstances as evidence of permanent mental characteristics. In our opinion, therefore, it is premature to say that fickleness is a permanent trait of Japanese national character.

A back number of the Japanese Education Society's journal contains an extremely interesting paper from the pen of Mr. Nose on the subject which we are now discussing. Though we do not in every case agree with the conclusions to which Mr. Nose arrives, we welcome the paper for the sake of the facts it contains, and think it worthy of being reproduced in summary here. As a statement of Japanese national characteristics as they appear to a native well acquainted with Western thought, it has a special value of its own.

After remarking that every nation has distinctive characteristics, produced by its soil, climate, history, and traditional customs—manifesting themselves in physical and mental peculiarities, in different modes of dress, in different diet, and great discrepancy of taste—Mr. Nose observes that it is desirable that every country should endeavour to preserve intact, so far as possible, its peculiarities, its national individuality; since it is for its possession of elements of character not found in the same degree in other nations that it will gain the respect and deference of foreign countries. Independent development of national characteristics and powers is what elicits the admiration of neighbouring countries. The principal national virtues of the Japanese, according to Mr. Nose, are loyalty, filial piety, benevolence, chastity, and personal cleanliness. He maintains that the contention of some writers that these virtues were originally derived from China or India is not warranted by facts. Though the terms now in use to express them are in many instances Chinese in origin, the virtues themselves are national heirlooms. Had there been no national virtues prior to the spread of Buddhism and Confucianism in this country, the writer contends, it would have been impossible for the nation to maintain its independence. For twelve or thirteen hundred years, says Mr. Nose, with the exception of disturbances among the Ainos, there was no rebellion against the established authority, and in those early times emperors with but few attendants frequently travelled long distances with perfect safety. This the writer attributes to the loyalty of the people. It was a long time even after the arrival of Buddhism and Confucianism before those creeds gained any influence over the lower orders; and even after their tenets had been studied and adopted by a large portion of the educated, the latter had a code of honour known as *menboku*, which was quite distinct from the teachings of foreign creeds, and the due observance of which often cost them their lives. Under the Tokugawa régime the Chinese classics were diligently studied, but more for the sake of their

¹ "Literary and Social Judgments," by W. R. Greg.
² Heredity, p. 110.

general teaching on politics than as furnishing a standard of morals. For the latter, Mr. Nose maintains, the Japanese invariably fell back on their national sentiment, on the moral instincts they had inherited from their forefathers. Mr. Nose adds that even those who were best acquainted with Confucianism never regarded its moral precepts with anything like the veneration which the Christian feels for the teaching of the Bible.

The writer next proceeds to define more precisely what he conceives to be the purely national elements of Japanese virtue. These, he says, are extreme aversion to disgrace, and a high regard for unspotted honour, loyalty to superiors, dutiful feelings towards parents, straightforwardness, cleanliness, and chastity. "In other countries," observes Mr. Nose, "ethical terms are derived from sacred writings; the terms in vogue in China come from the classics; those of Europe from the Bible; those of India and Turkey from the Koran or Buddhist scriptures; but in Japan the words which are best known as expressive of moral states, actions and feelings are, with few exceptions, purely native, and have no connection with any religious creed whatever." Mr. Nose gives the following twelve specimens of words not derived from Chinese classical literature and yet expressing moral ideas:—*ai-sunanu* (inexcusable, improper, wrong); *membokunai* (asliamed, crest fallen); *futodoki-senban* (audacious, insolent); *mottainai* (wrong, improper); *kindoku* (concern for others, regret); *appare* (splendid, admirable); *furachi* (unprincipled, lawless, wicked); *kawaii* (lovable, dear, pretty); *otonashi* (quiet, obedient, meek); *muri-no-nai* (just, reasonable, right); *fugyoseki* (wicked or immoral conduct); *taietsu shigoku* (of the greatest consequence, of the highest value); *ieiki* (obstinacy, an unyielding temper); *ritsugisha* (an upright, straightforward person); *buchōhō* (ignorant, awkward, bungling); *kuchi-oshii* (a thing to be deplored or regretted).

This list, it will be perceived, contains words derived from China, but such terms are mere adaptations, in Mr. Nose's opinion. His argument here is far from convincing. It would have been better had he excluded from his list all Chinese words. There would be no surer way of finding out what precisely were the ethical notions of the ancient Japanese than by making an exhaustive list of all the moral terms in use prior to the introduction of writing. This could be done by a careful examination of the *Kofiki* and the book of poems known as the "Collection of a Myriad Leaves." This latter work was published in the middle of the eighth century, and it embodies the most ancient forms of speech. Mr. Nose contends that the above terms refer to no standard of right and wrong outside of the minds of the people who use them; that when, for instance, an ancient Japanese uttered the word *sumanu*, he did not employ it in the sense of our word "un-Christian," nor did he refer to a standard set up by individuals like Confucius or Mencius. He spoke and thought of impropriety in the abstract, in the nature of the action of which this quality was predicated; and when he spoke of himself as *membokunai*, the standard of conduct which rendered him crestfallen was a purely national one, and had no reference whatever to a supposed divine revelation. Mr. Nose asserts that the feelings of ancient Japanese on such matters were well expressed by Sugawara Michizane when he wrote

"Kokoroda ni makoto no
Michi ni kanainaba
Imarazu tote mo kani ya
Mamoranu."

"As long as the heart is in harmony with truth, even though there be no praying, God will protect."

For the chastity of her women, for the loyalty and bravery of her great heroes, for the moral obligations which even the most uneducated of her sons feel themselves under, Japan, Mr. Nose affirms, is indebted to no religious creed, but to those inherent moral sentiments that have characterized her people ever since they have been a nation. He proceeds to show that though the terms for many of her virtues now in use are Chinese in origin, the qualities denoted by such terms are purely native. And he maintains that the loyalty of her sons and the chastity of her women are at once distinct and superior to anything in China. The objection to second marriages, which was so strongly felt by the Japanese women of former days; the native disregard of death when obligations had to be fulfilled, which was so conspicuous in the men—all this the writer contends finds no parallel in Chinese morals. Mr. Nose admits that the ambition to die honourably rather than live in disgrace was in Japan in excess of what is desirable; but nevertheless contends that as an exhibition of strength of moral purpose it was very remarkable, and adds that the determination which enabled men to die without regret when duty demanded the sacrifice of their lives, would,

had it been rightly directed, have sufficed to enable them to bear the shame to which they were exposed and to commence afresh life's battle. He thinks that the fundamental difference between Japanese and foreign mental characteristics is in the value put upon life. He admits that the fortitude which enables a man to survive disgrace and attempt to regain his lost reputation is of a higher order than that which nerves and sustains him in the hour of self destruction, and hence that the foreign view is preferable to that of the ancient Japanese.

Mr. Nose passes on to discuss the vendetta. He does not attempt to deny that this practice received the moral sanction of the nation for many centuries. But this, he says, was owing to the imperfection of the laws of those times. The justice which should have been administered by the State was dispensed by private individuals. But the desire to punish the wicked and to avenge the death of relatives was in itself highly virtuous. After the manner of most Japanese writers on this subject, Mr. Nose dwells on the loyalty to the throne manifested in Japan as something entirely unique.

Mr. Nose, at the conclusion of his paper, laments that there are at present so many signs of deterioration in the moral feelings of the Japanese, and points out that upon the increased cultivation of these depends the future prosperity of the empire. He remarks that the old disregard of death, the willingness to sacrifice life to the country's honour, is occasionally seen now-a-days, but that it no longer gains the respect of the nation, owing to the ignorance and bigotry with which it is associated. Mr. Nose maintains that it is quite possible to find all that is required in the way of an ethical standard in the hereditary moral sentiments of the nation, and thinks that if these sentiments be nurtured in the family and the school, a type of character inferior to none of those said to be the result of religious teaching in the West will certainly be produced.

Mr. Nose, in a work entitled *Kiōiku-gaku*, treats the subject of Japanese mental characteristics at still greater length. His point of view is that of an educationalist, but the conclusions which he reaches are of deep interest to the student of Japanese psychology. The following brief summary of his views taken from a notice of the work which we prepared for the *Japan Mail* some time ago, we think worth inserting in this paper.

The temperature, the climate, the physical characteristics of country, the fertility of the soil—these are all conducive to high development. But unfortunately, for the three hundred years that preceded the *Meiji* era, the beneficial effects of these physical influences were counteracted by the baneful nature of the social and individual agencies at work. Mr. Nose maintains that it was hardly possible to find an atmosphere less congenial to mental development than that which existed under the grinding despotism of the Tokugawa Shoguns. All forms of original thought, all attempts to encourage independent investigations, were suspected and suppressed. He is of opinion that it will take some generations to eradicate the evil effects of the social influences of old Japan. They are still to be traced in the fundamental ideas of the agriculturalist and the mechanic; they account for his lack of enterprise, and for the fatalistic manner in which he clings to his environment, as though it were unalterable. Not less are the effects of these influences manifested in the lives and thoughts of the learned classes of society. With the majority learning is no more than a pastime. It is pursued with no practical end in view, and is valued more as a polite accomplishment than as an organ of enlightenment and a means of ameliorating the condition of suffering humanity. The mental qualities which, according to Mr. Nose, need most cultivation in Japan are tenacity and stability of purpose, and a determination to bring to a consummation that which has once been commenced.

As we have already observed, we are prepared to endorse Mr. Nose's views. We think that his main contention that the fundamental ethical notions of the Japanese were not derived from China is incontrovertible. But the native origin of the ethical ideas of the Japanese is not to be elevated to the rank of a distinguishing national characteristic. When Mr. Nose tells us that the terms in vogue in China came from the Classics; those of Europe from the Bible; those of India and Turkey from the Koran or Buddhist Scriptures, but that in Japan the words which are best known as expressive of moral states, actions, and feelings are, with few exceptions, purely native, and have no connection with any religious creed whatever, he confesses two distinct things, namely ethical notions and the language in which those notions are expressed. It is no distinguishing mark of Japan that she had a stock of

moral ideas long before she came into contact with a foreign civilization. Nobody imagines that the Bible, the Koran, or the Buddhist scriptures could be rendered into the language of a people utterly devoid of all moral notions. The thoughts, in however vague and indefinite a form, must have been present in the minds of the people whom these sacred books have furnished with terms. But this does not make the obligation we are under to the writers of the books anything the less. And the same may be said of Japan. We think that Mr. Nose underestimates the influence which Confucianism and Buddhism have exercised in giving shape and definiteness to the ethical creed of the Japanese as we find it in their best books. The list of what he deems adopted terms might be confronted with a still fuller list of purely Chinese terms. Japanese ethics owes much to China. Had the native system been allowed to develop itself unaided by foreign writers, it would to-day be no less meagre and effete than the Shinto creed.

What we have said about the lack of peculiarity in the ethical language used by ancient Japanese applies to the notions themselves as stated by Mr. Nose. Nations have distinguishing marks, doubtless, but they do not consist of discrepancies in fundamental moral notions. What Mr. Nose designates the principal national virtues of the Japanese: loyalty, filial piety, benevolence, chastity, and personal cleanliness are virtues possessed by all nations who pretend to any kind of civilisation. These qualities are not then to be reckoned as distinctly national virtues. The regard in which the Japanese hold the person of their Sovereign is supposed by Mr. Nose and a crowd of other writers to be unique. But we all know that extreme veneration for sovereignty is a universal characteristic of nations in the earlier stages of their development.

While valuing many of the facts with which Mr. Nose furnishes us, we think that the inferences which he draws from them are by no means warranted.

We have done no more than trace the outlines of a great and interesting subject; confining ourselves for the most part to jotting down the results of our own observations extended over many years. We may return to the discussion on a future occasion. It would be interesting to know how far the views expressed in this paper are shared by other foreign students. We say foreign students, as it is of course plain that distinguishing marks of nationality must be more discernible to a foreigner than to a native, on the principle that to few is it given to see themselves as others see them.

We have purposely omitted from this paper the notice of some traits to which our attention has been frequently called by foreign observers, for the reason that we have our doubts whether the number of cases in which such characteristics are displayed is sufficiently large and sufficiently typical to warrant our including them in a list of distinctively national traits. As we observed at the outset the subject is one that requires very delicate handling, and one in which, perhaps, it is impossible to do more than arrive at an approximately correct opinion. Nevertheless, we think it worthy of the attention of this Society, and trust that since it is a topic on which all old residents must have formed some definite notions, this paper may induce such to give the Society and the public the benefit of their observations.

The President, after conveying to the author the thanks of the Society for his extremely interesting paper, remarked that both the author's views and those which had been summarised from Mr. Nose's essays bristled in points that invited discussion. He did not think that in the desire to utter their political views or lecture the gray-haired statesman the youth of Japan were any more precocious than the youth of our own lands. Our youth, however, have no publications open to them in which to air their convictions. He called to mind a scene in which Pendergast re-read with wonder at his own audacity his sage political councils of many years before. It is in fact only as we grow older and come to understand our ignorance that we cease to teach our elders how to act.

Dr. SEYMOUR, in referring to the early precocity of Japanese youth, noted what seemed to him an early decay of power of acquiring new knowledge. Perhaps it is because the elder men have lost their power and energy that the younger men do the writing.

Mr. CHAMBERLAIN, in his remarks, confined his attention mainly to some of Mr. Nose's views. Mr. Nose had laid great stress upon the moral ideas of the Japanese before the introduction of Buddhism. But of these pre-Buddhist days we know absolutely nothing. The oldest Japanese books were written after the introduction of Buddhism, and all Mr. Nose's remarks

about hereditary and purely native characteristics rest on a pure assumption with no historical foundation. Mr. Nose had referred to the objection of women to being married a second time as an example of a purely Japanese custom. But was it so before the advent of Buddhism? As a matter of fact, the women founded their objection upon a passage in the classics, saying that as warriors never served two lords, so wives should not marry two husbands. Again the word *mem-bokunai* which occurred in Mr. Nose's list, is of distinctly Chinese origin and means to lose face. It is difficult therefore to appreciate the argument that the idea so expressed must be of purely Japanese origin. Mr. Nose also seems greatly to understate the civilising influence of Buddhism in this country. Japan owes her formation as a nation to Buddhism. It was in the train of the priests that all the arts were introduced. In the contemporary notices in Chinese history previous to that time Japan does not appear as a nation governed by a centralised Government. See Mr. Aston's Paper on Ancient Japanese History, Vol. XVI. of the Society's Transactions. Finally, in common with many Japanese writers of to-day, Mr. Nose is very unfair to the Tokugawa régime. Where incessant fightings had been, the Shogun brought peace, and for disorder substituted order; and in organized society there is always less tyranny than where there is anarchy. Modern literature, the theatre, and modern art in all its branches, date from the Tokugawa days. Let us hope that young Japan will soon come to its senses in this matter, and instead of being ungrateful to the Shogunate which alone made a high civilisation possible and so led them to the knowledge that the Mikado was the true centre of power—instead of being ungrateful, may they soon render justice to their past.

Dr. KNOTT thought that the more we considered the matter the more difficult it became to lay down clearly the mental traits that distinguish the Japanese from ourselves. In almost every instance of apparent difference we do not need to go far before we find a sufficient explanation in the different lines of historic development. And this historic development ultimately in great measure is a direct outcome of geographical environment and climatic condition. In its isolation for centuries Japan has passed through an experience very different from that through which all the European nations have passed. With these there has been a continual give and take with a correspondingly rapid evolution of civilisation. During these centuries Japan received practically no stimulus from without. As a consequence her poetry, for example, is really antiquated, and has not had the continuity of development from old through middle to modern which so characterises our English poetry. It is a fact of history that a nation left entirely to itself cannot develop to advantage; and Mr. Nose's idea that Japan should strive to preserve her national characteristics and develop along her own lines seems to be a fair illustration of unpractical and speculative theorising. What philosopher ever formulated such a maxim to his race? What need indeed for such a formula? Except possibly as a conservative watch word, it can have no real influence upon the development of a strong race in the midst of other equally strong races. In a certain sense nations like children do develop along their own lines; but it is never as a result of predetermination so to do. Mr. Denning had made a great deal of the Japanese distaste for money-making pursuits; but seemed to the speaker to be somewhat too emphatic on the materialistic tendencies of the age. It was after all a question of finding scope for individual energies; and when a full commercial life became possible to the Japanese they would be as eager after wealth as any western peoples. England did not begin her commercial career till after the Wars of the Roses had destroyed the last vestiges of feudalism; and Japan is only a generation removed from her feudal times.

Mr. CLEMENT thought that the precocity and conceit of the Japanese student were largely due to over education and high pressure in the schools. For the same reason their logic was all in a narrow groove. There seemed to be too much of the purely intellectual in their training, leading to a cold intellectuality.

Mr. DENNING agreed with the last speaker as to the evil results of the Japanese educational system; and pointed out that one of the defects of the best private school in Tokyo was pushing the student at too early an age into the study of abstruse subjects. In reply to Dr. Knott's criticism that he had emphasised too strongly the Western desire after money making he would point out that his paper did not deal with the Western character as a whole, but was intended to draw attention to the differences between the Western and Japanese habits of

thought. And there is no doubt the average Japanese has less regard for money than the average European or American. They are not troubled over a loss of money as we are. Also they do not regard their debts in the same serious way as we do. Quite recently a prominent politician was highly lauded by many of the journals because, although he was owing money all round, he still refused to accept a Government post.

Mr. LISCOMBE wondered whether the difficulty frequently experienced by foreigners in getting information about places (for instance) from Japanese living in the vicinity was due to a lack of interest in things beyond the usual horizon of their thoughts. He once heard a story of a Japanese, very worldly wise in his own estimation, displaying the lack of this quality in a friend by suddenly asking him the price of rice. Yet when he (Mr. Liscombe) asked this worldly wise gentleman some simple questions about Japanese banks, he got nothing but a shake of the head and an introduction to a banker. This tendency to fall into ruts of every day life, and to see nothing or little beyond, must be a hindrance to progress of every kind.

Mr. DENNING thought that the Japanese do not really lack curiosity. They may not take an interest in things that we are more specially interested in; but they certainly take a profound interest in their own affairs and in their own way.

The PRESIDENT drew attention to what he had often noticed among his own servants. They knew the meanings of pictures and artistic designs, and the names of the painters and artists in a way that is very characteristic of Japan. With us the servant class as a whole is absolutely ignorant of like matters.

Mr. DROPPERS, in reference to the question of the logical powers of Japanese students, gave as his experience in the teaching of political economy that they did not reason in the way that we would regard as direct. From our recognised standards the Japanese seem to argue round a thing and arrive at their conclusions in what is to us an indirect manner.

Rev. CLAY McCauley thought that as regards the radical mental phenomena on which character is based, the Japanese people were to be characterised by emotionalism rather than by intellectuality. They act more upon impulse than from reason. Intellectually they possess intensity of feeling rather than clearness of perception. They have closest affinity with the peoples of the South of Europe.

The meeting then adjourned.

BASEBALL.

The return game of Baseball on Saturday, Club v. U.S.S. Omaha, resulted in a very easy win for the Club. We append scores:—

LETTER FROM KOREA.

(FROM A CORRESPONDENT.)

SŌUL, November 4th.

It may be interesting to your readers to hear how the Emperor's birthday was celebrated here in the capital of Korea. The Japanese quarter of the city is just inside the south gate, and on the side of Nam San, or south mountain, at least directly at its foot. The white plastered walls of the Japanese merchants' houses are conspicuous in contrast with the dark brown of the native houses. The cleanliness and neatness of the Japanese quarter, commonly called "chiu-go-kai" by Koreans, are a constant object lesson to the natives. The city was kept aware of the Emperor's birthday by the frequent discharge of huge fire crackers, and the display of patriotic bunting throughout this part of the city. The Legation is splendidly situated for such a display. It lies at the back of the Japanese settlement high up on one of the spurs of the mountain. It is the largest and handsomest edifice of the kind in the city, and its white walls, half shaded among a beautiful grove of pines, can be

seen from every part of the capital. The thickly wooded mountain at its back gives an opportunity for some fine landscape gardening and you can well imagine that the Japanese have not been slow to take advantage of this fact.

In the afternoon Mr. and Mrs. Kondo did the honours at a tiffin given to the diplomatic corps. But the principal event of the day was the soiree at which the whole European and American community was made welcome. From sunset until nine o'clock when the guests began to assemble there was a continual explosion of rockets and other fireworks which the whole city could enjoy owing to the conspicuous position of the legation. The flag-pole was decorated with three long graceful lines of lanterns and the approach to the legation was festooned with similar illuminations. As we entered the brilliantly lighted drawing-room a very representative company met the view. There were, first and foremost the ladies, their charms enhanced by pretty frocks and rich jewels. Then there were a number of high Korean officials, conspicuous in their white garments and white mourning hats which they have assumed in view of the decease of the Queen Dowager. They seemed to be enjoying themselves thoroughly. There were also gentlemen from the Chinese Legation and the Customs service. All these together with the Japanese and foreign gentlemen made up a very interesting company. But there was not much time to look around and converse or to admire the beautiful massing of chrysanthemums of all shades and hues with which the rooms were decorated, for at the farther end of the room was a table on the front of which was written in large letters *Legerdemain*, which gave us a clue to the novel entertainment that was to follow. When the ladies were seated the wizard took his place behind the table, and began his mysterious preparations to the music of a Japanese orchestra. The greatest mystery about it was how our host could have procured such a really skilful juggler in this out-of-the-place. He performed in a superior manner. I need not describe to you how he turned cotton to water and then to ink, and then back to water, or how he incubated eggs instantaneously, or how he brought out bushels of things from—well—nowhere. Your readers have seen the same things doubtless, and so it suffices to say that it was done in a very clever manner. After the various performances indicated on the neatly printed programme had been finished, the company adjourned to apartments upstairs and viewed from the windows a brilliant pyrotechnical display, after which they did ample justice to the refreshments served from an adjoining room. It was not until the small hours that the company broke up, delighted, I am sure, with the courtesy of Mr. and Mrs. Kondo, and mentally congratulating His Majesty the Emperor of Japan upon the completion of a year considered by the enlightened world the happiest of his reign, in that it has seen such a striking advance in the general welfare of his people.

IN THE SUPREME COURT OF JAPAN.

Before Judge NISHIOKA YUMBI, President of the First Criminal Bureau, and Judges MASATANI SENRI, YAMANE SHUSUKE, KAWAGUCHI TAIGI, and OKUYAMA SHIKETI.

No. 1,593, 1890.

WRONGFUL CONVERSION OF IMMOVABLES. THE PUBLIC PROSECUTOR OF THE NIYASAKI CORRECTIONAL COURT V. SAKAMOTO KUMASHIRO. Principles deduced by the editor of the *Saiban Suishi*:—

As the term "wrongful conversion of property" means infringement of the right of the true owner, such right is held to be infringed by the wrongful conversion of movables or immovables belonging to another, whether or no the true owner can follow and recover such property from the buyer. Wrongful conversion is held to have taken place when land, the ownership of which has been transferred by contract to another, has been sold without the consent of such other, even although the contract has not been publicly registered.

Reference—Paragraph 1, Article 393, Penal Code: "Any person who shall sell, exchange, pawn, or mortgage movables or immovables belonging to another, by wrongfully converting the same, shall be punished as having obtained property on false pretences."

The accused in this case, Sakamoto Kumashiro, and one other were convicted by the Niyasaki

Correctional Court of having attempted to sell immovables belonging to another by wrongfully converting the same, and were each sentenced to 2 months' major imprisonment and to a fine of 4 yen with 6 months' police surveillance, according to Articles 399, 393, 394, 397, 112, and 113, of the Penal Code, and Article 104 of the same Code, the offence being accessory; it being also held that the ownership of the land involved was vested in the plaintiff and not in the defendants, and decreed that yen 3 should be paid by defendants jointly as damages to the plaintiff.

The accused raised an appeal against this judgment in the Supreme Court, contending: (1) that paragraph 1, Article 393, of the Penal Code treats as an offence the obtaining of property by false pretences, because the person to whom property was transferred might be followed by the true owner on some future occasion and compelled to reconstitute the goods transferred, i.e. he was deceived by the offender; (2) inasmuch as the original judgment recognized that the buyer of the land agreed to purchase the immovables in question, which were entered under the name of the ancestor of the accused in the public records, he could not be followed by the plaintiff and compelled to reconstitute the land, so that the offence of wrongful conversion did not exist, for the buyer would not suffer any loss; (3) though the judge of the lower court recognized the ownership of the land to be vested in the plaintiff by oral evidence, the defendants had never transferred the land to the plaintiff, so that such recognition was quite unlawful.

The public procurator of the lower court objected to the appeal as groundless.

The judges of the Supreme Court decided that it was clear from the documents produced in the original trial that the transfer of the land involved in this trial was executed by mutual agreement of the plaintiff and defendant, so that its ownership was already transferred to the plaintiff, though the transfer had not been registered in the public records; that the person injured by the present offence of wrongful conversion was the individual who held the ownership of the land, not the buyer; that the true object of paragraph 1, Article 393 of the Penal Code was to inflict punishment in a case where the right of the owner was infringed, as well as where the purchaser of property was followed and compelled by the true owner to reconstitute the property; that the decisions of the lower court—that the defendants' action in selling to Yegawa Kuni-zo privately and without the consent of the owner, the land which it had been agreed to transfer, taking advantage of the fact that there was no public registration, constituted in the criminal case the offence of wrongful conversion and sale of immovables; and that, the ownership of the land in question being vested in the plaintiff, in the civil case damages of yen 3 must be paid jointly by the defendants—were reasonable, and that the appeal should be rejected as groundless.

APPROPRIATION OF FOUND PROPERTY.

THE PUBLIC PROSECUTOR OF YONEZAWA BRANCH CORRECTIONAL COURT V. HANAOKA SORICHI.

Principles deduced from the following judgment: Concealment of property picked up by another does not constitute the offence of concealment of found property.

The act of using property picked up by another and received in trust from him with the object that it should be reported to the Authorities, constitutes the offence of unlawfully using goods entrusted to one person by another.

Reference.—Article 385 of the Penal Code. "Any person who after picking up any dropped or floating property conceals it, and does not return it to the true owner, nor report it to the Authorities, shall be punished with major imprisonment for not less than 11 days and not more than 3 months, or with a fine of not less than yen 2 and not more than yen 20."

In this case the prisoner was acquitted by the Yonezawa Branch Correctional Court on the ground that his act could not be punished under Article 385 of the Penal Code because it did not constitute concealment of goods picked up by himself.

The Public Procurator of the lower court appealed to the Supreme Court on the ground that as the judgment declared that the prisoner's act could not be punished under the 385th article of the Penal Code, because the property was not picked up by himself, said judgment was a misapplication of law, because in this case the property had certainly been dropped and was not returned to the true owner nor reported to the Authorities; with this aggravation: that the property was pawned and the money loaned on it appropriated, which fact was fully recognized by the judge in the lower court. The prisoner did not produce any statement of defence.

The public procurator of the Supreme Court put in the additional appeal that the act of using privately, by pledging it, any property entrusted to one with the object that it should be reported to the Authorities, must be punished under Article 395 of the Penal Code; but it was quite impossible to investigate whether the act of the prisoner constituted the offence of using secretly what had been entrusted to him, because the judgment of the lower court only noticed the pawning of the property, but not the fact that redemption was now impossible, the property having been hualy disposed of.

The Judges held that as the act of the prisoner was not concealment of goods picked up by himself, and consequently not punishable under Article 385 of the Penal Code, the appeal of the public procurator of the lower court could not be sustained, and was therefore rejected according to Article 427 of the Code of Criminal Procedure. As, however, the original judgment stated that the prisoner had pawned for one year a watch which was picked up by his wife, and had been entrusted to him with the object that it should be reported to the Authorities, the prisoner must, if he finally used such property, be punished under Article 395 of the Penal Code, and therefore the additional appeal of the public procurator of the Supreme Court was reasonable. The judgment of the lower court, being thus defective in reason, must be cancelled, and the case transferred to the Wakamatsu Branch Correctional Court for the proper trial thereof.—*Saiban Suishi*, October 24th, 1890.

THE USE OF CANCELLED STAMPS.

Principles deduced from the following judgment:

—The offence of using stamps a second time consists in using them again by affixing them to objects or materials, on which it would be proper and lawful to affix such stamps if previously unused.

The use of stamps a second time on objects or materials to which it would not in the first place be lawful to affix them, does not constitute the offence, inasmuch as the law does not recognise as a legal act such use of uncanceled stamps.

Reference.—Art. 199, Penal Code.—"The use of postal or other various stamps after the same have already been once erased shall be punished with a fine of not less than yen 2 and not more than yen 20."

The accused, Fukuzawa Iwakichi, was convicted in the Omagari Branch Correctional Court of selling medicines without official licence, and sentenced to pay a fine of yen 30 and to forfeit the medicines. *Kinmeigwan* and *Kinmeisan*, which were seized by the Authorities, and the sum of yen 6 the proceeds of the sale of such medicines; but was adjudged not guilty of having used stamps a second time.

The Public Procurator took an appeal to the Supreme Court, with reference to that part of the decision which dealt with the charge of having used stamps a second time. He held that the law would not allow to go free any one who with a view to his own profit affixed to medicines stamps which had already been used, irrespective altogether of the point whether such medicines were lawfully licensed or not. The *Kinmeigwan* and *Kinmeisan* referred to were pills and powders, and as such undoubtedly came within the scope of Art. 1 of the Regulations relating to the Sale of Medicines. Art. 199 of the Penal Code, must, the Prosecutor contended, be applied to the use of such stamps under such circumstances.

The Bench held that the offence mentioned in Art. 199 of the Penal Code must consist in affixing stamps a second time to materials on which stamps should by law be placed; the use of cancelled stamps on other materials did not constitute the offence. The judgment of the lower court was therefore a lawful and proper decision, and the appeal was rejected under Art. 427 of the Code of Criminal Procedure.

LARCENY.

Principles deduced from the following case:—The offence described in Art. 366 of the Penal Code is held to have been committed when plants placed under temporary shelter with a view to their being planted by the owner in another place, are stolen, such plants differing from "products of the farm or field."

Reference.—Art. 366 of the Penal Code:—"Any person who steals the property of another shall be held guilty of larceny, and be punished with major imprisonment for not less than two months and not more than four years." Art. 372 of the Penal Code:—"Any person who steals corn, vegetables, fruit or other products of the field or farm shall be punished with major imprisonment for not less than one month and not more than one year."

The accused was convicted in the Kochi Correctional Court of theft, and sentenced to major imprisonment for one month and ten days, in

accordance with Arts. 372 and 376 of the Penal Code and to police surveillance for six months.

Against this judgment the Public Procurator of the lower court appealed on the ground that the offence came within the scope of Art. 366 of the Penal Code, the conditions requisite to bring it within Art. 372 being absent.

The Supreme Court held that the articles stolen (2,500 young plants of *bronnsonetia papyrifera*) were at the time under temporary shelter prior to being planted out, and therefore did not come within the meaning of Art. 372 of the Code. In this respect then the judgment of the lower court must be reversed. Proceeding, however, on the evidence laid before the lower court, the Supreme Court, under Arts. 366 and 376, imposed sentence of two months' imprisonment with police surveillance for six months.—*Saiban Suishi*.

CONCEALMENT OF FOUND PROPERTY.

Principles deduced from the following decision:—The offence of concealing found property is constituted when property dropped in a place which is in the custody of another is picked up and concealed.

The offence of using for one's own private purposes property held in trust for another, is constituted when property left and forgotten in one's residence is used without the consent of the owner.

Reference.—Art. 385, Penal Code:—"Persons who conceal the fact that they have picked up property that has been dropped or is floating about, and do not return the same to the rightful owners or report the finding to the Authorities, shall be punished with major imprisonment for not less than 11 days and not more than 3 months, or with fines of not less than yen 2 and not more than yen 20." Art. 395, Penal Code:—"Persons who have appropriated and used property lent to them, pawned with them, or otherwise entrusted to them by others, shall be punished with major imprisonment for not less than one month and not more than two years. Should such property be so used and appropriated under false pretences, or with imposition, then the offence shall be held to consist in the obtaining of goods under false pretences."

The accused, Ido Mito, was convicted in the Hikone Branch Correctional Court of having concealed dropped property, and sentenced to major imprisonment for 20 days in accordance with Art. 385 of the Penal Code. The leather purse which formed the subject of the offence was ordered to be returned to Hosoye Tomejiro, its owner, under Art. 48 of the Penal Code.

The Procurator of the lower court appealed to the Supreme Court and pointed out that on the facts of the case the accused found a leather purse containing a sum of money which had been left and forgotten in her house by Hosoye Tomejiro, who called on her on March 16th, 1890; that the accused concealed the fact that she had found the purse, used the money which it contained, and when the owner came again for his property stated to him that he had not left it there. The lower court held this to constitute the offence of concealing dropped property. But the essentials of such an offence were that the owner should not know of his loss at the time, and that the finder should not know who was the owner. But where, as in this case, the owner knew where he had left the property, and the owner was known, the property in fact being in the custody of another, such property could not be regarded as dropped. Here the property was implicitly entrusted to the accused, for the owner knew that he had left it in her custody, and the duty was incumbent on her of taking charge of it. The offence, therefore, was that of appropriating to her own uses and purposes goods that had been entrusted to her—(see Art. 395, Penal Code). The judgment of the lower court was, in these circumstances, a misapplication of law.

The Judges of the Supreme Court decided that the offence of concealing dropped property was constituted when property dropped in a place not under the supervision and control of another was picked up and concealed; whereas property left in a place under such supervision and control must be in the custody of the person exercising such supervision and control, and must be returned to its owner. The using and appropriation of such property therefore amounts to the appropriation to one's own uses and purposes of property entrusted to one. The judgment of the lower court set forth that a leather purse containing a sum of money had been left behind and forgotten in the accused's house by the owner when he called on her, so that the accused had appropriated to her own uses and purposes, without the consent of the owner, property which had been left in a place under her supervision and control, and which it was her duty to take charge of and return to the owner. The offence consequently must come under par. 1, Art.

395, Penal Code, and the judgment of the lower court was a misapplication of law, and must be reversed under Art. 429, Code of Criminal Procedure, a new sentence being passed by this Court on the facts as recognised by the lower Court. The accused was accordingly sentenced to suffer major imprisonment for one month under Art. 395, Penal Code.—*Saiban Suishi.*

THE COTTON-SPINNING INDUSTRY.

The proposed great meeting of the representatives of the leading cotton-spinning mills throughout the country in Osaka has been alluded to on more than one occasion in these columns (says the *Hyogo News*). The prevailing dullness in the trade, and the rapidly accumulating supplies in the hands of the producers, have been the chief causes which suggested the meeting. This dullness has brought about a heavy fall in the stocks of the leading companies. According to one of the native papers the 100-yen fully-paid-up shares of the Osaka Spinning Company, which only a short time ago were quoted at yen 280, are now as low as yen 108. The meeting was opened on Friday last, 15th, in the Osaka Chamber of Commerce, when delegates were present from the Tokyo, Himeji, Senshu, Nagoya, Shimada, Settsu, Hirano, Dojima, Miye, Aichi, Yamato, Hiroshima, Uwajima, Owari, Naniwa, Osaka, Tennoji, Kagoshima, Okayama, Shimomura, Tanashima, Wakayama, Shodoshima, Kinsashiki and Kowabara Spinning Companies. The Kanekin Weaving Company was also represented. No delegates attended from the following companies:—Hachiman, Watanabe, Kurumo, Saitama, and Shimotsuke. The following companies were also unrepresented on the opening day, but it was understood their representatives were on the way:—Kanehachiro, Fujii, Enshu, Miyagi, and Nagasaki. After the agenda papers had been distributed the election of a Chairman and Vice-Chairman was proceeded with. Mr. Okada, of the Owari Spinning Co., was elected Chairman, and Mr. Yamamoto, of the Osaka Spinning Co., Vice-Chairman. Of the subsequent proceedings the reports in the native papers are bald and meagre in the extreme. For instance, we are told that discussion on motion 5 before the meeting was postponed until the following day, but what motion 5 was not a hint is given. The motion that spinners and dealers should form themselves into a union for mutual protection and gain was not passed. The proposal regarding inferior productions was turned over to a committee of five to report upon. The meeting then took under consideration the proposal made to limit the production of the mills, but nothing definite appears to have been arrived at. On the 16th, Saturday, the motion advocating a union between spinners and dealers was again brought forward and referred to a committee. The above is all that the readers of the *Asahi* and *Mainichi* are told concerning deliberations of the Conference. In connection with the meeting one of the papers states that the annual demand for cotton yarn in Japan does not exceed 105,000,000 *kin* (262,500 bales), one bale being equal to 3 lbs. of cotton cloth, whereas the supply, including the native and foreign article, amounts to 390,000 bales, or an excess of supply over demand of 127,500 bales. It is this surplus which bothers the spinners, and how to get rid of it they cannot decide. The only outlet seems to be Korea and Shanghai. The price of Bombay yarn (*hidariyori*) of Japanese make in Shanghai is, we are told, \$85.746 per bale, inclusive of the 83.85 export duty, and the price of the same yarn as turned out by the Shanghai Spinning Mill is yen 81.377. If, therefore, the export duty on the Japanese article is taken off, the stuff can then be laid down in Shanghai at, roughly speaking, only 51 cents higher than the Shanghai product. It is this could be done the Japanese merchants are confident that they would be able to find means to so adjust that extra half-dollar that their sales should be successful rivals against those of Shanghai. It is much to be regretted that on so important a question, and one possessing more than local interest, our native contemporaries are not able to cater for the wants of their readers in a more efficient manner.

Continuing this subject on the 19th inst., the same journal says:—

The native papers publish further particulars of the Cotton Spinners' Conference in Osaka, but of the baldest and most disjointed description imaginable. The delegates met on the 16th (Sunday), at 9 a.m. and proceeded to discuss the motion advocating the abolition of the export duty on cotton yarn in order to facilitate the export of the same. Eventually it was decided, on the motion of Mr. Tanura, that a committee of five should be elected to form a delegation to the Government

praying for the removal of the impost in question. At the afternoon proceedings, however, Mr. Tanura, presumably with the consent of the meeting, withdrew his motion, and moved instead that the committee of three, already elected to interview the Government on the question of removing the import duty on raw cotton, should be entrusted with both matters. This was agreed to. It was then decided that whatever the result of the appeal to the Government to rescind these duties, those delegates present should pledge their companies to the export of their yarn in a manner to be decided by a committee of seven elected for the purpose. This appears to have concluded the labours of the conference on the 16th. On the 17th (Monday) the members again met and adopted a plan, of which no details are given, however, for the export of yarn to Korea and China. The next matter under consideration was an application made by the Naigai Wata Kaisha and the Mitsui Bussan Kaisha for permission to join the Cotton Spinners in their efforts to obtain from the Government an abolition of the duties on the import of raw cotton and the export of yarn. The application was granted. The Conference now appears to have itself discussed the best means of exporting yarn to Korea and China, although it had previously appointed a committee expressly charged with this work. But to attempt to impart any sequence to the proceedings is impossible. The most we can do is to reproduce what appears in the *Asahi* and *Mainichi*, and trust to the prior knowledge of those of our readers whom this matter interests to supply what is wanting. If they decline to do this we must adopt the high ground taken by one of the old dramatic authors, who, in reply to certain criticisms of his piece, said that when he had written his play he had done his work; it was no part of his business to supply his audience with the necessary brains wherewith to understand it. With this digression we will proceed to state the means by which the Conference decided the required export of yarn could best be effected. These are as follows:—The Spinning Companies to pledge themselves to a yearly export of 30,000 bales for five years, whether the duty be abolished or not. Meanwhile samples are to be sent forward at once in accordance with the following plan. The companies in the Union shall export one large bale for every 1,000 spindles in their shed. Those companies whose spindles do not number 1,000 shall use the *shisha go nyu* method of counting. With regard to the number of the yarn and the proportions to be used, 70 per cent. of the bale should be made up of No. 20's (*ni jitte*) both left and right twists (*hidariyori* and *migi-yori*); the remaining 30 per cent. should consist of Nos. 12's, 14's, and 16's. Any company exporting goods differing from the above will do so on their own responsibility and at their own risk. In the event of any profit being made on the above exports, the same to be distributed evenly. If any loss accrues, each company to pay according to its number of spindles. The work of collecting, packing, shipping, and selling in Shanghai to be entrusted to a committee of three, who will be responsible for the whole.

In the afternoon the Conference had under consideration a proposal limiting the import of yarn, and a committee of seven, consisting of the representatives of the following companies:—Okayama, Hirano, Settsu, Owari, Osaka, and Miye, were elected to report on the matter. The proposal advocates the manufacture of Bombay *hidari yori ni jitte* in the following proportion:—Companies having more than 5,000 spindles and under 10,000 should employ 20 per cent. of spindles in the manufacture of this yarn; companies with more than 10,000 and under 20,000 spindles should use 30 per cent. of their plant for the same purpose; companies with more than 20,000 spindles and under 30,000 should devote 40 per cent. to this manufacture; and those companies with more than 30,000 spindles should employ 50 per cent. of them to this end. The price of this yarn shall be arranged, in order that no opening shall exist for competition between the various parties to the Union. This appears to have concluded the labours of the Conference for Monday. It will last, we understand, for two or three days yet.

The *Hyogo News* continues its report of the Osaka Conference as follows:—

This conference was continued in Osaka on Tuesday, but nothing of interest appears to have transpired up to the hour of adjournment for tiffin. In the afternoon, however, the members had under discussion the proposal to establish a Cotton Yarn Exchange (*Yorihitaji*), where both raw cotton and cotton cloth dealers may meet and discuss business matters. Considerable difference of opinion seems to have been elicited on this proposal. One section of representatives advocated the formation of such

Exchanges at Tokyo, Nagoya, and Osaka; another section that Kyushu and Okayama should be the places chosen; while yet others thought it would be best that the first Exchange should be in Osaka, and then if it were found to be of any real service, that the movement should be extended to the other places named. After considerable discussion the latter scheme found most favour with the meeting, and a committee of five was elected to take the initial steps towards the formation of a Yarn Exchange in Osaka. The next matter under discussion was a proposal that an arrangement be made with the Banks by which the latter will consent to accept, as security for money advanced, the receipts furnished by the godown companies for goods stored with them. For this purpose the present system of storing goods would have to be considerably amended, but this could be done, the proposers thought, under the provisions of the new Commercial Code. The opinion of the meeting was so divided on the question that discussion on the proposal was postponed. Mr. Yamamoto then brought forward a motion calling upon the Diet, in the name of the Union, to increase the import duty on yarn. No definite decision on this matter was arrived at, but those in favour of the proposal were instructed to submit a petition embodying their ideas to the Union, which would then deliberate upon it.

The following are some of the remaining proposals before the Conference for discussion:—

(1) A proposal to further the sale of yarns in the Japanese markets.

(2) That application be made to the Minister of Finance to extend the time at present allowed by the Nippon Ginko for the repayment of loans; that the Banks be empowered to lend the Spinning Companies money in proportion to the value of the latter's goods in stock.

(3) That application be made to the Minister of Finance for permission to use commercial bills, and that the Nippon Ginko be instructed to allow a more liberal rate of discount when transacting business with members of the Cotton Spinners' Union.

(4) That permission be obtained whereby securities in the hands of the Nippon Ginko for money loaned may be taken away and others of equal value substituted, should the borrowers so wish; also, that on partial or whole repayment of a loan, the Bank return the interest paid thereon.

(5) That arrangements be made with the Nippon Ginko for the discount of bills at other places.

The foregoing is, we should say, thoroughly in accord with the Japanese idea of the fitness of things. Directly any corporation or any particular branch of trade finds itself in difficulties, it is the Government who must help it out. The idea of the Nippon Ginko paying back the interest received on money loaned as soon as the original loan is repaid seems preposterous.

LETTERS ON LEAVE.—I.

TO LIEUTENANT JOHN MCHAIL,

151st (Kumharan) P.N.I., Hakaiti via Thoranda, Assam.

Dear Old Man,—Your handwriting is worse than ever, but, as far as I can see among the lousies and fish-hooks, you are lousesome and want to be comforted with a letter. I knew you wouldn't write to me unless you needed something. You don't tell me that you have left your regiment, but from what you say about "my battalion," "my men," and so forth, it seems as if you were raising military police for the benefit of the Chins. If that's the case I congratulate you. The pay is good. Unless writes to me from some new fort something or other, saying that he has struggled into a billet of Rs. 700 (Military Police) and instead of being chased by writers as he used to be, is ravaging the country round Shillong in search of a wife. I am very sorry for the Miss. Unless of the future.

That doesn't matter. You probably know more about the boys yonder than I do. If you'll only send me from time to time some record of their movements I'll try to tell you of things on this side the water. You say "You don't know what it is to hear from town." I say "You don't know what it is to hear from the *dehat*." Now and again men drift in with news; but I don't like hot weather *khubb*. It's all of the domestic occurrence kind. Old "Hat" Constable came to see me the other day. You remember the click in his throat before he begins to speak. He sat still, clicking at quarter-hour intervals, and after each click he'd say: "D'ye remember Mistress So-an' So? Well, she's dead o' typhoid at Naogong." When it was "Mistress So-an' So" it was a man. I stood four clicks and four deaths and then I asked him to spare me the rest. You seem to have had

a bad season, taking it all round, and the women seem to have suffered most. Is that so?

We don't die in London. We go out of town and we make as much fuss about it as if we were going to the Neva. Now I understand why the transport is the first thing to break down when our army takes the field. The Englishman is curious in his movements and very particular about his baskets and hampers and trunks—not less than seven of each—for a fifty-mile journey. Leave season began some weeks ago and there is a *barra-choop* along the streets that you could shovel with a spade. All the people that say they are everybody have gone—quite two hundred miles away. Some of 'em are even on the Continent—and the clubs are full of strange folk. I found a Reform man at the Savage a week ago. He didn't say what his business was, but he was dirty and looked hungry. I suppose he had come in for food and shelter.

Like the rest I'm on leave too. I converted myself into a Government Secretary, awarded myself one month on full pay with the chance of an extension, and went off. Then it rained and hailed and rained again, and I ran up and down this tiny country in trains trying to find a dry place. After ten days I came back to town, having been stopped by the sea four times. I was rather like a kitten at the bottom of a bucket chasing its own tail. So I'm sitting here under a grey, muggy sky, wondering what sort of time they are having at Simla. It's August now. The rains would be nearly over; all the theatricals would be in full swing, and Jakko Hill would be just Paradise. You're probably pink with prickly heat. Sit down quietly under the punkah and think of Umballa station, hot as an oven at four in the morning. Think of the dale-glory sloshing in the wet, and the first little cold wind that comes round the first corner after the tonga is clear of Kalka. There's a wind you and I know well. It's blowing over the grass at Dunsinai this very moment and there's a smell of hot fir trees all along and along from Solon to Simla, and some happy man is flying up that road with fragments of a tonga-bat in his eye, his pet terrier under his arm, his thick clothes on the back-seat and the certainty of a month's pure joy in front of him. Instead of which you're being stewed at Hakaiti and I'm sitting in a second hand atmosphere above a sausage-shop, watching three sparrows playing in a dirty-green tree and pretending that it's summer. I have a view of very many streets and a river. Except the advertisements on the walls, there isn't one speck of colour as far as my eye can reach. The very cat, who is an amiable beast, comes off black under my hand, and I daren't open the window for fear of smuts. And this is better than a soaked and sobbed country, with the corn-shocks standing like plover's eggs in green moss and the oats lying flat in moist lumps. We haven't had any summer and yesterday I smelt the raw touch of the winter. Just one little whiff to show that the year had turned. "Oh what a happy land is England!"

I cannot understand the white man at home. You remember when we went out together and landed at the Apollo Bunder with all our sorrows before us, and went to Watson's Hotel and saw the snake charmers. You said: "It'll take me all my lifetime to distinguish one nigger from another." That was eight years ago. Now you don't call them niggers any more, and you're supposed—quite wrongly—to have an insight into native character, or else you would never have been allowed to recruit for the Kumbharsens. I feel as I felt at Watson's. They are so deathly alike, specially the more educated. They all seem to read the same books, and the same newspapers telling 'em what to admire in the same books, and they all quote the same passages from the same books and they write books on books about somebody else's books, and they are penetrated to their boot heels with a sense of the awful seriousness of their own views of the moment. Above that, they seem to be, most curiously and beyond the right of ordinary people, divorced from the knowledge or fear of death. Of course every man conceives that every man except himself is bound to die (you remember how Hallat spoke the night before he went out), but these men appear to be like children in that respect.

I can't explain exactly, but it gives an air of unreality to their most earnest earnestness; and when a young gentleman of views and culture and aspirations is in earnest the trumpets of Jericho are silent beside him. Because they have everything done for them, they know how everything ought to be done; and they are perfectly certain that wood pavements, policemen, shops, and gas light come in the regular course of nature. You can guess with these convictions how thoroughly and cocksurely they handle little trifles like colonial

administration, the wants of the army, municipal sewage, housing of the poor, and so forth. Every third common need of average men is, in their mouths, a tendency or a movement or a federation affecting the world. It never seems to occur to 'em that the human instinct of getting as much as possible for money paid, or failing money, for threats and fawnings, is about as old as Cain; and the burden of their *bat* is: "Me an' a few mates o'mine are going to make a new world."

As long as men only write and talk they must think that way I suppose. It's compensation for playing with little things. And that reminds me—Do you know the University smile? You don't by that name, but sometimes young civilians wear it for a very short time when they first come out. Something—I wonder if it's our brutal chaff, or a billiard cue, or which?—takes it out of their faces, and when they next differ with you they do so without smiling. But that smile flourishes in London. I've met it again and again. It expresses tempered grief, sorrow at your complete inability to march with the march of progress at the Universities, and a chastened contempt. There is one man who wears it as a garment. He is frivolously young—not more than thirty-five or forty—and all these years no one has removed that smile. He knows everything about everything on this earth, and above all he knows all about men under any and every condition of life. He knows all about the aggressive militarism of you and your friends; he isn't quite sure of the necessity of an army; he is certain that colonial expansion is nonsense; and he is more than certain that the whole step of all our Empire must be regulated by the knowledge and foresight of the working man. Then he smiles—smiles like a seraph with an M.A. degree. What can you do with a man like that? He has never seen an unmade road in his life; I think he believes that wheat grows on a tree, and that beef is dug from a mine. He has never been forty miles from a railway, and he has never been called upon to issue an order to anybody except his well-fed servant. Isn't it wondrous? And there are battalions and brigades of these men in towns removed from the fear of want, living till they are seventy or eighty, sheltered, fed, drained and administered, expending their vast leisure in talking and writing.

But the real fun begins much lower down the line. I've been associating generally and very particularly with the men who say that they are the only men in the world who work—and they call themselves the working man. Now the working man in America is a nice person. He says he is a man and behaves accordingly. That is to say he has some notion that he is part and parcel of a great country. At least he talks that way. But in this town you can see thousands of men meeting publicly on Sundays to try aloud that everybody may hear that they are poor down-trodden helots—in fact "the pore workin' man." At their clubs and pubs the talk is the same. It's the utter want of self-respect that revolts. My friend the tobacconist has a cousin who is, apparently, sound in wind and limb, aged twenty-three, clear-eyed and up-standing. He is a "skibbo" by trade—a painter of sorts. He married at twenty and he has two children. He can spend three-quarters of an hour talking about his down-trodden condition. He works under another *Raj-mistri* who has saved money and started a little shop of his own. He hates that *Raj-mistri*; he loathes the police, and his views on the lives and customs of the aristocracy are strange. He approves of every form of lawlessness, and he knows that anybody who holds authority is sure to be making a good thing out of it. Of himself as a citizen he never thinks. Of himself as an Ishmail he thinks a good deal. He is entitled to eight hours' work a day and some time off—said to be paid for; he is entitled to free education for his children—and he doesn't want no bloomin' clergymen to teach 'em—he is entitled to houses specially built for himself because he pays the bulk to the taxes of the country. He is not going to emigrate, not he, he reserves to himself the right of multiplying as much as he pleases; the streets must be policed for him while he demonstrates, immediately under my window by the way, for ten consecutive hours, and I am probably a thief because my clothes are better than his. The proposition is a very simple one. He has no duties to the State, no personal responsibility of any kind, and he'd sooner see his children dead than soldiers of the Queen. The Government owes him everything because he is a pore working man. When the Guards tried their Board school mutiny at the Wellington Barracks my friend was jubilant: "What did I tell you?" he said. "You see the very soldiers won't stand it."

"What's it?"

"Bein' treated like machines instead of flesh and blood. 'Course they won't."

The popular evening paper wrote that the Guards with perfect justice had rebelled against being treated like machines instead of flesh and blood. Then I thought of a certain regiment that lay in Mian Mir for three years and dropped four hundred men out of a thousand. It died of fever and cholera. There were no pretty nursemaids to walk with it in the streets, because there were no streets. I saw how the Guards amused themselves and how their sergeants smoked in uniform. I pitied the Guards with their cruel sentry goes, their three nights out of bed, and their unlimited supply of love and liquor.

Another man, not a workman, told me that the Guards' riot—it's impossible, as you know, to call this kick-up of the fatted flunkies of the army a mutiny—was only "a schoolboy's prank;" and he could not see that if it was what he said it was, the Guards were no regiment and should have been wiped out decently and quietly. There again the futility of a sheltered people cropped up. You mustn't treat a man like a machine in this country; but you can't get any work out of a man till he has learned to work like a machine. D—has just come home for a few months from the charge of a mountain battery on the frontier. He used to begin work at eight and was thankful if he got off at six; most of the time on his feet. When he went to the Black Mountain he was extensively engaged for nearly sixteen hours a day; and that on food at which the "pore workin' man" would have turned up his state-lifted nose. D—on the subject of labour as understood by the white man in his own home is worth hearing. Though coarse—considerable coarse! But D—doesn't know all the hopeless misery of the business. When the small pig, oyster, furniture, carpet, builder or general shopman works his way out of the ruck he turns round and makes his old friends and employes sweat. He knows how near he can go to flaying 'em alive before they kick; and in this matter he is neither better nor worse than a *brunna* or a *havildar* of our own blessed country; it is the small employer of labour that skins his servant, exactly as the forty-pound householder works her one white servant to the bone and goes to drop pennies into the plate to convert the heathen in the East.

Just at present, as you have read, the person who calls himself the pore workin' man—the man I saw kicking fallen men in the mud by the docks last winter—has discovered a real, fine, new original notion; and he is working it for all he is worth. He calls it the solidarity of labour *bundobast*—but its caste—four thousand years old, caste of Menu—with old *shettis*, *mahejuns*, guild toils, excommunication, and all the rest of it. All things considered there isn't anything much older than caste—it began with the second generation of man on earth—but to read the "advance" papers on the subject you'd imagine it was a revelation from Heaven. The real fun will begin—as it has begun and ended many times before—when the castes of skilled labour—that's the pore workin' man—are pushed up and knocked about by the lower and unrecognised castes, who will form castes of their own and outcaste on the decision of their own *punchayats*. How those castes will scuffle and fight among themselves, and how astonished the Englishman will be!

He is naturally lawless because he is a fighting animal; and his amazingly sheltered condition has made him inconsequent. I don't like inconsequent lawlessness. I've seen it down at Bow Street, at the docks, by the G. P. O., and elsewhere. It's chief home of course is in a queer place called the House of Commons, but no one goes there who isn't forced by business. It's shut up at present and the persons who belong to it are loose all over the face of the country. I don't think—but I won't swear—that any of them are spitting at policemen. One man appears to have been poaching, others are advocating various forms of murder and outrage—and nobody seems to care. The residue talk—just Heavens, how they talk; and what wonderful fictions they tell! And they firmly believe, being ignorant of the mechanism of Government, that they administer the country. In addition certain of their newspapers have elaborately worked up a famine in Ireland that could be engineered by two Deputy Commissioners and four average 'Stunts into a "woe" and a "calamity" that is going to overshadow the peace of the nation—even the Empire. I suppose they have their own sense of proportion, but they manage to keep it to themselves very successfully. What do you, who have seen half a country-side in deadly fear of its life, suppose that this people would do if they were *chukkered* and *gabrooned*? If they really knew what the fear of death and the dread of injury implied? If they died very swiftly indeed and could not count on their futile lives enduring beyond next sundown? Some of the men from your—I mean our—part of the world

say that they would be afraid and break and scatter and run. But there is no room in the island to run. The sea catches you, midwaist, at the third step. I am curious to see if the cholera, of which these people stand in most lively dread, gets a firm foothold in London. In that case I have a notion that there will be scenes and panics. They live too well here, and have too much to make life worth clinging to—clubs, and shop fronts, and gas, and theatres, and so forth—things that they affect to despise, and whereon and whereby they live like leeches. But I have written enough. It doesn't exhaust the subject; but you won't be grateful for other epistles. De Vitre of the Poona Irregular Moguls will have it they are a tidy-irregular people. He says that all their visible use is to produce loans for the colonies and men to be used up in developing India. I honestly believe that the average Englishman would faint if you told him that it was lawful to use up human life for any purpose whatever. He believes that it has to be developed and made beautiful for the possessor, and in that belief talkatively perpetrates cruelties that would make Torquemada jump in his grave. Go to Alipur if you want to see. I am off to foreign parts—forty miles away—to catch fish for my friend the char-cat: also to shoot a little bird if I have luck.

Yours,
RUDYARD KIPLING.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 16th.

It has been stated from several sources that Jamieson, who had bought a girl for the purpose of sketching her, was fallen upon by cannibals and killed and eaten by them.

Later.

A serious crisis in the City has been averted through the Bank of England and others having rendered assistance to a most important financial house.

London, November 18th.

The *Standard*, referring to the recent financial disturbance in the City, says that the crisis was hastened through the Russian Government suddenly withdrawing five millions sterling from Baring Brothers.

Later.

A guarantee fund of thirteen millions sterling was quickly subscribed for the support of Baring Brothers.

London, November 20th.

The Stock Exchange is greatly demoralised, and the dearth of money continues; while fears of impending failures among the banks cause great difficulty in the discount of bills.

MAIL STEAMERS.

REPORTS.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Kobe the 17th November at 6.30; had light E. winds to Oshima, which passed at 9.20; heavy easterly sea with strong head wind with blinding rain, and much lightning to port. Arrived at Yokohama the 18th November at 8 p.m.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 13th November at 2.20 p.m.; had very strong N.E. monsoon from Hongkong to middle of eastern sea; fresh E. winds from there to Oshima; Oshima to Rock Island heavy E.N.E. gale with passing rain; thence to port N.N.W. gale.

The Japanese steamer *Kamashiro Maru*, Captain Young, reports:—Left Hakodate the 17th November at 2 p.m.; had moderate and fine weather to Kinkasan, which was passed the 18th at 11 a.m.; weather set in squally and increased to a strong gale from N.E. with terrific gusts of wind and high confused sea, steamer shipping heavy water at times throughout the night; this morning wind and sea took off and weather set in fine to port. Arrived at Yokohama the 19th November at 3 p.m.

The Japanese steamer *Wakanoura Maru*, Captain Kenderline, reports:—Left Kobe the 19th November at noon; had fresh breeze from N.E. and fine weather; passed Oshima at 8.45 p.m.; at midnight strong wind from N.N.W. and clear weather which continued to 6 a.m.; wind shifted to N.E. with fresh breeze to Rock Island; which was passed at 11.50 a.m.; Cape Sagami at 4.25 p.m. Arrived at Yokohama the 20th November at 6.30 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left San Francisco the 1st November; San Francisco to 16th meridian moderate winds and fine weather; the 10th and 11th had strong blow from westward with high seas, reducing speed for the two days 158 and 176 miles; crossed the meridian at 40° N.; the 18th, Lat. 36.25 N. and Long. 151 10 E., had fine clear weather; the 19th, Lat. 36.00 N. and Long. 148.10 E., met with violent gale from E.S.E. hauling to W. and N.W. with wind at times blowing at hurricane force; lowest reading barometer 29.20; hove to for 12 hours; distance run in 24 hours—94 miles; thence to port northerly winds with fine weather.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 15th November at noon; had light easterly winds with fine weather. Arrived at Nagasaki the 17th at 6 a.m. and left at 5 p.m. Arrived at Shimomoseki the 18th at 8 a.m. and left at 10 a.m.; fine moderate weather through the Inland Sea. Arrived at Kobe the 19th at 8 a.m. and left the 20th at noon; had moderate to fresh N.E. winds throughout the passage. Arrived at Yokohama the 21st November at 8.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

There is no change to report in the position of Imports. A few sales of English Yarns at better prices have been reported, but the drop in Ex-

change has made the difference between buyer and seller as great as ever. A few sales of Bombay have been made at former quotations. Piece-goods are lifeless. Prices are quite nominal. Sales for the week amount to 100 bales English Yarns and 150 bales Bombays.

Galvanized Iron sheets	5.80	to 6.00
Wire Nails, assorted	4.40	to 4.00
Cake, per box	4.60	to 4.80
Pig Iron, No. 3	1.25	to 1.27

KEROSENE.

Holders make a show of strength on a lower rate of exchange, but no sales have been made, and buyers are shy of any advance. Present stock is about 850,000 cases; the *Sophie Richmers* having carried 40,000 cases Russian down to Kobe, thus lightening this market to that extent.

QUOTATIONS.

Chester	\$1.65	to 1.67
Comet	1.62	to 1.65
Heroe	1.60	to 1.62
Russian	1.55	to 1.57

SUGAR.

Still no business worth recording, and prices consequently nominal.

Namida	2.80	to 3.00
Cake	3.10	to 3.80
Brown Sugar	4.15	to 4.20

EXPORTS.

RAW SILK.

Our last circular was of the 14th instant, since which date settlements on this Market amount to 500 piculs divided thus: *Hanks*, 70; *Filatures*, 145; *Re-reels*, 222; *Kakada*, 39; and *Oshu*, 24. There have been no direct shipments during the interval.

Our Market has again been disturbed by cables from Europe and the States reporting fresh disasters in the commercial and financial world. News from the Silk centres was also very depressing, and at last holders here have given way considerably in price. This weakening of dollar prices, accompanied by lower rates of Exchange, have enabled buyers to operate to some advantage, and there is plenty of business doing on the basis of our present quotations.

Up to within the last two days business was not

large, but during the last 48 hours some large buyers for the States have entered the Market and purchases have been freely made.

Holders complain of the heavy losses which these figures yield them, but they may consider themselves very fortunate that Exchange has declined so much or they would have had to take still less dollars for their silk. They have struggled on bravely for a long time past, but the heavy stocks and bad accounts of foreign marts have compelled them at last to let go.

It is interesting to compare the present state of trade with that which existed a year ago; our statistics at foot will give comparative settlements and stocks, while as to prices Extra *Filatures*, 13/15 den, were last year quoted at \$815, against \$615 to-day; and No. 1 *Re-reels* worth \$750 last year are to-day worth no more than \$580. With regard to the question of Exchange, we are now down to within 2 per cent. of the rates current on the corresponding day last year.

There has only been one shipping opportunity during the week—the English mail steamer *Verona* on the 15th taking 82 bales for Europe. Present export figures are 8,068, against 27,098 last year and 16,957 to the same date in 1888.

Hanks.—There has been a fair amount of business in these, but the stock is small and well held; consequently prices have not receded so much as in other classes. Good *Joshu* has again been done at \$540 with *Chichibu* at \$530. *Shinshu* has also been done at \$530.

Filatures.—These have seen a marked decline, some holders making up their minds to lighten their stocks; others, who are apparently wealthy men, still hold on to their goods and hold out for their own figures. While willing, some large lines of No. 1 *Shinshu Filatures* in well known chops have been taken at \$590. These Silks, coupled with the present low exchange, should lay down at destination at very favourable rates. In five sizes for Europe very little has been done; one parcel of *Bishu* was noted at \$580 and another parcel at \$585.

Re-reels.—These show a further decline, and considerable business has been done at the lowest point. *Tortoise* chop has brought \$575, as against \$750 same day last year; while *Kite Chop* has passed the scales at \$570.

Kakada.—There has been considerable demand for this, but holders have been more firm in this class and less business has in consequence been done. *Flower Girl*, \$565; *Black Tiger*, \$550, are among the purchases made, owners refusing what seem like very good offers.

Oshu.—The only transaction has been one parcel of moderate quality *Sendai* district at \$550.

QUOTATIONS.—(NEW SILK.)

Export from 1st July	17,300	6,400	13,700
Stock, 21st November	25,700	31,800	31,000

WASTE SILK.

The good business in this branch continues; settlements for the week being 1,111 piculs divided thus: *Noshi* 276, *Kibiso* 835.

Quotations show no change, and as compared with last year it will be found that they are practically the same as then; thus giving a very marked contrast when compared with the Raw Silk side.

Holders have been very sensible this year and have sold currently; thus keeping in the Market and getting rid of their Stocks at good values.

The English mail steamer *Verona* had a fair shipment both of waste and *Cocoons* for Europe, and present export is 9,746 against 9,752 last year, and 10,365 on the same day in 1888.

Pierced Cocoons.—Nothing done this week; buyers want some reduction in price which at present holders are not willing to grant; should exchange decline yet further no doubt a larger business will result.

Noshi.—Considerable business has again been done, more especially in *Ninshu*; large parcels have been taken at from \$105 to \$120 according to quality. Some business also in *Joshu*, fair assortment, at from \$80 to \$85.

Kibiso.—Demand has revived, and large parcels of *Filatures* have been done, prices ranging from \$100 to \$115. A long line of *Mino* was also done at \$67 with some *Sendai* at \$95.

QUOTATIONS.—(NEW WASTE.)

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:-

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibrations.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in France, &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTENSIVE or THREAD WORMS. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1908.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts intrinsically in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a few hundred quantities of pens, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

NOW READY,

WITH COLOURED PLAN.

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YOKOHAMA: SATURDAY, NOV. 29, 1890.

MARRIAGE.

On the 26th inst., at Christ Church, Yokohama, by the Rev. E. Champneys Irvine, M.A., ROBERT CAMPBELL, to MARIANNE CRAWFORD, eldest daughter of HUGH CRAWFORD Esq., of Hackney, London.

SUMMARY OF NEWS.

News of the death of the King of Holland was received in Tokyo on the 23rd instant.

MR. MACHIDA, Consul at Hankow, will return home about the beginning of December next.

A SLIGHT earthquake was felt in the capital on the 22nd instant at 10h. 50m. 31s. p.m.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TARUHIITO proceeded to Yokosuka on the 24th instant.

COMMANDER SAKAMOTO HACHIROTA returned to Japan a few days ago from Russia, where he had been staying for some time.

A TELEGRAM from Nagasaki dated the 21st instant, announces that influenza has again broken out there.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TAKEHIITO, Count Oyama and about thirty field officers left Tokyo on the 23rd instant for Kamakura.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU, who had been in Saitama and Gumma Prefectures for some time, returned to the capital on the 25th instant.

MR. HIRAYAMA, secretary of the Hyogo Prefectural Government, was relieved from his additional appointment of Director of the Imperial Museum at Nara on the 22nd instant.

RAILWAY communication between Horonai and Harubetsu on the line of the Hokkaido Coal Company, was stopped on the 21st instant, for repairs to the line.

At a meeting of shareholders of the Naigai Sekitan Kaisha (Domestic and Foreign Coal

Company) held on the 24th instant, it was decided that the company should be wound up.

A LIBEL action was raised in the Tokyo Local Court on the 24th instant by Mr. Yamasaki Kiyonao, proprietor and editor of the *Heiji Shimpō*, against the editors of the *Ukiyo Shimbun*.

A DAILY newspaper bearing the name of the *Shin Azuma* will be published in Tokyo on and after the 4th December next, as an organ of the *Rikken Jiyu* party.

A MEETING of the Tokyo City Improvements Committee was held in the Home Department on the 21st instant. Marquis Hachisuka, Governor of Tokyo, attended the meeting.

VICE-ADMIRAL ITO, Vice-Minister for the Navy, Mr. Shirane, Vice-Minister for Home Affairs, and Mr. Watanabe, Vice-Minister for Finance, were present at the meeting of the Cabinet held on the 21st instant.

COUNT YAMAGATA, Minister President of State, was permitted by the Decorations Board on the 22nd instant to accept and wear a decoration conferred on him by the Emperor of Austria-Hungary.

THE Koyukai Society, organized by members of the *Rikken Jiyu* party in Kyoto, was dissolved on the 21st instant, in accordance with the Regulations as to Meetings and Political Associations.

A FAREWELL entertainment will be given on the 4th December next at the Koyokan, Shiba, by a number of members of the Asiatic Society to the Chinese Minister, who will leave Japan shortly for home.

AN application by Mr. Yamamoto Hiroshi for permission to establish a private bank under the name of the Yamamoto Ginko, with a capital of yen 30,000, at Horidomecho, Nihonbashi, has been granted by the Tokyo City Government.

AN outbreak of fire took place on the night of the 23rd instant, in a house at Nouchimura, Higashitsugaru-gun, Aomori Prefecture, and sixteen houses were reduced to ashes before the flames could be subdued.

THE Jiji Tsushinsha (Newspaper Correspondence Company) was suspended on the 24th inst. by the Authorities, pending the examination of several of its officers at the Tokyo District Court on a charge of embezzlement.

A STATEMENT showing the settled accounts of the Government for the 19th fiscal year was promulgated on the 22nd inst. over the signatures of Counts Yamagata and Matsukata, by Imperial Ordinance No. 274.

ON learning of the death of the King of the Netherlands, Viscount Okabe, Vice-Minister for Foreign Affairs, and Mr. Anenokoji, a private secretary of the Minister of State for Foreign Affairs, paid a visit to the Dutch Legation.

THE Sanitary Bureau in the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic up to the 22nd instant, was 44,502, resulting in 31,012 deaths.

THE first session of the Diet was opened on the 25th instant, at 9 a.m. In the House of Peers there were 38 absentees; in the House of Representatives only 8. After a sitting of twelve hours the House of Representatives chose three members to be submitted to the Emperor for nomination to the post of President, and three for the post of Vice-President. His Ma-

jestly nominated Mr. Nakajima Nobuyuki to the former office, and Mr. Tsuda Mamichi to the latter.

MR. ODAGIRI MASUNOSUKE, clerk of the Japanese Consulate at Jinsen, was appointed secretary of the Japanese Legation at Seoul on the 17th instant.

PROFESSOR NAKASAWA IWATA, of the College of Engineering in the Imperial University, was relieved from his additional appointment of a Judge in the Patents Bureau of the Agricultural and Commercial Department on the 20th inst. at his own request.

MR. ASADA, Governor of Kanagawa, Mr. Tanuma, Secretary, Mr. Mitsuhashi, Councillor of the Kanagawa Kencho, and the members of the Kanagawa Local Assembly, numbering about thirty, met at the Chitoseru, Yokohama, on the 20th instant at a social entertainment.

INDEPENDENT, Constitutional-Liberal and Constitutional-Progressive members of the Lower House to the number of about twenty held a conference on the 21st instant at the Atagokan, for the purpose of discussing the provisional rules of the House.

A DAILY newspaper bearing the name of the *Toyo Shimpō (Oriental News)* will be published on and after the 28th instant, at Owaricho, Kyobashi. The new journal being the organ of the *Kokumin Jiyu* party, Messrs. Yasuoka Yukichi, Suga Ryohio and Ayai Takeo will become editors.

THE ordinary Cabinet meeting was held on the 21st instant. The proceedings opened at eleven in the forenoon, when there were present Counts Yamagata, Saigo, Yamada, Matsukata, Oyama, and Goto. Viscounts Kabayama and Aoki, and Messrs. Mutsu and Yoshikawa, closing at half-past three in the afternoon.

RESIDENTS of Fukushima Prefecture to the number of a hundred and fifty applied to the Minister of State for Justice, on the 22nd inst. asking that those persons who are now in prison for being concerned in the Kabasan affair should be pardoned on the opening day of the Imperial Diet.

A FAREWELL entertainment was given on the 22nd instant at the French Legation to Mr. B. Bedont, secretary, and Capt. Bouguin, attaché of the Legation, who are about to leave Japan for home. Viscount Aoki, Minister of State for Foreign Affairs, and several high officials of the Foreign Department were among the guests.

THE daily average quantity of rice that changed hands in the Tokyo Rice Exchange during the first half of the present month was 46,676 *koku* (one *koku* = 2½ piculs), showing an increase of 883 *koku* as compared with the daily average quantity dealt in during the same period last month. The daily average quantities of rice that arrived at, and were sent from the Fuku-gawa Granaries during the first half of this month were 9,439 bales and 9,615 bales respectively, the quantities remaining in stock at the close of each day averaging 153,935.

THE Japanese holidays have brought business to a complete standstill on the import side, and the past week has been all but a blank. Very small sales of English Yarns and Bombays have taken place. Metals have been dull, and in Kerosene nothing has been doing. The same remark applies to the Sugar market. The Raw Silk market has been strong and active, and prices have been maintained at last week's figures. In Waste a large business has been done, the produce going chiefly to Switzerland. Exchange has been very unsteady.

EDITORIAL NOTES.

THE OPENING OF THE DIET.

THE *Mainichi Shimbun* says that police preparations on an extensive scale will be made for the opening of the Diet, by which we understand the day of the official opening by the Emperor. Thirty constables will be stationed inside the enclosure of the Diet and one hundred and eight outside, in addition to which force there will be a large number of gendarmes. Exceptional measures will also be adopted with regard to traffic. No one will be permitted on any pretence to keep a carriage, horse, or *jinrikisha* standing within the enclosure: all vehicles must be left outside. Throughout the whole district within Atarashi-bashi, Tora-nomon, and Saiwai-bashi, traffic will be temporarily stopped, and the utmost vigilance will be exercised to preserve perfect order and quiet. The crowd is expected to be immense, and the credit of the Tokyo Police is concerned in guarding against accident or disturbance.

On Tuesday the members of Parliament assembled for the first time in their places. The opening of the first really constitutional body of legislators ever called together in Japan, was of course regarded as a great event, and from an early hour in the morning crowds of sight-seers began to congregate in the neighbourhood of the Diet. As usual, however, these inquisitive folks were perfectly orderly. Those assembled opposite the main entrance consented cheerfully to be marshalled in the form of a five or six deep phalanx by the police, and to remain placidly in their ranks, with eyes fixed, for the most part, on the parliamentary buildings and their enclosure, as though they expected the legislative wisdom collected there to take concrete form and rejoice the populace by some striking demonstrations. The weather, perhaps, counted for something in the affair, the day being lovely enough to tempt people out of doors simply for the sake of basking in the autumnal sun. Nine o'clock was the hour fixed for commencing proceedings, but the Japanese being proverbially addicted to anticipating ordained times, a large number of the members entered the building long before that hour, and took their seats under the guidance of the secretaries and clerks. Vehicles were not permitted to remain inside the enclosure, where a considerable force of police was posted. The result of this arrangement was that the sunny sides of the streets surrounding the buildings were lined throughout the entire length by *jinrikisha*—all of them private vehicles, resplendent in black lacquer and mazarin-blue velvet, and aggregating no less a figure than four hundred and forty-one. Carriages were relegated to the wide space between the compound of the Russian Legation and the westerly face of the Diet. Here some seventy of these vehicles stood, not seriously interrupting the traffic, but still forming a motley mass which cannot but have offended the instincts of the police. Doubtless when the official opening of the Diet has taken place and everything is in working order, the conveyances of the members will be allowed to wait inside the enclosure, where a certain amount of shelter is provided for them. It had been predicted by some gloomy folks that this opening day would be made the occasion for a demonstration of some kind by the *soshi*, of whom a considerable number are said to be assembled in the capital. Judging from the abundance of constables and gendarmes stationed within the enclosure and in the vicinity of the Diet, the police were not unprepared for something of the kind, but no *soshi* put in an appearance, and thoroughly good order reigned from first to last. It will be perceived that we speak only of what took place outside the Diet. Concerning the proceedings inside we cannot give any accurate information, as they were of a strictly private character. The officials hold, rightly we think, that until the Diet shall have been duly organised and publicly opened by the Emperor, admission to its Chambers must be denied to outsiders. To

Parliament itself belongs the right of deciding who shall and who shall not have access to its debates, and it is plain that until the President and Vice-President of the House of Representatives are elected and nominated, and until the Sovereign himself announces the opening of the Diet, no proper exercise of that right can take place. Curious folk would have greatly valued the privilege of watching the members take their places for the first time, and address themselves to the discharge of the onerous functions devolving on them as the national representatives. But this was not to be. The preliminary formalities have been performed with closed doors, and before the day fixed for the official opening, everything will doubtless be in excellent order. Judging by external appearances, we should say that in a very short time Tokyo will settle down quietly to the presence of the Diet in its midst, and the Diet itself will fall into harness in a placid and dignified manner. The business to be discharged on the first day was the election of three candidates for the post of President and three for that of Vice-President, which names had to be submitted to the Emperor in order that his Majesty might nominate one for each office. The Rules provide that in the election of these officers at least one-half of the members present must vote for a candidate in order to render him eligible. In the first ballots taken the House failed to comply with this rule, and divided its votes among ten candidates in numbers varying from 131 to 37. It became necessary therefore to take a second ballot for each of the three names at the top of the list, and the final result was that Mr. Nakashima Nobuyuki obtained 161 votes; Mr. Tsuda Mamichi 158, and Mr. Matsuda Masahisa 153. It is generally supposed that the Emperor will be guided in his nomination entirely by the result of the voting, in which event Mr. Nakashima will receive the coveted but difficult post. Mr. Nakashima is a well known politician of the Constitutional Liberal Party. He used always to be closely associated with Count Itagaki, but of late he has separated himself from active party politics, and his comparatively neutral attitude is said to have secured many votes, even the members of the *Taisei-kai* (Independent Party) balloting for him. He is a brother-in-law of Mr. Mutsu, Minister of State for Agriculture and Commerce, and in former years he served as Governor of Kanagawa, for one of the districts of which he sits in the House. It is a remarkable fact that he professes, and is a staunch disciple of, Christianity. At the time of the promulgation of the Peace Preservation Regulations he was expected to be implicated, but we have never heard that anything could be proved against him. Mr. Tsuda, who obtained the second largest number of votes, was put up by the Independents. He is an ex-Senator, and enjoys a considerable reputation as a student of ancient Japanese literature. The third candidate, Mr. Matsuda, is not well known in Tokyo, but his celebrity in Kiushu is said to have been very considerable when he acted as leader of the former *Kiushu Shimpō-to* (Kiushu Progressionists). With regard to the members chosen for the post of Vice-President we cannot speak, as the elections were not concluded in time for any evening publication.

The first day of the Diet's session was not uneventful, although the character of the business to be transacted did not present much scope for discussion. The Houses met at 9 in the forenoon, and proceeded at once to the programme of the day. In the Upper House Count Ito, the President, called the attention of the members to the provision of the Constitution which requires that the House shall be divided into Sections by lot, and that in each Section a Chief (*Bucho*) and a Director (*Riji*) shall be elected by and from among the members of the Section. In order to comply with this provision, the Count suggested that after the drawing of lots, the various Sections should retire to their rooms, and having appointed the oldest of their members to act as temporary Chiefs, should proceed

to elect permanent Chiefs and Directors, returning to the Chamber and reporting their decisions at the close of the elections. This suggestion was complied with, the result being that the following Chiefs and Directors of Sections were elected:—

SECTION.	CHIEFS.	DIRECTORS.
First.....	Marquis Asano.....	Viscount Nabeshima,
Second.....	Mr. Itami Shigekata.....	Baron Ozawa,
Third.....	Baron Honda (I hikao).....	Baron Shimozu,
Fourth.....	Viscount Kiyo-oka (Kocho).....	Mr. Watanabe Ki,
Fifth.....	Viscount Tani (Tateki).....	Mr. Aoyama Ichi,
Sixth.....	Viscount Hayashi.....	Mr. Ito Mitsuji,
Seventh.....	Baron Senke.....	Viscount Matsudaira
		(Nobumasa),
Eighth.....	Mr. Hosokawa Junjirō.....	Viscount Kageyuki,
Ninth.....	Viscount Torio.....	Mr. Murata Lamoto,

In the House of Representatives 292 members out of the total number of 300 had assembled by 9 a.m., the hour appointed for the opening. The chief Secretary, Mr. Sone, acted as President, and rising in his place immediately after the clock had struck nine, informed the members that their first business was to choose three names to be submitted to the Emperor, in order that His Majesty might nominate a President from among them, and three names for the office of Vice-President. As, however, a detailed method of procedure was not laid down in the Rules of the House, he wished to take the opinion of the members on one or two points. The first was that the election should commence without debate. Thereupon Mr. Suyehiro rose and made the first speech ever delivered in a Japanese Constitutional assembly. It was a very brief speech; merely a suggestion that instead of requiring each member to come for a voting paper to the President's table, the voting papers should be distributed among them, and they should fill in the names in their places. This idea was unanimously approved, and the acting President then propounded his second query, namely, whether in the event of more than three names being written on a ballot-paper, it would not be advisable to take the first three only and reject the rest; and whether, again, if less than three names were recorded, the informality should not be disregarded and the names taken as they stood. Mr. Tanaka was of opinion that a paper containing less than three names should be considered informal, but the House adopted the acting President's suggestion. A further point was made by the acting President with regard to the use of *kun* (Japanese pronunciation) or *on* (Chinese pronunciation) in reading the names written on balloting papers, but this was quickly settled. At this stage the first approach to a scene occurred. Mr. Suyematsu Saburo rose to say that he had some remarks to offer concerning the prerogatives of the members, whereupon the acting President informed him that unless what he wished to say had direct reference to the business of election then before the House, he could not be heard. This ruling was greeted with cries of "hear," and Mr. Suyematsu, with warmth, enquired, first whether the acting President had authority to prevent a member from speaking, and secondly whether the employment of a foreign language within the walls of the House, as in the case of these cries of "hear, hear" ought to be permitted. He obtained no support, however, and his queries remained unanswered. Mr. Inouye Kakugoro now rose, and promising that his remarks had direct reference to the business of election, began to quote the provisions of the Constitution bearing on the privileges of members, and to apply them to the case of Mr. Mori Tokinosuke, who lies in prison charged with misapplying or embezzling property placed in his trust. Mr. Inouye was interrupted in the middle of his speech by the acting President, who ruled him out of order. He attempted to dispute the ruling, but finding the President firm, desisted. Mr. Suyematsu Kencho then pointed out that considerable difficulty might be experienced in carrying out the rule that each of the three candidates submitted for the post of President must obtain a majority of the whole House's votes. He proposed that this rule should be amended so as to read that the candidates obtaining the greatest number of votes should be eligible. The acting President explained that the rule in question had been enacted by Imperial Ordinance, and that the

House was not competent to amend it at that time. Mr. Itakura next proposed that four or five members should assist at the opening of the ballots. He explained that while not desiring to throw any imputation on the integrity of the Secretaries, it seemed desirable to adopt the course suggested by him. The acting President took the sense of the House on this question, but Mr. Itakura found no supporters. The business of balloting for President was then proceeded with, the first ballot resulting as follows:—Mr. Nakajima Nobuyuki, 134 votes; Mr. Tsuda Mamichi, 112 votes; Mr. Kono Hiro-naka, 102 votes; Mr. Kusumoto Masataka, 84 votes; Mr. Yoshino Seikei, 81 votes, and Mr. Matsuda Masahisa, 66 votes. As none of these had obtained the necessary number of votes, a second ballot was taken, when Mr. Nakajima received 161 votes and Mr. Tsuda, 158, but as the two next in order, Messrs. Kusumoto and Matsuda, had only 138 and 111 votes respectively, a third ballot was taken to fill the vacant place on the list of recommendations for the Emperor's approval. Mr. Tsuda was finally successful, obtaining 152 votes.

It was when the House proceeded to choose three names for the post of Vice-President that its troubles began in earnest. No less than six ballots had to be taken before the list could be filled. The first ballot resulted in the following manner:—Mr. Yoshino Seikei (100); Mr. Shimada Saburo (96); Mr. Tsuda Mamichi (87); Mr. Kusumoto Masataka (83), and Mr. Matsuda Masahisa (46). A second ballot was thereupon taken, and then a third, but still no candidate was found to have received the necessary number of votes. In the case of the President's election the Independents (*Tai-sei-ka*) had voted with the Constitutional Liberals, but the latter did not show similar readiness to support the former's candidate, Mr. Tsuda, for the Vice-Presidency. The third ballot having proved abortive, Mr. Tanaka Tetsujiro proposed that as there seemed to be no chance of coming to an agreement, the three names standing at the head of the list should be submitted to the Emperor as the House's choice. To this Mr. Okayama Ken-ichi objected as a violation of the Rules, and proposed that the House should petition for an amendment of the Rules. Several members rose, however, to call for another ballot, and Mr. Suyematsu Saburo suggested that, if a few minutes recess were taken, an agreement might be come to. Mr. Suyematsu Kencho proposed that if the next ballot did not result in the requisite aggregation of votes, the candidates at the head of the list should be submitted as the House's choice, without further query. The acting President also advocated a recess of fifteen minutes, accompanying his proposal with a remark that a little rest would probably serve to cool the members' heads, against which manner of speech Mr. Tanaka Shozo protested loudly. The House having declined to take a recess, the acting President called for a vote about the proposal of Mr. Suyematsu Kencho, whereupon a commotion took place, several members expressing astonishment that whereas the acting President had refused to entertain a proposal made in the forenoon for an amendment of the Rules, he was now willing to put to the vote a proposition which practically ignored the rules. Others urged that the proposal of Mr. Suyematsu did not involve any amendment of the Rules, but was merely directed to supplying a deficiency in them. An hour was wasted over this discussion, but the acting President patiently awaited its conclusion and then summoned the House to hold a fourth ballot, which resulted in Mr. Tsuda's obtaining 169 votes, while the next five on the list, Messrs. Yoshino, Kusumoto, Matsuda, Kono, and Shimada obtained 135, 129, 117, 113, and 67 respectively. Two more ballots were necessary, the first of which gave Mr. Kusumoto 171 votes, and the second gave Mr. Yoshino 141. The names of both of these gentlemen were sent forward, from which we presume that several of the members having left the House before the last ballot was taken

141 votes represented more than one half of those present. The sitting ended at nine o'clock in the evening. No recess had been taken, and the acting President had remained in his place during the whole twelve hours.

NEWSPAPER REPORTERS AT THE OPENING OF THE DIET.

We read in the *Yiji Shimpō* that ten provincial newspapers will be allowed to send reporters to the official opening of the Diet. The names of the gentlemen who are to represent these journals have been sent in, and the names of the journals themselves are the *Chiugai Dempo*, the *Kochi Nippo*, the *Chinsei Nippo*, the *Osaka Mainichi Shimbun*, the *On Nichi Nichi Shimbun*, the *Fukushima Shimbun*, the *Osaka Asahi Shimbun*, the *Shizuoka Taiyu*, the *Kobe Yushin Nippo*, and the *Nemuro Shimbun*.

OFFICIAL OPENING OF THE DIET.

The following Imperial Rescript has been published:—

In pursuance of Article VII. of the Imperial Constitution and Article V. of the Law of the Houses, We order that the Imperial Diet be opened on the 29th day of the present 11th month.

[His Imperial Majesty's Sign-Manual.]

[Great Seal.]

Dated the 27th day of the 11th month of the 23rd year of Meiji.

(Countersigned) The Ministers of State.

THE TONIC OF TREATY REVISION.

TREATY REVISION has certainly acted as an invaluable tonic to Japan, inspiring fresh vigour of reform and supplying a constant incentive to moral and material progress. Its latest influence is to be exercised, apparently, on the Diet. The *Koko Shimbun*, basing its remarks on an erroneous rumour that none of the Western Governments have yet replied to Japan's last proposals for Treaty Revision, says:—"The reason of this reticence is not far to seek. The various Foreign Powers are watching the result of the parliamentary experiment which Japan is about to make. It is true that, from a superficial point of view, Japan has now an excellent constitution and fine law codes; that Christianity is spreading among her people; that she freely employs the products of Occidental civilization; that her educational system is good, and that rapid progress is the prominent feature of her modern history. But one question remains still to be answered, namely, whether her people are competent to exercise the privileges of freedom, and to bear the responsibilities of representative government. This is the problem for the practical solution of which Western Governments are waiting. When it is solved, then they will take action with regard to Treaty Revision. Evidently therefore the Diet, which is to meet on the 25th instant, will exercise a powerful influence on Japan's foreign relations. It will be the duty of the members to keep this fact in view, and to take care that their proceedings do not injure the national reputation."

* * *

It is decidedly reassuring to find such language in the columns of one of the principal organs of the Constitutional Liberals, for on their action will chiefly depend the character of the Diet's proceedings. They represent the Opposition, and it rests with the Opposition to decide whether the business of the House shall proceed with moderation and order, or be interrupted by unreason and intemperance. The *Koko Shimbun* is wrong, as we have said, in supposing that Western States have refrained from giving any reply to Japan's proposals, and therefore wrong also in the inference that they are restrained by a desire to witness the results of her parliamentary experiment. But it is none the less certain that the eyes of the world are fixed upon this experiment, and that Japan's national capacity will be gauged by its success or failure. Critics will not make much allowance for the fact that she is absolutely inexperienced in the methods of constitutional government. They will say that if she was not prepared for the experiment she should

have postponed it, and they will measure the results by the same standard, approximately, that they apply to themselves. We are therefore on the eve of a momentous epoch in Japan's career, and efforts such as those made by the *Koko Shimbun* to secure her against discredit are very welcome and timely.

JAPANESE COSTUME.

SAYS the *Nippon* in its issue of the 17th inst.:—During the absence of Iwakura and his mission in Europe, General Saigo and other leading men incurred in no small degree the disapproval of their colleagues in consequence of their decision to substitute for the national costume of the country the style of clothing worn by Europeans and Americans. Count Inouye also, during his tenure of office as Minister for Foreign Affairs, showed his leaning towards alteration in our manners and customs, and advocated the adoption of the foreign system. Whether Count Inouye and General Saigo were actuated by a similar motive, we are not in a position to say, but we fancy that the latter and other army men were guided by the evident superiority of short sleeves and narrow trousers from a military point of view, which in their eyes was of more moment than the requirements of civil etiquette and ceremonies. Undoubtedly foreign dress is especially suited to the soldier, offering as it does every facility for prompt and rapid movement, but this recommendation can have little effect in respect of court ceremonies. We cannot blame military statesmen for looking at the question from their particular standpoint, though it may be suggested that their civil subordinates should have laid before them the other side of the case. These same civil officers, however, having no doubt heard how Ikeda Chikugo-no-Kami and his attendants were inconvenienced in their movements about Paris by their adherence to the Japanese fashion, and how embarrassed the present Count Katsu was when he had to sit down at table in a foreign steamer in his ceremonial dress, were probably themselves most strongly impressed by a sense of the unfitness for modern conditions of the dress of the Tokugawa period. Though foreign costume has since been formally declared the official dress, and has been worn without remark, a style of attire which seems highly suitable to ceremonial occasions has gradually come into use within the last twenty years. We mean the *haori* and *hakama*. This was the costume ordinarily worn by the better classes, and allowable also on the part of farmers and other civilians, under the Tokugawas, but the cut of the *hakama* has been greatly improved, and the colour of the *haori* definitely settled since the Restoration. In its present form the dress has an agreeable and dignified appearance, and as it is fitted to the habits and customs of our countrymen, and combines elegance with convenience, we hope to see its use become even more general. It is not surprising to find that many persons object to the regulations of the Diet, which prescribe evening dress for ceremonial occasions and ordinary European dress at other times, and are agitating for the adoption of the *haori* and *hakama*. To this exposition of the views of *Nippon* it may be added that the *Choya Shimbun* has written on the same subject and in a similar strain.

A MEDICAL REPORT FROM NINGPO.

IN a report of the Haomeng-fong Hospital at Ningpo, Dr. Daly, as quoted by the *North China Daily News*, writes:—"We have had many opportunities of improving our dental surgery. Chinese teeth are much easier to extract than those of Europeans. In connection with this it may be interesting to mention that the native dentist, possess some wonderful powder, which I have in vain tried to procure. The powers of this are said to be marvellous; it is rubbed on the gum, and after an interval of 3 to 5 minutes the patient is told to sneeze, when out drops the offending tooth. I have offered a reward of \$100 to any one who will bring about such a brilliant result in my presence, on

the condition that I choose the tooth, and am allowed to examine the mouth before and afterwards. No one will submit to such conditions. I trust that some of the doctors in other parts of China will be more successful than I have been in the search for this powder, for whoever gives to suffering humanity a remedy to save them the agony and dreaded sensation of having a huge instrument rammed up forcibly into apparently the middle of one's head, followed by the feeling of having one's head pulled off, and then being told by a general practitioner that one has most difficult teeth to extract and very brittle—which is the gentle way of saying the tooth is broken, and there needs must be a repetition of the operation—will deserve to have his name handed down to posterity as one of the greatest benefactors to the human race." Dr. Daly also says:—"We admitted nine patients suffering from bullet wounds inflicted in nearly all cases by pirates who infest the neighbouring seas and islands. These men are armed with foreign weapons; the bullets are large, but make clean, healthy wounds (*sic*). Foreigners who visit the islands in this neighbourhood ought to be on their guard against such visitors."

COUNT YAMAGATA ON MINISTERIAL RESPONSIBILITY.

A CERTAIN member of the Upper House, having enquired Count Yamagata's opinion about the responsibility of Cabinet Ministers, the Count is reported by the *Fuyu Shinbun* to have replied as follows:—"Various views are held by the public about the responsibility of Cabinet Ministers. The popular idea now prevalent among party politicians is that in a constitutional State the Cabinet should be responsible not to the Sovereign alone but also to the Diet. I do not share that view. If the Cabinet is responsible to the Diet, it is impossible for the Government to have a fixed policy. Changes of Cabinet would be matters of frequent occurrence, and national mistakes would be almost inevitable. Popular controversialists, for the most part, fix their eyes on Western systems, and advocate heroic changes without due regard to their country's national instincts and traditions. I sincerely hope that the members of the Upper House will not lend their countenance to such rashness, or be led away by the opinions prevailing among political agitators."

A NEWS AGENCY AND ITS TROUBLES.

WITHIN the past few days the *Tokyo Koron* has published three items about a news agency called the *Fiji Tsushinsha*, in which the Minister President of State is said, by the purveyors of the items, to be interested. The first piece of news was to the effect that the Agency, finding itself no longer in need of official aid, had asserted its independence, and by so doing had provoked the anger of Count Yamagata, the result being that instructions were given to pay off the proprietor of the agency, dismiss the employés, and reorganise the affair under a new staff. This story passed unnoticed, and was followed, on the 18th instant, by another more detailed narration. This time the trouble with the Agency was attributed to the fact that information about the Cabinet, given directly to Mr. Okabe, the Manager, had been indiscreetly communicated by him to the press, and that when a complaint about this was made to Mr. Masuda Takashi, the proprietor, he declared himself unable to take any action on account of an agreement into which he had entered with the previous Manager of the Agency, and signified that the only course open was to sever the Agency's official connexion. This was done, but after a time a desire to renew relations manifested itself on the official side, and as the Manager of the Agency turned a deaf ear, there was talk of forbidding the various Departments to furnish any information to the reporters of the Agency. It being plain, however, that the whole question turned upon the disposition of the Manager, pressure was brought to induce Mr. Okabe to resign, which he ultimately did, Mr. Fukushima Gizo being appointed in his

stead. But as Mr. Fukushima's appointment did not have Mr. Okabe's assent, a condition stipulated between the latter and the proprietor, the employés rebelled, and it was found necessary to replace Mr. Fukushima by Mr. Takatsugi Chikayoshi. All this was related in the *Tokyo Koron* of the 18th instant avowedly on the authority of the Agency itself, and a prediction was added that further trouble between Count Yamagata and the Agency was inevitable. The next day, however, the Manager of the Agency wrote to say that no such story had been furnished by the Agency, the intelligence sent from it having been confined to a bare statement of the change in the Managership. Thereupon the *Tokyo Koron* instituted enquiries, which revealed the fact that the narrative of the 18th had come from Mr. Okabe's party, in the name of the Agency, and that its columns had in fact been made a vehicle for ventilating private pique. Determined not to be deceived a second time, the *Koron* adds that the contradiction comes from the opponents of Mr. Okabe, namely, the genuine staff of the *Fiji Tsushinsha*. We mention the incident, because it seems to show that happily the business of collecting journalistic news in Japan is beginning to receive the attention it deserves. Certainly during the present year a great improvement has been observable in the quality of the news published by the Tokyo dailies.

THE OLD DELUSION.

THE strange idea entertained by some people as to the incidence of tariff dues crops up again in the following, which we translate from *Nippon*:—"Every day that the present tariff remains unrevised is a day's loss. For many years revision has not been accomplished, and an undue advantage has thus been conferred on foreigners. Revision ought to be effected immediately. The date when the former treaty became subject to revision is now nearly twenty years old. Is this because the strength of the country has not been sufficiently developed, or is it because the nation does not exert itself thoroughly? Our Government, with the view of recovering its tariff autonomy, formerly opened negotiations with the Treaty Powers, whereupon the American Government agreed to a revised treaty of ten articles, abolishing all the clauses relating to customs dues and other taxes in the present treaties and in the accompanying Tariff Regulations; cancelling also the Tariff Convention and Bonded Warehouse Regulations made by the Bakufu with America, Holland, England, and France, and restoring to Japan full tariff autonomy. In April, 1881, ratifications of this new treaty were exchanged in Washington. This was the first achievement of the Meiji Government in respect of treaty making. If it had been possible to conclude similar treaties with other Powers, and to put them as well as the Washington Treaty into force, the profit to Japan by this time would have been very great. It is much to be regretted that such a result has not yet been achieved."

* * *

We may remark, *en passant*, that the *Nippon* is slightly mistaken in its assertion that the Washington Revised Treaty was the Meiji Government's first essay at treaty-making. The first essay was the Austro-Hungarian Treaty of 1869, the most unfavourable compact for herself ever entered into by Japan with any foreign State. This by the way, however. The main point is our contemporary's assertion that every day's delay in increasing the import duties is a day's loss to Japan; that if they had been increased long ago she would have gained largely, and that the failure to increase them confers an undue advantage on foreigners. Who then is to pay the increased import duties? Surely the *Nippon* is not so completely in the dark as to suppose that foreign manufacturers or foreign importers are going to pay them. The Japanese consumer will pay every *sen* of them. No one else will take any part in the operation. Increased import duties simply mean that the Japanese who purchase imported goods must either give up doing so altogether, or consent to defray the additional cost resulting from the

added import. Foreigners will suffer only in the event of the bulk of the trade being reduced by the higher tariff. But in that case the Japanese themselves would suffer equally. It is no doubt very patriotic of the *Nippon* to lament that another source of revenue is not provided for the Government, but the notion that the Treasury's additional receipts, or even the smallest fraction of them, would come out of foreigners' pockets, is singularly erroneous.

HOW TO PREVENT A PANIC.

In its recent numbers, the *Koku-Hon* devotes several articles to the discussion of the unfavourable condition of the country's foreign trade, and to suggesting measures for the prevention of the panic which now threatens the commercial world. After noting that although the plentiful harvest of rice gives hopes of the advent of better times, things in the financial world have come to a difficult pass and the immediate outlook is decidedly gloomy, our contemporary gives the following table, showing the monthly balance of trade from January to September last, inclusive:—

Month.	Excess of Imports over Exports in Merchandise. Yen.	Excess of Exports over Imports in Specie. Yen.
January	724,315	423,712
February	1,487,866	709,480
March	2,938,831	1,678,453
April	3,780,626	1,034,567
May	2,838,260	209,482
June	2,451,487	594,405
July	3,598,957	1,300,028
August	4,454,425	2,943,194
September	3,108,748	1,411,280

Total 25,383,535 10,305,607

The withdrawal of so much money from the country at a time when it has only lately established a system of specie payments, cannot, we are told, fail to be injurious to industrial development and to the smooth conduct of business transactions. According to the latest weekly official report of convertible notes issued by the *Nippon Ginko*, the total amount of such notes in circulation at the time when the *Koku-Hon* wrote, was 69,510,574 yen, and the amount of the reserve in specie and bullion was 43,865,094 yen. The amount of specie in the vaults of the Bank of Japan was said to be less than the amount for the corresponding period of last year by as much as 8,670,000 yen; which circumstance is quoted by our contemporary as one of the results of the unfavourable state of foreign trade during the present year. The specie which the country has lost during the above mentioned nine months—25,383,535 yen—represents 57½ per cent. of the reserve in the *Nippon Ginko*, and 36½ per cent. of the convertible notes in circulation. Such a state of affairs must necessarily produce great disturbance in the financial world. The *Koku-Hon* then goes on to state more particularly the difficulties in which the silk merchants find themselves. Unlike the *Keisai Zasshi*, it approves the measure taken by the Bank of Japan and the Specie Bank in advancing money to the dealers at a low rate of interest, for it is owing to the timely help given by these Banks that the much dreaded panic has not yet overtaken the business world. But has the panic been completely averted? Our contemporary answers in the negative. The interval between the present time and the beginning of March next is the most important period of the year from a financial point of view, for it is during that interval that the annual settling of accounts takes place in the capital and the provinces (in the latter the date of settling is regulated by the old calendar). During the same interval, provincial merchants lay in their stocks of goods for the coming year; dealers in the capital and the large towns make payments to local producers and manufacturers; *saké* brewers purchase rice, and the fourth instalment of the national taxes has to be paid in. An immense quantity of money being required for these various purposes during the coming few months, the Tokyo journal urges that exceptional care should be taken by financiers to secure the distribution of funds in such a man-

ner that the difficulty of attaining money may not lead to a general panic in the commercial world. As to the mode of attaining such a result, our contemporary suggests that works of all kinds already determined upon should be, if possible, commenced at once; that such portions of the public loans as are to be redeemed within the present year should be redeemed as soon as possible; that any loans to be newly raised should be deferred for some months; that the Bank of Japan should be permitted to issue convertible notes to the maximum limits authorized by law; and that the same bank should be allowed to open its treasury and supply, as far as possible, the wants of provincial banks. Such in brief is the outline of our contemporary's writing on this subject.

THE CAPITAL OF THE JAPAN MAIL STEAMSHIP COMPANY.

THE *Official Gazette* of the 20th instant contained an announcement that the second article of the Japan Mail Steamship Company's charter should be amended to read as follows:—

The capital of the Company shall be ten million seven hundred and fifty thousand yen, divided into two hundred and fifty thousand shares. Further, the capital may be hereafter increased or diminished on application by the Company, or at the discretion of the Government.

This announcement has caused some surprise. People wondered that such a trivial matter as the reduction of the Company's capital from eleven million yen to ten million seven hundred and fifty thousand should have been thought worthy of official intimation. But the truth is that the official announcement embodies a principle, not a mere isolated fact. When the *Kyodo Unyu Kaisha* and the *Mitsui Bishi Kaisha* were combined to form the *Nippon Yusen Kaisha*, the capital of the united concerns was fixed at eleven million yen; a figure well understood to be considerably in excess of the actual value of the assets, which was estimated at seven or eight million yen. Since that time the Company has paid off all its debts and added to its fleet, yet its property is still below the nominal value. Such a state of affairs is, of course, unwelcome to business men, and the project of reducing the capital to a *bona fide* figure has long been earnestly entertained. Eight million eight hundred thousand yen has been fixed as the nearest approximation to the true value of the fleet and other assets, and with the view of reaching that figure, arrangements have been made for the gradual purchase and amortization of the Company's shares whenever surplus income justifies such a course. The first step has now been made by the purchase of five thousand shares, which are accordingly amortized, the total number of shares standing in the Company's name being thus reduced to two hundred and fifteen thousand. It is this first step and subsequent applications of the same principle that receive publicity and sanction in the *Official Gazette* of the 20th instant.

PROVINCIAL NEWS.

It is reported from the province of Hōki that the inhabitants are exercised about the question of amalgamating the prefecture of Tottori, under which they live, with the prefecture of Shimane. The people of that province have long been desirous of being brought under the rule of the last mentioned local Government. Their present Prefectural Government is situated at Tottori, which is far more distant and more inconvenient to approach than the town of Matsuyama, the seat of the Government of the prefecture with which they wish to be amalgamated. The local newspapers take up the question with great enthusiasm, and the people will, it is said, soon appoint a number of delegates to memorialize the Authorities in the capital.

The people of the province of Iwami in the prefecture of Shimane, are, on the other hand, reported to be desirous of joining the neighbouring Prefecture of Hiroshima. Their delegates came up to Tokyo some time ago, and it was even rumoured that the matter had been referred by the Cabinet to the Senate, and that

the latter had decided in favour of the Iwami folks. This rumour has not yet been confirmed, but there is no doubt that something must be done to satisfy the inhabitants of Iwami and Hōki.

On the 10th instant, the Prefectural Government of Akita was visited by a crowd of rustics numbering nearly five hundred. When they arrived at the gate of the Government building, the day had scarcely dawned, and the porter was rudely roused from his slumbers by the extraordinary noise in the street. The Governor, Mr. Suzuki, speedily appeared on the scene, and demanded the object of this unusual visit. The agitators behaved very well, but it being inconvenient to talk with such a large number of people, a few delegates were appointed on the spot to represent the general view to the Governor. From them it was learned that the five hundred early risers were inhabitants of certain villages, which, for the purpose of carrying out the new system of local government in *gun*, were to be separated from the Rural Division to which they had hitherto belonged and to be amalgamated with a new one. The villagers, entirely opposed to this measure, had come to acquaint the Governor with what they held to be the true aspect of affairs. They soon withdrew, leaving their delegates to see to the accomplishment of their object. A few of the delegates were arrested on the charge of having committed illegal acts, but were quickly set free.

The formation of a conservative party of considerable activity is reported from Matsunoto in the province of Shinano. The most conspicuous promoter of the movement seems to be a certain Mr. Nakamura Daihachiro. Some members of the Local Assembly and leading inhabitants of the neighbourhood are said to be enthusiastic supporters of the scheme. The promoters are making a lecture tour through the province, and they are said to have already gained a considerable number of followers.

It is curious to read the accounts of such agitation as that reported from Hōki, Iwami, Shimane, and Akita, and to contrast them with the idea prevalent among foreigners that the middle and lower classes of the Japanese are down-trodden, submissive folks who never dream of asserting themselves against the Authorities. If such a subservient spirit existed formerly in Japan, a very few years of modern education have sufficed to eradicate it.

THE FRENCH PRINCES.

Our San Francisco correspondent, in his last letter, alludes to a point which has attracted considerable, and in some respects unaccountable, attention. We mean the recent visit of the Comte de Paris to the United States, and the enthusiastic welcome given to him. It appears to have been thought that this welcome had something of an official character, and not only the French Government but also the European public in general attached to the event an importance which it scarcely seems to have deserved. It has been forgotten, apparently, what a characteristic and chivalrous part the Comte de Paris and the Duc de Chartres played at the time of the great War of Secession. These two Princes repaired to the United States just about the epoch when things looked blackest for the Northern cause, and offering their services as unpaid volunteers, were assigned to duty as military attachés on the staff of General McClellan when that distinguished captain was engaged in the organization of the Grand Army. Of the manner of service rendered by the young Princes abundant evidence may be found in the records of the war. They did their duty bravely and efficiently, and were always ready to obey any command whatever peril its execution involved. In the ranks of the Northern forces no names were better known than those of Captain Plon and Captain Chaffers, as they were familiarly called, and nothing could be more natural than that

the Comte de Paris, revisiting the United States twenty-five years after the never-to-be-forgotten events in which he took so active a share, should receive a hearty welcome. To attribute a political complexion to the reception of a Frenchman who had fought side by side with the soldiers of the North in a war for national existence, appears to us to be slightly hysterical.

FOREIGN TRADE OF THE UNITED KINGDOM.

The first half of the present year, for which the official trade statistics have lately been issued, was especially interesting from a commercial point of view, though it was not in every respect favourable. There was a small decline in the imports, a large increase in the exports of home productions, and a small decline in the re-exports of foreign produce. In imports the total amount reached £206,926,758, against £207,934,188 in the first half of 1889. The decrease is thus £1,007,430, and it is more than sufficiently accounted for by the decline in the receipts of raw materials for manufactures (£2,956,723); of chemicals, dye-stuffs, &c. (£478,325), and of miscellaneous articles (£428,125). These items of decrease make all together £3,863,173, but against them are to be placed large increases in the imports of food products, metals, oils, raw materials for manufactures other than textile, and of manufactured merchandise. At first sight a diminution in the imports of raw textile materials seems to indicate diminished activity in the textile industries. But, in fact, these industries have been very fully employed. The decrease in the imports of raw textiles during the last half-year is fully accounted for by the falling off in the imports of cotton, of which only £20,826,860 worth was received against £23,478,633 in the first half of last year. The decline is due, not to lessened home consumption, but to the fact that English textile manufacturers, especially those engaged in cotton industry, had previously imported to a larger extent than usual the raw materials produced last year. The increase in the exports of home productions is mainly the result of the rise in the prices of coal, iron, and steel which took place during the closing months of 1889. In the first half of last year the exports were £119,409,705. During the corresponding six months of this year they amounted to £127,555,965. The increase this year is £8,146,260. Of this large sum not less than £6,000,000 is due to the greater value of the coal, the iron and steel, and the copper which have been sent to foreign markets. Of copper, for example, the exports in quantity are put down at only 199,805 tons, against 200,258 tons in the first half of 1889. But in values the exports which are stated for the first half of 1889 at only £1,187,269, amounted this year to £2,138,982. The exports of coal amounted in quantity to only 2,586,737 tons, against 2,460,310 tons in the first half of 1889, but the declared value reached £14,277,056, against £13,781,639. Thus the increase of exports during the past six months is chiefly the result of an increase of prices in the coal and iron markets. The exports of textile fabrics, which constitute nearly one-half of the total exports of home productions, show only a small increase. The figures are £54,601,998, against £54,120,246 in the first six months of last year, the increase being only £481,752. This has arisen almost entirely from the greater value of the exports of cotton yarns and piece goods, which, however, is not due to larger exports to India. China has taken larger supplies, but for the most part the increase is accounted for by the greater demand from the smaller foreign markets. Of woollen and worsted manufactures the shipments have declined from £10,123,045 to £9,960,453, in spite of a somewhat increased export to the United States, due largely to the efforts which have been made to get forward supplies for the American markets in anticipation of the higher duties which were expected under the McKinley Tariff Bill.

A NEW MISSION IN JAPAN.

PROBABLY not many of our readers know that the Christian forces of Japan have recently been augmented by representatives of the Universalist

Church of America. So quietly did they come and begin their work that a theological school had been started, several publications translated and a church nearly completed before their presence became generally known. This new mission is in charge of the Rev. G. L. Perin, D.D., Rev. J. W. Calt, and Miss M. C. Schouler, all of Boston. The new church which is being erected at No. 7, Shichome, Iidamachi, Kojimachi-ku, Tokyo, is a two storey wooden structure, in size about 40 ft. by 60 ft. While simple in its arrangement, and by no means the most imposing church in Tokyo, it is to be very neat and commodious, and will rank in these respects with the best churches of the capital. It differs from most of the churches of Japan in having two stories under one roof with the main audience room up stairs. The lower storey is to be divided into eight large rooms by sliding doors. These doors may all be quickly removed at any time, thus making one spacious room for social or other purposes whenever much space may be required. We understand that arrangements are in progress to make these rooms a centre of moral and social industry. Among other things the mission proposes to have a weekly lyceum for the free discussion of all subjects relating to religion and the moral and social life of the people, and a free reading-room open probably nearly every night in the week, thus furnishing a pure place of resort for all who may care to avail themselves of its privileges. This is only one of many Christian missions in Japan, but it is perhaps noteworthy in a few regards. First, it has been wise enough to build conspicuously on a busy and much frequented street in accordance with advice given by competent persons. It has also made a considerable outlay of money in Church property before a congregation has been gathered. It is too early to predict whether this is wise or unwise, but, it does at least manifest some faith in the enterprise. Again, this is the first mission of the Universalist Church in Japan, and considering its theological standpoint there will no doubt be some curiosity as to the results of its work. We understand that the mission has strong backing in America and intends to publish a paper and push its work boldly in various parts of the Empire. This makes the third liberal Christian movement in Japan, the other two being the German Evangelical and the Unitarian. The Tokyo church will be finished soon after the 1st of December.

AN ART MUSEUM IN THE IMPERIAL HOTEL.

THE manager of the Imperial Hotel, Tokyo, has placed two rooms in the easterly wing of the building at the disposal of some of the chief dealers in objects of art in the capital, and steps are now being taken to furnish the rooms with what promises to be a choice collection of new and old curiosities. The modern department is under the direction of Messrs. Nami-kawa and Hayashi Kuhei. The former is the maker of the beautiful enamel with invisible cloisons, now of world-wide fame. The latter in the worker in metals who obtained a gold medal at the recent Industrial Exhibition for his wonderfully elaborate and striking figure of Ranryo. It is needless to say that by such experts as these exceptionally fine specimens of modern Japanese art will be furnished, not only in their own lines, but also in lacquer and ceramics. Already some of the remarkable porcelains of Takemoto and Makuzu are to be seen in the show cases. The chief purveyor of ancient objects of art is Mr. Fukui, of Himono-cho, one of the most skilled and trustworthy experts in Japan. We congratulate the manager on having placed this important department in such hands.

AN ITEM.

THE *Nippon*, always prolific in the matter of personal items, has a note about the proclivities of Counts Ito and Yamagata. As for the former, our contemporary says that his tastes lie in the direction of Chinese literature. This is no news, however. Proficiency in Chinese literature is synonymous with linguistic scholarship in Japan, and it is well known that Count Ito is one of the most accomplished living writers of

his own language. His pen has played a conspicuous part in the legislative history of the past fifteen years, and left indelible traces in the national archives. Count Yamagata, according to the *Nippon*, is remarkable for his intimate acquaintance with the ancient annals of his own country, from the "Kojiki" downwards. He believes that such a knowledge is essential in a statesman. Our contemporary further relates, in this context, a story which we consider very apocryphal; namely, that when Viscount Yenomoto was Minister of Education, he advocated the adoption of an educational system based on the principles of Mohammedanism, but was strongly opposed by Count Yamagata. This is about as unlike what we should expect of Viscount Yenomoto as anything could well be.

A NEWSPAPER COMBINATION.

It is announced that Mr. Murayama Ryohei, proprietor of the *Tokyo Koron*, has purchased the *Daido Shimbun*, and that the two journals will henceforth be united under the name of the *Kokkai Shimbun* (National Assembly Newspaper). The new journal is intended to be the *Times* of Japan. Its proprietor declares his intention of keeping it entirely independent of political parties. The public will doubtless receive this news with some surprise, remembering that the *Tokyo Koron* was originally started in the interests of the Radicals, and that the *Daido Shimbun* was regarded, until quite recently, as the organ of the *Daido Danketsu*. Both journals, however, have of late refrained from advocating the views of any party, and occasional editorial notes appearing in the columns of the *Daido Shimbun* led us to be not unprepared for some change in its rôle. The *Kokkai Shimbun* is to make its *début* to-day, simultaneously with the opening session of the body from which it takes its name.

THE JAPAN MAIL STEAMSHIP COMPANY AND THE "MUSASHI MARU."

It ought to be recorded that the Directors of the Japan Mail Steamship Company have behaved with remarkable generosity to the relatives of the foreigners who were lost in the ill-fated *Musashi Maru*. They have presented a sum of two thousand yen to the widow of Captain Frahm, and have given proportionate amounts to the families of the other sufferers. Such liberality on the part of a shipping company is rare. The total loss of a fine steamer, when nothing is recovered from underwriters, is not calculated to induce a generous mood. This act of the Company's assumes additional grace as a substantial evidence that the Directors are perfectly satisfied with the seamanship of the fine and trustworthy officer who commanded the *Musashi Maru*, and persuaded that no human efforts could have averted the disaster which befel her. It is pleasant to see that the traditions of the old Mitsui Bishi Company are so nobly obeyed by the Nippon Yusen Kaisha.

THE CIRCULAR RAILWAY.

It may be well to call our readers' attention to the fact that the morning train from Shimbashi to Akabane now starts at the time of the old schedule, viz., 8.10 a.m., instead of 7.30 a.m. We believe that not a few travellers missed the train owing to their ignorance of the fact that its departure had been altered from 8.10 to 7.30, and now that the Railway officials have reverted to the former hour without giving any notice to the foreign public, people may arrive at the station only to find that a forty minutes' wait is before them. It is, perhaps, unnecessary to observe that we refer to the train which connects with the Nikko, Mayebashi, Takasaki, and Sendai lines at the Akabane junction. People desiring to visit Nikko can now leave Shimbashi at ten minutes past eight in the morning, and arrive at their destination in time for tiffin.

THE QUESTION OF PROSTITUTION.

RECENTLY we reproduced a report as to the efforts of the opponents of licensed prostitution in Kyoto to get up a petition to the Diet. We learn from the *Jogaku Zasshi* (Woman's Maga-

zine) that there is going on in Tokyo a similar movement on a far larger scale. The abolitionists recently invited to dinner at the *Fujimiro* restaurant a number of the members of the Diet, and prominent journalists and Christian pastors. Among the members of the Diet there were present Messrs. Shimada Saburo, Yuasa Jiro, Ueki Emori, Nakamura Eisuke, Ebara Soroku, Kato Katsuya, Shimozuka Gonzaburo, Tateishi Ki, and Nagayo Tadaaki. There were also present Messrs. Tokutomi Ichiro, editor of the *Kokumin-no-Tomo* and the *Kokumin Shimbun*; Tsuda Sen, a well known writer on agricultural subjects; Honda Yoichi, Kojima Kango, Takata Koan, and Hiraiwa Tsuneyasu. It is stated that on this occasion plans were considered with regard to introducing in the Diet the question of the abolition of licensed prostitution. Two petitions are preparing, one for abolishing licensed prostitution, and the other disfranchising those engaged in the trade.

* * *

In addition to the report from Kanagawa that the Local Assembly has voted for the abolition of licensed prostitution, statements from the Provinces of Echizen, Hyuga, and Kai, all announce that the abolition movement is gaining ground.

UNMERITED LAURELS.

WE have spoken already of the markedly inferior character of the paintings of Japanese genre now exhibited under the auspices of the *Kanga-kai* in the Fine Art Gallery, Uyeno Park. We have also explained that the exhibition, though ostensibly a mere periodical display of contemporaneous work, was privately understood to have had its origin in a feeling of discontent engendered by the manner of awarding prizes at the Industrial Exhibition, and in a desire to prove that the works exhibited there did not represent the best efforts of living artists. So far as concerns the latter purpose, the *Kanga-kai's* display is a decided failure, the gallery of the Industrial Exhibition having been much better and more copiously furnished. There may have been reasons for this undiscernible by the general public. At all events, the inferiority of these later works need not have caused any regret deeper than that inspired by a mere accident. But the course pursued by the directors of the *Kanga-kai* is another affair. At first it was reported that in view of the unmistakably defective character of the pictures shown, no prizes would be awarded. By this austerity the directors—so said rumour,—contemplated showing that, unlike the jurors of the Industrial Exhibition, they knew how to bestow medals and certificates discreetly, and had sufficient strength of mind to withhold rewards altogether if merit were plainly absent. But if they ever entertained any such design, they have abandoned it incontinently. To the astonishment of the general public and the dismay of all genuine lovers of art, medals and certificates have been scattered broadcast. We cannot tell how many pictures have been thus distinguished, but their name is legion. And truly, in the vast majority of cases, it is quite beyond the capacity of ordinary folks to discover the grounds of these distinctions. The fortunate recipient of the gold medal is Mr. Morizumi Kanyo, who exhibits a picture of the mediæval authoress Murasaki Shikibu. The lady, at an advanced period of her life, is sitting in a meditative attitude leaning on an elbow rest. Before her is one of the low lacquered tables used as desks by the Japanese, and beside her stands a clothes-horse on which several rich garments are hung. The painting of these garments and of the poetess's dress is unquestionably very delicate and elaborate; a fine example of technical skill. But the other merits of the picture, if it has any, are imperceptible without special spectacles. The drawing of the desk does indeed exhibit that extraordinary perverted perspective peculiar to the Chinese, in which the vanishing point lies between the eye and the object. Possibly this is a recommendation according to conservative canons, but plain folks may be pardoned if they fail to appreciate it.

We are strongly tempted to believe that the highest prize has been bestowed on the Murasaki study because it is from the brush of Mr. Morizumi, rather than because it deserves such an honour. Passing to the recipients of silver medals we find quite a number. Perhaps the most justifiable award in this class is that made to two landscapes by Mr. Nomura Bunkyo. Copper medals and Certificates of First, Second, and Third Class have been bestowed so lavishly that to be without some of these marks of favour is to be distinguished. What it all means we cannot pretend to say. Perhaps our perplexity is the outcome of foreign incapacity to appreciate the true inwardness of Japanese pictorial art. There are some conservatives who hold that only a Japanese can understand or pronounce a really intelligent verdict on Japanese paintings. Admitting then that we lay no claim to this peculiar faculty, and that we judge only by Western standards, we venture to assert that the *Kanga-kai's* manner of bestowing rewards reduces the whole question of modern Japanese painting to a farce, and compels all unsophisticated spectators to conclude that the object is, not to distinguish merit, but to encourage mediocrity. It is conceivable that the *Kanga-kai* is influenced by a motive similar to that which induces the Committee of the *Riu-chi-kai* to admit to its exhibitions articles quite erroneously described by their proud owners: a common fear of deterring exhibitors may influence both societies. But with such an apprehension we have no manner of sympathy. If exhibitions can only be furnished on the one hand by allowing exhibitors to pervert them into occasions for misleading the public and flattering their own vanity by showing falsely described objects; on the other, by bestowing honours upon artists whose works scarcely deserve to be "skied," then exhibitions had better be abandoned altogether. True art will never flourish in an atmosphere of sham. The Committee of the *Kanga-kai* could inflict no more fatal injury on the school they seek to perpetuate and promote, than by practising the palpable deception of applauding where condemnation alone is deserved, and seeking by lightly bestowed honours to suggest the presence of merits which no longer exist.

BALLOON ASCENT FROM UYENO PARK.

On Monday afternoon at half-past two o'clock Mr. Spencer made his second balloon ascent in Tokyo. His first performance was given by special desire of the Emperor, and took place in the open space before the main entrance to the Palace. The performance yesterday was of a public character, and the interest excited among the citizens of Tokyo was very great. The Authorities permitted Mr. Spencer to make use of the area immediately in front of the Permanent Museum in Uyeno Park, and as the buildings employed for the purposes of the Industrial Exhibition are still standing, this central court is completely enclosed, thus forming an ideal place for Mr. Spencer's object. The court was divided into three rings, the innermost of which constituted the first class, the middle the second class, and the outermost the third class, the prices of admission being one *yen*, fifty *sen*, and twenty *sen* respectively. Every one of the rings was completely filled, the total number of paying spectators aggregating from four to five thousand. Needless to say that the crowds outside were far greater. The whole of Uyeno Park was packed to overflowing, and from one o'clock onwards no little difficulty was experienced in forcing a passage through the mob to the gate of the inner court. The proverbial good humour and order-preserving disposition of Japanese assemblies displayed itself as usual, however, so that women and children were as safe among the phalanx of people as they would have been in the open streets. Strange to say, very few foreigners were present, a fact to be accounted for only on the supposition that the foreign residents of Tokyo had already witnessed Mr. Spencer's performances in Yokohama, or that the failure to advertise in the English local press had left

people in ignorance of the programme. With respect to the foreign portion of the audience, there is a point which Mr. Spencer, or others who, like him, live by public favour, will do well to note, namely, that the same measure of courtesy meted out to Occidentals on these occasions, must be meted out to Orientals also. It was observed yesterday that every foreign lady or gentleman found admittance without question inside the central ring to the immediate vicinity of the balloon and apparatus, whereas with very few exceptions every one wearing Japanese costume was excluded. Such discrimination can only have the effect of rendering unpopular all exhibitions by foreign performers. Among those present inside the central circle were H.I.H. Prince Yamashina, and their Excellencies Count Kawamura and Viscounts Aoki and Yenomoto. At ten minutes past two o'clock the first pilot balloon was sent up. A grotesque figure of a man without any command of legs or arms, it ascended with limp gravity and occasional disturbances of equilibrium that afforded much amusement to the spectators. The day was beautifully bright and still, perfect Japanese autumnal weather, but the transparent dummy evidently felt a breeze not perceptible by more substantial beings, for it floated off in the direction of Hongo until a reverse current, catching it in an upper stratum of atmosphere, wafted it back so that it finally descended on the margin of the Shinobazu Lake. Another pilot, despatched upwards some minutes afterwards, voyaged off steadily towards Surugadai, the result of the two experiments being that people remained in a state of pleasing uncertainty as to the direction which the aeronaut himself would take. The big balloon was by this time fully inflated, but so still was the atmosphere that not a motion of the silken globe could be detected: it remained straining steadily on its detaining ropes as motionless as though crystallized in its place. The hour fixed for the ascent had now passed, and the crowd, on the tip-toe of excitement, greeted Mr. Spencer with a low hum as he stepped forward and began to untie the cords by which the lower end of the balloon had been frapped round the gas-conducting pipe. Mr. Spencer is of low stature, bandy-legged, light-haired, and resolute looking, but it may be gathered from his mien that he is not without consciousness of the perils attending his exploit. Under any circumstances a parachute descent must be a dangerous business, but where a great number of lofty trees are dotted about the ground, as is the case in Uyeno Park, the chances of accident cannot but be increased considerably. Rumour says, indeed, that the risk run by the aeronaut has attached to him a correspondent of an American journal, who firmly believes that his thirst for sensational copy will be satisfied one of these days at Mr. Spencer's cost. The preparations made by the intrepid performer were few and simple. They consisted chiefly in divesting himself of a gold medal and his watch and chain, exchanging his hat for a tight-fitting tweed cap, filling his pockets with advertisements to be scattered from the clouds, and seizing firm hold of the jacket by which he is attached to the parachute in the descent. Wonder-exciting pictures of the feat, posted in public places, represent the aeronaut suspended from his parachute by one hand and swaying nonchalantly earthwards. But that is a balloonist's license. It is plain that no fingers, however muscular, could be trusted to sustain a man at the moment of more or less rude shock when the swift downward motion of his leap from the balloon is arrested by the expansion of the parachute. The thing is managed by the aid of a jacket or sling passing round the body under the arms. This Mr. Spencer fixes when he has reached such a height that his actions are only discernible by the aid of a glass. The parachute is tied to the side of the balloon by a cord which, being just capable of supporting a weight of sixty lbs., gives way and allows the parachute to become detached when Mr. Spencer consigns himself to it. The descent of the abandoned balloon is ingeniously managed by means of a small weight attached to

the side. So long as the aeronaut is seated on the trapeze this comparatively trifling weight does not disturb the equilibrium of the balloon, but when the man leaps out, the little weight causes the silk globe to tilt over, until, the unclosed end coming uppermost, the gas escapes and the balloon, reduced to the semblance of a long streamer, floats slowly downwards. Contrary to the indications furnished by the pilot voyagers, the balloon yesterday rose at first quite vertically with admirable grace and steadiness, and it seemed for a moment as though Mr. Spencer's hope of descending within the enclosure from which he had ascended would be satisfied. But at a considerable elevation an eastward-setting current of air was entered, and when Mr. Spencer consigned himself to the parachute, he was sailing in the direction of Asakusa, in the vicinity of which he ultimately alighted safely. The ascent lasted, as far as could be judged, about a hundred seconds, and the descent was accomplished in nearly the same interval, some four seconds of which appeared to be occupied by the first rapid fall, preceding any perceptible exercise of the parachute's influence. Balloon and parachute came down together almost simultaneously, and in a quarter of an hour Mr. Spencer drove back to the enclosure, greeted by loud cheers, the crowd calmly breaking through all the barriers that separated it from the inner ring. It is not likely that any aeronaut will again command such a numerous attendance in Japan. Mr. Spencer was the pioneer, and we are glad to think his enterprise has been rewarded so far as Tokyo is concerned. Visits to the other great cities of the empire ought to prove very profitable.

ORGAN RECITAL AND CONCERT.

THE second of these entertainments drew a large audience to the Union Church on Tuesday evening, when the following interesting programme was performed:—

ORGAN Overture ("Occasional Oratorio") HANDEL.
ANTHEM "The eyes of all wait upon Thee" CLARE.
ORGAN Larghetto ("Symphony in D") BERTHOVEN.
VOCAL SOLO "Calvary" RODNEY.
ORGAN Prelude and Fugue F Minor RINK.
VOCAL SOLO "The gate of Heaven" TOURS.
ORGAN Fuga a 5 voci (St. Ann's) BACH.
SELECTIONS from Mendelssohn's "Elijah."
ARIA "Hear ye Israel,"
RECIT. "Night falleth round me."
CORO. "Behold God the Lord passed by."
QUARTETTO & CHORUS "Holy, Holy, Holy."
CHORAL RECIT. "Go, return upon thy way."
RECITED ARIA "For the mountains shall depart."
CORO. "Then did Elijah."
ARIA "Then shall the righteous shine."
ORGAN Offertory in B Flat LEBEURE WELLY.
VOCAL SOLO "Saved by a child" PICCOLMINI.
ORGAN Andantino ("Power of Sound") SPÖHR.
ANTHEM "The Glory of the Lord" GOSS.
ORGAN Waltz March ("Athalie")

MENDELSSOHN.

Mr. Griffin again displayed the powers of the organ as a solo instrument, giving us a fine selection of music "grave, gay, lively, and severe," preludes and fugues of the old German school, arrangements of orchestral scores, compositions of the modern French *genre*, &c. He also accompanied all the vocal music, and in so doing made good use of the charming soft registers which the organ contains. The fine quality of tone was also manifest in the accompaniment to the excerpts from Mendelssohn's *Elijah*. The vocal solos were taken by some of our best-known amateurs, the chorus being supplied by the same body of singers who did such excellent work at the first recital. After the fine chorus work which we have had at these two concerts under Mr. Keil's direction, we shall expect great things of the revived Choral Society which will soon be *en évidence*. All the items in the programme were much appreciated and warmly applauded; and we are sorry that the present series of Recitals is now finished. We would suggest another performance be given about New Year, at which all the organists of Yokohama and

Tokyo (Christ Church, Union Church, Catholic Church, S. Andrew's, Shiba, Hongo Central Mission, &c.) should be asked to lend their aid. Such an array of talent would be a guarantee of a most interesting and excellent performance. We commend the idea to the congregation of Union Church: they have a fine organ, and we hope they will soon give the public a chance of hearing it again.

MISS HELEN E. GREGORY.

ANOTHER writer has come to Japan in search of inspiration. This time the public is to be told what an English lady of quite exceptional attainments thinks of a country and a nation concerning which it ought to have become difficult ere now to say anything new. Miss E. Gregory, upon whom Trinity University, Toronto, recently conferred the degree of Master of Arts, has the honour of being the first "girl bachelor" of that institution. She appears to be the Miss Millicent Fawcett of Canada. The *New York World*, alluding to her musical abilities, writes of her in the following strain:—

Unlike other women composers, Helen Gregory stands almost alone in her profession. She is a writer of the ultra-classical, and enjoys the distinction of having been the first woman to have conferred upon her the dual degree of musical bachelor and bachelor of arts. Few imagine the necessary capabilities required for the attainment of such honours. In the Trinity university, Toronto, Canada, from which she graduated for the degree of musical bachelor, four successful examinations were necessary, each embracing a course in harmony, counterpoint, canon, fugue, form, history of music, and instrumentation.

At the last examination the student is required to write a musical composition with full orchestral accompaniment, one or two choruses of at least four or six parts, a fugue, chorus and solos. In order to keep the standard as high as possible the papers are sent to England and examined by three noted professors of the University of Cambridge. All this Miss Gregory went through successfully, claiming the credit of opening Trinity University to women, which had previously issued only certificates instead of degrees. She then, at the same college, by dint of perseverance, succeeded in persuading the senate of the university to also grant her admission to a full collegiate course, and but a few months ago, after a three years' course of study, she graduated with honours and the degrees named.

Miss Gregory visited Manitoba after her graduation and wrote some excellent descriptive articles of the settlers in that district. In a letter addressed to this journal from the Department of Agriculture in Ottawa, we are told that "her visit to Japan is mainly for the purpose of writing articles for the *New York Cosmopolitan Magazine*, *Toronto Globe*, and other magazines and journals. Miss Gregory was kindly furnished before leaving home (Hamilton, Ont.) with letters of introduction to the Sub-Governors of the Western Canadian Provinces, from the Premier of Canada, the Right Hon. Sir Jno. Macdonald, and the Hon. C. H. Tupper, Minister of Marine Fisheries. Also letters from the Marquis of Salisbury and the Marquis of Lorne, to the British Minister, Tokyo, Japan, and letters to the British and Norwegian Ambassador, and to the Bishop of the Anglican Church in Japan. Miss Gregory is a member of the Press Association (P. of Q.), Canada, and a contributor to several journals and magazines." We do not doubt that this accomplished lady will find much to interest her in Japan. She will probably have to run the gauntlet of the unfavourable local criticism usually penned against the presumption of new-comers who venture to ventilate the results of a few weeks' experience. But the eyes of new-comers see things that have long ceased to attract the attention of old residents, and it is to new-comers that we owe our most delightful and accurate descriptions of the country and its inhabitants. It is probably intentional that the arrival of Miss Gregory has occurred just on the eve of the opening of the Diet, but the coincidence is remarkable in one respect, namely, that it will at once bring into sharp prominence the rule excluding ladies from the galleries of the Japanese Houses of Parliament. We do not believe that a rule so inconsistent with the tendency of Japanese modern civilization can be preserved, but it might have escaped strong Western condemnation but for the arrival of a lady who will naturally be intensely disap-

pointed to find herself prevented from witnessing and describing the most important and memorable event in Japanese history.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 22nd instant were as follows:—

CONVERTIBLE NOTES:	RESERVES AND SECURITIES:
YEN.	YEN.
Notes issued 99,136,212	Gold coin and bullion 24,993,710
	Silver coin and bullion 20,183,149
	Public Loan Bonds 13,470,450
	Treasury Bills 22,000,000
	Government Bills 4,734,182
	Other securities 13,750,121
99,136,212	99,136,212

Of the above total issue of notes, the sum of yen 5,534,077 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and yen 71,602,135 is in actual circulation, the latter showing a decrease of yen 1,553,188 as compared with yen 73,155,323 at the end of the previous week.

A CONSULATE OFFICIAL STABBED.

ON Monday forenoon Mr. W. N. Wright, usher of H.B.M. Court for Japan, was stabbed in the neck by a seaman of the ship *Abbyssinia*, for whom a warrant for being absent without leave had been issued. The seaman, George Seymour, was at once arrested, and brought before Mr. Troup, H.B.M. Consul in the afternoon, and Mr. Wright, who lost a great deal of blood, was taken to Dr. Rokaku, who sewed the wound, being successful in taking up one of the vessels from which the chief loss of blood was occurring. The wound, which was inflicted with an ordinary pocket or pen knife, was almost in a line with the ear, and therefore in a most dangerous place. Though very weak, Mr. Wright is, we believe, out of danger.

ADMISSION TO THE STRANGERS' GALLERY IN THE DIET.

AS we conjectured in a recent issue, the amount of accommodation available in the House of Peers is found so limited where there is question of meeting the requirements of such an exceptional affair as the official opening on the 29th instant, that the privilege of being present can only be extended to a very small number of foreigners. There will be much disappointment, no doubt, but the restrictions imposed are inevitable. We believe that applications made diplomatically for the admission of naval officers of high rank have been rejected.

FAREWELL SERMON.

ON Sunday morning, the Rev. Arthur May Knapp conducted the service at the Unitarian Hall, Azabu, Tokyo, and preached a farewell sermon. The room was so full that a side room had to be utilized; the majority of those present being Japanese. At the close of the service, many bade Mr. Knapp farewell. He and Mrs. Knapp sail on Saturday next, proceeding via Suez to Marseilles, and thence to Vichy, where it is hoped, the mineral waters will restore Mr. Knapp to health.

REJOICINGS IN YOKOHAMA.

THE opening of the Diet was not observed on Tuesday in Yokohama in any official way, but the residents had organized various forms of demonstration, which were duly carried out. Sports took place in the open ground opposite the Post Office, and a procession headed by a band perambulated the streets in the afternoon. The various streets in Japanese town, especially Sakai-cho and Isezaki-cho (the latter of which was lit up by electric lights) were tastefully decorated with flags and lanterns.

DEATH OF THE KING OF HOLLAND.

OFFICIAL intimation having been received in Yokohama of the death of the King of Holland on Monday morning at 6 o'clock, the flags of the various Consulates were hung at half-mast on Tuesday.

According to the telegram published in the

Official Gazette, the death of the King of Holland took place at 5.45 a.m. on the 23rd instant. Court mourning for a period of nineteen days, commencing on the 24th instant and ending on the 12th proximo, has been decreed.

THE PRESIDENT AND VICE-PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

THE Emperor has endorsed the choice of the House, and nominated Mr. Nakajima Nobuyuki to the post of President, and Mr. Tsuda Mamichi to that of Vice-President of the House of Representatives.

We find that we erred in stating that Mr. Nakajima was imprisoned at the time of the promulgation of the Peace Preservation Regulations. It was rumoured that he had been incarcerated, but the report proved groundless.

A CORRECTION.

IN a letter published in our correspondence columns last Saturday, under the heading, "The music of the Japanese," the writer is made to say in the last paragraph:—"The Tokyo School has existed for years—where are the funds, what are the results?" The word "funds" is a misprint for "fruits." We note the error specially, because the sentence as it stands might create an unpleasant impression.

THE boys of the Victoria School will hold their sports on the ground of the Yokohama Cricket Club on Monday next.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

THE convocation of the Diet, the election of the President and Vice-President of the House of Representatives, and the movements of the various parties in view of these events, form the principal items of news and topics of discussion in the vernacular press during the week. The official announcement that the Emperor was pleased to appoint to the Presidency and Vice-Presidency of the Lower House the nominees who obtained the largest number of votes,—Mr. Nakashima and Mr. Tsuda respectively,—has been received by the whole press with loud approval and warm gratitude to His Majesty for the mark of respect thus graciously shown to the wish of his subjects' representatives. As to the personal qualifications of the new President and Vice-President, the general opinion of the papers is very favourable.

The *Yiyu Shimbun* welcomes Mr. Nakashima to his Presidential post with a high eulogy. A faithful servant of the State for the past thirty years, at first occupying several distinguished positions in the Government and latterly devoting himself entirely to the promotion of the liberal movement, Mr. Nakashima, says the Constitutional Liberal organ, enjoys an amount of confidence and respect from parties outside the Government that will be amply sufficient to make him an effective President of the House of Representatives. The position which he has been called upon to fill is by no means easy. There are abuses to be corrected, and reforms to be carried out, which demand on the President's part an exercise of high moral and intellectual capacities. But Mr. Nakashima's thoughtfulness, his perseverance, and his constancy, will, it is hoped, carry him successfully through the difficult ordeal he is about to undergo.

The *Choya Shimbun*, after expressing its hearty approval of the Imperial choice as to the President and Vice-President of the House of Representatives, proceeds to deplore, for the sake of the Constitutional Liberals, that their conduct in connection with the election of the President was not distinguished by that consistency which might have been expected from them. On the preceding day, they met at the *Payoi* Club and decided on three candidates for the position of the President of

the Lower House, pledging themselves to vote for none other than those thus selected. But on the day of actual election, it was found that many of the Liberal Constitutional votes were cast for other candidates. In this respect, the members of the *Taisei-kai* and of the *Kaishin-to* were more consistent, for they did not desert the candidates selected by themselves. Our contemporary then goes on to state that Mr. Nakashima owes his election not only to the support of his own party, the *Rikken Ji-yu-to*, but also to that of a section of the *Taisei-kai*, of the *Kokumin Ji-yu-to*, of the *Jichi-to*, and of the independent members. As to his prospects as President, the *Choya* says that his success will depend on the skill with which he keeps order in debates, and on the nature of the relations that he maintains with Count Ito, President of the House of Peers, to whom he has hitherto been what a junior student is to a senior.

The *Fiji Shimpō* alludes to the immense difficulties lying before the President of the House of Representatives, for, in addition to the onerous task of keeping order within the House itself, the occupant of that post has to maintain dignified relations with the Ministers of State on the one hand, and with the President of the House of Peers on the other. Moreover he will have to observe strict impartiality between the various political parties in the House. Our contemporary advises the members of the *Rikken Ji-yu-to* not to regard Mr. Nakashima as one of their own party, but to always bear in mind that, in his capacity as President of the Lower House, every party has an equal claim on his sympathy and protection.

The *Yomiuri Shimbun* follows a similar line of argument. After alluding to the circumstance that a certain section of the public is inclined to question the perfect impartiality and independence of the President and Vice-President of the Lower House, on the ground of their having formerly occupied official positions, the *Tokyo* journal asserts that for its part it believes these two gentlemen perfectly well qualified for their posts. It suggests the adoption of the practice followed in the English House of Commons as to the introduction of the newly elected President and Vice-President. According to the Japanese Regulations of the Houses, the President and Vice-President are to be introduced to the House by a Secretary. That, thinks our contemporary, is too simple. It proposes that, as in England, one of the members should congratulate the President and Vice-President in the name of the whole House. This suggestion was adopted. The *Mainichi*, the *Tokyo Shimpō*, and other papers all agree with those already quoted in exhorting the President to maintain an attitude of rigid impartiality and independence.

An unexpected move on the part of the politicians connected with the contemplated formation of the National Liberal party has reopened the old question of the amalgamation of the progressive parties. On the evening of the 23rd instant, Messrs. Sassa Tomofusa, Furusho Kamon, Maeda Kagashi, and a few other promoters of the formation of the new party, applied for admission to the *Taisei-kai*. The members of the latter held a meeting the following morning to consider the application. The meeting lasted until late in the afternoon. At one time those in favour of admitting the new applicants seemed likely to carry everything before them, but the debate became more and more animated, and it was seriously apprehended that the *Taisei-kai* might finally separate into two hostile parties. Upon this, those who had introduced the new applicants withdrew the application, and the meeting was adjourned without any serious rupture. But it is stated that the *Taisei-kai* is in a state of great excitement, and that an explosion will take place before long. It is rumoured that Messrs. Sassa, Furusho, and others are in league with a section of the *Taisei-kai* to carry over that association to

the National Liberal party now under formation. The *Tokyo Shimpō* advises the *Taisei-kai* to refuse the application, and carry out its original purpose of maintaining strict neutrality towards existing political parties; for our contemporary believes it highly important for the welfare of the country that there should be an independent association of members of the Diet to neutralize the struggles of the various political parties. The *Hochi Shimbun* takes a more sensible view of the question. It states that intelligent people had from the outset regarded it as extremely improbable that the *Taisei-kai* would maintain a neutral position in practical politics. Being composed of conservative and liberal elements, it is naturally divided into two factions. Rather than persist in attempting what is really impossible, the Independents had better break up their combination and join their respective natural allies. Some of them will no doubt go over to the National Liberal party, some to the *Rikken Ji-yu-to*, and some to the *Kaishin-to*, while others may prefer to keep aloof from any party. The *Hochi* considers the dissolution of the *Taisei-kai* merely a question of time.

As stated above, this unexpected step on the part of the originators of the *Kokumin Ji-yu-to* (National Liberals) has given a fresh impetus to the movement for the amalgamation of progressive parties. The *Rikken Ji-yu-to*, especially that section of it which represents the former *Kyushu Shimpō-to*, is desirous of effecting a union with the *Kaishin-to*, while the leaders of the latter, with the exception of the section under Mr. Ozaki, are said to be ready to move in the same direction. In the event of such a union, a section of the *Taisei-kai* will probably join the amalgamated party. Such a result is likely to be very much accelerated by the intrigues of politicians promoting the scheme of forming the *Kokumin Ji-yu-to*, which, we may mention, will be formally organized, if report can be trusted, in the course of next month.

The question of national defence forms the subject of several leading articles. The *Mainichi Shimbun* is now discussing this problem in a series of articles not yet concluded. From what it has thus far written, it appears, like most of the vernacular papers, to consider that the safety of the country demands an increase of fighting power, both military and naval. How to effect this, is a point which our contemporary promises to examine in future articles. The *Yomiuri Shimbun*, in the course of several essays, approves the rumoured decision of the Authorities not to introduce any bill for raising a loan to augment the Navy during the present session of the Diet. Our contemporary admits the necessity of increasing the naval forces, but suggests that, before asking for fresh supplies, the Government should introduce more economical methods of expenditure. The present appropriations should suffice, our contemporary thinks, to provide the country with a far better navy. It compares the amount of money expended by Japan on her navy with the expenditures of other countries. Japan pays, according to our contemporary, about 126 yen annually for each ton of her war vessels, England 90 yen, France 89 yen, Germany 70 yen, Austria 53 yen, Italy 114 yen, and the United States 229 yen. Making every allowance for the circumstance that, the Japanese Navy being in the course of formation, exceptional outlay is unavoidable, the *Yomiuri* cannot but think that there is something wrong in the mode of disbursing funds voted for the use of the Navy. If the Authorities introduce the proposed bill during the present session, many members otherwise in favour of increasing the Navy may be induced to vote against it. The Government is therefore advised to correct existing abuses in the Admiralty, and then to ask for a further grant of money.

The question of Treaty Revision is not neglected amid the exciting topics of domestic politics. The *Fiji Shimpō* discusses it in two

articles. Our contemporary observes that the efforts of Japan to obtain the recognition of her claims have thus far failed, because hitherto she has relied too much upon the chivalrous impulses of the Treaty Powers, and has courted their favour by adopting their manners and customs. Japanese negotiators of Treaty Revision, like all other negotiators, cannot hope to attain their object unless they have at their back a nation determined and competent to resort to force if necessary. What Japan wants, therefore, is a strong army and navy. Further, our contemporary remarks that, in order to assert the national rights, it is of great importance to encourage navigation, foreign commerce, and emigration to foreign countries, thus bringing the nation into closer contact with the outside world. In conclusion, the *Fiji* on the one hand, advises the Authorities to economize public expenditures as much as possible, applying every *sen* thus saved to increase the Army and Navy, and, on the other, exhorts the people not only to bear present taxes but also to be prepared for new ones.

Mr. Oishi Masami, a distinguished politician of liberal opinions now staying in London, writes in the columns of the *Nippon* on the same subject. His essay is not yet concluded. In the first article, he reviews the international position in Europe, and observes that all the European States being very hard pressed by their neighbours, none of them, not even Russia, could afford or is inclined to fight with Japan on the latter's soil. As to the United States, that Republic is very well disposed towards Japan, and little danger need be apprehended from her. Mr. Oishi therefore recommends the Authorities to push on the negotiations vigorously and resolutely. "There are," he says, "40 millions of brave people only too willing to die for the sake of their country. Should the Authorities prosecute the work of revision with resolution, they will have the hearty and unanimous support of these 40 millions of stout-hearted and loyal people."

The present week has been exceptionally fruitful of changes, actual or contemplated, in the journalistic world. The *Daido Shimbun* and the *Tokyo Koron* have been united under the new name, *Kokkuai*. This journal professes to be strictly independent, and to aim at becoming *The Times* of Japan. The *Hochi Shimbun* also announces great changes in its appearance and in the character of its contents from the beginning of next month. Our contemporary declares that its editorial department will be organized on the model of *The Times*, and that, besides the ordinary editor and sub-editors, fifteen new writers of high excellence have been engaged. It will allow perfect freedom to every one of these writers, so that its columns will become mediums for the ventilation of every shade of opinion, from ultra-conservatism to ultra-radicalism. Amid all these varieties, the *Hochi* promises to maintain strict independence. The *Nippon-jin*, hitherto a monthly publication, has become a weekly journal. The *Yogaku Zasshi* (Woman's Magazine) also promises considerable modifications from its issue of the 29th instant. It has engaged several lady writers. Concerning the two latter journals we shall write at greater length in a future issue.

The *Hochi Shimbun* advises the members of the Diet to effect reforms in the Organizations of Departments and in the salaries of officials, before proceeding to other changes. It has also written at some length about the probable conflict between the Government and the Diet. Needless to say that it recommends both sides to be moderate and reasonable. The *Nippon* has finished its articles on the history of national finance, and, among other subjects, discusses the relations between the Budget and the law. The *Nichi Nichi Shimbun* writes on the 27th article of the Constitution. The *Tokyo Shimpō* has concluded its articles on reforms in political business.

THE VOTE OF THE KANAGAWA
LOCAL ASSEMBLY.

THE Kanagawa Local Assembly, by a majority of fourteen at a meeting of 52 members, has recorded its disapproval of the system of licensed prostitution, and decided that a memorial shall be addressed to the Prefect asking him to take steps in the sense of the resolution. The control of these matters is now virtually in the hands of Local Assemblies, inasmuch as the proceeds of the tax levied upon brothels is included in the revenues of the local authorities, who in return are bound to contribute to the support of the *police de mœurs* and to the cost of sanitary arrangements. If, therefore, the Kanagawa Assembly is determined to put an end to the system, we see nothing to prevent it from accomplishing its propose. There is much to be said in support of the plan hitherto pursued in Japan, but, on the other hand, there will always be found a number of strong moralists wholly unable to become reconciled to the idea of licensing vice for the purpose of controlling it. We confess that for our own part the difficulty of deciding between the two views seems very great. Reduced to its simplest form, the contention of those who advocate the licensing of prostitution involves the assumption that prostitution is an absolutely ineradicable evil, and that consequently the State must recognise its existence just as it recognises gambling by levying a duty on playing cards, or drinking by imposing a heavy tax on alcoholic beverages. But to admit that any evil is ineradicable must always be impossible to men who believe, as many Christian optimists believe, in the complete regeneration of humanity, and who hold that to concede the necessity of sin in any form is to become indirectly propagandists of vice. As a plain axiom of abstract morality there is no gainsaying this latter view, but when we proceed a step further we find ourselves confronted by inconsistencies. For it is manifest that what is true of prostitution must be true also of drinking, which latter works incomparably more injury to the human race than does the social evil. If Government is bound to declare prostitution illegal and to wage war to the knife against it, prosecuting its votaries and employing the strong arm of the law to close all places where it is practised, surely Government is equally bound to prosecute all vendors of alcoholic averages and abolish all public-houses. It may be contended that the mere act of drinking whiskey is not wrong, unless carried to excess, whereas the practice of the social evil in every form and in any degree is immoral. But is the consumption of alcohol really capable of defence? Will any one pretend to say that, except when taken medicinally, it fails to injure its consumers? It is universally admitted, we presume, that if any nation could be

trained to abstain absolutely from the use of alcohol and tobacco, its advantages in the struggle for supremacy, other things being equal, would be enormous. And if this be granted, there is no escape from the conclusion that the law ought to be invoked to suppress a practice which undoubtedly demoralizes men and prevents them from making full use of their capacities. But legislators have recognised definitely, in respect of the consumption of alcohol, that human proclivities are factors of everlasting activity, and that to establish a certain control over the limits of their exercise is the utmost which a Government can hope to achieve. Does the history of the world justify any different conclusion in the case of the social evil? Can it be asserted that this form of vice is proportionately less prevalent in a country like England, where its votaries are theoretically law-breakers, than in a country like Japan, where the evil is controlled with tolerable efficiency? Judging from externals, we are obliged to confess that the advantage is with Japan. By recognising prostitution and banishing to a distant and secluded quarter those that pursue it professionally, Japan manages to keep the streets and principal public places of her cities absolutely free from everything offensive or suggestive. Far different is the condition of cities like London and Paris, where many of the principal streets become, from sun-down, nothing more than promenades for ladies of easy virtue; where a man may not walk from his club to his house without being solicited half a dozen times; where an immense number of cafés and restaurants throw their doors open to prostitutes, and lend to the social evil whatever aid can be furnished by splendid equipment and brilliant luxury; and where the competition inseparable from the virtually free exercise of private enterprise, leads to practices of the most revoltingly disgusting, demoralizing, and even inhuman character, which have no existence in a city like Tokyo. The system of suppression pursued in Europe is a practical farce, and it scarcely seems difficult to determine whether the evil is more propagated by being thus openly flaunted and rendered attractive, than by being legally recognised, controlled, hidden from public gaze, deprived of all romantic elements, and reduced to a mere matter of uninviting business. If any one nation in the world had ever succeeded in stamping out or even sensibly diminishing the social evil by the aid of repressive legislation, there could be no further question about the duty of all nations to make the attempt. But no nation has succeeded. The lesson taught by history is either that the evil is incapable of suppression, or that some means of suppression more drastic than anything conceived by ordinary legislators must be resorted to. Perhaps in no branch of human experience do theoretical morality and practical utility come into such flagrant

conflict. If this vote of the Kanagawa Local Assembly means that Japan seriously contemplates abandoning the system hitherto followed by her, and adopting the system followed in England and America, it is to be hoped that the question will be maturely considered and exhaustively debated. The Diet's time would be much better spent in discussing such a grave problem than in elaborating impossible schemes for reducing taxation.

WATANABE KAZAN.

ON the 23rd of November in the year 1840, died by his own hand in Tokyo, WATANABE KAZAN, an artist of exceptional talent. WATANABE was a member of the *shizoku* class. During the last two decades of his life Japan had begun to turn slowly but instinctively towards Occidental civilization. We are accustomed to speak of the Restoration of 1867 as the period from which this remarkable change of sentiment first made itself distinctly manifest, but the calculation is nearly half a century late. It is true indeed that officialdom still adhered firmly to the traditional policy of seclusion handed down from the days when the intemperance of Christian propagandists, and the jealousies of warring creeds, lent to foreign intercourse a startling and deterrent aspect. But despite officialdom with its iron rule and pitiless penalties, intrepid reformers among the people stealthily studied Occidental systems, and with wonderful patience struggled to emerge from the intellectual isolation to which their country had been condemned for more than two centuries. WATANABE was among these pioneers. He does not appear to have been swayed by any specially philosophic or philanthropic motives, or to have proposed to himself any deliberate programme of reform. An artist before everything, he thought only of art, and when chance afforded him an opportunity of seeing some pictures and studies by Western painters, he at once appreciated their immense superiority to the pictures of his own country in respect of linear perspective and chiaroscuro. Thenceforth it was scarcely possible for him to paint without suffering some traces to appear of the new inspiration that dominated him, and the public, perceiving the foreign taint, soon began to speak of his productions with bated breath. There was no mercy for political offenders in that era of feudal supremacy. Had WATANABE been a commoner, a heavy fine or a few months' imprisonment might have atoned for his error. But a *samurai* who violated the patriotic traditions of the Government had only one fate to anticipate. WATANABE fell under suspicion. The evidence against him was incontrovertible. His pictures bore witness, eloquent witness too, for he possessed rare skill, and it must have been evident that if

such an artist devoted his talents to popularizing Occidental methods of painting, the wholesome prejudice of the nation would run much risk of being softened, so far at least as pictorial art was concerned. Living in these later and radically changed times, one is puzzled to appreciate the bigotry of national exclusiveness that could ostracise beautiful and instructive objects merely because of their alien affinities. But when statesmen are pledged by their conception of high patriotism to keep the nation's eyes averted from everything foreign, they naturally desire nothing less than that the most attractive results of foreign civilization should be prominently brought into notice. In the eyes of the TOKUGAWA rulers WATANABE was an arch offender. He received the fatal order which every *samurai* was bound to obey unflinchingly, the order to commit suicide. But his work survived him. It would have been more consistent with the heroic methods of those days if every picture painted by him had been burned or buried with his decapitated corpse. The Administration did not, however, proceed to this length, and materials to make WATANABE'S name remembered by many a generation still happily abound. To bring together a number of these and exhibit them on the fiftieth anniversary of the artist's death was an idea which suggested itself to one of his chief modern admirers, Mr. SUZUKI MOHEI, a wealthy oil merchant of Tokyo. This enthusiast had long been a collector of WATANABE'S works, and when, some months ago, the project of an exhibition took definite shape in his mind, he devoted a large sum of money and a considerable amount of time and labour to the task of increasing his collection sufficiently for the purpose he had in view. Remarkable success crowned his efforts. He brought together a large number of finished pictures, studies, sketch books, and scrolls, all undoubtedly from WATANABE'S brush, and having enlisted the sympathies of the priests at that fine temple, Reigan-ji, in the Fukagawa suburb of Tokyo, he was able to have the whole temple devoted during two days, the 22nd and 23rd instant, to the uses of an exhibition. The *Hombu* itself was of course not employed for hanging pictures, but it nevertheless played a part in the ceremony, litanies being chanted there and masses said repeatedly during these two days for the repose of the ill-fated painter's soul. In the *Hombu*, too, at the edge of the dais supporting the high altar, stood an object that attracted no small interest. It was the short sword with which WATANABE had committed *seppuku*, and it rested on the same tray of white pine from which the artist had taken it at the supreme moment. Beside it lay the document written by him on the eve of the final act: a simply worded and brief confession that he had erred in the sight of the law, and that his transgression involved

the further crime of taking the life which he owed to his parents and which filial piety directed him to preserve for their sakes. A strangely sounding voice from the past must this have seemed to many of those who came to burn incense at the painter's tomb; men in whose memory the events of his last days are still fresh, though the epoch itself might be centuries removed from their present experiences. The walls of six chambers, three on either side of the *Hombu*, were completely covered with WATANABE'S works. Of some of them it is difficult to speak in terms of too high praise. The combined delicacy and vigour of their execution, the excellence of their composition, and the marvellous life breathing from their lines, show that the anti-foreign prejudice of the TOKUGAWA days inflicted few heavier losses on the country than the untimely death of such an artist. There is much in the style of WATANABE'S painting that recalls the best efforts of MARUYAMA OKYO. Like his great predecessor of the Shijo School, he excelled in delineating birds and fishes. Half a dozen paintings of this class shown at the Reigan Temple were of the very highest order. WATANABE possessed also, in common with OKYO, a wonderful faculty for depicting the folds of drapery and the lines of the female face. A painting by him representing a girl seated on the mats, leaning on one hand and holding a fan to her lips with the other, ranks with, if it does not surpass, the celebrated OKYO now in the possession of Mr. KUBO, Count MATSUKATA'S elder brother. But undoubtedly the most interesting part of the Exhibition was that which showed traces of WATANABE'S Western bias. Several pictures of this class were to be seen. Except in the case of studies of animals, as lions, tigers, horses, elephants, and so forth, no subjects of distinctly foreign type were displayed, but evidences that the painter had entered into the spirit of Occidental linear perspective and *chiaroscuro* were apparent in many pictures otherwise purely Japanese. This was notably true of a portrait, half life size, of a well-known Buddhist priest, which might have been painted by a Western artist and would have done credit to any European brush of WATANABE'S era. It is fruitless, however, to attempt a description of works which can only be appreciated by sight. Many foreigners interested in the development of Japanese art, would doubtless have seized this opportunity of estimating the possibility of its modification by Western methods had the exhibition been thrown open to the general public, but as admission was by invitation only, and no advertisements were published, the attendance was small. WATANABE solved the first portion of the problem which the Art School at Uyeno is now trying to work out, the problem of preserving the characteristics of Japanese paintings while adopting the technical

methods of the West. A permanent memento of the fiftieth anniversary of the remarkable artist's death now stands in the grounds of the Reigan Temple. It is a massive tomb-stone erected to WATANABE'S memory by Mr. SUZUKI MOHEI, bearing the pithy and singular epitaph "*Fuchu fuko no Watanabe Noboru*" (disloyal, unfilial WATANABE NOBORU). This brief notice tells us the story of WATANABE'S fate: disloyal because he incurred the displeasure of his rulers; unfilial because he took the life which he owed to his parents. A bold conception, truly, to parade these attributes before the eyes of posterity, as though defying men's moral judgment to detract from the painter's artistic merit.

JUDAISM IN ENGLAND.

A JEWISH periodical gives an extremely interesting account of Judaism in England, in connection with the election of a successor to the Chief Rabbi, the late Dr. NATHAN ADLER. The stream of Hebrew (or rather Jewish) migration appears to have flowed into Europe mainly through two channels. There was the North African route and the South European or Mediterranean route, and the colonies shed in every country along the line of march attested its course. Little is known of the English Jews of EDWARD I. except the piteous story of their departure, an exodus in which, as far as "spoil" went, they played the part of the Egyptians. After that there were practically no Jews in England up to the time of CROMWELL, who did not deny them the privilege of settling, and since then they have acquired all the rights of British citizenship. But these centuries of absence had domesticated them in their Continental abodes, and the conditions of Judaism in the Protector's day may fairly be called modern. The chief feature of those conditions was the division of the people into two camps or "nations." The deposits of the human tide from the East had stratified around two centres; one nucleus had been formed in the south of Russia, Poland and Germany; another Jewish mass had acclimatised itself in the Iberian Peninsula, and had sent out offshoots in the wake of the Spanish flag, notably to the Low Countries, where ALVA once ruled. The geography of the Neo-Hebrew was not very scientific, and it identified the former area, more or less exactly, with the heritage of ASHKENAZ, one of JAPHET'S grandsons, while it assumed that the latter was the SEPHARAD mentioned by the prophet OBADIAH, and by him alone of Biblical writers. Hence the Jews of the one part spoke of themselves as Ashkenazim, while their brethren of the other were known as Sephardim. These names corresponded to momentous practical distinctions. A historical phenomenon had happened, for

an analogy to which we must go back to the bi-section of the Hellenic world by Ionians and Dorians. The same race had started from the same aboriginal seat to find new homes in distant lands; journeying through different paths, the two swarms had acquired different customs and laws, a different ritual though not a different religion, a different pronunciation of the mother tongue, a different tone of mind and a different physiognomy—in short, almost every element of a different “cult” rather than a different “connection.” But like was knit to like by an undying brotherhood in face of the rest of the world. Such was the internal economy of Jewry in the Middle Ages, and such it remains at present; and in England at this moment, as in other countries, the Jew groups himself according to the route he or his ancestors took on their way hither, and reads his prayer-book and goes to his synagogue and pronounces his Hebrew according as he is a “German” or a “Spanish” (or “Portuguese”) Jew. A dream of legendary aristocracy still occasionally flatters the vanity of the latter; it is probably a reminiscence of the mediæval brilliancy and prosperity of those whom their most illustrious modern representative has described (in “Tancred”) as “the happier Sephardim, the Hebrews who have never quitted the sunny regions that are laved by the Midland Ocean.” One mark, however, of a superior caste they undoubtedly do possess in England, that is their comparative fewness. They are overwhelmingly surpassed in numbers and *apparel* by the sister organisation. Their ancient fane in Bevis Marks, a worthy cradle of English Judaism, attests early and long attachment to their new country. But this Queen of Synagogues has not sent forth many daughters; one in another part of London, one in Manchester, and one in Ramsgate make up her spiritual family. Yet she is the ecclesiastical home of much that is most considerable in Anglo-Judaism, and of many that are most honoured in England and by the Jews. The Sephardim have many excellent institutions distinctively their own, but freely take part also as individuals in all good works in the community. They lately elected a spiritual chief whom they call traditionally *Haham* (or Sage), and are not therefore corporately concerned in the burning Jewish question of the moment. The other organisation, that of the “German” Jews, includes practically all other Hebrew congregations (with one notable exception) in the British Empire. Its political constitution, so to say, resembles that of a loose confederacy, with the government at the capital highly developed, while the outlying parts are united to the centre chiefly by bonds of affection and sentiment. The supreme spiritual authority resides in a Chief Rabbi, and it is around the Jewish primacy, vacant by the death

of Dr. ADLER, that controversy is raging furiously at the present. Until the formation of the United Synagogue by Act of Parliament in 1870, each congregation of Hebrews, if it did not always dwell under its own tent, did as seemed good in its own eyes in local matters of ritual, ceremonial, or internal arrangements generally. The members might and often did resort to the Chief Rabbi in London for his help or his advice in the interests of their body, or for his decision in questions of orthodoxy or even of conscience. But their appeal was purely voluntary, and if they were not satisfied with his decision they might secede from his authority, though, as a matter of fact, except in one memorable instance, no schism ever took place. Indeed, it was one of the chiefest of the many distinctions of the late Chief Rabbi that he preserved and consolidated Jewish unity within his jurisdiction. But for a long time he was the sole visible link between the isolated settlements of Jews, and in many cases if a provincial congregation which nominally owned his sway registered their allegiance by contributing to the fund which supplied his salary, it was as much as they did. There was no central lay body in London whose supremacy in secular Jewish matters was generally recognised. There was the great Synagogue in Aldgate—the Cathedral Synagogue of the See—which by reason of its long history, its wealth, and its importance, was an imposing figure in the eyes of all British Jews; but this served as a model rather than as a mother to the remoter and less opulent groups. It did, indeed, invite representatives from these to take part in the election of a Chief Rabbi, but this was an act of grace, and not an admission of responsibility. Congregations had sprung up all over the country, especially in the chief centres of population in England and Wales. The Board of Deputies, a body representative of individual communities, sat, and still sits, in London to look after specially Jewish interests of the political sort. The Anglo-Jewish Association, the English branch of the Alliance Universelle Israélite, which has its head quarters in Paris, takes the world for its province, and exerts its great influence on the people and government of Great Britain in the cause of Jewish progress, and especially of Jewish education and liberty, in whatever countries these privileges are still denied to them through the backward condition of their kinsmen or their masters. It has many branches. The Jews’ College is the chief training school for Jewish ministers (and will in the future turn out even Rabbis—a grade in the hierarchy very seldom met with in England except in the person of the Chief, and created at present only by the diploma of Continental Rabbinical academies), and is rapidly replacing the old type of incumbent, who seldom had any secular learning, by

gentlemen with University degrees, in every English-speaking quarter of the globe. The Jewish Board of Guardians, which voluntarily relieves the municipal officials of the burden of the Jewish poor, and copes especially with the notorious “East End” of London, is the envy of the social reformer and of all who have to face practically the problems of pauperism, as its neighbour the Jews’ Free School is the envy of the primary educationalist. These are but one or two of the innumerable philanthropic institutions—industrial, charitable, social, literary, religious—which enrich the communal life, while three newspapers contemplate the universe once a week from an exclusively Jewish point of view. It was inevitable that the growing tendency to solidarity should find a corresponding expression in ecclesiastical terms. Thus in 1870 was incorporated the United Synagogue—in its essence a federation of the London congregations (who still, of course, retained a large measure of local self-government), with power to affiliate other congregations, and with provisions for coöperation with other constituent bodies on the occasion of the appointment of a new spiritual chief. A Council, of which Lord ROTHSCHILD is president, governs the affairs of the United Synagogue, and has been a conspicuous success. From the moment of its foundation it has taken the most prominent place in the eyes of all British Ashkenazim, and has supplied the want so long felt by their provincial congregations, who, without formal adhesion, willingly recognise its preponderating influence. These are now organised much after the pattern of their kindred in the capital; the unit of orthodoxy comprises a Synagogue, a school for sectarian teaching, and an official to celebrate the services. In small congregations this official is generally licensed (after examination by a Board in London) to kill cattle in the prescribed Jewish fashion, a matter of immense practical importance to those whose daily supply of animal food, with the exception of fish, depends on his presence. In larger bodies the same elements are present, developed and reinforced with the usual fringe of “societies,” according to their resources, and generally adorned by the presence of a Minister, preacher, and teacher, the whole being under the supervision and inspection of the Chief Rabbi, who formally “passes” the *personnel*. Such is a rough outline of the domain of “orthodox” British Judaism, divided unequally between Sephardim and Ashkenazim. But there is yet a smaller body of English Jews, whose wealth, weight, and culture is out of all proportion to their numbers, and who have peculiarly to be reckoned with at the present moment. These are the so-called “Reformers,” who number but two or three congregations, the parent body in Berkeley-street, London, and its off-shoots

in Manchester and Bradford, and they are schismatics, whose secession is the only one which has ever rent the Anglo-Jewish body. It took place about 1850, and derived its strength from some of the best blood in both the historic sections of the Jews. Its religious head was, and is, the Rev. D. W. MARKS, Professor of Hebrew in University College, London, and its object was, in the language of its adherents, "to spiritualise the religion." It undoubtedly marked a revolt against the yoke of the Ceremonial Law, though whether the movement preached the gospel of a purer morality is a point still debated amongst the Jews. At any rate, it worked itself out practically in the adoption of a simplified ritual, including the partial use of the vernacular in, and the introduction of music into, public worship, and the formal abolition of the "Second Day," this last institution being a survival from the early days of the Captivity, when the exiles at a distance from Palestine, being uncertain, owing to the difficulty of communication, whether they were celebrating the Holy Days of the Calendar on the exact dates at which they were observed at Jerusalem, decreed in their zeal a doubling of all feasts (though not of fasts) in order to make sure, thus withdrawing the faithful still more from their daily avocations. With regard to these cardinal innovations the public opinion of the community has decidedly followed in the wake of the first, and is, perhaps, ripening in the spirit of the other two. But at the moment of the new departure the seceders were regarded with horror. Excommunication was hurled at the new body. Yet they have steadily thriven, and have individually and collectively adorned the community with many noble undertakings. They have not abated a tittle of their aspirations, but the old feud has quite died out, and the parties to it, or their descendants, labour harmoniously together for the common good. This being the normal state of things in the Anglo-Jewish community, the largest section of it was confronted a few months ago with the question of filling the vacancy caused by the death of Dr. ADLER. As to the man there is no dispute. There is only one possibility. Rabbi Dr. HERMANN ADLER (who is practically an English Jew) is marked out as his father's successor by many titles, of which the chief are that he has for many years been the pastor of an important London congregation, and that for some time past as Delegate Chief Rabbi he has performed all the duties of the post. His ultimate election is certain. But what is agitating the mind of the community is the question as to the conditions of the appointment—what stipulations shall the community make with its new Head? What reforms or concessions shall it ask for? For there is a very different spirit abroad among the people now from that which animated the last electors of a

Chief Rabbi. Five decades of education and political equality have borne fruit, and many even of the orthodox have come to see that not every rite and ceremony of the synagogue is of the essence of true religion. Yet, in the mass, there are infinite differences as to details, and a thousand under-currents of controversy—which were not allowed to disturb the declining years of the late Chief Rabbi—are hastening to swell the rising stream of change. Perhaps, on the whole, the contest which is raging around the proposal to institute a Board (of laymen or clerics, or both) to advise, or, it may be, control, the Rabbinate fairly represents the two main lines of opposing tendency, and is a convenient rallying point for a trial of strength between minor but cognate rivalries. The ultra-orthodox will have nothing but the Rabbinate pure and simple, the Rabbinate as a dictatorship. The more "liberal" minded Jews would put some of its present power into commission. Others think the moment favourable for reunion with the "Reformers," so that the new Rabbi may rule over an undivided dominion; but it is certain that whatever schemes of general reconstruction these might entertain, they will not give up any thing of their independence.

CORRESPONDENCE.

LAND HELD BY FOREIGNERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 17th inst. you state, under the caption "Land held by foreigners in the Settlements,"—"The fact, as we understand it, is very simple. The Japanese Government, having granted one lease of a piece of land, in perpetuity, to a particular foreigner, declines to re-issue the lease in the name of another foreigner, for the obvious reason that by doing so it would take upon itself the responsibility of guaranteeing the correctness of all previous transactions in respect of the land. If Jones, having become lessee in perpetuity of a lot, subsequently transfers it to Brown, Brown to Robinson, and Robinson to Atkins, then if the Government issued a new lease in Atkins' name, it would at once become answerable for the legality of the transfers by Jones to Brown, by Brown to Robinson and by Robinson to Atkins. Such a proceeding on the part of the Japanese Authorities would be decidedly confiding. The absurdity of expecting it must be evident to the most superficial thinker."

Doubtless you will be sorry to hear that so far as Kobe is concerned, and your remarks were intended to apply to this Settlement, your information is most decidedly at fault. It has been the invariable custom of the Government to grant on application, and satisfactory proof of the applicant's title, new leases of lands in the Settlement of Kobe, and the practice has proved satisfactory both to the Authorities, who receive a substantial fee on the issue of each title-deed, and to the land renter, who thus avoids a multiplicity of documents. A similar proceeding obtains both in Osaka and Nagasaki, and from the care exercised by the Local Authorities before sanctioning the issue of a new deed the danger you appear to apprehend has not yet become apparent. In granting new title-deeds the Japanese Authorities may, as you remark, have been "decidedly confiding"—although my own experience in this particular connection has assured me that great care is exercised—but really it is difficult to realize, under the circumstances, the "absurdity" you attribute to a procedure that has existed for nearly a quarter of a century.

The paragraph you quote from the *Tokyo Koron*, which forms basis of your remarks, is certainly very mysterious, but perhaps it has its origin in an innovation attempted here recently by Mr. Hayashi, our present Chiji. The title-deeds

of lands in the Settlement were made out originally in the English language by the Japanese Authorities, and with a single exception that happened ten years since, all new deeds have been so issued, Mr. Hayashi signing one of them himself in February of the present year. A couple of months ago application was made for a new title-deed of some settlement property, and it was actually issued, but the applicant declined to accept it, because the document was in Japanese with a translation in English attached. What Mr. Hayashi's object could be is not immediately apparent, but doubtless he would not have sought to alter the existing procedure without adequate cause; whether the land renter would have benefited by the change that gentleman was not inclined to hazard.

Yours, &c.,

Kobe, 10th November, 1890.

J. C.

(We are well aware that new title-deeds have been granted in many cases, as J. C. explains. But that does not effect the argument advanced by us, and, as a matter of fact, our information is that the practice has been discontinued.—Ed. J. W.)

THE MESSAGE OF UNITARIANISM TO JAPAN.

The following farewell address was given by Rev. ARTHUR MAY KNAPP at the Unitarian Hall, in Tokyo, November 23rd, 1890:—

Past the foot of the hill on which stands my home in Massachusetts, there runs a road, in the history of which there is an interesting fact, which I shall take as the starting point of my remarks to-day.

"Some two hundred years ago," says the chronicler, "commissioners were appointed by the Colony of Massachusetts Bay to lay out a road ten miles west of Boston into what was then the wilderness of Newton, now one of the most beautiful suburbs of the metropolis. The work cost, as such works do now, more time and money than was expected, and the commissioners felt obliged to explain the facts to the legislature, but they triumphantly added, that though it had been an expensive task, yet the Colony was to be congratulated on the successful completion of the work, as there never would be need of a road any further in this direction." Ten miles west of the Atlantic shore was then the utmost limit of imagination for western emigration.

Now mount some eminence and see how far the great sweep of travel of thought, of settlement, of all that makes up civilization has extended. The ten miles have become hundreds and thousands. Wilderness after wilderness has been successfully tracked. Valley after valley has been exalted. Hills that were difficult of access have been laid low. Niagara's terrific flood has been safely spanned. Deserts have been made passable and converted to fertility. The Rocky Mountains, thick-ribbed with the strength of ancient forces, have been surmounted. Faith and persistent courageous labour have literally removed them to prepare the way for the swift onflowing of the new life. And to-day the free soul of man looks out upon the broad Pacific Sea, emblem of the Infinite still beyond, and a highway also over whose free and vast expanse the nations and races and religions of the oldest world and the newest are sailing into neighbourhood and into conditions of mutual regard, fraternity, cooperation, prosperity, progress, peace.

Now during all that period of two hundred years, while this tremendous movement of national life was going on, while the vast continent of America was being shaped and fitted by human hands, while all the multiplying resources and appliances of modern civilization were being brought to bear upon the destinies of a great nation, while the old world of Europe was pouring her surplus millions into the new, and the great industrial army was marching westward; while all this mighty flux and ferment was going on, what was Japan doing? It is scarcely possible in these days of nervous strain to conceive of the profound peace in which she was living. A peace so profound as to border upon stagnation. Indeed, it is the surpassing wonder of her history, that her isolation and peace prolonged for two and a half centuries did not produce actual stagnation and death. But no; instead of dying the slow death of inaction, Japan was living in many respects a wonderfully sweet life, devoted to the cultivation of some of the chief elements of civilization, devoted to the art of refinement, to the promotion of simplicity, and to the study of beauty. While America was going through her toilsome experience, doing the coarse and hard work of clearing a path for future generations, aye even when she was struggling for very existence against internal

and external foes—Japan in her isolation was learning sobriety, calmness, poise, simplicity. Here Buddhist quietism in religion reigned supreme. The Confucian philosophy played its part to add to the serenity of the Japanese mind, while everywhere the wonderful loveliness of nature appealed to eye and heart, weaving its spell upon the thought, and adding its refining and tranquillizing influences to the simplicity and beauty of the world of human life. The result was the unique civilization which here sprang up to be the wonder of the modern world, testifying to the inherent strength, beauty, and dignity of human nature, to an innate force of character in the Japanese able to withstand the deadly influence of isolation, and affording, let me add, to the theological world a direct and striking contradiction to the theory of human depravity, which forms the basis of the popular religious teaching of the West. Japan has conclusively proved what man can do alone without the help of any theological scheme of salvation whatever.

Now while this life was being led here so sweet and idyllic in many respects, and while it grew in refinement, simplicity and love of beauty through more than two centuries of isolation, there was growing up on the eastern coast of America in New England (whence the great westward movement I have described had its starting point)—there was growing up and strengthening a peculiar type of human character strangely similar in many respects yet preventing as many points of striking difference; there was being produced the marvellous combination of sweetness and strength, simplicity and worldly wisdom, love of beauty and vigorous devotion to moral reform represented by the three great names of Channing, Emerson, and Theodore Parker. Inheriting the rugged manhood of their Puritan ancestry; growing up in the atmosphere of the sternest Puritan morality, and showing in the very fibre of their nature the fervent patriotism and devoted resistance to all oppression and wrong which enabled our American forefathers to assert their independence, and to subdue to their purposes the vast wildernesses of a whole continent, they passed their early lives in the idyllic quiet and beauty of those peaceful New England homes, whence the more adventurous spirits had gone out to people the great West and to develop its wonderful resources. These New England homes, which still may be found in that now comparatively restful part of America, were the nurseries of many of the virtues which characterize the Japanese mind, and in their seclusion, in the midst of a nature whose sweetness and beauty in the milder months were only emphasized by the harsh and forbidding climate of the New England winter, these three men grew to manhood, endowed with a passionate sense of the beauty which surrounded them, accustomed to a charming simplicity of life and ways, inured to the strictest economy, and taught the most winning courtesy and gentleness of manners. There was thus a refinement of thought, theirs a simplicity of life, theirs a keen perception of the beauty of nature, theirs such a restful sense of faith in nature's God, that, made thus closely akin to all that is gentle and refined in the Japanese temperament, the type of religion which they represent has peculiar claims upon the attention and upon the reverence of the Japanese people to-day.

In Channing's serenity the Japanese may find all the charm of Buddhist quietism. If ever there was a peaceful soul it was his. If ever there was a voice that spoke peace to others' souls, it was his. And through him rest came to thousands upon thousands of perplexed and weary hearts throughout the length and breadth of America. Many are still living who have been in personal contact with him, under the spell of his serene presence. And you may know them to-day by the serenity of their own faces and by the purity of their own lives.

In Emerson there was a simplicity of life and thought and expression, and so evenly balanced a judgment of men and things, so calm and convincing a philosophy, that had he lived here in Japan, he would have won the heart and the mind of every Confucian in the land. While in the superb patriotism of Theodore Parker, which fought for a time almost single-handed against an evil which he saw was sapping his country's life, inspiring in him a spirit of self-devotion never surpassed by any samurai, there is that which appeals to every patriotic heart, and that means to every heart in this great empire.

Surely, between the religion which these men represent and the real religion of the Japanese mind and heart there ought to be the closest brotherhood and sympathy, and it is as surely no mere chance, which in this great westward movement I have described, has brought their religion to Japan. Whatever may

be the case with Unitarianism as interpreted by the popular thought of the West, the Unitarianism which is by many considered only a modified Orthodoxy, there is no question that the religion taught by these three great souls, or rather the religion which has grown out of their thought, must find a foothold and an abiding resting place among so congenial a people as this. For it comes not as a foreign importation. In its simplicity, in its naturalness, in its broad humanities, it belongs to no special land or nation; it finds a home wherever a rational habit of mind, wherever simplicity of life, naturalness of thought and the spirit of patriotism and self-respect are themselves at home and are cherished. Channing comes here as no stranger. He straightway finds himself among friends, for he appeals directly to those natural instincts of the heart which have here found so unique a development.

Emerson comes here as no stranger or foreigner; no one who knew him or who reads his thoughts could ever dream of Ralph Waldo Emerson coming to a foreign land in a spirit of assumption to make or to count converts. He would find everywhere, and especially here, hands outstretched in welcome as to one instantly recognized to be in sympathy with all who in any way or under any form of religion are trying to live a simple, natural, sincere religious life. The Japanese of to-day, I think it is conceded, if they are to have any Christianity, want a simple Christianity freed from the complicated unnatural and often superstitious doctrines and forms which have so manifestly grown up around and obscured its original natural and beautiful simplicity. There is perhaps no man, no writer, no thinker moulding the thought and the life of the present age who has illustrated so clearly in his own personality, in the calm faith and absolute serenity of his poise, and in the simplicity of his ways, how thoroughly simple and natural a thing real Christianity is, and therefore how entirely possible it is for everyone to dispense with those superstitions which still hamper the religious life and perplex the religious thought of the West. Surely I repeat, Emerson could not by any possibility be looked upon here in Japan as a stranger or as a foreigner. In the life that is lived here, in many respects, though by no means in all, he would recognize much that approaches his ideal, and he would find himself at home and among friends.

And so too would it surely be with Theodore Parker. The man who, though he could be and was ever when occasion required, as bold as a lion, was as gentle and winning and courteous as the sweetest child that ever bowed under the Japanese sun. Read his works and you will see that the very foundation of his religion and his life was his passionate love of the wonderful and beautiful nature which to him, in spite of its sterner and more terrible and even cruel aspects, carried ever the conviction of the abounding love and goodness of God. And were he to come to Japan to-day he could never say to its nature loving people, "Put aside that which you have so earnestly revered in the past, and accept instead the religion which I bring you from afar." Rather would he say, "Here in this very love of nature you have already the foundation of the true religion, yea the foundation of that simple nature religion of him who when he was asked by the people to tell them about God, pointed not to any miracle, not to any jugglery with nature, not to any break or interference in nature's laws, but to the wonderful because ever steadfast and sure working of those laws." "Consider the lilies of the field." "Behold the fowls of the air." "See the seed scattered on the ground." "See the corn ripe for the harvest." Look at these things, Parker would say. See the beauty and loveliness of them. Cherish the thought of that beauty and loveliness, yea even when nature seems most harsh and cruel to you, and from out your love of nature there will come to you the conviction of the love of God. It is this that Theodore Parker would speak to the Japanese as he spoke to the heart of America, and there awoke a sense of God in so many an earnest soul well nigh buried away by the fires of the unnatural and cruel faith in which they had been reared. So none of these men could possibly have come here as strangers or to proclaim an alien faith. They would come to build on all which they could find of the good and beautiful and true in outward nature and in human nature, and greatly would they rejoice at the breadth and beauty of the foundation already established.

But they would not come here at all unless they felt that they had something also to give, something to contribute to your life and thought, to build it up into a higher strength and beauty. Nor does the religion which now points to them as its most honoured teachers and exemplars, come here to Japan without some reason for coming, without some definite and helpful message of its own

to bring, without something to add to what you already have of religion, of character, and of life.

And to what this is, we may find what may serve as a certain clue and vivid illustration, by recurring again to the unique feature of your own history. That long isolation of yours while the rest of the world was engaged in a fierce struggle for existence, enabled you to grow in gentleness, in refinement, in courtesy, in kindness of disposition, and in the spirit of neighbourly helpfulness. But it also had its marked disadvantage, and deprived you of many an opportunity for growth in other directions. As was the case with the ancient nation of the Greeks, whom you greatly resemble, the exclusive cultivation of the arts of refinement inevitably sapped your strength and impaired your stability of character. Again cut off as you were from the rest of the world it was also inevitable that you would lose in great measure that sense of human brotherhood without which no man can feel, or can put forth his own real strength to-day. You were and are kind and helpful to your immediate neighbours to those of your own family, clan, or kin, but you do not yet feel the thrill which comes from the conviction that the whole world of humanity is one great brotherhood. You are patriotic, none more so, but you have not yet grasped the great truth that the nations of the earth are to-day members *one of another*; that the good of each depends upon the prosperity of all; that no nation can live to itself alone, or can possibly dominate the rest. Their interests are mutual; their life is *one*. Japan needs the strength which comes from belief in the unity of man, in the great truth of human brotherhood.

Then, too, in your isolation and because of the cramping of your sympathies, there seems to have come to you in the midst of the loveliness by which you are surrounded, and the refinements by which you have adorned your life, a paralyzing indisposition to look beyond yourselves or your nation to something higher than yourselves, higher than your nation, to the source from which you and your nation have sprung, and from which came all the loveliness and beauty as well as all the wonder and terror of the universe and all the love of your own earth. By your long isolation, in a word, with all that you gained you lost or seriously impaired strength and stability of character, the sense of human brotherhood and the thought of dependence on God, three things without which no nation can hold its place in the modern world of thought and life.

Now for one I know of no teachers or leaders who can so well supply these needs, who can bring you to-day such an influx of genuine manly strength—and stability of character, such a sense of the grandeur of human brotherhood, such a spirit of true patriotism or such a conviction of the reality of God as the three who would here find themselves so much at home and so thoroughly among friends.

For theirs was not only your gentleness of disposition, your courtesy of manner and your refinement of life, but also a rugged and indomitable strength, a magnificent stability of character and purpose, which combined with their simplicity of life and thought enabled them to become the leaders of the life and thought of all America. Theirs too was not only an ardent love of their own country, but an abounding love for mankind, so that now they belong to no one nation, to no one people. They are the world's own.

And theirs above all, with all their conviction of the grandeur of their own human nature, theirs was a sweet and tender humility, born of a sense of dependence upon God—upon the "power, not themselves, which makes for righteousness."

And it was because of this conviction of God, the conviction that they were not alone in the world, but that the strength of God was in the right, in the principle, in the cause for which they fought, that their own strength never faltered, that their love for man never failed, and that the peace of God was in their hearts and showed itself in their lives. Their crowning gift to you, and would that you had it to-day, would be their conviction of the reality of God.

And as I now look back over the time during which it has been my privilege to come to you as the messenger of that religion, or of that which is the outcome and legitimate descendant of their thoughts, and as I stand here at the parting of our ways to speak the word of farewell, my own utmost longing and hope for the Japan which has been so kind to me, and where I have found so congenial a home, is the hope that God may indeed be with you as He was with them; that there may come to you the greatest and most helpful of all the things which your life is now lacking; that there may come to you the conviction of the reality of God in your daily life and thought.

And feeling that this is indeed your greatest need, you may perhaps see why it is that in bidding you farewell I shall not use your Japanese *sayonara*, but rather the strong Anglo-Saxon word *Good bye*. "*Sayonara*" is indeed a softly flowing, tender, and gentle word. Literally translated "if it be so," which I take to mean simply "if we must part, why then we must," it is a word strangely expressive of the tenderness, the patience, the refinement of the Japanese character. Those of you who know me will believe therefore that it is in no spirit of depreciation of these characteristics, but rather with heartiest admiration for and sympathy with them, that my last word to you is not *sayonara*, but that stronger word which exactly expresses my conviction of your greatest need, and my hope that in the thought of God, in the coming day of a high and noble Theism, you will find the source of all true progress, of all true strength, of all true greatness and courtesy. There is no better wish nor hope to which I can give expression, than that which is contained in the simple words "*Good-bye, may God be with you.*"

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, November 1st.

The State elections come off on Tuesday, and the canvass waxes fast and furious. The party which is beaten in the off years usually consoles itself with the assertion that party feeling is not roused oftener than once in four years. But, in fact, these intermediary elections do reflect the drift of political opinion, and foreshadow results for the future.

Public attention is chiefly drawn this year to New York, and to the central grain States. It transpires that Porter's Census gave New York City some 200,000 less population than it really contains. As New York is a Democratic stronghold, a reason for the miscount can easily be imagined. Nothing in Mr. Porter's past record forbids the suspicion that he tampered with the returns from that city in order to reduce its Congressional representation for the benefit of the Republicans whom he serves. But tricks of this kind invariably cut both ways. Mr. Porter's little dodge has had the effect of strengthening the Democracy in New York, and of making it reasonably sure for the Democratic candidate in 1892.

In such interior States as Kansas, the McKinley Tariff Bill is telling against the Republicans. Hard-headed farmers are not deluded by the provisions which levy protective duties on agricultural produce which we do not import; but they see quite distinctly that they have more to pay for their clothing and their farm utensils, in consequence of the advance in prices which has followed the passage of the Tariff Bill. As usual in these States, the prevailing discontent has taken shape in the organization of a Farmer's Alliance, which has formed a fusion with the Democrats. Simultaneously, the U. S. Supreme Court Judges, sitting in Circuit, have decided that the Wilson Act of last session empowering State legislatures to prohibit the sale of liquors under the police power of the State, does not resurrect the existing constitutions and laws which had been pronounced unconstitutional—that the Act merely authorizes the legislatures to go on and pass new prohibitory statutes or constitutional amendments. This blow to the prohibition movement will weaken its partisans and strengthen its opponents. It will cost the Republicans some votes.

In the southern States, the Democrats are confident not only of recapturing, at the polls, the seats which the Republicans awarded to contesting members at last session, but of replacing a number of Republican members, over whose seats there was no dispute, with Democrats. In this way it is reckoned that there will be a clear Democratic majority often or twelve in the next Congress. The prospect has provoked Major McKinley and Speaker Reed to announce the passage of the Force Bill at the next session of Congress, in spite of the warnings of Senator Quay and his prudent friends. It hardly seems likely that such a device can succeed. The presence of federal bayonets at the Southern polls is calculated to exasperate the Southern people to such a degree that it may destroy the Republican party in the South entirely.

In the meantime nothing is heard from the White House. Mr. Harrison is probably reading up the old English humours for neat conceits to be put into his next message. Mr. Blaine has been stump speaking in Ohio. His speeches read as if his mental power was beginning to decay. When a statesman compares the population and wealth of the country in 1890 with its population and wealth

in 1860, and argues that the advance is due to the maintenance of the war tariff, there is a solution of continuity somewhere. The Secretary is not happy in his public functions. He has just had to apologize to the Government of France for quasi-public attentions paid to the Count de Paris, who is on a junketting tour through this country. M. Carnot very properly observed that it was not a friendly act for our Government to pay honour to one who was a conspirator against his own, and who was driven into exile for fear he would do mischief.

Down in New Orleans they are having exciting times over an outbreak of race prejudice—the Italians, and not the negroes, being on this occasion the victims. It is alleged that a branch of the secret society of Sicily, known as the Mafia, had established itself at New Orleans. Some members, charged with crime, were promptly and roughly arrested by the police. A day or two afterwards, the Chief of Police, one Hennessey, was shot dead on his own door-step. The Italians were suspected of the murder, a wild commotion broke out, the Mayor summoned a special meeting of the City Council, red hot resolutions were passed, and nearly every Italian resident of the city was arrested. Up to date, no lives have been lost, but the fury against the poor "*Day-goes*" is fierce.

Slight attention has been paid thus far to vital statistics in this country. The federal authorities collect a few in the decennial census; and in some cities, such as New York, Boston, and San Francisco, statistics of the public health, and of births, marriages and deaths, are regularly gathered. But we have no such regular tabular chronicles of the events of life as are published regularly in Great Britain, France and other European countries. This omission imparts peculiar value to the records which are now being given to the world by Mr. J. J. Goodwin. From them it appears that the average duration of human life is longer in this country than in Europe. In Massachusetts, the average duration of life among the males is 47, in Vermont 51, in New Jersey 48, in Virginia 47, in New York 48, in the Western States 50 years. Women generally live longer than men. Dividing people according to callings, men who are unemployed live longer than men who are employed; which implies that activity of brain and exercise of muscle are consumers of life. Of those who have a calling, judges, bank officers, and farmers live the longest, their average being between 64 and 65; and the shortest lived are telegraph operators, editors, teachers, clerks, printers, machinists, and musicians—among whom the average of life is under 40 years. Among the classes which on the average live to the shady side of 50, are public officials, lawyers, clergymen, physicians, merchants, and a number of mechanics, such as carpenters, masons, tailors, blacksmiths, coopers, and rope makers. Curious to state, in all sections of the country, Jews are longer lived than Christians. Centenarians flourish among the negroes of the South, and in several New England villages. The supply of old women, black and white, who saw George Washington, and some of whom dandled him on their knee is well known to be inexhaustible.

It has been finally settled by the judgment of a Court in Pennsylvania that in that State, and probably in other States with similar codes of law, a man may not sell his wife. The decision was rendered in a case arising from the following facts. A Mrs. Marchell married off with a man named Musker, who was younger than her husband. The latter followed the fugitives, and coming up with them, proposed to Musker not to make it an affair of pistols and coffee, but to adjust the controversy on a business plan. He had lived with Mrs. Marchell for many years, and knew all her good points; he submitted that she was worth \$130 to any man. The co-respondent in the case admitted that the lady had charms, but his two days' enjoyment of her exclusive society had also developed some bad traits in her, and he thought \$100 would be about a fair price to pay. The disputants finally compromised on \$115, which Musker agreed to pay. Instead of doing so, however, he fled again with his innamorata without paying a cent. Once more the bereaved husband sorrowfully packed his grip sack, and started in pursuit. He overtook the quarry at Scranton, and wasting no words in quarrel or argument, he seized the despoiler of his home for \$115. He was a sad man when the judge decided that no suit would lie on a contract which was illegal; and he was still sadder when the court ordered him into custody for having tried to make merchandise of the noblest work of God.

Ex-President Cleveland unbosomed himself yesterday on the political situation. His views are so tersely expressed, and they seem to me to be so accurate throughout, that I append a few extracts:—

The judgment of our countrymen has been so trammelled and their perceptions so clouded by prejudice and appeals to self-interest that their apprehension of the true province of our Government has been distorted, and they have for years been led to believe that the conduct of public affairs might properly minister to their profit, not by securing general prosperity founded on principle, but by giving direct advantage to certain classes.

It is certainly true that in such selfish operations the interests of some of the people must be neglected. Protest on the part of these has been stifled by the most arrant deception and cajolery. At last, however, these neglected ones are aroused, and in spite of the clouds of misrepresentation and delusion which surround them, they begin to see the light. Our agriculturists and others whose interests have been disregarded, while advantages have been accorded to the favoured few, are not to be much longer deceived. I am confident we shall secure a majority in the next House of Representatives. I cannot forget how laboriously a reform moves which must break through selfish interests, strongly entrenched and unscrupulously asserted, and overcome abuses long suffered and arrogantly maintained. I believe all our gains must be the result of a hard struggle against these odds. It is not, however, possible that the complete triumph of the people's cause can be much longer delayed.

The elective collection of the wholesome doctrine which characterizes the Democratic press, through discussion going on in every part of the country, the undisguised schemes at the Republican party to secure its perpetuation in power through reckless enactments which stifle the result of the people's surplus, its brutal methods of legislation, and, above all, positive distress daily threatening our people's homes under the operation of the new and iniquitous tariff law—a law which not only enhances the cost of the necessities of life, but fosters the extortions of trusts and combinations—make certain the advent of a freer, better time, and the ascendancy of true Democracy.

The Director of the Mint has issued his annual report for the fiscal year ending June 30th. He states that the coinage for the past fiscal year was the largest in the history of the Mint, aggregating 112,698,071 pieces. Gold and silver bars were manufactured as follows: gold, \$23,342,433; silver, \$7,045,357, total, \$30,387,791. Gold bars were exchanged for gold coin, free of charge, of the value of \$16,357,677. The exports of gold during the year exceeded imports by \$4,253,047. Silver exports were \$8,545,455 over imports. The total amount of silver purchased during the fiscal year for the coinage of silver dollars was 30,912,111 standard ounces, costing \$26,899,326. From the close of the fiscal year to August 13th, the date the new Silver Act went into effect, the amount of silver purchased was 3,108,199 standard ounces, costing \$3,049,426. The amount of silver bullion purchased under the act to October 31st has been 12,276,578 ounces, at a cost of \$14,038,168.

There was a marked improvement in the price of silver during the fiscal year. The Director estimates the stock of metallic money in the United States on July 1, 1890, as follows:—gold, \$695,563,029; silver, \$463,211,919. The total amount of metallic and paper money in circulation, exclusive of holdings in the Treasury on June 30, 1890, was \$1,435,610,612, a per capita of \$22.09, against \$1,380,418,091 at the commencement of the fiscal year, an increase of \$55,192,521. The number of silver dollars in circulation on June 30, 1890, was 56,278,749, against \$54,457,299 at the commencement of the year. The product of gold from the mines of the United States during the calendar year 1889 was \$32,800,000; silver, 50,000,000 fine ounces, the commercial value being \$46,750,000, and the coinage value \$64,646,464. The product of mines and smelters in the United States during the same year was: gold, 2,327,892 troy ounces; silver, 60,236,469 troy ounces. The total purchases of silver for coinage into silver dollars, from March 1, 1878, to August 12, 1890, was 323,635,576 standard ounces, costing \$308,199,261. The net profit of the earnings over the expenditures of the Mint during the fiscal year was \$9,232,929.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—MONDAY, November 24th, 1890.

DEGRON V. GABERETTA.

Richard Gaberetta appeared on a judgment summons taken by Henry Degron for the non-payment of \$20, the instalment for November of the amount for which judgment was given against him in the case of Degron against Gaberetta.

Richard Gaberetta deposed in answer to the plaintiff that a certain sum of money which he had received was got in January—was before the judgment took place. He received the money from Mr. Salabelle on account of the estate of Joseph Ruel. The money had been lent and did not belong to witness, but belonged to a man named Marino Jakoro, a Spanish subject. It was \$1,400, which was lent; it belonged partly to witness's wife and partly to Mr. Mariano, and he (witness) was working with it. The money which was used in purchasing land was his wife's money. When Mr. Ruel died witness lost \$100, having lent him money. The money used in the purchase of land was about \$600, belonging to his wife.

His Honour said he (witness) was ordered to pay \$20 per month. He had done so in September and October. Had he paid the \$20 for November?

Witness said he had not. The reason was Mr. Degron had asked him to transfer No. 500, Bluff. He did so and the transfer expenses were in all \$24. He (witness) only received \$70 per month and had himself, his wife, and five children to support, and if he had to pay Mr. Degron \$20 also there would be only \$26 left for him to support his family, so that he had not enough money to pay \$20 for this month. He had never said Mr. Degron would not get his money; but some people had probably been talking, and had told him so. Witness could not prevent people talking. He got only \$70 a month. They had sold all his tools except about \$25 worth, which were of very little use, and he could not work. He had told Mr. Litchfield that they were preventing him from working. The property was rented at \$15 per month.

His Honour said there was no proof that Mr. Gaberetta had said Mr. Degron would not get the money, and as he had explained he had to pay \$24 for transfer expenses, and therefore for November the instalment could not be paid. But if he was brought up again he would be liable to imprisonment. He would have to pay \$20 per month. It was his first duty to pay that amount before anything else. Mr. Buslie made the order for that amount, and his Honour could not alter that. He was only to see that the \$20 was paid monthly.

The witness said they were nearly starving on \$50 per month, and it was quite impossible for him to keep paying the \$20.

His Honour said he could make no alteration; he only man who could do it was Mr. Degron.

Witness then asked Mr. Degron if he would accept \$10 per month as it was impossible to pay \$20; if he would accept \$10 it would be paid regularly, but if he (witness) had to pay \$20 he would probably be in court again.

Mr. Degron however would not agree.

His Honour said he could only leave it as it was. If Mr. Gaberetta did not pay the \$20 per month they would have again to see what could be done, and to prevent further expense to Mr. Degron his Honour adjourned the case till Monday, December 13th. The defendant would have to pay the money by that time with costs.

TUESDAY, November 25th, 1890.

ASSAULT AND WOUNDING.

Thomas Conway was brought up for trial on a charge of having stabbed and wounded William Kelly, with intent to disable him, on July 29th on board the barque *Abyssinia* on the high seas.

Mr. Litchfield prosecuted for the Crown.

The accused said with respect to the wounding of Kelly he was guilty, but with regard to doing him grievous bodily harm and to disable him he (deponent) deliberately walked over to him and stabbed him. The man was completely at his mercy and was doing nothing. He was completely mesmerized when he (deponent) presented the knife. His right hand fell down by his side and with his left hand he was grasping the ladder, and if he (deponent) had wished to do him grievous bodily harm he could have taken his heart out, for he was completely at his mercy. Therefore he (deponent) did not think the charge ought to be stabbing with the intent to do grievous bodily harm and to disable.

Mr. Litchfield said he was prepared to accept a plea of guilty on the second count without going into the first count.

His Honour said the gentlemen who had been called as a jury would not be required to remain.

Mr. Litchfield, addressing the Court, said it seemed that on 29th July last, while the *Abyssinia* was on the high seas, the master was displeased with the state of the after deck in the morning. He need not trouble his Honour with all the details, but the regulation was that the after deck was to be kept free from excretion. The crew were summoned aft, and the master asked them who had offended. It seemed that an altercation took place between Kelly and the prisoner, and afterwards a scuffle took place, in which the master interfered by tripping up one if not both of the men engaged in it. The two men were separated, and the accused challenged Kelly to have a fair fight on the main deck. The accused then left the after deck and went down, and after a few seconds Kelly followed him. Taking the statement of the accused it seemed that upon reaching the main deck, the accused seeing Kelly following him, drew his knife, turned round, and met Kelly and struck at his face cutting him over the temple, giving him a wound that might have been of a very serious character. So far the accused had committed a very serious offence. Mr. Litchfield went on to say that as the accused had pleaded guilty to the second count, and though there was a further charge against him for stabbing Bride, it was possible if not probable that the ac-

cused did not act with intent when he cut him over the left hand, the wound being according to medical testimony such as would practically disable the arm. If his Honour would look at the depositions he would take into account some of the circumstances that occurred. The accused was violent, and fancied himself very much provoked. After those two men were wounded, and in order to quiet the accused, it was very evident that he suffered some ill-usage. Some of the crew kicked and some struck him, and according to the accused's account the captain struck him with a capstan bar, though that was denied by the captain. It was also evident that for sometime the accused was imprisoned on board the ship. The master in his evidence said, "I tried him up to the mizen stays for three hours until he got a little subdued, and afterwards put him in solitary confinement for a time, after which on promise of good behaviour he was released. After about two weeks, Bride, being in a very weak state, seemed afraid of his being at liberty and he was shut up for about a month." So the accused seemed to have been confined for a month or six weeks. The accused had pleaded guilty, and the stabbing of Bride seemed to have arisen from the same action as that of Kelly, so with his Honour's permission he would accept the judgment from him for the case, without summoning the jury for Bride's case to-morrow.

The accused said he had heard Mr. Litchfield make some remark about the stabbing of Bride, during the scuffle. With respect to that he interfered when he (deponent) fell on the deck with Kelly, and was being attacked and kicked by the others. Whether Bride tried to make himself officious in the eyes of the master or to raise himself in the estimation of the crew he did not know, but when deponent fell on the deck after wounding Kelly he was caught by the arm when he still had the knife in his hand, and tried to free himself. He did not know how the wound was inflicted. Bride was liable to receive some wound when he interfered, but he (deponent) had not the slightest intention of wounding him, and had no idea that he had wounded him till he was put in irons; when Bride asked the master for permission to kick him. The master kept silence, and it seemed that silence meant consent and that the master meant that he could not give him permission to kick him (deponent) but if he did so he would not be punished for it, and he (Bride) did kick him and struck him in the face saying, "You cut me," and a few other uncomplimentary words. Bride had said to the Court that he told him (deponent) to go aft, and said it was very foolish for him to use a knife on Kelly, but that was not a fact. Bride never addressed such words to him or anyone in the vessel. Deponent said it seemed to him that it was a pre-arranged affair, for on previous occasions he had had some words with the captain and officers. One occasion was when he one day fell nearly a hundred feet from a foot rope which was slung in such a way that he could hardly hold it. The deponent went on to say that the Nova Scotia vessels were sent out without good officers; the officers were simply to back up the captain, and if he found fault with a man, to give him the dirty work to do. Another occasion when he had some words was when he was told to splice a rope, and, receiving no particular instructions as to how to do it, he naturally did it the easiest way and cut off some frayed ends, upon which the captain asked if he had cut off any, and, he answering yes, they had some words about wasting the stuff.

His Honour said he did not see what use it was to talk about the general management of the ship. He would willingly hear anything prisoner had to say to better his case about the assault, but that talk was not evidence.

Accused said he thought the matter had been pre-arranged by the master to get him into some trouble. When Kelly interfered between the captain and him Kelly put his hand on deponent's collar. Deponent put up his hand to push him off, and the master then tripped him up. Kelly told the master to let them alone, thus taking it out of his hands, and Bride tried to take it out of Kelly's hands. After cutting Kelly he was instantly attacked by a severe blow on the shoulder from the captain, and by repeated blows from a capstan bar he was kept down till they got the irons on him. He knew nothing about injuring Bride, and if he got into trouble it was his own fault for interfering.

His Honour said he had no doubt the prisoner had some provocation. He would also take into consideration that he was put in irons, and was rather ill used. He did not think that imprisonment here was anything so bad as solitary confinement on board a ship, and under the circumstances he would sentence accused to five months' imprisonment with hard labour.

AFFAIRS IN JAPAN.

LOCAL GOVERNMENT.

The following able and interesting articles have appeared in recent issues of the *Nation* from the pen of Mr. John H. Wigmore:—

Tokyo, May 1890.

There is an old Japanese saying, once current in Kyoto, "Tenka hatto, mikka hatto" (Government laws are but three-day laws). The accepted import is, that the central Government, its officers and laws, constantly change, and their influence is but a passing one; the true source of social order lies in the customs and regulations of the home, the hamlet, and the city. Whether this was a genuine deduction from experience, or merely an adaptation of the Confucian maxim, "By good morals govern and tranquilize your homes, then govern and tranquilize the country," is perhaps a question. It is certain, however, that the local political life of the Japanese people under the Shogunate was far more active and important than one is allowed to gather from the dry annals of the military aristocracy which form the staple material of the ordinary histories, whether native or foreign.

To comprehend the conditions under which Japan will enter upon parliamentary government, we must have some knowledge of the degree of success with which the nation rules itself in local affairs. To convey some such information is my present object. It will be desirable, however, to glance first at the local political life which has been left behind. The available materials for its study are, unfortunately, not yet plentiful. I rely for such facts as I have obtained upon some translations (recently made for me) of scarce local histories, upon the manuscripts of Dr. D. B. Simmons (an able observer, recently deceased), to which I have had access, and upon some private lectures of Prof. Konakamura, reputed to be the most learned Japanese legal antiquarian.

It is a matter of general knowledge that the administration of the country (confining ourselves to the last 300 years) was parcelled out, under the Shoguns, between themselves, the eighteen greater daimios, and the lesser landed nobles; and that the last two classes maintained a certain amount of legislative independence, and surrounded themselves with a military body, the Samurai, for whose government codes of rules were formed. But these classes of the population (with few exceptions) were consumers only, not producers. In number they seldom, if ever, exceeded one fifteenth of the whole population. Below them a great national life went on. Their particular regulations were but a small part of the usages and rules which secured social order, and formed the characteristic law of the country.

The division of the daimiates for purposes of administration was, in its general features, simple enough. Each was divided into *mura* (villages or townships). Over the *mura* was a *nanushi* (called *shoya*, in the west). The general management of the producing population of the daimiate was placed by the lord of the soil in the hands of an officer called *kori bugyo* (county superintendent), or, in the Shogun's dominions, *daikwan* (deputy). If the district exceeded a certain size, the title was *gundai* (county chief). Sometimes a *gundai* supervised several *daikwan*. Between the *nanushi* and the *daikwan* was often an *o* (chief)-*nanushi*. Below the *nanushi* were various officers—the *kumi-gashira* (company-chief), whose duties were executive, the *toshiyori* (elder), and *hyakusho-dai* (farmer-agent), whose offices were advisory.

In appearance this arrangement was merely a series of subdivisions of executive duties. In fact, there began at a certain point in the scale a vital distinction. Above that point all power was received from above; below it, all came from below. The *daikwan* and the *gundai* were always appointed by the central authority, in Bakufu (Shogunate) districts (*ken*) as well as in the other feudal divisions (*han*). The *nanushi*, on the other hand, were as a rule elected by the people (subject to approval by the *daikwan*). They were identified with the people, protected them against official severity, and were their representatives in all questions arising between the Government and the people. The *daikwan*'s powers involved all that concerned the interests of the central Government. Roughly speaking those interests were that the people should make the land yield the greatest possible returns, though this purpose was seldom carried out oppressively or from a short-sighted point of view. The *daikwan* and his assistants therefore supervised the system of irrigation and methods of cultivation, had full charge of taxation, assessed the lands (a matter of extreme complication), allowed rebates for crop failures, etc., and collected and forwarded the taxes. Besides this he had judicial functions,

fixing land boundaries and hearing appeals from the justice meted out by local authorities. To many sequestered communities he was the embodiment of supreme authority, and Shogun and Mikado were only names.

In the local interests of the people, however, their own usages obtained. They had their financial problems. They repaired roads, each person owing a quantum of service. The *mura* owned grass lands and forests as public property, and made regulations for their use. As a rule all ordinary administration of justice, civil and criminal, began and ended within the borders of the *mura*. It was, to be sure, a life of customs, not codes; of arbitration, not litigation. The officers of the community were advisers, hardly rulers. The *nanushi*, although he was elected, and by ballot, too, was usually some patriarch, marked out beforehand by the general opinion. Spirited electioneering, however, sometimes took place; a tie vote was occasionally recorded. Curiously enough, a mere majority was not decisive; a clear preponderance of favour was required. Owners of land seem alone to have had the franchise, but other considerations were also of importance. To vote for one's self was a breach of good manners; one who once did so has been dishonourably immortalized in one of the old chronicles.

By the seventeenth century, if not before, certain of the local usages, mixed with regulations of the Bakufu and the Emperor, were customarily committed to writing as a sort of constitution. This document was signed and sealed by the head of every *go-nin kumi* (five-person company, a subdivision of the *mura* to some one of which every person must belong). It was called *kumi cho*. Of these documents, Dr. Simmons, in his journeys saw many still remaining in all parts of the country. I know, however, of only four copies which are now accessible—one in the Imperial University Library, one among Dr. Simmons' papers, and two in my possession, sent by courteous officials in Chiba and Kyoto. Future research in this field would be very fruitful.

Such, in outline, was the local self-government of the past. It was not everywhere the same; in details it varied widely. In the cities, particularly, it received a special development. But in general the elements remained the same.

Turning now to the story of local government since the Restoration down through the last twenty-three years, and compressing it into a sentence, it has been a veritable leading of the Israelites out of the wilderness, a deeply interesting instance of the systematic political education of a people. As a matter of course, broad modern influences have contributed much. There have been intervals, too, when other pressing problems forced a suspension of this work. Yet so far as governmental direction is concerned, it has certainly been a difficult task skillfully accomplished.

The period from 1867 to 1889 falls into two parts, dividing at the year 1878. The former was occupied with testing the capacity of the people for self-government; the latter with extending to them a larger and larger measure of power, and in advancing towards a proper degree of decentralization. At the beginning, however, the political situation was such that the establishment of a strong central power was the paramount requirement. The local divisions, as has been said, had been *ken* (Bakufu districts), and *han* (clans), with three *fu*, or metropolitan cities. By skilful management on the part of the Government, their object was gradually attained. The only measures relevant to our subject were the transformation, early in 1869, of *daimio* into temporary *chi-han ji* (clan-governors); and the final substitution for *han*, by decree of August 29, 1871, of a uniform system of *ken*, with *chi-ji* or *ken-rei* (governors) appointed by the Government. There were at that time three *fu* and sixty *ken*.

Meanwhile the foundation of the present system was laid by the decree of February 5, 1869, a sort of constitution for internal affairs. It provided for the uniform administration of *fu*, *han*, and *ken*, and regulated in general terms the principal departments of administration. For a while, at least, the old system was not in practice much altered. At the head of the *mura* was the *ko-cho* (sometimes still called *nanushi*) with his assistants. The popular favourite was usually appointed by the Governor. Several *mura* together formed a *kori* or *dai-ku* (county), under a *ku-cho*, who was usually selected from among the *ko-cho*. The *ken-rei* had charge practically of the entire administration, and served as a judicial officer as well. The police were controlled from Tokyo.

But a step forward was soon taken. The third clause of the decree of February, 1869, read: "Holding of assemblies. When existing laws are to be amended or new ones to be enacted, public opinion shall be consulted, so that legislation may

be impartial and the people may be content." Within two months' time an assembly chosen by popular vote had been summoned in Osaka, and in the course of a few years a system of ward (*ku*) assemblies was added. *Gi-ji cho* (parliament) was at first the general term used, but *swai* (assembly) has since come into general use for local bodies. During the next eight years this example was followed with increasing frequency. The credit of the next assemblies seems to belong to the *ken* of Yamaguchi and Hyogo, and after these to Chiba, Niigata, Oita, and others. In Tokyo no popular assembly seems to have been formed, but only an assembly composed of the heads of smaller districts. Indeed, in Chiba *ken* the members were at first *ku-cho* and *ko-cho* only, but they soon began to be elected by the people. So too, in this *ken*, the presiding officer, at first the *ken-rei* himself, came to be one of the members, chosen by themselves. In this *ken*, it may be added, *ku-cho* and *ko-cho* were chosen by popular election for some years before the law of 1878.

While on the one hand the people were beginning to take part in the management of local affairs, the process of decentralization had begun. As early as 1873 the Government had by a general order recommended the *ken-rei* to establish local school departments, and to have the officials elected by the people; and the measure was very generally carried out. In 1876 the judicial functions (which in 1872 had been in many districts taken from the *ken-rei* and placed under the Government) were vested in a series of courts, one *Dai-shin-In* (Supreme Court), one *Koso-In* (Superior Court) having four circuits, and a *Saiban-sho* (court of first instance) in the capital of each *fu* and *ken*. Justices' courts were afterwards established here and there in the larger towns. The first two had been established in the previous year, but were now reorganized.

Finally, in the early part of 1878, at a meeting of the *Chihō-kwan Kwai-gi* (assembly of local officials) held in Tokyo, the Government submitted a bill establishing popular assemblies in each *fu* and *ken*. A similar bill had been submitted to the same body in 1875, and they had declared in favour of constituting such assemblies of the appointed *ku-cho* and *ko-cho* only; but the Government had concluded that the time was ripe for something better than that. The measure became a law on July 22. It was liberal and modern in spirit and in detail, though it simply introduced the assembly to a share in deliberation, and gave no complete legislative power.

On the same day were published a law naming the various purposes (schools, police, roads, etc.) the taxes for which were to be laid by the local government; and a law dividing *ken* into *gun* (counties) and *son* (villages or townships), and dividing *fu* into *ku* (wards) and *cho* (precincts). A law of July 25 revised the law of 1869, and provided for the appointment of subordinate officers by the Governor. On August 26 it was ordered that the heads of *cho* and *son* should be elected by the people, subject to the approval of the Governor.

The first three of these laws have been called *San Dai Shimpō* (The Three Great Laws). On the same July 22 it had also been decreed that "in each of the *fu* and *ken*, *ku*, *cho*, and *son* assemblies are to be held, as soon as circumstances permit, to determine the amount of taxes for such district." In a few years such assemblies had come into general existence, and uniform regulations dating from 1881, but revised in 1884, modelled them after their provincial predecessors.

In the period beginning with 1878 the local government system has advanced steadily, if slowly, in the direction of greater decentralization and broader popular prerogative. Under the first head we may notice: in 1880, the relinquishment to the local government of taxation for prisons and public works; in 1881, the establishment of local committees (appointed) and assemblies (elected) for agriculture, trade, and commerce, and the granting of the power to establish local educational boards; in 1885, greater freedom in shaping local educational methods; in 1886, a revision of the administrative system, giving wider powers to local officials; in 1888, the surrender of the *fu kin* (licensed-prostitution tax) to the local governments. Under the second head may be noted: in 1879, the exemption of Assembly members from arrest during a session without consent of the President; in 1880, the substitution of the Assembly President for the Governor as the one to pass upon resignations and requests for leave of absence, the grant to Assemblies of the power to expel members for neglect of duty, and to address the Governor; and in 1887, a greater accountability of the Governor to the Assembly in reporting details of work.

Practically a new period begins with 1889. A new and comprehensive law for city (*shi*), town (*cho*), and village (*son*) government was submitted

to the Senate (*Genro-in*) in 1887, and to the Assembly of Local Officials in 1888, and was enacted April 14, 1888, going into effect April 1, 1889. By it the local subdivisions are somewhat changed, a *gun* (county) being now divided into communities of three classes (*shi*, *cho*, and *son*), graded according to population, and each with a popular assembly; and each *fu* consisting of one main "city," with suburban districts. Ward (*ku*) assemblies may be established when desired. A few of the notable features are (1) the use of certain terms new to the language, such as *homin* (citizen); (2) the declaration of the principle that "a city, town, or village shall be considered as a juristic person," that is, as a municipal corporation, not merely an administrative subdivision; (3) the election of mayors (*shi*, *cho*, and *son cho*) by the city, town, or village assembly; (4) the division of the electors into classes according to the amount of taxes paid, each class electing an equal number of representatives—a system similar to that in vogue in Hamburg, Brunswick, and other German cities; and (5) the creation of a second or aldermanic chamber. A similarly comprehensive law reorganizing the *fu* and *ken* governments will soon be issued.

Such has been the progress of local self-government in the Meiji period. The difficulty of obtaining accurate information on the subject is very great, and I can hardly hope that the preceding account is entirely without error. My object has been not to describe in detail the system as it exists, but rather to call attention to the steadiness with which progress has been made, the spirit in which the Government has carried out the work, and the carefulness with which the institutions have been adapted to the condition of the people. How far the people themselves have risen to the occasion I propose to notice in another letter.

There is an amusing illustration of the way in which, in the early days, say 1873, the new ideas were carried out. At an election in Shimane *ken* for school officials, one of the countrymen refused to vote because he knew no one whom he thought worthy. The Governor insisted that he must vote, whereon he cast his ballot for the Governor himself. Enraged at being considered low enough for such a position, the insulted Governor ordered the offender to prison. The man appealed, however, and was released by the Government, who severely rebuked the touchy official. New institutions could not be made to work smoothly in a day, and from the state of things at that period much progress had to be made. Taking our stand at the present time, let us look briefly, first, at the people themselves, secondly, at their assemblies.

In the year 1880, an acute writer, Nishi Sensei, published an essay in which, analyzing the Japanese character, he noted two great influences, one political—the despotism of feudalism—and one moral—the Confucian principle of obedience to superiors; and two minor ones—the fidelity of the *samurai* to his lord, and the national complaisance of behaviour—the combined effect of which was inevitably a deep-seated spirit of political inertness, of obsequiousness to authority, which formed the great obstacle to the success of representative government. That such has been a characteristic of the mass of the people is undoubted. To what extent have they risen out of it?

So far as comparative statistics of elections are of value, we are left with little material to judge from. Strange to say, neither the Home Department nor the *ken* officer have kept a systematic record of the voting figures since 1878. In Niigata *ken*, however, this has been done, and the Governor, Mr. Chida, has kindly sent me these figures:—

	Electors.	Votes cast.	Per cent.
1880	51,088	27,732	54
1889	52,949	22,403	42
1890	48,932	30,122	61

It seems difficult, however, to draw any general conclusions, as the following figures from two *gun* (counties) show: (1.) Percentage in 1880, 22; in 1886, 44; in 1890, 68. (2.) Percentage in 1880, 48; in 1886, 43; in 1890, 29. Probably the explanation lies as a rule in local causes, each community having an electoral history of its own. So far as I can judge from reliable testimony apart from statistics, the last four or five years have seen a distinct advance in the interest taken by the mass of the people in the management of their affairs. Officials from various sections tell me that at present the vote does not as a rule fall below 50 per cent. of the electorate, while in many places, where cause for special interest exists, it runs as high as 60 per cent.

Figures showing the percentage for the whole country are not easily obtainable, as they are not

forwarded from the *ken* to the Home Department. I can judge only by the following figures (election of February-March, 1890) kindly furnished by governors and others, and coming from representative parts of the Empire:—

	Electors.	Votes cast.	Per cent
Tokyo (<i>fu</i>)	12,281	4,845	40
Kyoto (<i>fu</i>)	28,276	9,391	33
Aomori (<i>ken</i>)	18,556	13,394	72
Niigata (<i>ken</i>)	48,932	30,122	61
Chiba (<i>gun</i>)	2,410	1,522	63

There is a marked contrast here between the proportion in the metropolitan cities (*fu*) and that in the provincial regions. The percentage in the latter is on the one hand much better than that in Massachusetts in "off" years (52 per cent. in the period of 1871-'89), but not as satisfactory as that of New Jersey, Michigan, Wisconsin, and some other States (ranging, I believe, from 75 to 90 per cent. in the period 1876-'88). The *fu* seem to be distinctly behindhand in the interest shown by their citizens. Individual wards (*ku*) make an even more deplorable showing. In four wards in Tokyo the percentages were respectively 10, 13, 16, and 17. Indeed, it was only by the aid of the suburban (rural) districts (one of which cast a vote of 75 per cent.) that the average was brought higher than 25 per cent. In Kyoto, matters were little better: three wards returned percentages of 16, 19, and 19, respectively. The same lack of interest may be gathered from what one observes in mingling with people. For example, when inquiring the date of the Tokyo election, I found at least four intelligent and highly educated gentlemen—men, too, who take a deep interest in the national progress—who could not tell me. Another, when I referred to the election in conversation, did not know it had occurred. "The Assembly?" one said; "oh, nobody pays much attention to that." I cannot venture to indicate with certainty the influences that produce this state of things; the fact is there plainly enough. Evidently Japan, like our own country, finds that in large cities the problem of local government develops special phases.

The proportion between electorate and population depends on the pecuniary voting qualification, already explained in your columns by an able correspondent. The notable fact is the repeated fluctuations in the size of the electorate. The figures for the Empire are as follows: 1880, 1,513,308; 1885, 1,637,137; 1887, 1,486,107; 1889, 1,602,249. Of course the causes of this are economic rather than political, and cannot be gone into at length in this place. Apparently the *fu* have on the whole been the losers. Thus:—

	1880.	1884.	1887.	1889.
Tokyo.....	12,100	12,200	12,200	12,300
Kyoto.....	31,100	28,900	28,400	28,300
Osaka.....	48,000	63,200	36,900	39,800

Probably the resumption of specie payments in 1886, the imposition of special taxes, and migration have contributed to the result. I am told, moreover, that in many districts financial distress, arising from various causes, has tended to make the rich richer and the poor poorer, thus thinning the electorate.

The three ranks are represented in the electorate as follows:—*kwaazoku* (nobles), 298; *shisoku* (corresponding to the old *samurai*), 60,337; *heimin* (commoners), 1,541,614. As to their relative influence in local politics, some inference may be drawn from the statistics of membership of the assemblies. This is divided as follows:—*kwaazoku*, 1; *shisoku*, 508; *heimin*, 1,617. But the different sections of the country differ widely, and must be noticed separately. In the metropolitan cities the upper class contingent is 17 per cent. of that of the commoners; in such old homes of clan feeling as Kagoshima (Satsuma) and the neighbouring region, 678 per cent.; in the country districts elsewhere 13 per cent. The whole electorate in these different sections is divided about as follows:—metropolitan cities, upper classes, 2.3 per cent.; Kagoshima, etc., 21 per cent.; other districts, 1 per cent. Making the necessary comparisons, then, we see that in the first section the upper classes, when it comes to the choice of members for the assemblies, wield an influence greater than that to which their mere numbers entitle them by 7.4 times in the first instance, by 34.2 times in the second, and by 13 times in the third. This indicates that, by reason of various historical influences, we cannot expect to find uniform progress throughout the country. It is, too, an instance of what may be frequently noticed in dealing with Japanese institutions, that, notwithstanding the comparatively small area of the country, there exist, as in our own country, in different sections widely different conditions, that in different regions may be found different solutions of the same problem, and that general truths must be laid down with hesitation.

The local political parties furnish another instance of this. In some districts parties exist, in others not. They separate usually on some question of local expediency. Not unlike the Athenian parties of the Mountain, the Shore, and the Plain, the lowlanders are frequently found fighting against taxation for mountain roads, and the mountaineers against the burden of dyke and irrigation expenses. In Gumma *ken*, if not elsewhere also, the abolition of licensed prostitution has created two political camps. In Chiba *ken* for a long time the citizens have been divided over a certain Government-fathered bank, whose affairs were not satisfactorily managed. In Yokohama the merchants and the land-owners have been at odds, the disposition of some public property being at the root of the dissension. As to nomenclature, however, they have in many cases developed the custom, which so hampers our own politics, of fighting local battles under national standards. Partly because the leading national parties have a widespread local organization, partly because prominent partisans become identified with opposing sides in local controversies, partly for other reasons, one finds the *Kaishinto* (Progressists) and the *Fuyuto* (Radicals), for example, contending in Chiba or Yokohama over questions that have not the remotest connection with their national platforms.

Party feeling often runs high, though here too, it is impossible to make general statements about particular provinces, or even counties, much less about the Empire at large. In the town of Chiba, for example, I saw a very quiet and orderly election, while a small town only sixteen miles away has been notorious as one of the most turbulent places in the country. In the past few months the papers have reported at least half-a-dozen instances of violence. In Niigata *ken*, a few years ago, a too outspoken editor was decoyed from his sanctum and ducked in a muddy ditch. In Kagoshima a political murder occurred in March last. The country is troubled in various parts with young harebrained *soshi*—a cross between hoodlum, anarchist, and reformer. Their creed is political liberty, but their methods are detestable and their character misguided.

As for the assemblies themselves, almost everything good can be said of them. To begin with there is, according to universal testimony, none of our cheap jobbery and noisome corruption. What ever exists is as yet sporadic. Tokyo has furnished the only scandal I have heard of, an alleged bribery of members by proprietors in the Yoshiwara to obtain a diminution of the licensed prostitution tax. The members as a rule are of respectable, even of high standing, particularly in the country districts. From an examination of a small book giving the name, age, etc., of every member of the provincial assemblies, I find the average age to be as follows, with no special differences to be noted in different localities: 25 to 30 years 9 per cent., 30 to 35 30 per cent., 35 to 40 46 per cent., 50 to 60 15 per cent. In a country where young men, even youths, are so important an element among the educated classes, and are found so much at the front, this is certainly a very conservative showing. The occupations of the members are as follows (though these returns are not complete):—Farmers 1,227, merchants 309, lawyers 64, physicians 59, bankers and brokers 17, printers and booksellers 3, liquor-brewers and dealers 10, pawnbrokers 11, journalists 10, teachers 16, corporation officers 5, artisans 2, local officials 16, miscellaneous 59, no business 192. The small number of journalists and the large number of those described as having "no business" are peculiar features.

In the general conduct of the assemblies, entire decorum is the rule. Here and there one hears of a turbulent session or factional quarrels. In Niigata *ken* on one occasion a member of the Opposition was unceremoniously ejected by the angry majority. In another *ken* a member, who had fallen out with the presiding officer, took a somewhat erratic method of showing his disrespect by entering the Assembly wearing a mask. A spirited discussion ensued, which ended by the voluntary removal of the mask by its wearer, and the restoration of harmony. *Hara-kiri* has long been abolished, but one notices now and then that, on the occasion of a supposed insult, or at a moment of uncontrollable indignation, the offended member will leave the Chamber, or even resign his seat out and out.

In the majority of cases the relations between Governor and Assembly are harmonious. The popular Governors seem to be more numerous than the unpopular ones. The personality of the official, the temperament of the community, the difficulty of the special problems of the district, all enter into the question. There seems to have been but one genuine failure, Gov. Mishima of Fukushima *ken*, in 1883. It may be noted that the first public criminal trial in the country was that of some

young men who were goaded by his conduct into a defensive league and were charged with conspiracy. Two years ago the Governor of Awamori *ken* (apparently a man not easy to get along with), in a report not intended for the public, referred to his constituents as "doltish." The word got abroad, the provincials stormed, the local officials resigned in a body, and the Governor's recall was demanded. His place is now filled by another.

Outside of the metropolitan cities, the assemblies seem to be really representative—to be, in truth, the mouthpieces of the people. They lead as well as express the public opinion of the community. Considered, too, merely as a measure for keeping the people contented, they are a success. Officials tell me that under the present system taxes are collected of a kind and amount that would otherwise be out of the question. That they are not always representative, however, in the sense of standing for all classes of opinion, is probably true. In some places, one is told, the educated and intelligent do not take part in politics. In some the mere politicians, not the sober citizens, preponderate. There is, however, as yet no antagonism between rich and poor or capital and labour. Great differences in wealth, where they exist, are not politically of consequence.

One characteristic, not easy to set forth briefly, stands out in contrast with the old attitude of thought. The difference between the law and government of former days and of to-day is the difference between precept and legislation. The people have emerged from a communal into a political system. Everything with them now is decision, law, statute—not mere custom or the unfettered discretion of an official. Apparently they are developing that habit of attention to exact expression, of drawing distinctions, of insisting on strict interpretations, which in modern times is characteristic of the Anglo-Saxon race. Take this incident for example. A few years ago, the Governor of an interior province obtained a two-weeks' furlough and was replaced by a deputy. Fretting over affairs, however, he returned unexpectedly in a few days, entered the Assembly, where his deputy presided, and took an outer seat. It chanced that the Assembly was taking the occasion of his absence to criticise his conduct, and that, too, without gloves. Angered at last by a specially severe hit (for the debates continued, unawed by his presence), he jumped up and ordered the speaker to be silent. Nothing daunted, the member craftily inquired:—"Do you speak as Governor or as an individual?" "As your Governor, sir, of course," indiscreetly replied the furloughed official. The debate over, the member made complaint to the Home Department, and the upshot was that the Governor was fined 100 *yen* for assuming to exercise the official prerogative while off duty. Now, the taking of such a distinction may appear to us natural enough, and hardly worth the mention. But here such incidents are much more than trivial. That such lines of reasoning have occurred, and have been accepted, is significant. That they should ever become general would denote a change in modes of thought which would be no less radical than subtle.

In the general management of business, conscientiousness and intelligence usually characterise the assemblies. A journal of the last session of one of these bodies lies before me, and, so far as can be judged from extracts, the debates are sensible and to the point, with perhaps a tendency to go a great deal into trivialities. The best opinion seems to be that the special need, if any, is greater experience and wisdom. Two extremes—a younger generation, visionary and impractical, and an older one, conservative and behind the times—too often find a representation. In an interview with several Governors, which Count Yamagata, the Prime Minister, courteously procured for me, they said:—"On the whole, we are satisfied. The assemblies suit the times. Give us ten years, when the old generation has gone, and the new has grown up. Then we will show you something better."

REPRESENTATIVE INSTITUTIONS.

Tokyo, June, 1890.

Amid the gratulations and plaudits which have attended the grant of the Japanese Constitution of 1889, we must not forget, if we would understand the conditions and historical influence amid which it is to be put in force, that its advent is but the final one of a series of events, the culmination of repeated efforts spread over the years from 1868 to 1881. To attempt to comprehend its significance in history, except in the light of the decree of 1875, the agitation of 1876-81, the decree of 1881, and the attendant circumstances, would be as great a mistake as to ignore, in considering our own Constitution of 1787, the Declaration of 1776, the

ensuing struggle, and the peace of 1783. In the questions at issue there is, of course, no parallel, but in the order and relative importance of events there is not a little resemblance. As no connected account of previous efforts to establish representative institutions has, I believe, ever been published, I will venture to relate the story briefly.

The resignation of the Shogun, November 9, 1867, and the *coup d'état* in Kyoto of January 3, 1868, left the Imperial party in possession of the power for which they had so long schemed and toiled. This party was led by a small band of men, composed of a few leading *kuge* (imperial nobles) and some influential *samurai*, representing three or four of the clans. The whole movement of the Restoration had practically been supported by the general body of the *samurai*, and the reconciliation of conflicting opinions and rival claims was a pressing question for the new leaders. It was just at this time that men began to look to the West for guidance, and to borrow attractive features of its civilization. The Western method of securing political harmony, a representative assembly, seems to have been in their minds and to have suggested the body which was speedily organized. By the famous imperial oath of April, 1868, it was promised that a parliament should be established, and all measures be decided by public opinion (though doubtless at that time the constituency to whom these privileges were to apply did not in their minds extend beyond the *samurai* themselves).

The plan of this assembly was under discussion for some time. The form at last fixed upon involved a representation of the *samurai* only, on the basis of the clan organization. Three *samurai* were to be sent by each large clan, two by each of medium size, and one by each small one. These delegates were appointed nominally by the *daimio*, but in fact by the leaders of the *samurai* of each clan, that is, practically by the public opinion of the clan. Their powers were meagre enough, and were deliberative only. They met first in Kyoto in 1868 and discussed various subjects. The debate on the colonization of Yezo was published in the *London Times*. In April, 1869, the assembly met again, this time in Tokyo. The name *Kogisho* (Office of Parliament) was given to the place of meeting, and *Gi In* (Parliament), afterwards changed to *Shingi In* (House of Commons), to the body itself. They debated the question of permitting partnerships between foreigners and Japanese, and of forming a new constitution, but no decided conclusions were reached.

The future of this body would doubtless have seen the gradual concession of greater powers, but its end came soon, from causes within itself. The debates showed the leaders of the Government that the *samurai* of the time could not be looked to to assist by political action the progress that was absolutely necessary for the nation. On motions, for instance, to abolish *hara-kiri* and the carrying of swords, the figures of the unfavourable votes were respectively 200 to 9 and 213 to 0. In the same year the *Shingi In* adjourned *sine die*, and was never resumed. The truth was, that it had not been created in answer to an explicit demand, either of the people at large or of the *samurai*, for political rights, but rather as a means of uniting the clans by deferring in semblance to public opinion while yielding nothing of the real control; and its existence could, in the nature of things, hardly have been more than temporary.

The principle of consulting outside opinion, however (so it was given out), was to be retained. The place of the *Shingi In* was taken by the *Sa In*, a sort of Senate, created in 1871, whose members were nominated by the Prime Minister. But this was in no sense a representative institution. It was regarded as a home for all kinds of visionaries; its debates were never published, and it was quite without influence. Its successor of 1875, the *Genro In* (usually called Senate), though heralded as marking an important advance, was for a long time of little more than practical consequence, and only within a few years has it shown evidences of an influence on legislation. The next essay at genuine national representation had its beginning in 1873. It came about not so much through the desire of the Government to consult public opinion as through the very need of obtaining information and advice for administrative purposes from various parts of the country. Beginning with 1872, if not earlier, uprisings in different provinces, and other signs of discontent, had made it clear that the new order of things—involving as it did changes in methods of taxation, in political status, in various customs of immemorial validity—was not to be introduced without friction. In April, 1873, Inouye, then acting Minister of Finance, called a meeting of the provincial governors, to listen to their views upon the pressing administrative problems. They seem to have accomplished nothing definite, but this meeting of 1873 was the

germ of an institution which, from 1875 onwards, occupied the place of a national assembly, and, nominally at least, did not end its existence until the present year.

This body was the *Chihokwan Kwaigi* (Parliament of Local Officials). Along with the distress and discontent of the time, there had been naturally some talk of a representative assembly as the balm of all evils. Late in 1873 the resignation of Itagaki, Soyeyama, Gotō, and others, on the question of war with Korea, gave them a chance to utilize the situation, and in January, 1874, they presented a memorial calling for a national assembly as the one means of governing smoothly. They did not, of course, escape the reproach (certainly unmerited by some of them) that their discovery of the crying need of the country occurred strangely soon after their departure from office. But their memorial was widely read, and gave a countenance to the agitation which powerfully assisted it. It is noticeable, however, that the memorialists were unable to take their stand on charges of oppression of any sort, but claimed simply that an assembly would educate the people, concentrate public opinion, and strengthen the Government. The *Kwaigi* was already in contemplation by the Ministry, and early in 1875 came its establishment. When the change of constitution was made by which the *Genro In* took the place of the *Sa In*, and the *Daijishin In* (Supreme Court) was created, the same decree contained the following provision:—"We also call a council of the officials of our provinces, so that the feelings of the people may be made known and the public welfare attained. By these means we shall gradually confer upon the nation a constitutional form of government. The provincial officials are summoned as the representatives of the people in the various provinces, that they may express their opinion on behalf of the people."

The *Kwaigi* (sometimes called *Gi In*) met in July, 1875, at the *Hongwanji* (a temple), and was hailed as a decisive token that the promise of 1868 was in process of fulfilment. It consisted, of course, of appointed officials only, but the Government treated it as the mouth-piece of the people, and undoubtedly regarded the method of selection of its members as only temporary. An imperial speech opened the session, and the able Kido (the "brain and pen" of the Restoration) was appointed *Gi-cho* (President). There were seventy delegates, who were either governors or their deputies. Rules of procedure had already been drawn up by the Government. The results of this first session were not at all promising. The Assembly had no initiative. It occupied most of its time in discussing a system of roads and bridges laid before it by the Government. The meetings were not opened to the public or to the press, and the publication of the debates by the Government did not mitigate the general dissatisfaction which this caused. The Assembly itself showed a conservatism which did not tend to commend it to the people. In a discussion on the proposition to establish a national representative assembly, the vote was to constitute it of *ku-cho* and *ko-cho* (county and town mayors, appointed by the Government). At the same time its influence was weakened by contrast with the action of some of the citizens of local prominence, who had been brought up to Tokyo by the governors to assist with their advice. These met and drew up a memorial asking for an assembly founded on popular election.

These and other events combined to doom the *Kwaigi* from the beginning as a body which would not be accepted by the people in place of a popular assembly, even as a basis for further development. Indeed, the withdrawal of Itagaki (for he had reentered the Government in 1875) for the second and last time in 1875 was upon the express issue whether the *Kwaigi* should be accepted even temporarily, as a substitute. Itagaki thenceforward dedicated himself to the cause of popular representation, and the movement for it now began in earnest. The *Kwaigi* was not called together in 1876, because of the Emperor's extended journey to the north, said the Government; because the Government was afraid to allow the popular discontent to receive utterance, said others. With Itagaki and Saigō in secession, the very existence of the Government—practically made up of the little band of able men who had achieved the Restoration—was threatened. All sorts of charges were rife of official misgovernment and corruption. In the midst of all came the Satsuma rebellion. Every one knows of Saigō's failure. But it was Itagaki who, having no different causes of complaint and standing in no different attitude toward the Government, avoided brave, blunt Saigō's blunder—the resort to arms—and, with Tosa shrewdness, struck a note to which the nation responded as they did not and could not to Saigō's. When the Government sent

to Itagaki, in 1877, at the time that he was raising troops "for the protection of Tosa," as he said, and asked whether his intentions were hostile, he replied: "Not if you guarantee the establishment of a popular assembly."

His society, the *Rissai-sha*, which had been formed in the preceding year and had for its object the establishment of a national assembly, spread far and wide. Its memorial of June 14, 1877, making eight charges of misgovernment and praying for representative institutions, has, by some, been considered one of the most important political documents since the Restoration, and certainly puts the case as favourably as can be for the popular cause.* A society on a similar basis, the *Aikoku* (Patriotic) *sha*, was started by Itagaki in Osaka in 1878. By the next year the *Aikoku-sha* had branches in fourteen provinces, and was said to have over 13,000 members. The agitation went on with the greatest activity. In one district the *Rissai-sha* gave lectures daily to audiences of hundreds. They set songs of the French Revolution to Japanese airs, and even the children sang them in the streets. An old saying was remembered that "Liberty shall spring forth from the forests of Tosa," and its prophetic meaning was now seen.

Amid this fervour of feeling, the second meeting of the *Kwaigi*, in April, 1878, received little attention from the people. On this occasion reporters were admitted, but a new cause of complaint was found in that the President (Ito, then Minister of Public Works) was again appointed by the Government, not chosen by the members. That most important measure, the Local Assembly act of 1878, was passed in this session, but even this proof of the readiness of the Government to establish popular institutions as soon as needed did not satisfy the popular clamour. The *Kwaigi* we may here dismiss from our attention, noting that it met again in 1880 omitting both 1879 and 1881, and that in 1882 a decree provided for the holding of an annual session until the national Parliament should assemble.

The agitation now took (1880) the form of petitions and memorials. From all parts of the country these were showered upon the Government. They bore thousands of signatures, representing all classes. Even women, wives of influential men, employed agents to canvass for signatures. The hotels in Tokyo increased from 413 in 1879 to 1,605 in 1880, owing, it is said, to the presence of so many persons bringing petitions for a national assembly. Some of the nobles began to advocate it. By the end of 1880 it was rumoured that all but two or three of the Ministry were favourable. It is certain that throughout the year the subject had been under discussion in that body, and that there existed a division of opinion. A draft constitution, said to be circulating among the societies was made public. Finally, on October 12, 1881, came the well-known decree establishing a parliament in 1890.

This result was apparently a foregone conclusion, for all the members of the then Ministry, excepting perhaps the Satsuma men, were only delaying matters until they felt sure that the country was ripe for popular institutions. But the circumstances immediately responsible for the decree were as follows:—To Okuma, then Minister of Finance (and undoubtedly one of the four or five ablest of the Restoration statesmen, and in some ways the cleverest of them), the crisis seemed to present a tempting opportunity to gain popularity for himself and at the same time to restore to some extent the waning influence of the Hizen clan in the Government; for now that Ito and Soyeyama were gone, Ōki and Okuma alone represented Hizen, and its power had diminished. Accordingly, just before the Emperor's departure for the North in the fall of 1881, Okuma laid before him a proposition for the establishment of a national assembly within six months. To this, of course, his colleagues would never agree. On the very night of the Emperor's return (till then the subject had necessarily been postponed) a protracted session took place, and at two o'clock in the morning the decree was agreed on establishing the Parliament, but not for nine years to come. But Okuma had gained his point; and, accepting with satisfaction his expected defeat, immediately resigned office, threw himself upon the country, and was able to fulfil his hopes and to form a political party which is to-day one of the most powerful political influences in the nation, as well as his own most efficient ally.

The moving cause of the Constitution seems clearly to have been the agitation of 1876-81. But just how far the clamour arose from a thoroughly national emotion, just how far it was factitious, just how far it was the work of professional agitators—

* There is a translation in U.S. Pub. Decs., Foreign Relations, 1877, No. 204.

on these questions it is difficult to reach a conclusion. It is the opinion of Mr. Fukuzawa (than whom there could certainly be no keener or more impartial observer) that "not only has parliamentary representation not been conceded in consequence of any general demand on the part of the people, but that it has been given voluntarily, so far as concerns the great mass of the nation." That is to say, "the temporary agitation on the subject" was "a display of enthusiasm confined to a very limited circle, being merely a piece of strategy, wrought by various sections of the then unemployed *shizoku* (samurai)." To corroborate such a weighty opinion we have the undoubted fact that the *heimin* (commoners) of Japan have always been politically passive and indifferent, not greatly moved by sentiments of self-respect and self-assertion, and that a recognized problem has been that of educating them up to their rights, private as well as public. Yet, even if we cannot reasonably suppose them to have originated a broad political movement, we can at any rate believe that under the lead of the *shizoku* they would understand the issue and join in the protest. Certainly, to judge by appearances, there must have been a participation of some sort on their part. The Government, too, must have believed to some extent in these appearances, for the promise of 1881 was undoubtedly drawn forth by the agitation.

Mr. Fukuzawa, however, explains their action on the theory that they were aware of the ferment existing among the younger educated men as well as the *samurai* of the Restoration, who had never been admitted to take official power, and were willing to provide a "national palaver" as a harmless place in which their efforts could be expended. Perhaps we cannot, with our present sources of information, venture much beyond this. It should be conceded, on the one hand, that the people as a whole took a real part in the movement; on the other hand, it is probable that the true grievances for the redressing of which a national assembly might properly have been looked to, where those of the *shizoku* alone, and that the mass of the people, harassed by economic difficulties for which the Government itself was not responsible, had no real occasion to demand representative rights, except on grounds of abstract justice and political theory which were not appreciated by them, and *a fortiori* could not be urged in their favour.

The genesis of the Japanese Constitution, then, is not to be explained according to the categories of European experience. It was neither wrested by the nation nor withheld by the Government. The people grew up to it, not the Government down to it. Historically it does not signify a safeguard against oppression, but a means of bringing the methods of government into accord with the popular wish. It was not the surrender of inherited power by an autocrat or an aristocracy to a plebs; it was (in token, of course, rather than in fulfilment) the relinquishment to a people of power hitherto held in trust for them by a self-chosen body of their own number until they should arrive at political majority.

POLITICAL PARTIES.

Tokyo, July, 1890.

In approaching the subject of political parties in this country, one needs to familiarize one's self with two or three general truths of Japanese politics before attempting to gather the significance of individual political sections.
